Thus, we have our Government exacting 4 percent interest from its own veterans who may need funds and charging at most only 2 percent for money loaned for the benefit of the people of another nation.

This is a glaring example of how far the administration has gone in its fast-moving policy of looking after the well-being of the rest of the world and forgetting its own people.

It is claimed that this loan will guarantee great benefits to America because the money will be used by Britain to purchase American-made goods and thus create for us a better market abroad. Writers and commentators have been trying to convince the American public of this view. Nothing could be more misleading; nothing could be more unfair to our people.

The written agreement itself (sec. 3) expresses the purposes of the loan. Here I quote the declared purpose:

"3. Purpose of the line of credit: The purpose of the line of credit is to facilitate purchases by the United Kingdom of goods and services in the United States, to assist the United Kingdom to meet transitional postwar deficits in its current balance of payments, to help the United Kingdom to maintain adequate reserves of gold and dollars, and to assist the Government of the United Kingdom to assume the obligations of multilateral trade as defined in this and other agreements."

Thus, four purposes are recited for which this loan of money may be used. It is not limited to the purchase of American goods. And most glaring is the absence of any provision whatever as to what part of these billions should be used to trade with us.

The United Kingdom would decide what part of the fund may be used for any of the named purposes.

Perhaps some light is thrown on the planned use of this money by a statement of Sir Arthur Cripps, president of the British Board of Trade, as reported by an Associated Press dispatch appearing in the press last Sunday. In an address before automobile workers in Birmingham he is quoted as saying: "Assuming we get the United States loan—and it looks as though Congress might turn it down—we shall have 3 or 4 years in which to build up our export trade."

Then the dispatch went on to say: "He added that if the trade wasn't restored in that time 'we shall have wasted the assistance we got from the loan'."

In truth, the real purpose of the loan is to establish competitive British commerce—not particularly to establish trade with us.

Many people believe that the British United Kingdom is a free-trade nation. Nothing could be further from the truth. For years—and prior to the recent war—she had and exercised preferential control over imports into her markets.

She exercised what is known as Imperial Preference Tariffs, through which she gave preference to imports from other British dominions and territories and which certainly excluded the goods of this country, and this she did in the face of an existing indebtedness to us of more than six billion dollars. Also, she imposed import and export quotas, fixing the extent of commodities taken from us.

She required trade in her own currency, pound sterling, in countries whose trade she dominated—known as the sterling bloc—that required purchase of her own products and merchandise—keeping a balance in those countries usable only for the buying of English goods to the exclusion of American products.

This agreement to some extent attempts to relieve America from the discrimination resulting from these British trade practices. But the terms are so hedged with exceptions and provisos, as to make the agreement indefinite and uncertain in practical results.

For example: It is agreed (section 9) that neither Government will discriminate against imports from the other, except in several instances. One instance is where there is special necessity to assist a country whose economy has been disrupted by war.

Where, indeed, is the country whose economy has not been disrupted by war? There is not a single one—victor or vanquished.

Australia, Canada, India, British Dominions—all have been disrupted economically. This exception would allow discrimination in their favor—just as discrimination was carried on under the Imperial Preference scheme to the exclusion of American products.

So I say to you that there is no assurance that American trade will be helped.

This plan is backed by those who have set out pell-mell upon a course of benefaction to the world. That motive is high—but it must be performed with a regard to the well-being of our own people. This Government must realize that those here in office are the trustees of the welfare of the people of this country and the future of our Nation.

We seek the friendship of nations, but that is not to be bought. We shall act in concert with friendly nations for happier world relations, but that does not mean that we must settle all the burdens of the world upon the already heavy-laden backs of our own people. The time has come to be frank and fair upon this subject and not to deceive ourselves or others.

America will be generous. She has been and she will continue to be. Let us note what has already been done.

Since the close of the war we have contributed 72 percent of the funds expended for the relief of the needy people of Europe.

We have authorized the spending of $2,600,000,000 and already appropriated $1,350,000,000 for the aid of needy in Europe alone. We have given nearly three-fourths of all the money given by the world for that helpful purpose.

We have provided for a contribution of almost $6,000,000,000 to the Bretton Woods funds, from which other contributing nations may borrow to rebuild and to meet their national needs and to save monetary systems that may become shaky. Our contribution there is 30 percent of the whole amount. We ourselves will probably never draw a penny from it.

Here arises an interesting inquiry. Great Britain has agreed to contribute the sum (measured in American dollars) of $2,600,000,000 to the two funds of the Bretton Woods agreement. If she is really in need of this proposed loan for trade, then whence is she getting her great contribution to Bretton Woods?

Let us go on—we have appropriated $3,500,000,000 of dollars to the Export-Import Bank, to be loaned to other countries to help build up trade for them and for us.

Yes, we have been considerate and generous of others with the money of our own people. Each man, woman, and child in America today must carry through life a debt of approximately $2,000. That is not conducive to stable financial conditions of a people. The time has come to start reducing that debt, not to add to it.

Soon Congress will act on this, the first loan. By that decision it will declare whether this Government will embark upon an almost endless process of loaning American money to foreign governments. We did that after the last war. It did not help. It did not prevent conflict or save us from it. It will not do so again. It is but a commercial proposition in which certainly the welfare of our own people should receive first consideration. I learn from a United States Treasury statement of July 1, 1945, that Great Britain still owes us on loans prior to World War II the sum of $6,415,664,782. She has paid only $434,181,641 on the principal indebtedness—$1,590,667,175 in interest.

Just what commercial institution in this land would loan any American citizen money upon that record and expect to receive repayment?

It is my hope that the Congress will not start upon a policy of loaning the money of the American people to the governments of other countries. It can mean only more burdens and a harder road ahead for those to whom we owe the highest duty of protection.

If the administration now holding control of our National Government continues to insist that this country owes the duty to other nations to carry their burdens of finance and to build up their commercial trade, and that this Government must take the attitude of raising that money from our people, for the use of others, then let bonds be issued, clearly marked and plainly understood, to be sold for the purpose of raising money to make the British loan, or similar bonds issued for any other loan abroad, and let the purchasers know that they will receive all funds received in payment of the bonds and that they will take any losses that may arise from nonpayment.

This plan is not original with me, but it appeals to me as fair. Then those among us who desire this policy of loans abroad could back up their views with these funds, and those opposed would not be compelled to contribute. The profit or the loss would come to those who decide that the loan is good. That is a way out if the administration insists that American money must be loaned to other nations.

Lincoln Day Address by Hon. William A. Stanfill, of Kentucky

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, February 18 (legislative day of Friday, January 18), 1946

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting address delivered by the junior Senator from Kentucky [Mr. STANFILL] on February 12 last, Lincoln's birthday, at Paducah, Ky.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is good to come to Paducah and western Kentucky to meet with the men and women whose sole purpose at this meeting is the advancement and the success of the Republican Party. Paducah has always had a reputation for good cheer and hospitality and you are living up to that reputation tonight.

On this the one hundred and thirty-seventh anniversary of the birth of Abraham Lincoln, it is fitting and proper that we gather ourselves to gether to talk over and analyze the conditions with which our party and our country are confronted today. Undoubtedly these are perilous times both in our Nation and in the whole world.

I am speaking to you tonight for the Republican Party which polled more than 22,000,000 votes in the last Presidential election; a party now successfully governing 23 States of our Union; certainly more than one-half of the population of our Nation; a party which is now within striking distance of winning in our National Congress. The Republican Party today nationally is a minority party, but it is a very formidable minority.

Let us look at our situation in Kentucky. A little more than 2 years ago we had:

A Democratic administration at Frankfort.

A Democratic administration in Louisville.

We had not a single judge on the court of appeals.

Many of our circuit court districts, normally Republican, were in the hands of Democrats.

We had only 8 or 10 State senators.

Look at the picture today:

We have a State administration, except for the Secretary of State

We have 17 State senators.

We have a complete administration in Louisville and Jefferson County except for the mayor.

We have three members of the court of appeals; two of whom have just been elected, one from a district which has not had a Republican judge for 60 years.

We have redeemed many of our judicial districts and now have Republican judges where only one and one-half months ago we had Democratic judges.

I recall in one county, Wayne, we elected a full Republican ticket last year for the first time in 50 years.

Our State administration is showing Kentucky a philosophy of government, the like of which has never been seen in this State. Good government is the watchword; every department of our State government is carrying out this slogan; and the people of Kentucky, regardless of political affiliation, are now awakening to the salutary effects of such a philosophy of government and are rallying to its support. Your fellow Kentuckian and my good friend, the Honorable Simeon Willis, is the head of and the activating force behind this movement for good government in

this State, and I here and now pay tribute to him as a great leader and as a man who will not be swerved from his course by petty politics or differences or jealousies and he will go down in history as the best governor Kentucky has ever had. I know his fellow citizens are and have the right to be proud of his achievements.

Turning now to the national scene, I call your attention to the fact that President Truman in his radio address on the evening of January 3, 1946, said "I can say with emphasis that the legislative branch of our Government has done its full share towards carrying out its responsibility in foreign affairs."

He failed to say that the Republicans in Congress supported the United Nations Charter, that we, the Republicans, helped provide for full participation by the United States in the United Nations Organization; that we Republicans approved the appropriations for UNRRA; that we Republicans implemented the Bretton Woods agreement and in fact have supported every measure for world peace and well being.

In England, the minority party has the right to question the Government leaders and, at all times, to demand a clear statement of their domestic and foreign policies. The governmental leaders give these statements regularly so that the people are well informed on the basic political issues.

In this country no such system is followed. We are only told what the administration chooses to tell us, when and if the administration chooses to let us know. Too often it has chosen not to speak.

It is, therefore, the obligation of the Republicans to scrutinize every act of this administration, taken pursuant to the United Nations Charter. If these acts are imprudent we shall call that to the attention of the American people. If necessity arises we shall make constructive suggestions for carrying out American policy under the charter.

Many Americans look with deep misgivings at the world today. We see a large section of Europe shrouded in ominous mystery. We see whole nations in which American Government officials, despite the advent of peace, are restrained in their activities, and where the American press and radio have not yet been permitted to send representatives and report freely.

These are areas where millions of Americans had their origin, and where they are vitally interested for the well-being of their parents and relatives. In spite of promises made in the Potsdam declarations, there appear to be no substantial improvements realized in these important matters. Does the administration intend to press for improvement and for the realization of these American hopes in the United Nations Organization in Assembly and Security Council of the United Nations? We trust the administration will soon give some assurance in these matters to the American people.

We Republicans are concerned as well for the political future of these areas abroad. Shall we see the realization of our understanding of free elections and the expressed will of the peoples? Or shall something quite different, but under the same names, be carried out?

As we view the mass deportations of people and large transfers of territory being made, evidently with the acquiescence of the administration, we remember that similar acts in history resulted in the sowing of seeds of rancor. Particularly have we felt that where people have maintained their culture in an area for centuries, the uprooting of these people and their culture has left hatred and the urge to revenge in its wake.

We wonder about the scope and import of our manpower and fiscal commitments abroad. Are those commitments such that our boys are to be drafted to police foreign countries; and, if so, how many of them? Are we going to take our 18-year-old boys, many of whom are still in high school, and send them to police the European, Asiatic, and other countries? Are they to be sent to these foreign countries to act as a police for the world? These are some of the questions which are confronting the Members of Congress, and they are some of the questions with which we know the people of this country are concerned.

As nearly as can be figured, from the very indefinite information given us, without including any lend-lease sums, and without counting costs of our armies of occupation, the fiscal commitments of the United States Government abroad are already in the neighborhood of $15,000,000,000. Of this amount, three and one-third billions are to be channeled through the Export-Import Bank; another three billions or more through the newly created International Bank; still another two and three-fourths billions, through the International Monetary Fund, and at least one and one-third billions through the United Nations Relief and Rehabilitation Authority. Now we have the British loan. These commitments total over fifteen billions—not millions—of dollars.

In America the people are faced with a taxation program. Before the tax-reduction program is framed, we would like to have more information about our foreign commitments in dollars. These fragments of lending fit into a general picture; we would like to be reassured that the administration is accepting these colossal obligations as part of a matured plan, and not as a day-by-day improvisation of our economic-fiscal relationships with the rest of the world.

These questions are not asked in any quarrelsome attitude; they are basic to the future welfare of our country. Any opposition or minority party which did not demand the answers to them would be failing its duty to the American electorate. Of course, we are told that some of the answers to these questions are necessarily delayed by the changes of personnel being made in some governmental departments, and the systematic dismissal of appointees of the late President Roosevelt which seemingly is being carried on. Answers must be forthcoming soon, if reconversion is to be accomplished with a minimum of human suffering and economic dislocation.

Many other questions in the international field remain to be answered. What will happen in the Pacific area? More than for any area in Europe our Nation is pledged to the territorial integrity of China. Our Government spokesman for the past 15 years have been particularly insistent that the province of Manchuria is Chinese and must remain so. Shall we find that as a result of this war China's sovereignty over this area has been impaired or destroyed?

The Big Three have met by two's and three's repeatedly at Quebec, at Cairo, at Tehran, at Yalta, and at Potsdam. The administration leadership has told us only what they chose about their decisions, and some of the telling has been very, very belated. Witness the recent disclosure of giving the Kurile Islands to Russia. And yet these decisions are almost irrevocable. Make no mistake about it, however much these rulings may seem to be subject on paper to decisions by a future peace conference, all the influence of our powerful Nation cannot undo them after our President has acquiesced. All that a peace conference can do in respect to Germany will be to write down what has already been decided, except in minor details. They told us at Potsdam, and Tehran, and Yalta that various questions were raised and various agreements reached. What were the questions which remain unanswered? What were the problems upon which no agreement was found? You have not been told and neither has your Congress. The Senate of the United States has not passed upon these decisions and the people of the United States have not been given an opportunity to voice their views. Some day, when the time is ripe, the people of this country will hold the administration to strict accountability.

These are some of the thoughts in the hearts of thinking Americans. We hold that this war was fought to defend our Nation, and to bring about, so far as in us lies, freedom for the individual and free development of governmental processes abroad which are consistent with the principles upon which our Republic is based. Therefore, we are bound to see to it that the administration never looses sight of the purposes for which our boys were fighting. We shall urge incessantly and insistently that the great influence of this country be brought to bear for the achievement of these American ideals.

We have met tonight to venerate the memory of Abraham Lincoln, first Republican President of the United States.

Not only is Abraham Lincoln the heritage of all the American people but he is peculiarly the heritage of the people of Kentucky. His birthplace is a shrine to which in each succeeding year come increasing numbers from the corners of the earth, the great and the small, to cherish in humble reference the memory of this man of the ages.

It seems to me that there is no more reverent way to pay tribute to the memory of this greatest of Americans than to seek, by study of his character and of his words, to find and to express what advise he might desire to give in these tragic days to the great political party of which he was the leader.

He would look backward at 12 years of defeat, and he would seek to determine the reasons for our defeats, and the reasons why, in four national campaigns, the voters of this country have retained in power an administration whose principles are the contrary of the principles which were his own. He would study and weigh, in an effort to discover why the voters of the United States maintained in power an administration they mistrusted; whose intentions they feared; with whose planning of our domestic life they disagreed; and whose integrity they doubted.

I am confident he would reach the conclusion that these New Deal victories were not the result of a superior political organization on the part of our opponents; not because of vast sums of money squandered to influence votes; not because of spurious humanitarian principles, nor because of alliance with such radical organizations as the Political Action Committee. Most certainly he would be assured in his fine mind that these victories were not the result of splendid principles calculated to better the common condition of our citizens and to make of America a finer, happier, healthier land.

He would say that the Republican Party must never be lacking in that most vital of all political assets—the courage to stand for what it knows is right, and to condemn boldly what it knows is wrong. He would say that the Republican Party must always stand like a rock, and never allow itself to be blown aimlessly about like a tumbleweed.

He would say that the only way the Republican Party can marshal votes behind its banner is by casting awey forever the demagog's method of winning votes. The only way the Republican Party can win the next election is by opposing what seems to be popular and by standing fearlessly for what is right.

Thousands of men in thousands of places from coast to coast are asking, "What has the Republican Party to offer?"

This is a question the Republican Party must answer and answer quickly and positively. It will not be enough to answer it with phillipics against Franklin Roosevelt. It will not be enough to answer it by saying that we stand for most of the things the New Deal stands for, but that we can administer them more efficiently.

You cannot sell your bill of goods by telling the customers that your competitor

carries an inferior line of merchandise. You must stock your shelves with honest wares, honestly manufactured and worth the customer's money. And you must advertise those wares and display those wares until the customers see for themselves that you are running a better store than the firm across the street. You must convince them that you carry in stock articles which are to their advantage to buy; that your business methods are honest, and that you stand back of your advertisements.

We must not be afraid of the word "conservative" in this day when the multitude is shouting the word "radical." To conserve means to save. It does not mean a shellback who does not believe in human progress. It does not mean a flint heart who has no sympathy for the poor, the hungry, and the oppressed. It does not mean a reactionary who places property rights above human rights. It does not mean a fool who believes we can go back to the bad old days of greed and exploitation and unregulated gouging of the people by the avaricious. It means—the word "conservative" means—a man who labors to save. First, to save the Nation from ruin; second, to save the individual from the serfdom of regimentation; third, to save the sacred right of equal opportunity for all; fourth, to save the right of every man to make the most of his abilities in the business or calling which he chooses, and the right to lay aside and keep his surplus earnings to insure him security in old age. And next it means to save, to conserve, to insure those national morals, those national virtues, which made this Nation great and rich and happy for a hundred and fifty years. That is my understanding of the meaning of "conservative." The Republican Party must adopt it and make it its own, and have courage to use it as a challenge and a watchword and a battle cry in the tragic days that lie before us.

The Republican Party has spoken well upon foreign issues. We have stated our position insofar as it can be stated until all the postwar facts are in our possession. We cannot speak with exact definiteness until we know in what respects our allies, Great Britain and Russia, will be willing to cooperate with us to prevent future wars; until we are informed of their territorial war aims. We have defined our position and our willingness to do our part, and the country is satisfied with our declaration.

But there remains vital domestic matters. Until we make clear to the citizens what we have to offer with respect to these, and until we compel them to believe in our sincerity they will not entrust us with the administration of our affairs.

Under the guise of war necessity we have been required to surrender our personal rights to freedom of action. We have not been watchful. We have given up more than was essential in our common eagerness to bring the war to a speedy and victorious conclusion.

These rights must be returned to us when peace shall come, not curtailed but enlarged, and so surrounded by safeguards that they never can be taken away from us again.

The Republican Party has taken a definite stand on the question of labor. Every intelligent man knows that one of the greatest stabilizing forces in the world is organized labor So long as labor is permitted to organize, socialism, communism, nazism, and fascism cannot come into control of the state. Before any one of these parties can impose itself upon the Nation it must first destroy organized labor and organized religion. The right of any individual to associate himself with other individuals for their common protection and betterment is an essential part of democracy. But to make their will and their desires effective, democratic processes must govern the union as well as the Nation. Union action must come as the result of the will of a majority of its members just as national action must come as a result of the will of the majority of the Nation's citizens. There must be no dictatorship in labor unions as there must be no dictatorship in the Nation. Each union must be a republic within a republic, acting as a unit for the benefit of its members, dealing for them, bargaining for them, negotiating for them.

But just as monopolies are abhorrent in business, so monopolies are abhorrent in labor. Just as business must be fairly supervised to prevent excesses and injury to the people, so must labor be supervised for the same reason. The individual must be assured of protection against labor exactly as the individual must be assured of protection against capital. Every individual shall be defended in his right to join a labor organization.

Every man must be guaranteed the right to membership in a trade union appropriate to his trade or calling and to his place of residence. This right is not to be denied by discriminations based upon race, creed, color, sex, national origin, or political affiliation, nor by the imposition of restrictive or excessive initiation fees, nor by any other limitations on membership than incompetence in his trade or calling, bad moral character or a record of antiunion activity.

He should be guaranteed of the right to democratic participation in the conduct of the union to which he belongs. This right obviously requires democratic organization of the union, inclusive of local, district, State, national and international units. Among the principles to be safeguarded in democratic organization of trade unions are: provisions for regular meetings or conventions held at reasonable intervals, fair elections, free discussion within the union of all union problems and control of dues, assessments, and financial matters by the membership together with clear and authentic periodic reports to members on union finances.

Concentrations of capital are forbidden to contribute money to any political party or organization; concentrations of labor, for the same reason, should be forbidden to contribute money to any political party or organization. And neither capital nor labor should be permitted to evade the law of subterfuge.

Our party has spoken on this subject in a statement of the aims and purposes, issued by the Republican Members of the House of Representatives and of the Senate of the United States, December 5, 1945. The labor question is treated as follows:

We reaffirm our belief in the right of labor to organize and bargain collectively with employers as one of the cornerstones of competitive enterprise. The processes of such bargaining must be protected and strengthened if we are to have real jobs and prosperity for all.

For that purpose we believe that governmental decision must not be substituted for free agreement, but governmental machinery to promote peaceful settlement of disputes should be improved.

Demands by either side must be kept within the bounds of reason and fairness, and both sides must recognize the rights of the general public.

The desired end of bargaining between management and men is a contract. Once that contract is made, it should and must be equally binding on both parties as to agreements made.

Free collective bargaining and contracts resulting therefrom must not be nullified or destroyed by resort on either side to willful violence or unlawful destruction of property.

The Republican Party must pledge itself to revise and to make efficient our present cumbersome, inequitable, and blundering system of taxation. We must tax for revenue and not for revolution, and to spend and spend, elect and elect. We shall, for years to come, be crushed under a great burden of taxation. But that burden must be made as light as possible to the individual and to the industry of the Nation. It must be given stability so that the individual will know what he will have to pay and for a reasonable time into the future, in order that he may plan to meet the requirements and organize his affairs. Taxes must be fairly distributed. They must be so levied as to encourage and not to discourage; to create and not to destroy.

The Republican Party must pledge itself to decrease the powers of the Federal Government and to increase the powers of the several States. It must free itself of powers and responsibilities better performed by the States, and it must compel the States to assume them.

It is alarming to know that since VJ-day the civilian pay roll of United States Government has increased in numbers more than 15 percent. The Federal civilian pay roll still has 3,500,000 employees who are being paid more than $9,000,000,000 a year. The war emergency has created countless jobs for people who are now on the Federal agencies pay roll. Despite publicity to the contrary, only a few straggling functions have been terminated and, so far as I know, only the Office of Censorship, among the major agencies, has gone out of business. The others have learned from their older brothers and sisters—the depression agencies and functions—the art of getting themselves, their employees, and their appropriations transferred wholly or in part to some less obvious location in some other agency.

Therefore, when you read, for example, that a war agency, like the Federal Emergency Act has been abolished, and afterward learn that, out of its 3,400 employees, 2,900, together with most of its funds, have been transferred to other departments of the Government—well, it is not just an amusing statistic.

Our standard of living depends on how much wealth we produce, and Government work, generally speaking, is not wealth-producing. Our Government workers are fed, housed, and clothed by the labor of others. If you are not a Government worker, you are helping to pay for the support of the Federal bureaucracy.

We cannot go back to the old days of root hog or die. We must care for the sick; we must keep starvation and misery from the door of the unfortunate and the helpless aged, and the worthy who have, through no fault of their own, fallen upon evil days; we must give sufficient aid in flood, famine, and calamity. But, in season and out of season, by day and by night, we must preach the doctrine that the dignity of man—the integrity of the individual—demand that he exert himself to the utmost to provide himself, to support his wife, his children, and his aged parents—and that the only thing that can be safely guaranteed to him is the opportunity to work, to earn, to save, and to become secure through his own splendid efforts. We must guarantee opportunity; the citizen must avail himself of it. Under any other way of life the Nation dies.

It cannot be denied that the Federal Government is faced with the most perplexing world problems of all time, and the manner in which it meets these obligations will determine the course of the world. It is absolutely necessary in the face of these world conditions that the United States, in assuming its position of leadership, must be invincible, domestically. It is doctrine that sound liberalism and leadership must be built upon fiscal conservation. Conditions prior to the war were sufficient to indicate the wisdom of withdrawal from the extravagancies of the Federal programs; but now our new obligations make it imperative that we abandon domestic waste and paternalism.

We must not allow ourselves to approach the tremendous international situation in the "too little too late" position in which the war overtook us. Our war allies who fought the delaying actions while we tightened our belts will be in no position to repeat their heroics in an atomic peace.

The spirit of Lincoln is alive and always will be; as long as the English language lasts his simple and majestic oratory will move the hearts of men; as long as the world strives for social justice, we will be inspired and rendered steadfast in our search for truth by the example of the man who "saved America and freed the slaves," as long as popular government stands or as long as men struggle against the insidious or open attacks of privilege or corruption, they will gain courage from the courage of Lincoln.

I venture to say there was never greater need for the example and inspiration of the living Lincoln than there is today. In his immortal Gettysburg Address he did not dwell upon the past but looked bravely to the future with the high resolve that from all the sacrifice and suffering there should be a new birth of freedom. We, too, have passed through troubles and the world is in peril. The cause of democracy and justice for which Lincoln worked and died has fallen on evil days. Can we not highly resolve that the cause of international peace, based on a spirit of sympathy and good will "shall not perish from the earth."

Let us hope that the spirit of Lincoln will move and guide the statesmen of the world in the working out of the United Nations Charter. These men can be guided by no wiser admonition than the words of Lincoln uttered many years ago—"Let us beware of military glory. It is a rainbow made of drops of blood. Like the fascination of the serpent, it charms only to destroy."

Let us then—our Republican Party—be bold, be courageous, be daring to stand for what we know is right. This Nation will know the right when it sees it, and will rally around the cause of right, of wisdom, and of integrity. Down this road, and only down this road, does victory lie—and with victory the safety and permanence and happiness and serenity of this land that we love.

Statistical Record of B'nai B'rith During World War II

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 18 (legislative day of Friday, January 18), 1946

Mr. MEAD. Mr. President, I should like to have inserted in the RECORD the statistical record of B'nai B'rith war service during World War II.

Mr. President, this great American organization made a very noteworthy record of assisting in the Nation's war effort. The many contributions it made, materially aiding the morale of our troops, furnishing many services to the armed forces, and conducting many programs, very naturally should be commended by the Senate of the United States. So I ask unanimous consent to have this statistical record included in the Appendix of the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[From the B'nai B'rith News of September 1945]

STATISTICAL RECORD OF B'NAI B'RITH WAR SERVICE DURING WORLD WAR II

On the occasion of VJ-day, marking the end of World War II, the B'nai B'rith News presents this statistical record of B'nai B'rith's contribution to the war effort. The figures are based on information published in the B'nai B'rith News since Pearl Harbor:

Thirty-one thousand two hundred and eighty members of B'nai B'rith, Aleph Zadik Aleph, BB girls and Hillel Foundation serving in Army, Navy, Marines, WAC, WAVES, and SPARS.

Five hundred members of B'nai B'rith, Aleph Zadik Aleph, BB girls and Hillel Foundations killed in action or line of duty or missing in action.

Four hundred and sixty-six members of B'nai B'rith and members and alumni of Aleph Zadik Aleph, and Hillel Foundations decorated for bravery since Pearl Harbor.

Seventy-two thousand members of B'nai B'rith, men and women, and members of AZA and Hillel have donated blood to the American Red Cross.

One thousand four hundred and ninety-five recreational facilities, including company, squad, and battalion rooms; recreation rooms; lounge, game, and cardrooms; chapels, service clubs, and recreational centers; and hospital solaria have been equipped and furnished at 394 Army, Navy, and Marine installations and hospitals in the United States, Canada, and Alaska.

Six hundred and fifty fighting ships of the Navy and gun crews of merchant-marine vessels and 28 Army and Navy hospital ships have been supplied with recreational equipment, athletic equipment, musical instruments, mechanical cows, and libraries, while 225 portable organs have been shipped to Navy and marine units throughout the world.

Six hundred and fifteen million dollars in war bonds sold by B'nai B'rith lodges, auxiliaries, BB girls and AZA chapters and Hillel Foundations in seven war loans.

Three hundred and twenty permanent war-bond and stamp booths in stores, office buildings, banks, theaters, and clubrooms manned and sponsored by B'nai B'rith lodges and auxiliaries.

Nine hundred thousand dollars contributed to the Red Cross and other war relief agencies of United Nations by B'nai B'rith's war service and emergency relief funds and by individual B'nai B'rith units.

Sixty-seven pieces of mobile equipment presented to the American Red Cross by B'nai B'rith units, including canteens, station wagons, ambulances, and blood donor units.

Two million and five hundred thousand service men and women entertained at parties, picnics, dances, shows, holiday services, hostels, dormitories, and other forms of hospitality sponsored by B'nai B'rith, AZA, Hillel, and BB Girls.

Six hundred and fifty thousand service and gift kits and packages, including 20,000 birthday gifts for returning wounded men, provided by B'nai B'rith lodges, auxiliaries, Hillel Foundations, and AZA and BB Girls units.

Two million games, books, and magazines contributed to the armed forces by B'nai B'rith groups, men and women, and youth auxiliaries.

Twenty-six million pounds of scrap metal and rubber and waste paper collected by B'nai B'rith and AZA and BB Girls salvage units.

Five million surgical dressings and 380,000 sewn and knitted garments turned out by Red Cross production units of B'nai B'rith women and girls.

One hundred and fourteen Torah scrolls furnished to Army and Navy chapels for use in Jewish religious services.

Twenty-one thousand five hundred and seventy B'nai B'rith women and girls served in 283 B'nai B'rith-sponsored Red Cross sewing, knitting, and bandage-rolling units.

Eight million seven hundred and fifty thousand packages of cigarettes contributed by B'nai B'rith groups to members of the armed forces overseas.

Forty-six thousand B'nai B'rith men, women, and members of youth auxiliaries served in civilian defense volunteer services.

One thousand five hundred members of B'nai B'rith in 35 States served in the home guard, State militia, and home defense corps.

One hundred and twenty college campuses served by Hillel Foundations with religious and recreational programs for Jewish student trainees in uniforms, while BB Youth Organization maintained youth houses for community war services.

Three hundred and fifty thousand dollars spent by B'nai B'rith's national war service fund for national war service projects.

Two hundred and fifty thousand Jewish service men and women throughout the world read B'nai B'rith National Jewish Monthly which was distributed free every month since Pearl Harbor to servicemen's libraries, chaplains, USO centers, and company day rooms.

One hundred and seventy-five thousand youth and adults received wartime job information through regional guidance counselors of B'nai B'rith Vocational Service Bureau.

Four hundred thousand copies of B'nai B'rith's wartime job journal, the Career News, distributed.

Nineteen thousand B'nai B'rith women and girls served as hostesses, chaperones, and dancing partners at servicemen's canteens, lounges and clubs.

Fifty-four servicemen's recreation huts furnished for Canadian troops by Canadian B'nai B'rith, in addition to education building and servicemen's hostels.

Three hundred and forty-two thousand United Nations troops entertained by traveling theatrical units sponsored by Canadian B'nai B'rith.

Three hundred and sixty thousand gift boxes and holiday packages for servicemen contributed by Canadian B'nai B'rith men's and women's units.

Thirteenth Annual Victory Christmas Party, Rock Hill, S. C.

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 18 (legislative day of Friday, January 18), 1946

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD the proceedings in connection with the thirteenth annual victory Christmas party sponsored by the Rock Hill Printing and Finishing Co., held at Rock Hill, S. C.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

SPEECH OF SENATOR OLIN D. JOHNSTON, OF SOUTH CAROLINA

Mr. Chairman, Governor Williams, honored guests, ladies and gentlemen, it is an honor for me to be on this program on the occasion of the thirteenth annual Rock Hill

victory Christmas party. An occasion such as this is inspiring—it makes us feel that our faith in our way of life has not been in vain.

Here today we have an industry that located in this State 16 years ago, and with steady growth has become the largest plant of its kind in the United States.

It has given steady employment to you good people of Rock Hill. It has meant much to the State of South Carolina.

This growth has come about only, however, through the cooperation of you folks who work here and the management, but that is not all—this cooperation must go further—the good town of Rock Hill must and has played its part, too.

It takes this working together all the way down the line and up the line—in the Federal Government, too, to make for the harmonious America that our fathers always meant it to be, and to that end I have pledged myself to do my part.

But above all else (as is evidenced by the presence of these 5,000 handsome little children), love of our fellow man, consideration for the other fellow's problems, his happiness and that of his family—that's what it takes above all else. What more beautiful thing can a Christmas party symbolize, but this—

It is a fine thing, and fitting, too, to pay tribute at this Christmas season to those who have sacrificed their careers and their very lives. It should make each of us stop and think and ask ourselves: "Are we going to be satisfied with just a military victory?"

Or, are we going to shoulder our part of the load of perpetuating the peace, and implementing the democratic principles for which the 26 young men of this plant gave their lives. What could possibly surpass in splendor and glory a memorial that will further the cause of peace by bringing the people of all walks of life, and of the world, together in understanding and fellowship.

Yes, your job and mine has only just begun.

I want to pay tribute, also, to the foresight of Mr. Lowenstein and his splendid organization, known to us all as the Rock Hill Printing and Finishing Co., for having made possible such a world famous event as this party. In no less degree, I doff my hat to the great citizenry of Rock Hill for so patriotically and enthusiastically cooperating year after year.

Yes, my friends, let us carry on, all of us—this great plant the thousands of people who make it work, and all the citizens of Rock Hill—by working together to build a better plant, a better Rock Hill, a better State, a better Nation, and a better world, by constantly keeping in our minds and in our hearts the truly wonderful significance of Christmas: "Peace on earth, good will toward men."

SPEECH OF ARCHIE O. JOSLIN, TOASTMASTER

Honored guests, soldiers and sailors, veterans, friends, and children, as we start the Christmas party today I am sure we all have the feeling in our hearts and souls that we are assembled together this December—December 1945—in the happiest Christmas—a victory Christmas.

Foremost in our minds is the thought that this Christmas party is a peactime celebration. We greet our friends and neighbors with a feeling of intense happiness, intermingled with a sense of relief and security, and a prayer of thanks to the Almighty in our souls for having made all this possible. We are thankful that families have been reunited. This victory Christmas will be a milestone in the lines of many children who, for the first time, truly understand and visually appreciate the significance of the word "peace." We know that these children will be the guardians of peace and of our national security for years and years to come.

In honoring you men in uniform we are paying tribute not only to you, but through you to the millions of boys who have been and are in the armed forces—who have fought so gallantly in every war theater around the globe and made possible this happy celebration. I say to you all, on behalf of the thousands who are assembled here—thanks for a job well done!

Today, our Christmas party combines the spirit of victory, with the traditional Christmas feeling of the brotherhood of man. We see it evidenced in the expressions of our honored guests, our friends, and particularly the thousands of children all assembled here, who are overjoyed with enthusiasm and thanksgiving to you boys and the host of others you represent, who have sacrificed so much for all of us back home.

During your absence, we, back here at the Rock Hill Printing & Finishing Co., and in the distributing offices of our parent company—M. Lowenstein & Sons—carried on with all the vigor we could command under difficult, man-shortage conditions. You all know, I am certain, the variety of war-essential items we produced during the global conflict, such as airplane cloth, camouflage cloth, uniform cloth, cartridge cloth, gas-mask fabrics, tent duck, raincoats, and other fabrics so necessary for the war effort.

You boys have undoubtedly come in contact with most of these products in the various war theaters around the world. Of course, we made the goods as did all American industry, that the Government required, but what was even more important, we delivered them on time; our products were referred to as weapons of war, and well named, because they, the weapons, contributed their share efficiently, though silently, in the air, on the land, and on the sea.

Soon after some of you left, back in December 1941, it was the policy of our company to go all out for the war effort. The extent of our efforts and all-out policy has been emphasized in acknowledgment and tributes that we have received from time to time from the different branches of our Government. We did not stop with official commendations. Having you men of the armed forces in mind, we thought it also most important that we maintain the proper morale back here at home. We realized that you fellows, scattered throughout the world, could do a better job if you knew that your own folks and children back home were being taken care of. Let me assure you now, we did not let you down..

During the last 4 years, while you were away, there was no interruption of the normal things that the bleachery has always been known to do. For example:

No. 1. Maintaining a proper relationship with our employees. This relationship has been on the highest possible level, a relationship that I know all Americans can be truly proud of. I know it will always continue to remain so. There is nothing remarkable in such a statement. It just resolves itself into the simple fact of consideration and respect for one another's rights as human beings. In short, live and let live. May this spirit of good will continue for decades to come.

No. 2. We continued this glorious Christmas party each year, when your children have each received 8 or 10 gifts, in that same old Christmas spirit. Christmas continued with them as usual, in spite of their daddies being far, far away.

No. 3. We have expanded our plant; our parent company. Mr. Lowenstein & Sons has increased its distribution, and we are continuing to grow, having in mind the one essential fact, that when you boys returned there would be jobs open and opportunities available for you, as well as for those who have worked in your place during your absence.

No. 4 The Rock Hill Printing & Finishing Co., and I may add the town of Rock Hill as well as the State of South Carolina, play a major part in contributing to the welfare of the country as a whole. If we pause and consider the importance of our enterprize, in relation to the well-being of this city, numerous communities, the State and Nation, we can then fully appreciate the responsibility which rests upon all connected with our plant.

No. 5. We have continued to maintain the same standards of character in the bleachery as you remembered it before you left for the service.

I say to you fellows, in the presence of this great gathering—I am happy to welcome you home. We are greatly indebted to each and every one of you for a job which you undertook and which you carried out in the tradition and spirit of the founders of this great Nation.

SPEECH OF CONGRESSMAN J. P. RICHARDS, OF SOUTH CAROLINA

Mr. Chairman, Governor Williams, Senator Johnston, General Dozier, guests, ladies, and gentlemen, as the Representative of the Fifth District of South Carolina in the Congress of the United States, it is my proud privilege to be on this platform today to pay homage to the 180 young men from Rock Hill on the occasion of the thirteenth annual victory Christmas party sponsored by the Rock Hill Printing & Finishing Co.

I have naturally watched with keen interest over these past dozen years the growth of this Christmas party, born 13 years ago in the mind of Mr. Leon Lowenstein; have seen it mushroom from a vague idea to a Nation-wide event that has made Rock Hill, S. C., a mecca for Christmas pilgrims throughout the Nation. That such a party should have been designed for such a beautiful holiday as Christmas is somehow fitting for the city of Rock Hill and for the State of South Carolina. That the thirteenth Christmas party, and the largest, should have been held in conjunction with a special tribute to 180 former employees of this company is the final touch of esteem that could have blessed such an event.

I am proud to be the Congressman of a district that contains within its confines a city like Rock Hill, which could give rise to an idea and to an event such as this Christmas party. As I look about me, it seems to me there is a very symbolic and significant sign—the employees and citizens of this community representing one generation, the returning young servicemen representing another, and the thousands of young children, our leaders of tomorrow. I think it is fitting and proper that on a holiday such as this, celebrating peace on earth and good will to men, that all these fine young children should see their daddies and older brothers back home again, once more within a generation having made the world safe for their democracy and their future.

I want to especially pay tribute to Mr. Joslin, and through him to Mr. Lowenstein, and the other executives of the Rock Hill Printing & Finishing Co., for having established America's finest Christmas event in our own beloved city of Rock Hill.

I thank you all.

SPEECH OF ADJ. GEN. JAMES DOZIER

Mr. Chairman, Governor Williams, Senator JOHNSTON, Congressman RICHARDS, guests, and ladies and gentlemen; this is, in my opinion, the highest tribute that could have been paid to me as commander of the South Carolina National Guard—the awarding of these Victory bonds to the 180 returned servicemen, representing the cream of Rock Hill's young manhood, all of whom are employees of the Rock Hill Printing & Finishing Co. The record of these boys in the armed forces of our country is something that needs no laudatory remarks from me or anyone else, for their deeds on behalf of our country are today a matter of official record.

I know that the fighting men of these 48 States of ours have been of the highest cal-

iber among all military armies of the Allied Powers, but there isn't the slightest doubt in my mind that there is no par among the fighting men to equal the exemplary courage and fortitude under fire displayed by these fighting lads from Rock Hill.

Before progressing any further, I want to tell you about 26 young men from Rock Hill who are not with us today in body, but will always be with us in spirit. These boys—all former employees of this plant—died in the service of their country. Their names, my friends, are: H N. Barnes; Charles Blair; Eugene R. Cowan; Marion Clark; Francis H. Campbell; Wm. L. Dixon, Jr.; John K. Dorsett; McNeill Epps; David Edwards; Robert L. Edwards; Charles Ford: Coley B. Gibson; M. F. Gordon; Hazel Hough; Thomas Hart; John Lock; Calvin P. Lockridge; J. N. Mitchell; William McKibben; Blain W. Robbins; D. L. Roddey; W. H Rodgers; M. A. Stewart; John Gwin Smith; Charles Warmouth, Sr.; Lewis Williams

I realize how futile any gesture can be to assuage the grief of our people in Rock Hill who knew and loved these 26 boys, but the realization that their efforts were not in vain, that the sacrifice of their lives brought a great victory, should in some small measure compensate us and them for this overwhelming loss.

In my opinion the city of Rock Hill and the Rock Hill Printing & Finishing Co. stand in a unique spot in the United States today. Of approximately 2,200 employees, over 1,300 have served in the armed forces. This ladies and gentlemen, represents over 50 percent of all the employees of an organization the size and importance of this plant.

I am not a statistician, nor an economist, but I am willing to wager everything I own that there isn't another town or city, and certainly not another single industry in the United States that can equal this record.

When I saw these 180 young men, representing the latest group of employees to return from the armed services, march to the grandstand, I felt a justifiable pride in the knowledge that these young men were born and bred right here in Rock Hill, S. C.

Before presenting the Victory bonds to these young men, on behalf of the Rock Hill Printing & Finishing Co., I do sincerely take this opportunity of paying my respect to an organization whose feet are planted in the very soil of American patriotism, exemplified by this beautiful gesture heretoday in the form of the thirteenth annual victory Christmas party, and as evidenced by the awards for these returned service men.

SPEECH OF GOVERNOR WILLIAMS OF SOUTH CAROLINA

Mr. Joslin, Senator Johnston, Congressman Richards, General Dozier, Mayor Carothers, veterans and other distinguished guests, ladies and gentlemen, I feel that this occasion is a very important one in the history of Rock Hill and for the entire State of South Carolina, because this thirteenth anniversary of the annual Christmas party—this year the victory Christmas party—has reached national proportions to such an extent that it is now favorably compared to such well publicized events as the Easter Sunday Mass in Pasadena's Rose Bowl. To me the remarkable thing is that this great pageant, as you may call it today, was originated in a town the size of Rock Hill, and that the germ for this tremendous and wonderful celebration was born in the mind of one man 13 years ago. I think we all know that the creative genius behind this idea was Mr. Leon Lowenstein, whom all of you know as the president of the Rock Hill Printing and Publishing Co. of this city, the cosponsor, together with the city of Rock Hill, of this Christmas party.

To me, this seems to symbolize something more than just a Christmas party, especially in these days of international chaos and political mistrust among nations generally, in days where—thank God not in South Carolina—we hear of industrial unrest, of bitter class struggles in—mind you—a dangerous atomic era, of other disturbances on the ordinarily calm surfaces of American life. All these, I say to you, are somehow minimized in my mind, as despite their potential explosive possibilities, I look at what ordnarily might be considered as only a Christmas party.

As the Governor of this great State, I realize that this party is not just a Christmas party but is symbolic of a great effort on the part of a splendid American industrial organization to display a magnanimity, a humanness toward its neighbors, employees particularly, and to industry and labor generally. To me, this Christmas party symbolizes the most forward step ever taken to assure the American people of higher standards of employee-employer relationship, and, despite my high office, I am proud to take my hat off to men like Mr. Lowenstein, Mr. Joslin, and other thousands of men and women who sincerely and enthusiastically represent the company and city that are sponsoring this annual party.

When I look around on this grandstand and see such men as Senator Johnston, Congressman Richards, General Dozier, Mayor Carothers, Mr. Joslin, and other leaders in industry and statesmanship in our State and country, I feel a justifiable pride in the knowledge that this city and this State of ours should have been chosen as the locale for so significant and beautiful an event.

And to the servicemen who have just paraded on toward this grandstand, and who—I understand—are all employees of this plant, I want to extend the sincere welcome and convey the appreciation of the people of this great State for the role they played during the recent global conflict. I am just as proud to see you back in your home town, back at your prewar positions, as are the people of this community and the executives of this plant.

I want to take this opportunity of congratulating the executives of the Rock Hill Printing & Finishing Co. and all the thousands of men and women who constitute its personnel and the mayor and citizens of the city of Rock Hill, S. C., for having made this annual Christmas party possible.

I thank you.

Tribute to Albert Goldman, Postmaster of New York City

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, February 18 (legislative day of Friday, January 18), 1946

Mr. MEAD. Mr. President, on February 9 I attended a testimonial dinner to Hon. Albert Goldman, postmaster of New York City, tendered to him by the Association of Postal Supervisors.

Mr. President, the title "A. P. O., care Postmaster, New York," has become a legend with our troops all over the world. Because of the magnificent performance of the postmaster and the New York post office, I ask unanimous consent to have inserted in the RECORD a greeting and testimonial to him by the postal supervisors, a letter from the Secretary of War, another from the Secretary of the Navy, another from the admiral in charge of the Coast Guard, as well as the statement which I made at the dinner on the occasion to which I have referred.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

TESTIMONIAL TO THE HONORABLE ALBERT GOLDMAN, POSTMASTER, NEW YORK, N. Y., ON THE OCCASION OF THE DINNER TENDERED TO HIM BY THE ASSOCIATION OF POSTAL SUPERVISORS, BRANCH 100, NEW YORK, N. Y., AND HIS FRIENDS, AT THE HOTEL ASTOR, ON FEBRUARY 9, 1945

Whereas by the grace of Almighty God, the combined might of military, naval, and industrial forces of the United States and her Allies has resulted in the cessation of hostilities and brought World War II to a victorious conclusion; and

Whereas in fighting this global war, the Honorable Albert Goldman, as postmaster of the New York, N. Y., post office, maintained a highly efficient postal service despite the many difficulties due to the war, taking into consideration also the greatest increase in quantity of mail handled and postal receipts in the history of the New York, N. Y., post office; and

Whereas it was the responsibility of Postmaster Albert Goldman to supervise the handling of unprecedented volumes of mail for our troops overseas; to maintain constant liaison, much of which was of a highly secret and confidential nature, with officers of the Army and Navy, the Post Office inspection service, the Federal Bureau of Investigation, the United States merchant marine, the District Postal Censorship, the Foreign Economic Administration, and other Government and civil agencies, as well as arranging for the dispatch of international mails; and

Whereas the handling of the mail constituted a close tie between the people of the United States and the military personnel, as well as with people in foreign countries, and so helped considerably to maintain the high morale of our fighting forces; and

Whereas Postmaster Albert Goldman has shown his constant interest in the welfare of the employees of the New York Post Office, as well as demonstrating his ability as a civic leader and public servant; and

Whereas Postmaster Albert Goldman has displayed exceptional executive and organizational ability marked by outstanding leadership, initiative, resourcefulness, untiring energy and fidelity and devotion to duty: Be it

Resolved, That the Association of Postal Supervisors, Branch 100, New York, N. Y., records its appreciation to Hon. Albert Goldman, for his interest in our membership and for his outstanding meritorious services to the armed forces of the United States and to the people of the city of New York; and be it further

Resolved, That this testimonial be suitably engrossed and presented to the Honorable Albert Goldman, postmaster.

JOHN J. GILLEN,
President.

HENRY J. WEGENER,
Recording Secretary.

GREETINGS

The Postal Supervisors of New York, N. Y., cordially welcome the official family of the Postmaster General of the United States, the Honorable Robert E. Hannegan; the Honorable JAMES M. MEAD, United States Senator, and friend of postal employees everywhere;

Members of Congress; representatives of our State, county, and municipal governments; postmasters and other distinguished guests; fellow employees; members and friends; to this testimonial dinner to the Honorable Albert Goldman, postmaster of New York, N. Y., whose efficient administration, devoted public service and abiding civic consciousness are a source of pride and admiration to his fellow citizens and to us, his associates of the New York post office.

We are happy to have you with us, and trust you will find the evening a most enjoyable one.

JOHN J. GILLEN, *President.*

WAR DEPARTMENT,
Washington, December 21, 1945.

Hon. ALBERT GOLDMAN,
Postmaster, New York, N. Y.

DEAR MR. GOLDMAN: You now have successfully discharged the major responsibilities involved in handling the unprecedented volume of mail for troops overseas. I wish, therefore, to express to you the appreciation of the War Department for the efficient and expeditious manner in which this task was accomplished. The unstinting service and cooperation rendered by the New York Post Office under your diligent and conscientious direction was of inestimable value in maintaining high morale of troops overseas, and you may feel justly proud of this notable contribution to victory.

The devotion of your supervisors and employees to the postal service's traditional ideals of superior service has been noteworthy, and I shall be pleased if you will convey to them the appreciation of the War Department for their assistance in making possible this outstanding accomplishment.

Sincerely yours,

ROBERT P. PATTERSON,
Secretary of War.

THE SECRETARY OF THE NAVY,
Washington, January 14, 1946.

Mr. ALBERT GOLDMAN,
Postmaster, New York, N. Y.

MY DEAR MR. GOLDMAN: Now that our country is once again at peace, we of the services have the opportunity to view retrospectively a number of the factors which contributed so greatly to our final victory. One of the more important factors was the delivery of mail to our fighting men and the consequent effect it had in maintaining a high level of morale.

The generous and willing cooperation as well as the professional counsel given by the New York post office proved helpful to the Navy in expediting the handling of mail for our men overseas.

I, therefore, wish to take this opportunity to convey to you and the employees of the New York Post Office the Navy's sincere appreciation for a job—well done.

Sincerely yours,

JAMES FORRESTAL.

UNITED STATES COAST GUARD,
Washington, D. C., January 7, 1946.

Mr. ALBERT GOLDMAN,
Postmaster, New York, N. Y.

DEAR MR. GOLDMAN: Now that the major portion of the distribution of the mail to the members of the armed forces has been completed, we think it is fitting that official notice of the excellent service you have rendered be taken by the United States Coast Guard.

The steady flow of mail to the members of the Coast Guard was always a vital factor in the maintenance of morale and consequently in the winning of the war. The unselfish cooperation and untiring efforts of the staff of the United States post office in New York has contributed in large measure to that end. Under your guidance and enthusiastic leadership, your post office may well feel proud of the record you compiled.

It is hoped that you will convey the appreciation of the United States Coast Guard to all the supervisors and other employees of your staff for a war service discharged with distinction.

Sincerely yours,

J. F. FARLEY,
Admiral, USCG, Commandant.

ADDRESS OF HON. JAMES M. MEAD OF NEW YORK, AT POSTAL SUPERVISORS OF NEW YORK AT TESTIMONIAL DINNER DANCE TENDERED TO ALBERT GOLDMAN, POSTMASTER, AT THE HOTEL ASTOR.

The past 4 years were perhaps the most trying in the history of the Republic. We recruited the biggest Army and Navy the world has every known and the youth of our country went to the four corners of the globe. The strain placed upon the postal service was in keeping with the monumental task of defending our freedom.

The only tie that bound the families to their loved ones was the United States postal service. This undertaking, your Postmaster Al Goldman and his staff at the New York Post Office, carried out the tradition for speedy carriage of the mails under any and all circumstances. To you, Mr. Postmaster, and to all of the postal workers assembled here this evening, I wish to add my word of congratulations and grateful thanks for the splendid job which you have accomplished. To you men who handled the millions of pieces of mail daily, figures, as to volume of business, become a matter of fact. Nevertheless, would be remiss if I were not to mention the highlights of the strain placed upon the New York office.

The peak load was reached last fall during the period September 15 to November 15 when more than 48,000,000 Christmas parcels were distributed and in almost 3,000,000 sacks, with each sack labeled to a respective Army unit and then turned over to the Army for dispatch overseas.

These Christmas parcels carried with them the love and affection of the relatives and friends at home and brought the Christmas spirit to the front lines in Europe, in the Pacific, to the lonely outposts wherever our gallant men were daily braving the dangers of the terrible conflict.

Last Christmas, as in each preceding year, that took our men from their firesides, the United States Post Office Department made it just a bit easier for all those who were separated from home and country.

Of course, in addition to handling Christmas packages there was a steady stream of incoming and outgoing mail through the New York Post Office that welded the home front to the battle front—airmail letters, ordinary letters, and V-mail letters. The month of March 1945 the average number of letters distributed daily at the New York Post Office for the Army overseas was nearly 2,500,000 airmail letters, 1,250,000 ordinary letters, and over 600,000 V-mail letters. This was in addition to 250,000 parcels and more than 1,000,000 newspapers and other prints which were being handled daily.

The incoming business to be handled likewise was tremendous with an average of over 1,500,000 pieces being received at New York each week via steamers; 500,000 airmail letters every day via Army bombers, and processed V-mail letters averaged 500,000 a day.

In addition to all other duties, the postmaster at New York had the responsibility of seeing to it that operating supplies were provided for the APO's within the district. Nor must we forget that 4,000 naval postoffice units located on warships, large and small, and the naval installations in all parts of the world were assigned to the New York Post Office.

Another field peculiar to the function of the postal service during the war was the censorship operations handled in the New York Post Office under Postmaster Goldman and, of course, the registration of aliens prior to our entry into the war and the alien registration function necessitated after our entry into the war required much detailed work.

The South Holds the Balance of Power

EXTENSION OF REMARKS
OF
HON. THEODORE G. BILBO
OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, February 18 (legislative day of Friday, January 18), 1946

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and thought-provoking article by the Honorable Thurman Sensing, director of research of the Southern States Industrial Council, at Nashville, Tenn.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOWN SOUTH

(By Thurman Sensing, director of research, Southern States Industrial Council, Nashville, Tenn.)

THE SOUTH HOLDS THE BALANCE OF POWER

The successful fight just concluded by the Senators of the South against the passage of a bill establishing a permanent FEPC illustrates most dramatically the fact that the South must look out for its own interests, that no one else will do it for them. It demonstrates beyond question that the South is a region with problems distinctively its own and that these problems can only be settled by united action on the part of the people of the South and their representatives in the Halls of Congress.

As a matter of fact, it would appear to be the destiny of the South to hold in its hands the responsibility for preserving those principles of government which have made this country great and have brought its people the highest standard of living the world has ever known. Powerful and well-organized forces now exist in this country directly opposed to these time-honored principles. These forces have studied the political control of this Nation and have centered their efforts on those particular spots or those particular groups which seem to hold the balance of power in elections. These spots have been the heavily populated urban areas and these groups have been the minorities which can be influenced to act as units. This method has worked and will continue to work unless a large segment of our general population can also work together as a unit in counteracting it.

The method referred to, however, has been predicated on the assumption that the South as a region always votes one way. In other words, here is a great region of the land comprising one-third the Nation's area and containing one-third the Nation's people that can be counted upon to throw its entire strength to one party regardless of any other considerations involved. Therefore, in order to control this party and accordingly control the Nation, all these forces needed to do was to organize their followers in the densely populated cities and among the minority groups outside the South so that their vote alone would enable this party to stay in power. This gave them the balance of power and control of the party.

They can hold the balance of power only so long, however, as the South permits them to hold it. That the South itself can easily hold the balance of power in this country should be readily apparent to any thinking person. The marginal balance of power outside the South is a very slender one indeed and should the South at any time decide to throw its strength against this slender margin, it can very quickly "upset the apple cart."

This brings us right back to the successful fight of the Southern Senators against the establishment of a permanent FEPC. This battle was not fought upon party lines. The measure was introduced by a Democratic Senator outside the South and yet its passage was defeated by a group of Democratic Senators within the South. It was defeated because these Senators could see that the attempt to establish a permanent FEPC was simply part of the larger scheme of those who thought they held the balance of power to undermine the principles on which this Government was founded, to replace individual freedom with bureaucracy, to supplant constitutional democracy with State socialism or communism. It was defeated because these Southern Senators were statesmen before they were politicians, because they placed the welfare of the Nation above the welfare of their party.

Not without reason has it been said many times lately that the South represents the greatest remaining stronghold of true Americanism in this land. It will be to the eternal credit of the South if its people and their representatives in Congress shall use their unquestionable balance of power to retain for the whole Nation those things for which so many of our people have fought and died throughout our history—the American way of life.

St. Lawrence Seaway Project

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, February 18 (legislative day of Friday, January 18), 1946

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a newspaper article entitled "Hearings Open on St. Lawrence Seaway Project," published in the Washington Post of today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HEARINGS OPEN ON ST. LAWRENCE SEAWAY PROJECT

A Senate Foreign Relations subcommittee today starts hearings on the controversial United States-Canadian St. Lawrence seaway and power agreement which the Government estimates would cost this Nation about 200 million dollars.

The project, advocated by four Presidents, has the support of Under Secretary of State Dean Acheson who has been called to testify. It is opposed by the railroads and public utilities on grounds that it would hurt private business.

The agreement negotiated by the late President Roosevelt before Pearl Harbor, would open 2,700 miles of inland waterways and the heart of the continent to oceangoing ships. It calls for a channel depth of at least 27 feet from the coast to Duluth, Minn., and dredging of about 258 miles. It will provide more electric power than the entire TVA system.

The Senate defeated the project when it was presented in treaty form in 1934. The Pearl Harbor attack ended House hearings on a revised agreement and the Seventy-eighth Congress defeated it when it appeared as an amendment to the rivers and harbors bill.

The project has been backed by Presidents Coolidge, Hoover, and Roosevelt and President Truman has termed it "one of the great projects of the world."

The FEPC

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, February 18 (legislative day of Friday, January 18), 1946

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "A Service by Senators From the South to All the People." The editorial was written by a former Member of this body.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A SERVICE BY SENATORS FROM THE SOUTH TO ALL THE PEOPLE

(By Roger C. Peace)

In a world just emerging from 5 years of savage and brutal warfare—in a country, the United States, where great decisions are to be made concerning the peace of the world—it seems a shame that the whole business of the United States Senate should be stalemated for better than 3 weeks to discuss a bill known as the Fair Employment Practice Act.

Yet that has taken place and the public has wondered why. Unfortunately, too few people except those directly interested have troubled to inform themselves about this strange manifestation of democracy. The issues have been so confused that very little information about the vital phases of the bill have been disseminated.

Outwardly it has been made to appear that a majority of the Members of the Senate are intent upon giving all persons in the United States an equality of opportunity in the matter of employment; that a handful of reactionary southern Senators, hopelessly outclassed in voting power, have engaged in a filibuster to prevent a vote on the bill; that the only way to stop them was to invoke cloture, which requires a two-thirds vote the majority was unable to summon. There is much more to the case than that.

To understand the law, the philosophy, and the politics behind the FEPC should cause intelligent Americans to be everlastingly grateful to the southern Senators who have set up a barrier against this heinous legislation. For although the legislation is aimed directly at the South, its enactment would cause chaos and injustice throughout the land that would resound for generations.

The FEPC was set up by President Roosevelt in the early months of the war in response to pleas of pressure groups that certain minorities—notably Negroes, Jews, and Mexicans—were being denied jobs in war industries. The theory behind this Executive order (it never had legislative sanction, nor required it) was that the sinews of all our people were needed to bring the war to the earliest possible conclusion. But, as so often happens, it was an entering wedge that the minority groups were hell-bent to preserve when the war ended.

The administration of the FEPC under Executive order was not notable. For one thing, more than 50 percent of its employees were Negroes, although only 9 percent of our population is colored. Nor did the experience disclose widespread discrimination evils in the South, even though that was the main purpose. Only 10 percent of the cases examined originated in the South.

Senator RUSSELL, of Georgia, was the first to call national attention to the maladministration of the Commission when he sought to eliminate all funds for its support. That was before the end of the war. He did not entirely succeed, but a series of compromises resulted in whittling appropriations to a minimum.

The pressure groups got busy when Congress reconvened and had some bright boy polish up a piece of legislation to be known as Senate bill 101. With the support of the Republican National Convention endorsing a permanent FEPC, this bill was thrown into the hopper and is the cause of the present uproar.

In the meanwhile, during the past 2 years, the pressure groups have gone into 20 States and tried to have enacted fair employment bills. Of course, none of these States were in the South, because they did not believe they had a chance here. They were all in the North and West. And with what results? Eighteen States turned them down. Only two—New York and New Jersey—produced any kind of fair-employment legislation, both of which measures are as milquetoast compared to the severe bill introduced in the Senate.

So the pressure groups have come knocking at the door of Congress, asking it to pass legislation that is nauseating and distasteful to a majority of the people of the United States, if their own State legislatures are representative.

The leading sponsor of the bill is Senator DENNIS CHAVEZ, of New Mexico, an able and idealistic legislator. Himself of Spanish descent, a large number of the people of his State are American citizens of Mexican lineage. He is vehement that many of them should be denied employment because of that ancestry. The way to cure that situation, if it can be cured, is by the people of New Mexico. Yet when a bill to that effect was introduced in the legislature of the State, it died in committee. Evidently the proponents could not muster enough strength to have it brought to the floor.

And so with most of the other States where such legislation has been tried. There has been no indication whatever that the American people, other than the minority groups that maintain active and aggressive lobbies in Washington, have made any outcry for laws to outlaw discrimination in the matter of employment. Of course, fair and intelligent people deplore conditions where men and women are denied jobs because of the color of their skin, the origin of their race, or the kind of religion they practice. They acknowledge, however, that the millennium, wherein such will not exist, cannot be produced by the force of legislation.

It is unfortunate but true that in national politics the Negro holds approximately the balance of power. In such States as New York, New Jersey, Illinois, and Michigan, the Negro's vote is numerically small, but as a bloc it is often the dividing point between success and failure for the major parties. Hence the competition between leaders of the parties to outdo each other in the wooing of the colored vote. That is why the Negro exercises such a tremendous political power outside the South. That is why the Negro associations, aided and abetted by other minorities that wield similar political strength, are able to get such legislation as the proposed FEPC before Congress. That is one salient reason why Senators from sections outside the South, both Democrats

and Republicans, fall all over each other trying to get the bill passed.

The politicians of these other sections have not forgotten that President Roosevelt could have been reelected last time if he had not received a single electoral vote from the South. To them the South is no longer a political power, not even to the northern Democrats, although the South held the Democratic Party together for more than 50 years. Without the South the party would have gone with the wind a long time ago. So that, when Negro associations come to them with legislation such as S. 101, hoping to embarrass and humble the white man of the South, the northern Democrats and Republicans rise up almost solidly to do their bidding, hoping it will help them and their party in the North, meanwhile reposing in the belief that the South doesn't amount to a tinker's dam, politically anyhow.

Then when a group of southern Senators try to stop this outrageous maneuver by taking advantage of unlimited debate, the proponents shout persecution and make an effort to invoke cloture. It is only natural the southern Senators should take advantage of every parliamentary device that is to their advantage. Senator CHAVEZ tried it first when he sprung the bill on the Senate without advance notice. The southerners were quick on the trigger, moving to correct the Journal as of January 17. Technically there has been no debate on the FEPC, but a daily correction of the Journal. In that way the southerners have circumvented cloture which is just another name for the limitation of debate. Senator MCKELLAR, the President of the Senate, ruled that a petition for cloture was out of order because there was no pending legislation before the body.

Actually it is, of course, a filibuster and though generally speaking there is much to be said against that practice, no recourse was left to the southern Senators unless they were willing to have rammed down their throats another "force bill" of the type that came along during the days of reconstruction.

In the press reports of this legislative battle, little attention has been given the elements of the bill itself. It has a sweet-smelling title, "Fair Employment Practice," but just what is involved in the act? Not given to extravagant statement on any occasion, Senator CLYDE HOEY, of North Carolina, has rendered perhaps the best summary of the proposed legislation. This is his analysis of it:

First. It denies to any person who employs as many as six people the right to select his own employees. (That is, he must select them without regard to race, creed, color, nationality of origin, or ancestry).

Second. It prevents him from discharging an employee if he is not satisfactory. (In other words, he cannot discharge them for any of the above reasons.)

Third. It sets up a commission of five in Washington to have charge of the employers of the Nation, individuals and corporations.

Fourth. It provides this Commission with an army of investigators to send over the Nation to work up charges against employers upon any complaints.

Fifth. It gives these investigators the right to enter a person's place of business and examine his books and papers without process from any court, in an effort to get evidence upon which to bring charges against him.

Sixth. It forces a man to give evidence against himself, depriving him of his constitutional rights.

Seventh. It provides for an examiner to hear evidence and send the record off to Washington where a decision can be rendered against him in absentia.

Eighth. It denies him any right of appeal from findings of fact against him.

Ninth. It denies him a trial of his case by a jury or before a judge of any court.

Tenth. The Commission can order the employer to hire anybody that it names and make him pay back wages for having refused to hire him in the first place, and it can assess fines and penalties against the employer and have him placed in jail if he refuses to obey orders.

Eleventh. It can have the employer brought into the United States circuit court, hundreds of miles from his home and place of business, to have its orders put into effect, and when he gets there, the court cannot overrule the Commission's findings if there is any evidence to support them, however flimsy the court may find the evidence to be.

Twelfth. It provides a fine of $5,000 and 1 year in prison for any person who hinders or interferes with the Commission or any of its agencies in any of its works.

These are the elementary principles of the bill, and, reading them, everyone should applaud the heroic stand the Southern Senators have made against letting this kind of legislation become the law of the land. Even some of the proponents of the bill have admitted that the bill is too severe and should be amended. But they could of course give no guaranty that their colleagues would be of such like mind as to give majority consent.

Small wonder, then, that the bill has been renamed, "Unfair Employment Practice Commission," by some who see the truth that it is the very opposite of what it purports to be.

Lincoln

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 18 (legislative day of Friday, January 18), 1946

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Lincoln," published in the Bismarck (N. Dak.) Leader of February 14, 1946. I call the editorial particularly to the attention of the Republicans on this side of the Chamber. The newspaper in which the editorial was printed is a cooperative newspaper owned by approximately 400 farmers in North Dakota.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LINCOLN

This week was the birthday of the Great Emancipator, Abraham Lincoln. Abe was a man of the common people. Yet no man in our history was more maligned and persecuted than was he. One has but to look through the press of his day in the archives at the National Capital to learn that which history does not teach. He was attacked alike by the arrogant industrial class of the North as well as the slave-holding aristocracy of the South. There was no Mason and Dixon's line when wealth was concerned. Neither was there any line drawn when the so-called Cliveden set of England conspired with the Nazis of Germany at Munich.

Yet Lincoln was of the common people. He understood them and they understood him. During all the disappointments and disillusionment of the Civil War, he remained grounded in his implicit faith in the common man. Had he lived there would not have been the carpetbaggers and the crimes committed on the South by the Reconstructionists of his own party. The Nation today is still paying the price of that travesty on justice forced upon the South by those who only saw in victory an opportunity for loot and pillage.

There is a great lesson in that period of our history as it applies to conditions of today if we will but read history.

There is also a lesson for the Republican Party of today if this party is to continue to live and exert an influence upon the Nation. This week the Republican Party holds its Lincoln Day programs. Would that the leaders of the party would spend a few hours reading the speeches and the opinions of the Great Emancipator. For the Republican Party was born of the common people and it will again attain leadership in the Nation only if it is returned to the common people.

The British Loan

EXTENSION OF REMARKS
OF
HON. BURTON K. WHEELER
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, February 18 (legislative day of Friday, January 18), 1946

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the RECORD a discussion on the British loan participated in by the Senator from Colorado [Mr. JOHNSON], Mr. Sterling Fisher, and myself. The proceedings were under the auspices of the NBC network broadcast on Our Foreign Policy.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

Subject: The British Loan: II.

Participants:

1. Senator BURTON K. WHEELER, Democrat, of Montana, chairman of the Interstate Commerce Committee.

2. Senator EDWIN C. JOHNSON, Democrat, of Colorado, member of the Finance and Interstate Commerce Committees.

3. Sterling Fisher, director of the NBC University of the Air.

ANNOUNCER. Here are headlines from Capitol Hill in Washington:

Senator WHEELER says some State Department officials seem to be more interested in welfare of other countries than in welfare of the United States; claims proposed British loan should be considered a gift, not a loan; says if vote were taken in Congress today, loan would be defeated.

Senator JOHNSON advocates financing loan to Britain through private sources in America; says proposed British loan would be precedent for applications for loans from other countries, which our Government could not deny.

ANNOUNCER. This is the fifty-third in a series of broadcasts entitled "Our Foreign Policy," presented by the NBC University of the Air. This time, in response to a request and in accordance with our practice of presenting both sides of controversial questions, we present a discussion of the British loan by Senator BURTON K. WHEELER, of Montana, chairman of the Senate Interstate Commerce Committee, and Senator EDWIN C. JOHNSON, of Colorado, a member of the Finance and Military Affairs Committees. Sterling Fisher, director of the NBC University of the Air, will be chairman of the discussion. Mr. Fisher.

Mr. FISHER. Five weeks ago, Secretary of the Treasury Fred Vinson and Under Secretary of State Dean Acheson presented the case for the proposed loan to Great Britain on this program. Since this is a controversial issue, we are glad at this time to present the views of two United States Senators who oppose the British loan. On that previous broadcast, we brought up the principle

arguments against the loan, for Mr. Vinson and Mr. Acheson to answer. This time we shall reverse the procedure, and bring up the principal arguments for the loan, for Senators WHEELER and JOHNSON to answer

But before we get into that, let's restate the terms of the loan agreement itself. Last December, after prolonged negotiations, American and British officials reached agreement on a proposal involving the settlement of Britain's lend-lease for the sum of $650,000,000, and a loan or line of credit to Great Britain of $3,750,000,000—making a total of $4,400,000,000. The British agree to pay back this amount plus 2 percent interest, over a 50-year period starting 5 years from now. The loan is supposed to help Britain restore her commerce and industry to peacetime levels. In return, the British agree to lower trade barriers in the areas they control, in the interests of increased world trade. Is that a fair summary of the agreement we are discussing, Senator WHEELER?

Senator WHEELER. There are several points that are open to question, as you have stated them, Mr. Fisher. On this matter of the interest rate—the British themselves have stated that the rate is only 1.8 percent. That takes into consideration that the loan will be free of interest for the first 5 years. And the interest rate could average as low as 1.62 percent, if the British were to draw the full amount of the loan immediately after its passage.

Mr. FISHER. You'd like to see our officials get together with the British on this point?

Senator WHEELER. Yes; and there is another aspect of this interest rate that we should not overlook. Under the proposal, England will begin to pay interest at 2 percent, but only if she is able to do so. We have agreed that if British gold reserves are low, if the conditions of international exchange are bad, and if British income from foreign trade is below certain standards, the interest payment will not merely be deferred or postponed, but will be forgiven, wiped off the books. How would American veterans like to borrow money for homes, for farms, for businesses, at such rates?

Senator JOHNSON. I have a good many letters from veterans, and this is what they say: "In the GI bill of rights you charge veterans 4 percent. Then you loan money to Britain at 2 percent or less. Why not treat the American veterans as well as you treat the British?"

Mr. FISHER. The veterans have a good point there, Senator JOHNSON.

Senator JOHNSON. In presenting the proposal for a British loan, the State Department and the Treasury have not been frank with the Congress and the country. Mr. Vinson makes the bold statement that the British loan "is in no way a precedent for other loans," and yet every American schoolboy should know that almost every European and Asiatic nation wants a similar loan, and that the British loan will, and must, set the pattern for all of these loans. It is my opinion that our State and Treasury officials who are now planning huge loans to all the world are using the British loan to start an avalanche of foreign loans. It is the foot in the door, the camel's nose in the tent. The British loan is indeed a precedent, a mighty bad precedent.

Mr. FISHER. On that point, the argument was made in the other broadcast that the British are in a unique position with regard to world trade. That is, their world trade is much more important than that of Russia, France, or any of the other countries, and so the British loan would not be a precedent for other large loans. Senator WHEELER, would you comment on that?

Senator WHEELER. Of course, I appreciate that the world trade of Great Britain is very important, but I don't think for one moment that a loan of $3,000,000,000 or $4,000,000,000 is necessarily going to put Britain on a sound economic basis.

Senator JOHNSON. I don't know what the balance of trade running against Britain is at the present time, but I imagine that what Britain needs is an injection into her economy of about a billion dollars a year from now on.

Mr. FISHER. But I take it, Senator JOHNSON, that you don't advocate such an injection.

Senator JOHNSON. Not out of our Treasury; no. Britain's problem is chronic. Loans are adapted to overcoming temporary difficulty, but here you are dealing with a fundamental problem which will last as long as there is an England and may even grow worse. The new techniques of trading and banking have left Britain high and dry.

Mr. FISHER. How would you handle applications for loans such as the British have made?

Senator JOHNSON. Applications for loans from all nations should be considered by us at one time. To grant a loan to one nation and deny it to another is very serious business which would involve us in a bitter international crisis. We would deserve to be universally despised if we played favorites. This would lead to international jealousy, and eventually to war. Senator WHEELER, isn't there something in the argument that Congress ought to have the whole picture of what all the nations are going to want, so that we might consider it at one time?

Senator WHEELER. Yes. When I was in Europe recently, not only were the British saying that they had to have a loan, but France, Italy, Greece, Turkey—almost every country on the continents of Europe and Asia—indicated they would insist upon a loan in order, as they say, to build up world trade and to free the economy of the world. Moreover, there are the South American countries to be considered as well.

Senator JOHNSON. We are asked to loan Socialist Britain $4,000,000,000, and nationalistic China $2,000,000,000, and Socialist-Communist France two and a half billion, plus one to six billion for Communist Russia—a grand total of 10 to 15 billion to finance nations that publicly and officially denounce capitalism. The free-enterprise system of America is in open conflict with the closed and controlled economies of Europe. They are the bitter trade rivals of this capitalistic democracy.

Mr. FISHER. But, Senator, don't we need our trade with the British? She was our best overseas customer before the war.

Senator JOHNSON. They'll trade with us anyhow if we have what they want and they have what we require. There is no sentiment or charity in business. Let's take a look at Russia. In a recent speech Marshal Stalin condemned capitalism in no uncertain terms, but he did not condemn American capital. He would like to borrow all of it he could lay his hands on. That would weaken us and strengthen communism. Also Britain wants our capital to aid her in her conversion to socialism. Why this capitalistic democracy deliberately should cut its own throat to promote antagonistic political and economic systems is beyond me.

Mr. FISHER. Is it possible that loaning this money—in the case of Britain, at least—might strengthen free enterprise in England, by enabling it to survive? That argument has been set forth. Senator WHEELER, what about that?

Senator WHEELER. I have been told that the reason we should make this loan to Britain is that if we do not make it, the British Empire will collapse, and if the British Empire collapses, then Russia will take over the whole show. That is, Russia will take not only all of Europe, but all of Asia. At least, that argument is being advanced by some people as a reason for the loan. There may be something in it, but frankly I don't believe that the loan that we are asked to make, of nearly $4,000,000,000, is going to save the situation if it is that bad. If that is the purpose of the loan, then immediately we will be getting deeper and deeper into the European and Asiatic conflict between Russia and the British Empire. And let me add this: The American people are not in favor of keeping the people of India or the people in the Dutch East Indies or in Hong Kong in subjection, and they are not in favor of putting up money so that a few people in Europe can control those countries. I don't believe American blood was sacrificed to save the British Empire and the Dutch Empire in the Far East and in the South Pacific; is that what we went to war for?

Mr. FISHER. Senator WHEELER, how can Britain get back on her feet without some help from the outside? After all, her economy is pretty badly shot after 6 years of war.

Senator WHEELER. The solution of the problem of England is the same as the solution of the problems of the rest of the world, and that is for everybody to tighten their belts and get down to work and produce more goods. We are not going to accomplish that by loaning people money—the people of England, or the people of the United States, or the people of the world. I call your attention to the fact that Britain's debt to us from the first war was nearly $6,000,000,000; lend-lease goods and services already shipped, now proposed to be forgiven, amount to about $25,000,000,000; loan for the payment of new lend-lease items, 650 million; the proposed line of credit extending for 55 years, 3 billion 750 million; plus ships and destroyers and other items which we earlier transferred, of which we don't know the value—a total of perhaps as much as $35,000,000,000. That is what we have given and are to give to Great Britain.

Mr. FISHER. Of course, the British have contributed a lot to our common war effort. Britain's cities have been devastated; and her exports are down to about 30 percent of what they were before the war.

Senator WHEELER. That's right. But there is a limit beyond which the United States can't go. We are talking about Britain, but we had better think about the United States of America. As a result of this war, we have a debt of close to $300,000,000,000. Can we afford to continue to loan to Great Britain and every country that asks for it? What right has the Congress of the United States to give money to some foreign country? After all, this country was not set up as an international banking enterprise.

Mr. FISHER. On that matter of lend-lease, which is the major part of your $35,000,000,000 figure, Senator WHEELER, it has been argued very often that in giving lend-lease we were saving American lives. Mr. Acheson said, "We didn't charge the British for the bombs the RAF dropped on Berlin, and they didn't charge us air mail for delivery."

Senator WHEELER. I saw the statement. But the record of the debate in the Senate when lend-lease was being considered didn't mention that. Then everybody said that lend-lease was for the purpose of keeping us out of war and that it was being loaned and not given. If we forgive the lend-lease that we sent to Great Britain, we are going to have to forgive the lend-lease that we gave to Russia and to every other country.

Senator JOHNSON. Lend-lease cost our taxpayers $46,000,000,000, but if it has saved American lives, it has fulfilled a noble mission and is money well spent. Britain got the lion's share of this gratuity. Under it we gave Britain every conceivable kind of merchandise, ranging from sewing needles to locomotive engines. The bulk of these goods had no direct connection with the war. From us these civilian goods were a gift, but the British Government sold some of them to the British people at full market value and put the proceeds in her treasury. That helped her taxpayers. Now, thanks to our lend-lease program, the per-capita savings of

British citizens during the war years are the greatest in British history.

Senator WHEELER. In other words, we put up the money, we furnished the men, furnished the material, depleted our own natural resources to carry on the war, created a national debt which is approaching $300,000,000,000, and lost hundreds of thousands of American boys killed. And now we are asked, in addition to that, to loan all of these countries money so that they can get back on their feet to compete with us after the war is over. Mr. Churchill said, "Furnish us the tools, and we will do the job." We furnished the tools. I said then we would have to furnish the money. We had to furnish not only the money but the men.

Mr. FISHER. Of course, in justice to the British, we might add their proportion of mobilization was much higher than ours during the war. I believe 75 percent of their industry was mobilized, and manpower also was mobilized proportionately.

Senator WHEELER. That's right, but the fact remains that without the United States the war would not have been won.

Senator JOHNSON. Eighty percent of the troops on the western front were American troops.

Senator WHEELER. If we have $4,000,000,000 more to give away, let us turn our attention to the United States, where we have some very difficult problems. We have millions of veterans coming back. The needs of the veterans to rehabilitate them are bound to make large demands upon the country. We have slums all over the United States where the money could be used profitably for the public good. While I sympathize with Great Britain and the plight that she finds herself in, first of all I am thinking of the United States of America.

Mr. FISHER. During the loan negotiations, economists from Britain and the United States agreed that in the course of a period of 3 years or so, in which British pump would be primed with three and three-quarter billion dollars' credit, Britain will be able to get the raw materials and the machinery which she needs to reconvert. Then she would resume her normal trade relations with us and with the world. Senator JOHNSON, do you agree with that?

Senator JOHNSON. That's just speculation which has no basis in fact whatever. If we loan Britain close to $4,000,000,000 now to save her economic system, and it doesn't save it, will we have to come to her rescue again? It is a continuing process. If we are going to save Britain by this method, other loans will have to follow. For a long time trade balances have been running against Great Britain. She's losing out as banker and merchant in the world markets.

Mr. FISHER. What about that, Senator WHEELER?

Senator WHEELER. What indication has the Treasury Department or anybody else given us that our loan agreement will solve Britain's economic and political problems? What has Great Britain to offer us in exchange that we wish to buy in sufficient quantity to liquidate such a loan? Why have we forgotten that during the war Great Britain doubled her output of agricultural products so that she is now only one-third dependent thereon, for food products? Why have we forgotten that Britain also is trying to make herself nearly as self-sufficient in other lines as possible? Why have we overlooked the fact that the natural trade and financial relationships of Great Britain are with the constituent parts of her Empire and with such great food and raw materials producing countries as Argentina? The Argentine and these South American countries are the countries that will buy machinery and other things that Great Britain produces in return for the raw products which they supply. Europe is the natural market for the raw materials of South America and likewise South America is a natural market for Great Britain's finished products.

Mr. FISHER. You are arguing that she will be a competitor, then?

Senator WHEELER. Exactly. She will be a competitor of ours in South America. She always has been; she is now; and she will be in the future.

Mr. FISHER. Senator JOHNSON, wouldn't the cost of this loan, which the British say they will pay back, be pretty small compared to the benefits to England and, eventually, to us?

Senator JOHNSON. Mr. Fisher, the Treasury of the United States is not a bottomless barrel that can make the whole world prosperous. There is nothing magical about its operation. Every dollar that comes out of it must be returned to it by American taxpayers sooner or later. This Government of ours owes twice as much money as all the rest of the nations of the earth added together. If Uncle Sam should confiscate all the private property in America—all of our homes, our land, our factories, our industries, our railroads, our bank deposits and everything of value owned by private persons—he would not have wealth enough to pay off his debt. Uncle Sam has placed a mortgage on every item of private property in this great country. He has mortgaged it for every cent it will bring on the market. About the only thing that Uncle Sam has left is his shirt and the faith of his people. He will lose both unless he plays his cards close to his belt. He is in no condition to go into the banking business on a world-wide basis.

Mr. FISHER. You don't hold, then, with the argument that this is not such a great drain on the Treasury because a great part of it will be spent in this country and because it constitutes only about 15 days of what we spent during the peak of the war expenditures?

Senator JOHNSON. This is not a loan to end all foreign loans; instead, it is just the beginning of an avalanche of loans.

Senator WHEELER. I wonder if the American people realize that the amount really involved, the $35,000,000,000 which we are forgiving the British from both world wars, is almost as much as the First World War cost us? Thirty-five billion equals about $250 per capita for every man, woman, and child in this country, and about 50 percent of our entire national income some 5 or 6 years ago. In addition to this loan that we are proposing, we have already created for international use the Export-Import Bank, which has a loaning power of $3,500,000,000, and the Bretton Woods Bank and International Monetary Fund with about $10,000,000,000.

Mr. FISHER. You are suggesting that some or all of the loan that is made to Britain should go through these channels?

Senator WHEELER. It should; but if the British went to the Export-Import Bank, of course, they would probably be asked to put up some security.

Mr. FISHER. Could they get as much as they need? These banks are for all countries, and probably couldn't lend such a big amount to any one nation.

Senator WHEELER. I doubt that they could—but the British could get at least part of it from these banks.

Mr. FISHER. But the Bretton Woods bank isn't set up yet, is it, Senator JOHNSON?

Senator JOHNSON. No; but we have agreed to it. The Congress has approved the Bretton Woods agreement for the establishment of an International Bank. I was dubious of the scheme at the time, but with many mental reservations I voted for it. My compelling reason was to avoid direct loans by our Government out of our Treasury to foreign nations. Now I am told by official Washington that the Bretton Woods program is dead unless we go through with the proposed British loan. Either we were deceived then or we are being deceived now.

Mr. FISHER. Now, getting back to the arguments for the loan: As I understand it, the credit is to be applied largely on the purchase of American materials.

Senator JOHNSON. Oh, no. There are no strings to the loan at all. The British don't have to spend it here.

Mr. FISHER. Suppose an amendment were offered to the proposal limiting the credit to what was spent on American goods. Senator JOHNSON, would that alter the picture as far as you are concerned?

Senator JOHNSON. In ordinary times that might be desirable from our point of view. But at the present time we have empty shelves, and credit in this volume will aggravate the present very dangerous inflationary trend.

Mr. FISHER. I think it was Secretary of the Treasury Vinson who made two points on that. First, that the British expenditures will be spread out over a period of several years, and, second, that they will be mostly for raw materials and heavy machinery and things which would not contribute to inflation through competition with the American consumers.

Senator JOHNSON. But there are no guaranties of that kind in the agreement at all. They can spend that money any place on this earth they want to spend it, and for anything they want. If we approve this damnable loan proposal, Congress will sow the wind and the American taxpayers will reap the whirlwind.

Mr. FISHER. Meaning inflation, Senator?

Senator JOHNSON. Yes. Under present Treasury arrangements every dollar of United States bonds sold to our citizens is in actual reality printing-press money and add to our buying power. If the British loan is made by our Treasury, the currency of this country will be inflated to the full extent of the loan.

Mr. FISHER. Senator Wheeler, under the loan agreement the British agree to do away with trade restrictions in the sterling area, and it is claimed that our foreign trade will greatly benefit thereby.

Senator WHEELER. Mr. Acheson, in his statement on this program, said: "The British have agreed to support the American proposals to reduce and eventually to eliminate these special privileges. In some ways the joint American and British statement on commercial policy is the most important part of the agreement. The United States has made certain proposals for consideration by a United Nations Trade Conference, which we expect will be held late next summer. The British have joined us in these proposals for tariff reductions and an end to hampering restrictions of all sorts." Of course the British want us to reduce our tariffs. They want us to reduce our tariffs so they can ship into this country a great many things which would very materially disrupt business in this country. I haven't any doubt that they would like to ship in wool from Australia free of duty. They would like to ship in manufactured goods free of duty in the United States, but if we agree to those things it will simply mean that we will be destroying our own economy at the benefit of Great Britain.

Mr. FISHER. You mean by lowering our own tariffs?

Senator WHEELER. Yes; by lowering our own tariffs. We have millions of pounds of British and Australian wool stored in this country. If we reduce our tariffs and turn that loose, it would put the wool growers in the United States out of business.

Mr. FISHER. We haven't yet touched on the claim that proponents of the loan have made that if we don't grant the loan, the only alternative open to Great Britain will be to tighten up her sterling bloc and try to pull herself up by her own bootstraps. This would mean cutting off as much trade as possible outside the sterling bloc area. In other words, there would be a full-fledged trade

war between British and American interests in many parts of the world.

Senator WHEELER. The British will trade wherever it is to their interest anyway—and with their low wages and low living standards they can undersell us, and will whenever possible.

Mr. FISHER. But in section 7 of the agreement, Britain promises to end all sterling bloc restrictions within a year.

Senator WHEELER. But whether she will actually do it, remains to be seen.

Senator JOHNSON. There are other ways out. For one thing, the British Government has vast holdings of American common and preferred stocks and first- and second-mortgage bonds. Senator MOORE, of Oklahoma, who has been making a study of this phase of the British loan, estimates the total value of these stocks and bonds to be not less than $775,000,000. I am not talking about American property owned by British subjects. I am speaking of American securities owned by the British Government. They can sell them if they want to.

Mr. FISHER. What about your own bill, Senator JOHNSON? Is that another alternative?

Senator JOHNSON. I believe it is. It's a substitute for the administration loan bill, and would authorize the Treasury to see special bonds to American investors on a voluntary basis, the proceeds to go to Britain, and in turn whatever interest and principal is paid by the British Government would be paid to these investors on a pro rata basis. The bonds would be of distinctive design and would bear on their face a statement to the effect that they are not backed by the credit of, or guaranteed by, the United States. The sale of the bonds would serve as a referendum in America on the British loan. It would be anti-inflationary, not inflationary, and if such an investment is not attractive to American investors, it certainly is not right to unload it on the hard-pressed American taxpayer against his will.

Mr. FISHER. Do you think that would work, in the sense of getting three and three-quarter billion dollars from the bonds within a reasonable length of time, so that Britain can reconvert? Would the American people buy British bonds in competition with Victory bonds?

Senator JOHNSON. I earnestly hope there are to be no more Victory-bond drives. The time has come to balance our Budget.

Senator WHEELER. If the American people wouldn't buy them, then the American Congress should not unload this debt on the American taxpayers—not only the present taxpayers but their children and their children's children.

Mr. FISHER. Then you support Senator JOHNSON's substitute proposal, Senator WHEELER?

Senator WHEELER. I certainly do.

Mr. FISHER. Are there other points in that earlier broadcast you'd like to take up?

Senator WHEELER. Yes. You asked this question of Mr. Acheson: "Why didn't we get more of a quid pro quo from the British? They have certain territories in this hemisphere, for example, where we need permanent bases. What about that?" And Mr. Acheson said: "To demand such concessions as a part of the loan agreement would be like saying to Britain, 'Sure, we will help you get back on your feet, but not unless you hand over some of your territories and do things our way from now on.' You can imagine how any self-respecting nation would react to that. They would have felt that we were taking advantage of their necessity to drive a sharp bargain in a totally different field." I don't think this would be a sharp bargain at all. We need some of these bases for our own protection and for our commercial needs. Certainly when Britain is dealing with any other country in the world she looks out for Great Britain's need. The trouble with the State Department in my judgment is that some of the men there think more of England than of the United States.

Senator JOHNSON. We should also consider to what extent loans to these foreign nations are to be used for military purposes. It occurs to me that what we may be doing is assisting other powers into an armament race with us. I haven't heard anyone say just exactly what Britain's postwar military plans are.

Mr. FISHER. I understand that she is demobilizing quite rapidly.

Senator JOHNSON. Demobilizing and an armament race are two different things. The point is this: If we lend money to all the nations of the earth and they use it to arm themselves, then we will have to spend a lot of our taxpayers' money to catch up with them.

Mr. FISHER. Do you think, Senator JOHNSON, that we ought to insist on disarmament as a condition of future loans?

Senator JOHNSON. I don't think you can separate the two ideas. They are tied closely together. Senator TYDINGS brought that point out very forcibly the other day. He said that we must not contemplate a loan to anybody until we know what the disarmament plans of the world are.

Mr. FISHER. Now, with regard to the outlook for the loan, Senator WHEELER. Do both the House and the Senate have to approve it?

Senator WHEELER. Yes; by majority votes.

Mr. FISHER. What do you think are its prospects for passage?

Senator WHEELER. I don't think anybody can predict today what is going to happen in the Congress of the United States a month from now, or even 2 weeks from now. I think if a vote were taken today the loan would be beaten. But I have seen the radio commentators, the newspaper columnists, the magazines, and the motion pictures sell the American people something that Congress wouldn't put across without that pressure.

Senator JOHNSON. I would hate to predict what Congress will or will not do, except that unless the country changes its attitude toward this loan, Congress is not going to enact it. At the present time my observations indicate that the country stands about 3 to 1 against the loan.

Mr. FISHER. There was a poll of public opinion recently which showed that a plurality of those with opinions were in favor of the loan when its terms were explained.

Senator WHEELER. I would be willing to wager that the overwhelming sentiment of this country is against it.

Senator JOHNSON. I never did have confidence in polls. Most polls are a racket or perhaps a clever form of propaganda.

Mr. FISHER. I've read that several organizations—farmers, women, and so on—have come out for the loan.

Senator JOHNSON. Some have come out against it, too. It will make some difference what position the labor organizations take on the loan. But unless the State Department rallies support for this loan, I think it would be very foolish to expect Congress to support it, especially in an election year.

Senator WHEELER. I'd like to add one thing: The proposed loan to Britain must not be confused with relief for the starving peoples of Europe and Asia.

Senator JOHNSON. I agree. I favor dividing our dwindling supplies of food with the war-torn peoples of the world. And a starving German baby or a starving Japanese baby looks just the same to me as a starving Chinese, French, or British child. They are all God's precious children. But the British loan is not to provide relief for starving people. It is to provide relief for a decadent empire. My slogan is: Billions for the relief of starving children, but not 1 cent of American taxpayer's money for the relief of empires.

Mr. FISHER. Well, thank you, gentlemen, for a very hard-hitting discussion of the proposed British loan. Now that we have had one broadcast for and one against the loan, I hope that on some future program we can bring the two viewpoints together in a single discussion.

ANNOUNCER. That was Sterling Fisher, director of the NBC University of the Air. He has been interviewing Senators BURTON K. WHEELER, of Montana, and EDWIN C. JOHNSON, of Colorado. The discussion was adapted for radio by Selden Menefee.

Members of Congress, and officials of the State Department and other Government agencies, will discuss these important subjects. If you have questions on these topics which you would like to have us ask the participants, please send them to the NBC University of the Air, New York 20, N. Y. Your suggestions for future topics will also be appreciated.

Military Justice

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, February 18 (legislative day of Friday, January 18), 1946

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have inserted in the RECORD an article entitled "Military Justice," from the Army and Navy Journal of December 1, 1945. It relates to courts martial. Some time ago the Senator from Oregon [Mr. MORSE] offered a resolution on this subject, and this article fits in with his resolution.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MILITARY JUSTICE

Following are the points outlined in an opening statement recently made by Samuel T. Ansell, Acting Judge Advocate General during World War I, as counsel in a case before the Secretary of War's Discharge Review Board:

1. This Board, authorized by statute, has an attractive and novel setting in the field of military justice. If justice is the highest interest of man on earth, if to achieve justice is declared by our Constitution as one of the prime reasons for the establishment of our Government, if justice is not a mere generalization but a matter of vital concern to every individual citizen, then this board has a noteworthy place among the instrumentalities of justice. Its members should be, and they doubtless are, inspired by the love of justice.

2. Never before has there been in the service a statutory board of general jurisdiction with authority to review and correct the record characterizing separations from the service, and to grant to an applicant a fair hearing to that end. To me it has always been a matter of some pride that at the close of actual hostilities of the First World War some boards, upon my recommendation, were established by the Secretary of War to correct, in some degree and in some special cases, injustices done by the records of the discharge of enlisted men; but, so far as I can recall, nothing was done, or could have been done, in behalf of commissioned officers.

3. The military record of a citizen is to him a thing of great worth, more than money or other material value. It is a permanent memorial which should truly evidence, beyond doubt or question, the quality of citizenship

exhibited by the citizen while serving in the defense of his land.

4. In the haste and welter of war many injustices in such matters are done—one might say inevitably done. Without assured means of correcting such injustices, war must, and does, leave in its wake innumerable human wrecks—men who struggle, usually in vain, to recover that of which they have been unjustly deprived, or who live on with bitterness for the Government they loved and served, or who sink into despair.

5 It is out of such background of thought we as counsel come before this Board. We come expectantly, because of confidence in the Board and in the facts we shall adduce. We know, of course, that a separation, with its characterization, is backed by statements upon the record. We need hardly remind you that merely because a statement has become embalmed in a military record is no assurance of its truth. Too frequently those facts merit the designation only because they appear on the record; they are not tested or established facts; they are only what somebody, in more or less authority, carelessly or hastily or injudicially accepted as facts; too often they are only what somebody reported or said or thought. Sometimes they are but statements of a commanding officer who is inexperienced, or is unfair, or has been misled; sometimes they are but his own conclusions made or shaded to place himself in a better light; sometimes they are statements made with unworthy design or through servility to some superior view. Sometimes they are nothing better than the groundless report of some pseudo-psychiatrist; sometimes they rest on nothing better than common camp gossip.

6. Facts are at the foundation of all justice but, unfortunately, the obtaining of facts is frequently a task that is irksome, and the proper interpretation of them requires high qualities of care and judgment. It is the duty of a lawyer appearing here to adduce nothing but facts and those inferences which reasonably and fairly flow from them. In doing this he should be as quick to expose an untruthful record as to spurn a resort to untrue statements.

7. During this war there has been a tendency to force resignations for the good of the service in lieu of court martial by means of record statements whose undependability would have been developed by court-martial investigation. Such a policy gives abundant opportunity for injustice. Such resignations are sometimes the result of a species of compulsion. Besides, temporary officers, especially when advised by superiors, can easily be subjected to imposition. Few temporary officers are in a position to apprehend that a resignation for the good of the service has many of the stigmatizing consequences of a sentence of dismissal or dishonorable discharge by general court martial, consequences that deprive them of many military benefits, blotch their reputations throughout life and prejudice them in obtaining employment. Inexperienced officers can easily be stampeded into such ill-advised action by the threat of the court martial alternative. Later, with time to consider, such an officer may seek to withdraw his resignation before it becomes effective and stand court martial, only to find that the War Department refuses the request.

8. Such stigma should be placed upon a soldier's record only when fairest and fullest consideration of every pertinent fact and circumstance leads to no other reasonable conclusion. The tender of a resignation under the circumstances indicated is no evidence whatever of a conscicusness of guilt. Our Government should ever be loath to deprive a soldier of material service-benefits and even more loath permanently to besmirch his reputation. It is still true that "Who steals my purse steals trash; but he that filches from me my good name leaves me poor indeed."

Proceedings and Transactions of Bermuda Civil Aviation Conference

EXTENSION OF REMARKS
OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 18 (legislative day of Friday, January 18), 1946

Mr. BAILEY. Mr. President, I have before me certain documents relating to the Bermuda Civil Aviation Conference, recently concluded, the Conference being between representatives of the United Kingdom and representatives of the United States. The delegates to that Conference agreed upon a final act and some collateral acts. I think it is important that the Senate be fully informed of these agreements and some portions of the proceedings. The documents which I have before me consist of 36 typewritten pages. I ask unanimous consent that they be printed in the Appendix of the RECORD.

I have obtained from the Public Printer an estimate of the cost of printing. The estimated cost is $468.

There being no objection, the documents were ordered to be printed in the RECORD, as follows:

JOINT PRESS RELEASE OF THE UNITED KINGDOM AND UNITED STATES DELEGATIONS ON THE WORK OF THE BERMUDA CONFERENCE, JANUARY-FEBRUARY 1946

1. Three documents, two to be signed and one to be initialed in Bermuda at 2300 hours GMT (7 p. m. Bermuda time, 6 p. m. Washington time) on Monday, February 11, represent the work of the Anglo-American Civil Aviation Conference, which has been in session there since January 15.

2. The documents agreed upon at the Bermuda Conference represent a sincere and determined effort to reconcile the widely divergent views which were held by the two nations on the extent to which international air transport should be subject to governmental controls. The two Governments are happy to announce that agreement has been reached on conditions which they believe will be satisfactory and advantageous to both nations.

3. The three documents are:

(i) The final act of the Conference.

(ii) A bilateral agreement between the Governments of the United Kingdom and the United States and an attached annex.

(iii) Heads of agreement relating to the civil use of leased air bases.

4. All the chief aspects of civil aviation outstanding between Britain and America are covered and resolved in these three documents. They should provide a firm foundation on which future and closer aeronautical collaboration between the two nations can be built. Both nations had before the Bermuda Conference accepted the multilateral air-transit agreement at the Chicago air conference, which provided for freedoms I and II; that is, the right of the air carrier or carriers of one nation to fly through the air space of the other (freedom I) and to land for nontraffic purposes (freedom II).

5. The chief feature emerging from these Conference documents is that the broad policy agreed between the two Governments offers an opportunity for the development of air transport coupled with provision for later review and adjustment of any practices which are shown by experience to be harmful to the best interests of the two nations.

6. In brief, the high lights resulting from the Conference are—

(i) Rates to be charged by air carriers operating between points in the United Kingdom and points in the United States are to be subject to governmental review.

(ii) The Civil Aeronautics Board has announced its forthcoming decision approving the traffic and rate conference machinery of the International Air Transport Association (IATA) for a period of 1 year (sec. II of the annex).

(iii) Freedom by each country to determine the frequency of operations of its airlines.

(iv) Freedom to carry fifth freedom traffic in accordance with defined principles subject to adjustment in particular cases where such adjustment may be found necessary in the light of experience (sec. I of the annex and paragraph (6) of the final act).

(v) Agreement on an initial schedule of world-wide air routes of mutual interest to the United Kingdom and the United States (sec. III of the annex).

(vi) Clearing of the position of the air bases leased by the United Kingdom to the United States so that they may be opened for civil use as soon as possible wherever such use will contribute to the over-all development of civil aviation along sound economic lines. In effect, this means that when the agreement is finalized the leased bases at Bermuda, Antigua, Santa Lucia, and British Guiana will be opened for full civil use while other bases will be available for civil aircraft as bad weather alternates to existing civil airports. The United States has conditioned its approval of the agreement upon the working out of a satisfactory agreement covering similar problems as regards bases and airfields in Labrador and Newfoundland. (Heads of agreement on leased bases.)

(vii) Agreement that in general any dispute between the two nations relating to the interpretation or application of the agreement which cannot be settled through consultation shall be referred for an advisory report to the Provisional International Civil Aviation Organization (PICAO) or its successor (art. IX of the agreement).

7. The final act of the Conference: This document brings together in one place the different documents of the Conference and sets out the principles for the development of international civil air transport to which the two Governments have agreed to subscribe. The deliberate trend of these principles is to encourage the use of air transport and to stimulate air travel at economic rates. At the same time the principles provide for fair and equal opportunity for air carriers of the two Nations to operate between their respective territories and to provide air transport facilities matched to the needs of the public. The fair and equal opportunity referred to above does not imply the allocation of frequencies by agreement, but only the right of each nation to offer the services it believes justified under the principles agreed to.

Special consideration is also given to safeguarding the rightful interest of both countries and to bridging the period during which difficulties resulting from the war might militate to the prejudice of either country.

An important principle is that outlined in paragraph 6 of the final act. This paragraph in referring to the carriage by air carriers of one of the two nations of so-called "fifth freedom" traffic—that is passengers and cargo between two foreign countries—recognizes this "fifth freedom" privilege, granted in the annex, so long as the carriage of these loads does not defeat the primary objective of the agreed international air services which is to provide air transport adequate for the traffic between the country of origin of the aircraft and the country of destination of the traffic.

To this end, the right to carry fill-up "fifth freedom" traffic is to be subject to the general principle that capacity should be related to—

(i) The traffic requirements between the country of origin and the countries of destination;

(ii) The requirements of through air line operation; and

(iii) The traffic requirements of the area through which the air line passes after taking account of local and regional services.

Thus, the privilege of carrying "fifth freedom" traffic has been reciprocally granted subject to the considerations indicated above.

Another important principle agreed on and set out in the final act is that (in paragraph 11) which provides for regular and frequent consultation between British and American Government authorities—in fact the CAB and the British Ministry of Civil Aviation—to ensure that there shall be close collaboration to implement and develop the understandings arrived at in Bermuda and to provide for the solution of new problems of interest to both nations in the field of civil aviation.

8. The bilateral agreement: This agreement follows the line of the standard form of such agreements as drawn up at Chicago. It contains 14 articles which define the conditions under which air services (i. e., regularly scheduled air-line services) shall be operated between the territories of the United Kingdom and the United States. (Details of the routes are set out in sec. III of the annex.)

The agreement sets out (art. 8) that modifications to the annex (other than the route changes provided for in sec. IV of the annex) may be made after consultation and agreement between the aeronautical authorities of the two nations. Further, there is provision (art. 9) that any dispute between the two governments on the agreement or the annex shall be referred to the PICAO or its successor for an advisory report. There is no time limit on the agreement but either nation may at any time request consultation with the other with a view to making amendments which may be desirable in the light of experience. Pending the outcome of such consultation, either nation may give notice to the other of its desire to terminate the agreement. In the absence of an agreement as to the desired amendments the agreement can be terminated 12 months after the giving of notice. But termination of the agreement in this way will not affect the traffic rights which United States air carriers may exercise at any of the leased bases which are to be opened for civil use.

9. The annex: This is a most important part of the agreement from an operative viewpoint. It is divided into five sections: I, Rights; II, Rates; III and IV, Routes; V, Change of Gage.

I. Rights: This section sets out that airlines of the United States and the United Kingdom shall enjoy traffic rights between the territories of the two countries on routes outlined in section III of the annex in accordance with the principles stated in the final act and in the annex.

II. Rates: The two countries have agreed on regulation to ensure economic operation and to prevent rate wars resulting from unfair and uneconomic rates. The CAB has announced its forthcoming decision approving the traffic and rate conference machinery of the International Air Transport Association (IATA) for a period of 1 year from February 1946. Under United States law, rates agreed upon by IATA in all cases where United States air carriers are parties are subject to CAB approval. Furthermore, the executive department of the United States (including the CAB) has agreed to seek from Congress power to fix fair and economic rates for United States air carriers on international air services.

A most important principle has been agreed to in respect to rate regulation. In all cases where disagreement arises as to any rates between points under the jurisdiction of the United Kingdom and points under the jurisdiction of the United States, consultation between the aeronautical authorities of the two countries is provided to the end that if possible agreement as to the proper rate can be reached and such agreement made effective within the respective constitutional powers and obligations of the Governments.

New rates proposed by any United Kingdom or United States air line are required to be filed with both Governments 30 days before the effective date of such rates. If agreed by both Governments, the new rate can go into effect at once.

If, before the CAB acquires its rate-fixing powers, it disagrees with a rate proposed by a United Kingdom carrier and approved by the United Kingdom Government, or the United Kingdom disagrees with a rate proposed by a United States carrier, and if after consultation the two Governments do not agree or if after agreement it cannot for any reason be made effective, the party objecting to the rate "may take such steps as it may consider necessary to prevent the inauguration of continuation of the service in question at the rate complained of."

After the CAB acquires rate-fixing powers, if after 30 days either the CAB or the United Kingdom Government cannot agree on a rate proposed by an air carrier or carriers of the other nation, the proposed rate may, nevertheless, go into effect provisionally at the discretion of the government of the air carrier concerned pending settlement of the disagreement either by further consultation or by an advisory report from the PICAO which each party agrees to use its best efforts to put into effect.

III. Routes: Under this heading both the United Kingdom and the United States have set out lists of proposed air routes which touch their two territories. Although some of these air routes are already in operation, some may be opened shortly and others may not come into operation for some time, all are set down as an indication of how the rights granted in section I of the annex may be exercised.

IV. Route changes: This section lays down that any changes on the routes of one nation in the territory of the other will be made only after consultation and agreement between the aeronautical authorities. Other route changes in third countries may be made at any time, provided that prompt notice is given by the one country to the other of such changes. Any disagreement which may arise and cannot be resolved by the aeronautical authorities of the two countries shall be referred to PICAO for an advisory report. In addition, each country will keep the other informed of new route certificates and authorities extended to their own air carriers.

V. Change of gage: On any long, through, route it may be that it will be more economical to handle the onward carriage of traffic from key points in smaller aircraft than that used on the prior part of the trip. The Conference has recognized this possibility but has provided that in such case the smaller aircraft will operate only in connection with the larger aircraft arriving at the point of change so as to provide a connecting service, specifically scheduled as such, and the smaller aircraft will thus normally wait on the arrival of the larger aircraft at junction points.

VI. Frequencies: The Conference has placed no specific limitation on frequencies. Each nation operating under the principles agreed to is to be free to determine for itself the number of frequencies which are justified services being related to traffic demands.

10. Leased air bases: Heads of agreement relating to the civil use of leased air bases have been drawn up and initialled with a view to the ultimate conclusion of a formal agreement.

When the United Kingdom undertook in 1940 to lease to the United States certain areas in Newfoundland, Bermuda, and the Caribbean area for naval and air bases, the subsequent agreement expressly provided that, except in special circumstances or by agreement between the governments concerned, commercial aircraft should not be allowed to operate from the airfields in the leased areas. It also provided that no commercial activities should be conducted within the leased areas other than with the consent of the governments concerned.

After the lease of these bases, the United States constructed a large airfield at each of them. With the end of the war there are obvious advantages in opening, for use by civil aircraft, airfields in the leased areas in territories in which no other satisfactory civil airfields are available. Such opening would contribute both to the development of air transport and to the territories concerned. But where satisfactory airfields already exist there would not be the same reason for arranging for commercial aircraft to use the base airfields.

Some discussions on this subject between the Governments of the United States and the United Kingdom were held in the autumn of 1945. Thus, when arrangements for the Bermuda Conference were made it was suggested that the opportunity should be taken to deal with this question as well as other more general questions relating to civil aviation.

As a result of the Conference, when the agreement now envisaged is concluded, the airfields at the leased bases in Bermuda, Antigua, St. Lucia, and British Guiana will be opened to regular use by civil aircraft. Other similar airfields in Trinidad and Jamaica will be available for use as bad weather alternates in case of necessity.

The opening of the bases to civil aircraft use is contingent upon the making of satisfactory agreements with the Governments of Newfoundland and Canada regarding the use by civil aircraft of airfields in Newfoundland and Labrador, namely Gander, Harmon, Argentia and Goose Bay.

There have been prolonged discussions on the many difficult questions arising on the commercial use of the airfields. These discussions have left some remaining difficulties and complicated legal problems which will form the subject of further discussions between the two Governments.

Agreement has, however, been reached in principle as to the terms on which British, United States, and other aircraft should be allowed to use the airfields. The positions of both the United Kingdom and the United States in regard to the exercise of traffic rights on the bases have been safeguarded and provision has been made to insure that the United States, which will maintain the airfields for military purposes, shall enjoy "most-favored-nation" treatment. Thus it is agreed that no other civil air carrier, including civil air carriers of the United Kingdom, will be granted any greater or different traffic rights at the bases than are granted to United States civil air carriers at such bases, with certain exceptions permitted in the case of United Kingdom traffic between two points under its jurisdiction. There is also provision that the United States shall have the right to carry between the bases in its own civil aircraft certain personnel traveling on business connected with the leased bases.

Other provisions of the heads of agreement relate to the right of either government to suspend for military reasons commercial operations at the base airfields, and to the right of the United States military authorities to insure that no steps are taken in connection with commercial air operations which would prejudice in any way the military use of the bases. There is also a provision that if the United States wish at any time to relinquish the responsibility for maintaining the base airfields the United Kingdom or the colonial governments concerned would have the right to take over that responsibility.

FINAL ACT OF THE CIVIL AVIATION CONFERENCE HELD AT BERMUDA, JANUARY 15 TO FEBRUARY 11, 1946

The Governments of the United States of America and of the United Kingdom of Great Britain and Northern Ireland, having decided to hold between themselves a Conference on Civil Aviation, appointed their respective delegates, who are listed below:

United States of America: George P. Baker (chairman of delegation), Director, Office of Transport and Communications Policy, Department of State; Harllee Branch, Member, Civil Aeronautics Board; John D. Hickerson, Deputy Director, Office of European Affairs, Department of State; Josh B. Lee, Member, Civil Aeronautics Board; Stokeley W. Morgan, Chief, Aviation Division, Department of State; George C. Neal, general counsel, Civil Aeronautics Board; Garrison Norton, Deputy Director, Office of Transport and Communications Policy, Department of State; L. Welch Pogue, Chairman, Civil Aeronautics Board; Oswald Ryan, Member, Civil Aeronautics Board; John Sherman, Liaison Consultant, Civil Aeronautics Board.

United Kingdom: Sir Henry Self, K. C. M. G., K. B. E., C B (chairman of delegation), Director General designate of Civil Aviation, Ministry of Civil Aviation; Sir William P Hildred, C. B. O., C. B., Director-General of Civil Aviation, Ministry of Civil Aviation; W. J. Bigg, Colonial Office; N J. A. Cheetham, Foreign Office; L. J. Dunnett, Ministry of Civil Aviation; Peter G. Masefield, Civil Air Attaché, British Embassy, Washington.

Who met in Bermuda on January 15, 1946.

At the first plenary session, Sir Henry Self was elected chairman of the Conference and the Conference was divided into two committees. The members of the committees and of the subcommittees, appointed by the respective Chairmen of the Delegations, are listed below:

COMMITTEE I. RATES AND TRAFFIC

Chairman: Sir Henry Self (United Kingdom).

United States delegates: George P. Baker, Harllee Branch, Josh B. Lee, Stokeley W. Morgan, George C. Neal, L. Welch Pogue, Oswald Ryan; advisers: Col. S. E. Gates, W. John Kenney, Maj. Gen. L. S. Kuter, Livingston Satterthwaite; consultants: Harold Bixby, Terrell Drinkwater, Julius C. Holmes, John Leslie, John E. Slater, James H. Smith, Jr.

United Kingdom delegates: Sir William Hildred, N. J. A. Cheetham, L. J. Dunnett, P. G. Masefield; advisers: M. E. Bathurst, Maj. J. R. McCrindle, Vernon Crudge.

Subcommittee 1. Policy

Chairman: Sir Henry Self (United Kingdom).

United States delegates: George P. Baker, Stokeley Morgan, L. Welch Pogue.

United Kingdom delegate: Sir William Hildred.

Subcommittee 2. Drafting

Chairman: Stokeley W. Morgan (United States).

United States delegate: George C. Neal; adviser: Col. S. E. Gates.

United Kingdom delegates: L. J. Dunnett, P. G. Masefield; adviser: M. E. Bathurst.

Subcommittee 3, Routes

Chairman, L. Welch Pogue (United States).

United States delegates: Harllee Branch, Josh B. Lee, Stokeley W. Morgan, George C. Neal, Oswald Ryan, John Sherman; advisers; William Fleming, Col. Samuel E. Gates, Maj. Gen. L. S. Kuter, Commander S. Jurika, Livingston Satterthwaite; consultants: Harold Bixby, Terrell Drinkwater, Julius C. Holmes, John Leslie, John E. Slater, James H. Smith, Jr.

United Kingdom delegates: W. J. Bigg, N. J. A. Cheetham, L. J. Dunnett, P. G. Masefield; advisers: M. E. Bathurst, Maj. J. R. McCrindle, Vernon Crudge.

COMMITTEE II, AD HOC

Chairman, L. J. Dunnett (United Kingdom).

United States delegates: John D. Hickerson, Stokeley W. Morgan.

United Kingdom delegate, N. J. A. Cheetham.

The final plenary session was held on February 11, 1946.

As a result of the deliberations of the Conference, there was formulated an agreement between the Government of the United Kingdom and the Government of the United States relating to air services between their respective territories and annex thereto. (Attached hereto as appendix I.)

The following resolution was adopted:

"Whereas representatives of the two Governments have met together in Bermuda to discuss civil aviation matters outstanding between them and have reached agreement thereon; and

"Whereas the two Governments have today concluded an agreement relating to air services between their respective territories (hereinafter called 'the agreement'); and

"Whereas the two Governments have reached agreement on the procedure to be followed in the settlement of other matters in the field civil aviation: Now, therefore, the representatives of the two Governments in conference resolve and agree as follows:

"(1) That the two Governments desire to foster and encourage the widest possible distribution of the benefits of air travel for the general good of mankind at the cheapest rates consistent with sound economic principles; and to stimulate international air travel as a means of promoting friendly understanding and good will among peoples and insuring as well the many indirect benefits of this new form of transportation to the common welfare of both countries.

"(2) That the two Governments reaffirm their adherence to the principles and purpose set out in the preamble to the Convention on International Civil Aviation signed at Chicago on December 7, 1944.

"(3) That the air transport facilities available to the traveling public should bear a close relationship to the requirements of the public for such transport.

"(4) That there shall be a fair and equal opportunity for the carriers of the two nations to operate on any route between their respective territories (as defined in the agreement) covered by the agreement and its annex.

"(5) That in the operation by the air carriers of either Government of the trunk services described in the annex to the agreement, the interest of the air carriers of the other Government shall be taken into consideration so as not to affect unduly the services which the latter provides on all or part of the same routes.

"(6) That it is the understanding of both Governments that services provided by a designated air carrier under the agreement and its annex shall retain as their primary objective the provision of capacity adequate to the traffic demands between the country of which such air carrier is a national and the country of ultimate destination of the traffic. The right to embark or disembark on such services international traffic destined for and coming from third countries at a point or points on the routes specified in the annex to the agreement shall be applied in accordance with the general principles of orderly development to which both Governments subscribe and shall be subject to the general principle that capacity should be related:

"(a) To traffic requirements between the country of origin and the countries of destination;

"(b) To the requirements of through airline operation, and

"(c) To the traffic requirements of the area through which the airline passes after taking account of local and regional services.

"(7) That insofar as the air carrier or carriers of one Government may be temporarily prevented through difficulties arising from the war from taking immediate advantage of the opportunity referred to in subparagraph (4) above, the situation shall be reviewed between the Governments with the object of facilitating the necessary development, as soon as the air carrier or carriers of the first Government is or are in a position increasingly to make their proper contribution to the service.

"(8) That duly authorized United States civil air carriers will enjoy nondiscriminatory "two-freedom" privileges and the exercise (in accordance with the agreement or any continuing or subsequent agreement) of commercial traffic rights at airports located in territory of the United Kingdom which have been constructed in whole or in part with United States funds and are designated for use by international civil air carriers.

"(9) That it is the intention of both Governments that there should be regular and frequent consultation between their respective aeronautical authorities (as defined in the agreement) and that there should thereby be close collaboration in the observance of the principles and the implementation of the provisions outlined herein and in the agreement and its annex."

In witness whereof the following delegates sign the present final act.

Done at Bermuda the 11th day of February 1946.

This final act shall be deposited in the Archives of the Government of the United Kingdom and a certified copy shall be transmitted by that Government to the Government of the United States of America.

United States of America: George P. Baker, Harllee Branch, Stokeley W. Morgan, George C. Neal, Garrison Norton, L. Welch Pogue, Oswald Ryan, John Sherman; United Kingdom: A. H. Self, W. P. Hildred, W. J. Bigg, L. J. Dunnett, Peter G. Masefield.

BILATERAL AIR TRANSPORT AGREEMENT BETWEEN THE GOVERNMENT OF THE UNITED KINGDOM AND THE GOVERNMENT OF THE UNITED STATES OF AMERICA RELATING TO AIR SERVICES BETWEEN THEIR RESPECTIVE TERRITORIES

The Government of the United Kingdom of Great Britain and Northern Ireland and the Government of the United States of America, desiring to conclude an agreement for the purpose of promoting direct air communications as soon as possible between their respective territories, have accordingly appointed authorized representatives for this purpose, who have agreed as follows:

ARTICLE 1

Each contracting party grants to the other contracting party rights to the extent described in the annex to this agreement for the purpose of the establishment of air services described therein or as amended in accordance with section IV of the annex (hereinafter referred to as "the agreed services").

ARTICLE 2

(1) The agreed services may be inaugurated immediately or at a later date at the option of the contracting party to whom the rights are granted, but not before (a) the contracting party to whom the rights have been granted has designated an air carrier or carriers for the specified route or routes, and (b) the contracting party granting the rights has given the appropriate operating permission to the air carrier or carriers concerned (which, subject to the provisions of paragraph (2) of this article and of article 6, it shall do without undue delay).

(2) The designated air carrier or carriers may be required to satisfy the aeronautical

authorities of the contracting party granting the rights that it or they is or are qualified to fulfill the conditions prescribed by or under the laws and regulations normally applied by those authorities to the operations of commercial air carriers.

(3) In areas of military occupation, or in areas affected thereby, such inauguration will continue to be subject, where necessary, to the approval of the competent military authorities.

ARTICLE 3

(1) The charges which either of the contracting partie may impose, or permit to be imposed, on the designated air carrier or carriers of the other contracting party for the use of airports and other facilities shall not be higher than would be paid for the use of such airports and facilities by its national aircraft engaged in similar international air services.

(2) Fuel, lubricating oil, and spare parts introduced into, or taken on board aircraft in, the territory of one contracting party by, or on behalf of, a designated air carrier of the other contracting party and intended solely for use by the aircraft of such carrier shall be accorded, with respect to customs duties, inspection fees, or other charges imposed by the former contracting party, treatment not less favorable than that granted to national air carriers engaged in international air service or such carriers of the most-favored nation.

(3) Supplies of fuel, lubricating oils, spare parts, regular equipment and aircraft stores retained on board aircraft of a designated air carrier of one contracting party shall be exempt in the territory of the other contracting party from customs duties, inspection fees, or similar duties or charges, even though such supplies be used by such aircraft on flights within that territory.

ARTICLE 4

Certificates of airworthiness, certificates of competency and licenses issued or rendered valid by one contracting party and still in force shall be recognized as valid by the other contracting party for the purpose of operation of the agreed services. Each contracting party reserves the right, however, to refuse to recognize for the purpose of flight above its own territory, certificates of competency and licenses granted to its own nationals by another state.

ARTICLE 5

(1) The laws and regulations of one contracting party relating to entry into or departure from its territory of aircraft engaged in international air navigation or to the operation and navigation of such aircraft while within its territory shall apply to aircraft of the designated air carrier or carriers of the other contracting party.

(2) The laws and regulations of one contracting party relating to the entry into or departure from its territory of passengers, crew, or cargo of aircraft (such as regulations relating to entry, clearance, immigration, passports, customs, and quarantine) shall be applicable to the passengers, crew, or cargo of the aircraft of the designated air carrier or carriers of the other contracting party while in the territory of the first contracting party.

ARTICLE 6

Each contracting party reserves the right to withhold or revoke the exercises of the rights specified in the annex to this agreement by a carrier designated by the other contracting party in the event that it is not satisfied that substantial ownership and effective control of such carrier are vested in nationals of either contracting party, or in case of failure by that carrier to comply with the laws and regulations referred to in article 5 hereof, or otherwise to fulfill the conditions under which the rights are granted in accordance with this agreement and its annex.

ARTICLE 7

This agreement shall be registered with the Provisional International Civil Aviation Organization, set up by the interim agreement on international civil aviation signed at Chicago on December 7, 1944.

ARTICLE 8

Except as otherwise provided in this agreement or its annex, if either of the contracting parties considers it desirable to modify the terms of the annex to this agreement, it may request consultation between the aeronautical authorities of both contracting parties, such consultation to begin within a period of 60 days from the date of the request. When these authorities agree on modifications to the annex, these modifications will come into effect when they have been confirmed by an exchange of notes through the diplomatic channel.

ARTICLE 9

Except as otherwise provided in this agreement or in its annex, any dispute between the contracting parties relating to the interpretation or application of this agreement or its annex which cannot be settled through consultation shall be referred for an advisory report to the interim council of the Provisional International Civil Aviation Organization (in accordance with the provisions of article III, section 6 (8) of the interim agreement on International Civil Aviation signed at Chicago on December 7, 1944) or its successor.

ARTICLE 10

The terms and conditions of operating rights which may have been granted previously by either contracting party to the other contracting party or to an air carrier of such other contracting party shall not be abrogated by the present agreement. Except as may be modified by the present agreement, the general principles of the air navigation arrangement between the two contracting parties, which was effected by an exchange of notes dated March 28 and April 5, 1935, shall continue in force insofar as they are applicable to scheduled international air services, until otherwise agreed by the contracting parties.

ARTICLE 11

If a general multilateral air convention enters into force in relation to both contracting parties, the present agreement shall be amended so as to conform with the provisions of such convention.

ARTICLE 12

For the purposes of this agreement and its annex, unless the context otherwise requires:

(a) The term "aeronautical authorities" shall mean, in the case of the United Kingdom, the Minister of Civil Aviation for the time being, and any person or body authorized to perform any functions presently exercised by the said Minister or similar functions, and, in the case of the United States, the Civil Aeronautics Board and any person or body authorized to perform the functions presently exercised by the Board or similar functions.

(b) The term "designated air carriers" shall mean the air transport enterprises which the aeronautical authorities of one of the contracting parties have n tified in writing to the aeronautical authorities of the other contracting party as the air carriers designated by it in accordance with article 2 of this agreement for the routes specified in such notification.

(c) The term "territory" shall have the meaning assigned to it by article 2 of the Convention on International Civil Aviation signed at Chicago on December 7, 1944.

(d) The definitions contained in paragraphs (a), (b), and (d) of article 96 of the Convention on International Civil Aviation signed at Chicago on December 7, 1944, shall apply.

ARTICLE 13

Either contracting party may at any time request consultation with the other with a view to initiating any amendments of this agreement or its annex which may be desirable in the light of experience. Pending the outcome of such consultation, it shall be open to either party at any time to give notice to the other of its desire to terminate this agreement. Such notice shall be simultaneously communicated to the Provisional International Civil Aviation Organization or its successor. If such notice is given, this agreement shall terminate 12 calendar months after the date of receipt of the notice by the other contracting party, unless the notice to terminate is withdrawn by agreement before the expiry of this period. In the absence of acknowledgment of receipt by the other contracting party notice shall be deemed to have been received 14 days after the receipt of the notice by the Provisional International Civil Aviation Organization or its successor.

ARTICLE 14

This agreement, including the provisions of the annex hereto, will come into force on the day it is signed.

In witness whereof, the undersigned being duly authorized thereto by their respective governments, have signed the present agreement.

Done in duplicate this 11th day of February 1946 at Bermuda.

For the Government of the United Kingdom of Great Britain and Northern Ireland.

For the Government of the United States of America.

ANNEX

I

For the purposes of operating air services on the routes specified below in section III of this annex or as amended in accordance with section IV hereof, the designated air carriers of one of the contracting parties shall be accorded in the territory of the other contracting party the use on the said routes at each of the places specified therein of all the airports (being airports designated for international air services), together with ancillary facilities and rights of transit, of stops for nontraffic purposes and of commercial entry and departure for international traffic in passengers, cargo, and mail in full accord and compliance with the principles recited and agreed in the final act of the conference on civil aviation held between the Governments of the United States and of the United Kingdom at Bermuda from January 15 to February 11, 1946, and subject to the provisions of sections II and V of this annex.

II

(a) Rates to be charged by the air carriers of either contracting party between points in the territory of the United States and points in the territory of the United Kingdom referred to in this annex shall be subject to the approval of the contracting parties within their respective constitutional powers and obligations. In the event of disagreement the matter in dispute shall be handled as provided below.

(b) The Civil Aeronautics Board of the United States having announced its intention to approve the rate conference machinery of the International Air Transport Association (hereinafter called IATA), as submitted, for a period of 1 year beginning in February 1946, any rate agreements concluded through this machinery during this period and involving United States air carriers will be subject to approval by the Board.

(c) Any new rate proposed by the air carrier or carriers of either contracting party shall be filed with the aeronautical authorities of both contracting parties at least

30 days before the proposed date of introduction; provided that this period of 30 days may be reduced in particular cases if so agreed by the aeronautical authorities of both contracting parties.

(d) The contracting parties hereby agree that where:

(1) During the period of the Board's approval of the IATA rate conference machinery, either any specific rate agreement is not approved within a reasonable time by either contracting party or a conference of IATA is unable to agree on a rate; or

(2) At any time no IATA machinery is applicable; or

(3) Either contracting party at any time withdraws or fails to renew its approval of that part of the IATA rate conference machinery relevant to this provision.

The procedure described in paragraphs (e), (f), and (g) hereof shall apply.

(e) In the event that power is conferred by law upon the aeronautical authorities of the United States to fix fair and economic rates for the transport of persons and property by air on international services and to suspend proposed rates in a manner comparable to that in which the Civil Aeronautics Board at present is empowered to act with respect to such rates for the transport of persons and property by air within the United States, each of the contracting parties shall thereafter exercise its authority in such manner as to prevent any rate or rates proposed by one of its carriers for services from the territory of one contracting party to a point or points in the territory of the other contracting party from becoming effective if in the judgment of the aeronautical authorities of the contracting party whose air carrier or carriers is or are proposing such rate, that rate is unfair or uneconomic. If one of the contracting parties on receipt of the notification referred to in paragraph (c) above is dissatisfied with the new rate proposed by the air carrier or carriers of the other contracting party, it shall so notify the other contracting party prior to the expiry of the first 15 of the 30 days referred to, and the contracting parties shall endeavor to reach agreement on the appropriate rate. In the event that such agreement is reached each contracting party will exercise its statutory powers to give effect to such agreement. If agreement has not been reached at the end of the 30-day period referred to in paragraph (c) above, the proposed rate may, unless the aeronautical authorities of the country of the air carrier concerned see fit to suspend its operation, go into effect provisionally pending the settlement of any dispute in accordance with the procedure outlined in paragraph (g) below.

(f) Prior to the time when such power may be conferred by law upon the aeronautical authorities of the United States, if one of the contracting parties is dissatisfied with any new rate proposed by the air carrier or carriers of either contracting party for services from the territory of one contracting party to a point or points in the territory of the other contracting party, it shall so notify the other prior to the expiry of the first 15 of the 30-day period referred to in paragraph (c) above, and the contracting parties shall endeavor to reach agreement on the appropriate rate. In the event that such agreement is reached, each contracting party will use its best efforts to cause such agreed rate to be put into effect by its air carrier or carriers. It is recognized that if no such agreement can be reached prior to the expiry of such 30 days, the contracting party raising objection to the rate may take such steps as it may consider necessary to prevent the inauguration or continuation of the service in question at the rate complained.

(g) When in any case under paragraphs (e) and (f) above the aeronautical authorities of the two contracting parties cannot agree within a reasonable time upon the appropriate rate after consultation initiated by the complaint of one contracting party concerning the proposed rate or an existing rate of the air carrier or carriers of the other contracting party, upon the request of either, both contracting parties shall submit the question to the Provisional International Civil Aviation Organization or to its successor for an advisory report, and each party will use its best efforts under the powers available to it to put into effect the opinion expressed in such report.

(h) The rates to be agreed in accordance with the above paragraphs shall be fixed at reasonable levels, due regard being paid to all relevant factors, such as cost of operation, reasonable profit, and the rates charged by any other air carriers.

(i) The executive branch of the Government of the United States agrees to use its best efforts to secure legislation empowering the aeronautical authorities of the United States to fix fair and economic rates for the transport of persons and property by air on international services and to suspend proposed rates in a manner comparable to that in which the Civil Aeronautics Board at present is empowered to act with respect to such rates for the transport of persons and property by air within the United States.

[1] Notice will be given by the aeronautical authorities of the United States to the aeronautical authorities of the United Kingdom of the route-service patterns according to which services will be inaugurated on these routes.

IV

(a) Amendments made by either contracting party to the routes described in section III of this annex which change the points served in the territory of the other contracting party will be made only after consultation in accordance with the provisions of article 8 of this agreement.

(b) Other route changes desired by either contracting party may be made and put into effect at any time, prompt notice to that effect being given by the aeronautical authorities of the contracting party concerned to the aeronautical authorities of the other contracting party. If such other contracting party finds that, having regard to the principles set forth in paragraph (6) of the final act of the conference referred to in section I of this annex, the interests of its air carrier or carriers are prejudiced by the carriage by the air carrier or carriers of the first contracting party of traffic between the territory of the second contracting party and the new point in the territory of a third country it shall so inform the first contracting party. If agreement cannot be reached by consultation between the contracting parties, it shall be open to the contracting party whose air carrier or carriers is or are affected to invoke the provisions of article 9 of this agreement.

(c) The contracting parties will, as soon as possible after the execution of this agreement and from time to time thereafter, exchange information concerning the authorizations extended to their respective designated air carriers to render service to, through, and from the territory of the other contracting party. This will include copies of current certificates and authorizations for service on the routes which are the subject of this agreement, and for the future such new certificates and authorizations as may be issued, together with amendments, exemption orders, and authorized service patterns.

V

(a) Where the onward carriage of traffic by an aircraft of different size from that employed on the earlier stage of the same route (hereinafter referred to as "change of gage") is justified by reason of economy of operation, such change of gage at a point in the territory of the United Kingdom or the territory of the United States, shall not be made in violation of the principles set forth in the final act of the Conference on Civil Aviation held at Bermuda from January 15 to February 11, 1946, and, in particular, shall be subject to there being an adequate volume of through traffic.

(b) Where change of gage is made at a point in the territory of the United Kingdom or in the territory of the United States the small aircraft will operate only in connection with the larger aircraft arriving at the point of change, so as to provide a connection service which will thus normally wait on the arrival of the larger aircraft, for the primary purpose of carrying onward those passengers who have traveled to United Kingdom or United States territory in the larger aircraft to their ultimate destination in the smaller aircraft. Where there are vacancies in the smaller aircraft such vacancies may be filled with passengers from United Kingdom or United States territory, respectively. It is understood, however, that the capacity of the smaller aircraft shall be determined with primary reference to the traffic traveling in the larger aircraft normally requiring to be carried onward.

(c) It is agreed that the arrangements under any part of the preceding paragraphs (a) and (b) shall be governed by and in no way restrictive of the standards set forth in paragraph (6) of the final act.

HEADS OF AN AGREEMENT FOR USE BY CIVIL AIRCRAFT OF NAVAL AND AIR BASES IN AREAS LEASED TO THE GOVERNMENT OF THE UNITED STATES OF AMERICA UNDER AN AGREEMENT WITH THE GOVERNMENT OF THE UNITED KINGDOM, DATED MARCH 27, 1941.

Whereas by agreement of March 27, 1941 (hereinafter referred to as the "bases agreement") the Government of the United Kingdom of Great Britain and Northern Ireland agreed to lease for military purposes to the Government of the United States exclusively certain areas in the Western Hemisphere in which naval and air bases have been constructed with full and continuing rights of military use and control thereof for a period of 99 years as specified in the agreement; and

Whereas article XI (5) of the said agreement provides that "commercial aircraft will not be authorized to operate from any of the bases (save in case of emergency or for strictly military purposes under supervision of the War or Navy Departments) except by agreement between the United States and the Government of the United Kingdom, provided that in the case of Newfoundland such agreement shall be between the United States and the Government of Newfoundland"; and

Whereas the Governments of the United States and of the United Kingdom desire, in order to facilitate the development of air transportation, at this time to arrange for the air bases to be available for use by civil aircraft on the conditions hereinafter stated without interfering with, restricting or limiting the present military rights of, or continued military use by, the United States of the bases in accordance with the said agreement;

Now, therefore, it is agreed as follows:

ARTICLE I

The air bases (hereinafter referred to as "the bases") leased to the United States pursuant to the bases agreement will be open for use by civil aircraft wherever such use will contribute to the over-all development of civil aviation along sound economic lines.

(a) In accordance with the above principles the following bases will be open for regular use by civil aircraft: Kindley (Bermuda), Coolidge (Antigua), Beane (St. Lucia), Atkinson (British Guiana).

(b) The following bases which are situated in territories where adequate civil airports now exist, will be open for use by civil aircraft only as bad weather alternates until such time as agreement is reached that experience or other developments indicate the need for their regular use by civil aircraft: Carlson (Trinidad), Waller (Trinidad), Vernam (Jamaica).

The circumstances in which the said bases will be used as bad weather alternates will be determined in the light of any rules established by the Provisional International Civil Aviation Organization, or its successor, or in the absence of such rules by further discussion between the two Governments.

ARTICLE II

So long as the United States and the United Kingdom are parties to the International Air Services Transit Agreement signed at Chicago on December 7, 1944, the civil aircraft of all countries parties to that agreement may use the bases for nontraffic purposes in accordance with the provisions of section I of article I of the agreement. In view of the special circumstances in the case of these bases, countries which are not parties to that agreement but which are parties to bilateral agreements either with the United States or with the United Kingdom providing for the privileges specified in the said agreement may utilize the bases only with the concurrence of both the United States and the United Kingdom.

ARTICLE III

(a) Any duly authorized United States civil air carrier utilizing the bases shall be entitled, without prejudice to the principle of cabotage, and in view of the special circumstances in connection with the bases, to carry between the bases referred to in article I (a) hereof:

(i) United States Government sponsored passengers (and their personal effects) traveling at the expense of the Government of the United States or on business directly connected with the bases or with United States personnel at the bases; and

(ii) Cargo carried at the expense of the Government of the United States.

(b) The exercise of the privileges granted in these heads of agreement shall be without prejudice to rights (together with any extensions thereof) which may have been granted by the Government of the United Kingdom (or any of the colonial governments concerned) to any United States civil air carrier. In view of the special circumstances in the case of the bases, the Government of the United Kingdom will not grant civil air carriers of third countries utilizing these bases traffic rights incident to the use of these bases beyond the extent that such third countries have granted corresponding rights (though not necessarily on the same routes as those operated by the air carriers of the third countries concerned) in their respective countries to the civil air carriers of the United States.

(c) No other civil air carrier, including civil air carriers of the United Kingdom, will be granted any greater or different traffic rights at the bases than are granted to United States civil air carriers at such bases, provided that United States civil air carriers shall not, by reason of this provision, be entitled to claim the right to carry cabotage traffic between any two points in the territory (as defined in article 2 of the Convention on International Civil Aviation signed at Chicago on December 7, 1944) of the United Kingdom (except to the limited extent provided in paragraph (a) of this article) nor shall civil air carriers of the United Kingdom be precluded from carrying cabotage traffic between the bases concerned so long as United States civil air carriers are entitled to exercise traffic rights at those bases.

(d) For the purposes of this article, the term "civil air carriers of the United Kingdom" shall be deemed to include those of territories under the sovereignty, suzerainty, protection, or mandate of the United Kingdom.

(e) Notwithstanding the termination of the agreement between the Government of the United Kingdom and the Government of the United States of America relating to air services between their respective territories, signed at Bermuda on February 11, 1946, its provisions and those of its annex shall continue to apply to any traffic rights which United States air carriers may thereafter exercise at any of the bases referred to in article I of these heads of agreement until such time as the contracting parties may otherwise agree: *Provided*, That the Government of the United States shall have the right at any time after 15 years from the date on which the agreement referred to in article XII of these heads of agreement becomes effective to give notice of its desire that the provisions of the first-mentioned agreement and its annex shall cease to apply, on the date specified in the notice but which shall not in any case be less than 2 years after receipt of such notice, to the traffic rights exercised by its air carriers at any of the bases referred to above pursuant to that agreement.

ARTICLE IV

Subject to the provisions of article V hereof, civil aircraft of the United Kingdom (including those of territories under the sovereignty, suzerainty, protection, or mandate of the United Kingdom) shall be entitled to use the bases for nontraffic purposes on terms no less favorable than those enjoyed by United States civil aircraft.

ARTICLE V

(a) The United States military authorities will make every reasonable effort to avoid interruption of civil operations at the bases. It is understood, however, that the United States military authorities have the right for military reasons, on a nondiscriminatory basis, to curtail or suspend civil air operations, and, from time to time as may be necessary, to impose restrictions of a temporary or continuing nature on the use of the bases by civil aircraft.

(b) Subject to requirements dictated by military reasons, no limitation on the use of the bases by civil aircraft will be prescribed, except those predicated upon safety or the capacity of a field or its facilities, and any such limitations will be imposed on a proportionate nondiscriminatory basis.

(c) The use of the bases by civil aircraft may likewise on a proportionate nondiscriminatory basis be limited, curtailed, suspended, or subjected to such regulation as may be necessary for security reasons by the colonial government concerned. In such event that government will give timely notice to the United States military authorities.

ARTICLE VI

Subject to the provisions of article VIII (b) hereof, administrative and operational control of the bases will be exercised by the United States military authorities, who may, subject to the provisions of article VII hereof, delegate the performance of certain services to civilian agencies. Such delegation will be without prejudice to the right of the United States military authorities to resume the performance of such services at any time and without delay.

ARTICLE VII

Airport tower control and approach control will be operated by or under the direction of the United States military authorities. The responsibility for area control will be reviewed in the light of the studies and recommendations of the Route Service Organization Conference of the Provisional International Civil Aviation Organization, or its successor.

ARTICLE VIII

(a) Discussions shall be held between the two Governments with a view to making arrangements for the provision of necessary facilities, supplies, and services to civil air carriers using the bases, and the agreement to be concluded pursuant to these heads of agreement shall contain provisions defining such arrangements and shall not enter into force until such arrangements have been made.

(b) At each of the bases where suitable land is not conveniently adjacent thereto for the provision of necessary civil airport facilities, supplies, and services, and for the erection of buildings for customs, immigration, quarantine, and other similar matters of colonial or United Kingdom national interest, the United States military authorities will, if this is possible without conflict with military requirements, designate an appropriate area within the boundaries of the base for such purposes. Except as otherwise specifically provided in these heads of agreement, the provision of the above facilities, supplies, and services and the conduct of the matters mentioned above within the area so designated will be under the control and jurisdiction of the colonial government in the same manner and to the same extent as they would be if they were provided or conducted in an area outside of the leased area, but shall be without prejudice to the right of the United States military authorities to resume complete and unrestricted control and use of the designated area and its facilities should this prove to be necessary for military reasons of overriding necessity. The terms and conditions under which such area will be made available will be as approved by the Government of the United States after consultation between the two Governments.

(c) In connection with fire protection, sanitation, and other matters affecting the military security of the bases, the United States military authorities shall have the right, in collaboration with or after prior notice to the local colonial authorities in the territory concerned, to enter upon and to inspect any buildings or other facilities and services erected or provided in any area designated under paragraph (b) of this article for the purpose of satisfying themselves that adequate precautionary measures are taken in the matters referred to above. If the United States military authorities consider that the precautionary measures taken are not adequate, they shall have the right, in consultation with the colonial authorities concerned, or, in cases where military reasons so require, on their own initiative, to supplement these measures to the extent considered necessary. With respect to terminal and other facilities contiguous to the base area, the location, type, size, hazards to safe operation of aircraft, sanitation, etc., will be subject to consultation between the appropriate local authorities and, as required, between the two Governments for the purpose of safeguarding the military use of the base.

(d) Civil aircraft using one of the bases referred to in article I (a) hereof shall load and unload persons, mail, and cargo only within the area (which shall be either the area referred to in paragraph (b) of this article or outside the leased area), designated for that purpose by the colonial government concerned.

ARTICLE IX

The scale of fees to be charged for the civil use of the bases and for facilities, sup-

plies and services to civil aircraft using the bases, will be subject to consultation between the local United States military authorities and the local colonial authorities and, as required, between the two governments. The terms and conditions of any sublease by a colonial government to a civil air carrier for terminal and other facilities located within the base area and the location, type, size, and other pertinent details of the terminal and other facilities shall be subject to the approval of the United States military authorities.

ARTICLE X

Should the Government of the United States elect for military reasons to place one or more of the bases on a caretaker basis:

(a) The Government of the United States will have no further responsibility for maintaining that base in operational condition for civil use; provided that timely notice of intention to place on a caretaker basis is given to the Government of the United Kingdom.

(b) The Government of the United Kingdom or the colonial government concerned will have the right to maintain the base for civil use; provided that the Government of the United States at any future time within the term of the bases agreement and upon appropriate notice will have the right to resume the maintenance and operational control of the said base.

(a) Nothing in these heads of agreement will be deemed to constitute a limitation or an abrogation of (1) any of the rights or privileges accorded to the Government of the United States by the provisions of the bases agreement, or (2) the sovereign rights of the colonial governments concerned.

(b) The two Governments will consult together to decide what amendments, if any, to the bases agreement will be necessary in the light of these heads of agreement.

ARTICLE XII

(a) The two Governments will consult together and prepare an agreement giving effect to the terms herein contained. Such agreement will become effective on signature on behalf of the respective Governments, and shall continue in effect indefinitely but either of the Governments may, at any time after the agreement has been in effect for 15 years, give to the other notice of termination and in such event, the agreement shall cease to be effective 24 calendar months after the date of receipt of such notice.

(b) The two Governments hereby agree that while the agreement continues in effect, they will consult together not less than once in every five calendar years with a view to reviewing the operation of the agreement and agreeing upon any modifications that may be desired.

(c) The initialing of this document shall not indicate that a contract has been concluded. This document is the agreed basis of, and subject to the preparation of, a formal contract. In the preparation of the formal contract any outstanding points, more particularly the points arising in articles 8 and 11, will be resolved.

FEBRUARY 11, 1946.

Delegation of the United States of America

FEBRUARY 11, 1946.

SIR HENRY SELF,
K. C. M. G., K. B. E., C. B.,
Chairman, United Kingdom Delegation.

MY DEAR SIR HENRY: In initialing today the heads of agreement with respect to the use of the 99-year-leased bases by civil aircraft, I wish to confirm by this letter the oral reservation which I have heretofore made on behalf of the United States. Final approval and signature by the United States of the agreement to open any of the 99-year-leased bases to civil aircraft is contingent on reaching satisfactory agreement with the Governments of Newfoundland and Canada regarding the use by civil aircraft of airfields in Newfoundland and Labrador, namely Goose, Gander, Harmon, and Argentia.

I am, my dear Sir Henry,
Very sincerely yours,

GEORGE P. BAKER,
Chairman, United States Delegation.

Delegation of the United Kingdom

BERMUDA, *February 11, 1946.*

MR. GEORGE P. BAKER,
Chairman, United States Delegation,
Civil Aviation Conference, Bermuda.

MY DEAR MR. BAKER: You will recall that on February 9 I informed you that the United Kingdom Government wished a reservation to be made at the time of the initialing of the heads of agreement relating to civil use of base airfields, and that they wished articles VIII and IX to be specifically referred to in this reservation as both of these articles provide for discussions on outstanding points. We have since heard from London that the amendments which we have agreed upon in article III of the heads of agreement do not entirely resolve the doubts felt in London in regard to the commitments already entered into by the United Kingdom Government granting traffic rights to Canadian air services operating through Bermuda. I, therefore, take this opportunity of letting you know that the United Kingdom Government will wish to discuss this question with the United States Government at a later stage.

Very sincerely yours,

A. H. SELF.

REPORT ON THE BASES DISCUSSIONS

The discussions on the bases were conducted by a committee under the chairmanship of Mr. Garrison Norton (United States) and composed as follows:

United States delegates; John D. Hickerson, John Sherman; advisers: Col. S. E. Gates, W. John Kenney, Maj. Gen. L. S. Kuter, and Vice Admiral F. P. Sherman; consultant, John Leslie.

United Kingdom delegates: W. J. Bigg, N. J. A. Cheetham, L. J. Dunnett, P. G. Masefield; advisers, M. E. Bathurst, F. Kennedy.

There is submitted herewith a draft of heads of agreement which has been agreed on with a view to the preparation and conclusion of an agreement between the two Governments.

It is recommended that the bases agreement of 1941, and particularly articles IV, VI, IX, XII, XIII, XIV, XVI, and XVII, be examined with a view to determining how far they should apply, if at all, in relation to the use of the bases for civil purposes. It is the intention that United States mail originating at United States post offices established in the bases under article XVI of the bases agreement should be included in the arrangement mentioned in paragraph (a) of article III of these heads of agreement.

It is also recommended that examination be made of the applicability of colonial laws and regulations to the commercial transactions which may be conducted on the bases.

CLOSING REMARKS OF MR. GEORGE P. BAKER, CHAIRMAN OF THE DELEGATION OF THE UNITED STATES

Your Excellency, Sir Henry, Sir William, ladies and gentlemen, 4 weeks ago in my opening remarks I stated that the United States delegation came here with an earnest desire, in the interest of the speedy development of international air transport and the continuing good relations between our two countries of working out a bilateral air transport agreement. We believed that if both sides approached the subject in the light of the over-all economic relations of the two nations, of our comradeship throughout the past years of war, and the seriousness of the world problems now facing us, that we could reach a successful result. That success is now achieved. We have had from the other side of the table the forthright and energetic presentation of the British view coupled with a willingness to seek ways and means of finding common ground when these views sometimes seemed diametrically opposite to ours. We have shared long periods of very concentrated effort. We have shared some periods of anxious inactivity waiting upon the necessary review of our best efforts by the Governments at home. We have shared the enjoyment of this beautiful island. I believe that the cooperation which has begun here augurs well for the future of civil aviation between our two nations and we hope for the development of civil aviation throughout the world, for what has been worked out here may well form the cornerstone on which other nations work out their equally difficult air-transport problems.

We have agreed on some very fundamental principles—primarily upon the desirability of governmental control of international rates; secondly, the desirability of freedom from control of frequency of operation; and thirdly, on through routes and in accordance with general rules, the freedom to pick up en route traffic not originating or terminating in the country of origin of the aircraft involved. All these principles should be seen in the light of an overall agreement that the aeronautical authorities of the two nations should freely consult when either party feels that it has a fair grievance under the actual practices carried out in operation. I believe we have come a long, long way from where we started. I cannot end my remarks without a word of my deep personal appreciation, and I wish to express the appreciation of the entire United States delegation as well, of the privilege of meeting and working with Sir Henry Self and Sir William Hildred. Without their strong and able personalities we should undoubtedly be looking forward to long negotiations still ahead or we would have left long since with no such agreement as we proudly sign our names to this evening.

In addition to the problems involved in the drawing up of an air-transport agreement, we have struggled equally hard with the problem of opening up the so-called leased bases to civil aviation. I am going to ask General Kuter if he will be kind enough to say a few words in that regard.

CLOSING REMARKS OF MAJ. GEN. L. S. KUTER, UNITED STATES ARMY AIR FORCES, ADVISER TO THE UNITED STATES DELEGATION

Your Excellency, Sir Henry, Sir William, Mr. Baker, ladies, and gentlemen, results of the Bermuda Civil Aviation Conference demonstrate conclusively the encouragement being given by our armed forces to global interests of civil aviation.

It is agreed that civil aircraft may use the United States military air bases in Bermuda and the West Indies which were constructed upon areas leased from the United Kingdom. Our agreement is contingent upon satisfactory arrangements between the

United States and Newfoundland and Canada for similar use of military airfields in Labrador and Newfoundland.

Civil use of these bases will be of substantial benefit to international aviation and without prejudice to complete military control of the bases by the United States.

Civil use of air bases under the military control of one nation located in the territory of another involves unprecedented jurisdictional and other problems which it has not been possible entirely to solve at this conference. Some problems which require further experience have therefore been held for continued study and later agreement.

The conference has proved that the spirit of cooperation which existed between the Allied Nations during the war will continue to guide the United States and the United Kingdom and other nations in peacetime extension of civil aviation throughout the world.

CLOSING REMARKS OF SIR HENRY SELF, CHAIRMAN OF THE DELEGATION OF THE UNITED KINGDOM

Your Excellency, Mr. Baker, General Kuter, ladies and gentlemen, on behalf of the United Kingdom delegation, I should like to express our thanks for the very kind words which we have just heard, and to say how much we have all enjoyed our association with the United States delegation.

Both sides, I believe, came here conscious of the high importance of reaching an agreement, and have steered steadily toward that goal. During the inevitable ups and downs, it has been a source of comfort and hope to know that the members of the Civil Aeronautics Board, the War, Navy, and State Department teams, under the able leadership of Mr. Baker, were searching along with us for common ground.

Well, we have reached agreement, and I hope and believe it to be a good agreement, which will stand the test of time. The overriding aim is to encourage the healthy growth of civil aviation, and to make reasonably sure that it will be neither stunted, as it has been in the past, by overshadowing political and commercial difficulties, nor be itself a disturber of international relations.

It is our belief that the set of principles to which both sides have subscribed in the final act will secure this great purpose. They are the key to the whole matter. With both countries adhering to them, the agreement contemplates a vast expansion of air services, a blueprint of which is to be found in the annex to the bilateral agreement, in conditions which will serve the public interest and in which British and American air lines will vie in friendly competition.

As all of you who have been with us through the weeks of this conference will know only too well, whatever may have been our initial differences, there has never been any difference between the United Kingdom and the United States delegations as to the ultimate objective which we are both trying to reach. We both believe in what is commonly called mass air travel, and I do not think I can do better than quote a passage from the final act of this conference:

"That the two Governments desire to foster and encourage the widest possible distribution of the benefits of air travel for the general good of mankind at the cheapest rates consistent with sound economic principles; and to stimulate international air travel as a means of promoting friendly understanding and good will among peoples and insuring as well the many indirect benefits of this new form of transportation to the common welfare of both countries."

We have also reaffirmed our adherence to the principles and purposes set out in the preamble to the Convention on International Civil Aviation signed at Chicago in December 1944. It was there recognized that the future development of international civil aviation, if properly developed, can greatly help to create and preserve friendship and understanding among the nations and peoples of the world. It was also there stated that in the ordering of international civil aviation one of the main objectives should be to avoid friction and to promote that cooperation between nations and peoples upon which the peace of the world depends.

In stressing the significance of the present agreement as clearing outstanding problems between our two countries, I am not suggesting that from now on there will never be any differences of opinion between us in the field of civil aviation. We know that in a sphere of activity so new and so dynamic as air transport points of difficulty are bound to arise, and I personally regard it as one of the major achievements of this conference that we are both wholeheartedly agreed on the continuing need for regular and close consultation between our respective aeronautical authorities and have provided for it. We have invited the Civil Aeronautics Board of the United States to post a representative in London who will work continuously with our Ministry of Civil Aviation, and in return the United States delegation have invited us to post a representative of our Ministry in Washington, in order to work daily upon the Civil Aeronautics Board. This machinery for consultation will insure that any points of difference that may arise will be handled quickly. Nothing is more conducive to the creation of difficulties than misunderstanding, which often arises merely through lack of knowledge of what the other side is in fact doing, thinking, or planning. Under the machinery which we have here agreed to set up we shall be constantly interchanging information as to what our plans and purposes are. I am confident that in this atmosphere of frankness, mutual understanding will also flourish.

I am not suggesting that what we have done here is ideal or immutable, but we do claim that the principles set out in the final act are, on the situation so far as it can be foreseen, constructive and practical. They have been agreed, following the most frank discussions in what is probably the most representative gathering of aeronautical experts from our two countries that has ever taken place.

Air transport is by its very nature an international business. What we have done here will inevitably be studied with keen interest by all those wherever they are who are interested in this great business. If, as I believe, we have done our work well, what we have done will no doubt be woven into the broad international tapestry. Realizing this we have provided, as you will have noticed, not only for our respective operators to work as far as possible, in and through the machinery of the International Air Transport Association, but also on the governmental level for our two Governments to refer for advice and guidance to the Provisional International Civil Aviation Organization, which under the distinguished chairmanship of Dr. Warner has already made so auspicious a start. I should like to make it clear that throughout our discussions we have been careful to do nothing that will in any way prejudice the role and importance of that organization.

I cannot end these remarks without saying how great a privilege it has been for me personally and for the other members of the United Kingdom delegation to take part in the conversations and how honored we have been that the United States of America should have sent to Bermuda so large and so distinguished a delegation. The friendships that have been established or renewed here provide the happiest of augurs for the future. Equally, we look forward to welcoming American aircraft and crews and American passengers on our airfields, and to British aircraft and crews and British people becoming constant users of American airfields.

There is one category of airfield where the British and Americans will be joint hosts, namely the airfields in the areas leased to the United States for military purposes. I am particularly glad that during our stay here firm foundations have been laid for an agreement which will reconcile both the requirements of the British colonies concerned and also those of the United States naval and military authorities. It is believed, I think by both sides, that the opening of these airfields for civil use will assist the development of air services both to and in the territories concerned.

Bermuda is one of those territories and her soft airs have been most sympathetic to our labors. Her sky has at times wept, but always smiled through its tears. Bermuda's loveliness and hospitality have been, as His Excellency said they would when we first came here, kindly influences, infusing a spirit of concord among us. We are deeply appreciative and grateful.

Finally, I hope that Mr. Baker will allow me to say that it is in very large measure due to his unfailing courtesy, to his profound knowledge of all aspects of transportation and to his dispassionate and reasonable approach to all problems that such progress has been made here. We regard it as a great honor to have been associated with him and his colleagues in these discussions over these past weeks.

Truman Finally Admits Republican Doctrine Is Best

REMARKS
OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. JENKINS. Mr. Speaker, tucked away in the President's statement on wage-price policy of February 14 is this sentence:

It is imperative that production in great volume be accomplished.

Mr. Speaker, I should like to ask the questions, "Can we depend on this? Is this to be the policy of the administration from this time forth?" I wonder.

This is the first time any responsible Democratic leader has admitted that production and more production is the primary solution to our present domestic difficulties, not alone in the wage-price crisis into which New Deal bungling has plunged us, but also to overcome food shortages which the President has also finally admitted exist. It is a complete reversal of the New Deal philosophy of scarcity which has been so strongly advocated by New Deal advisers. Will the President dare to adhere to this new policy.

It is gratifying to know, Mr. Speaker, that the administration is gradually coming to the Republican doctrine of plenty. The Republican Congressional Food Study Committee, of which I am chairman, has consistently advocated that production in tremendously increased quantities was a necessary solution to most of our domestic economic ills. As long ago as July 8, 1943, I emphasized this matter in the House of

Representatives, and have repeatedly reasserted that only by a doctrine of increased production could we win the fight against scarcity and inflation. Let me quote from my remarks in the CONGRESSIONAL RECORD of July 8, 1943. At that time I said:

Although the early policies of the New Deal administration, which advocated that surpluses of foods were dangerous and that scarcity of foods was desirable, had been very disastrous, yet the great productivity of our country would have been sufficient to have overcome this disaster if those in charge of food affairs had been frank and courageous enough to admit their mistakes. * * * Apparently it never occurred to them that no one ever went hungry on a surplus. They should recognize the fact that production must come first. Instead of building on a solid foundation they have proceeded to build as one who would build the second story of his house before he laid the foundation or built the first story. Instead of starting at the beginning with the producer and proceeding from production to processing and distribution they thoroughly disorganized the whole food situation. The only way to solve this food problem now is to increase the production of all kinds of basic food commodities to the maximum.

Let us hope that the administration, recognizing its failure to solve our problems by following the nebulous doctrines of Wallace, Rosenman, and Hopkins, will take hold of and use the good old Republican doctrine of plenty.

Ingratitude to Veterans

REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. LARCADE. Mr. Speaker, I am completely exasperated and digusted with the treatment which has been accorded the returning veterans of this country, and I demand that the departments of the Government charged with the administration of the disposal of surplus war material and the Federal Housing Administration either be made to carry out the terms of the legislation passed by the Congress in furnishing our veterans with the benefits which have been provided for them, or that they either resign or be removed from their positions from the top to the bottom. Mr. Speaker, in my district and State, and all over the country, veterans seeking to purchase surplus war materials have been given the run-around to such an extent that they have been unable to purchase even automobiles, much less other surplus material upon which they have a priority under the terms of legislation passed by this Congress.

It is a crying shame and a disgrace to this great Nation that men who have fought for their country are unable to obtain a place to live for themselves and their families, and in my district, State, and all over the Nation, those who desire to take advantage of the educational provisions of the GI bill are unable to enter the colleges and universities because there is inadequate housing facilities there, and little can be secured from the agencies of the Government charged with the responsibility of furnishing the same, notwithstanding there is scattered all over this country and other places, all of the housing necessary to take care of these deserving veterans. If this situation is not corrected immediately, it is my purpose to introduce legislation for an immediate investigation of this situation.

The Housing Situation

REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. MURRAY of Wisconsin. Mr. Speaker, it seems that many are doing quite a lot of talking about the housing situation as far as the veterans are concerned. It seems that 5,000,000 rural people went to the cities during the war, and if these 5,000,000 people will go back to where they came from, we would not have so much of a housing problem for veterans. I also call your attention to an open letter to the Congress in yesterday's Washington papers by Mrs. Evalyn Walsh McLean in which she suggests that the Congress take a little action in this matter instead of so much conversation.

Also, there is an article in the Times-Herald by Lt. Comdr. Tyrrell Krum on the same subject. This housing business, as serious as it is, can be met. I think that the first step to meet it would be to give a chance to the people that want to get out in the rural areas to move into houses in rural areas.

Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include this open letter to Congress and also the article by Lt. Comdr. Tyrrell Krum.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

The documents referred to are, as follows:

FEBRUARY 15, 1946.

The Congress of the United States.

GENTLEMEN: I respectfully bring to your attention the following situation regarding our veterans:

When the war was on our boys had priority over everything. They had priority on trains, on ships, and on planes, anything to get them quickly to the battle front where they could kill and be killed. Now that they have won the war they have apparently no priority on anything. Many of them with missings arms, legs, and eyes, and the rest who have come through physically safe but mentally broken can now take a back seat.

Big business steps in—the selfish interests and the leeches who will suck the last penny out of the great victory our veterans have given us. Why is this allowed to happen in our country? Why can't our veterans have a chance to buy safe and solid homes, which are already built? Why must our Government-owned houses like McLean Gardens, Naylor Gardens, and others, be denied our war veterans when they were bought by the Government, and run by the Government, and should be sold by the Government to the veterans who saved our democracy? Why are things made so hard for our boys who a year ago were heroes, who a year ago could have had anything we could give them if only they would win the war? Why now must these same lads live in wretched cheap little houses (if they can find one) when the Government has houses already built that should be made available to them?

Why is the great pool of real-estate interests who are able to bid on these houses just to make money allowed to carry their plans through? I'll tell you why. Our veterans are being double-crossed. Our great heroes of a year ago can't now even have the right to bid on the housing plan and pay for it with their own money. They say it is too big for them to handle. Why? We can give billions to Europe but we can't, apparently, take a chance on a few millions to back our boys. We could so easily give them a 20-year lease on the different Government-owned houses throughout the United States, and if they can't make good in that time our Government won't go broke.

Let's start right here in the capital of the world to let veterans buy these decent, well-built, available houses, and this should be carried out all through the great cities of this country. If there is no law now to give our veterans the right to have the first bid on these Government projects why shouldn't the Congress of the United States manage to take a few hours off a day and see that our veterans get their just due?

It will be 2 years before new homes can be built. Meanwhile, what happens to our veterans? Our boys, who saved democracy for us, who gave everything they had when they were called upon, should now be the first to be considered, to be protected, and to have the best that our Government can give, without red-tape delays or any of the other foolish wicked obstructions which are put up in argument against a peaceful and happy life for them all.

Respectfully,

EVALYN WALSH MCLEAN.

(P. S.—I have absolutely no financial interest whatever in McLean Gardens or any other housing project under consideration.)

VETERANS' AFFAIRS

(By Lt. Comdr. Tyrrell Krum, USNR (retired), Times-Herald veterans editor)

Somewhere in today's edition of the Times-Herald, as well as other Washington newspapers, will be found a full-page paid advertisement containing an open letter addressed to the Congress of the United States over the personal signature of Mrs. Evalyn Walsh McLean.

Every one of you should digest its contents carefully and thoroughly.

And I hope and trust that my charming coworker, Mrs. Helen Essary, whose "Dear Washington" is over to the right and the other writing ladies who deal with the distaff side of Washington life will not consider me infringing on their territory when I include Mrs. McLean in our discussion of veterans' affairs.

Because, unbeknown to most of you, Mrs. McLean occupies a place all her own in the hearts of our war veterans, particularly those maimed and crippled fighting men now edging their way back to health in our Army, Navy, and veterans' hospitals of the Washington area.

Mrs. McLean has long dominated the social life of the Nation's Capital. For years on end her parties and receptions at Friendship, the McLean mansion at Wisconsin and R Streets, have been the focal point of the more fastidious folk of the city who found

themselves fortunate enough to receive a bid from the city's topflight social leader.

Today all this, to a large degree, has been changed. Instead of the glittering jewel-bedecked social matrons and the high-ranking military and naval figures dominating the McLean drawing rooms and spacious garden of Friendship we find the drab GI uniforms and Navy blue of ordinary ex-fighting men.

Without fanfare or public notice, Mrs. McLean has been giving of her boundless energy and unlimited wealth and has practically turned over her palatial mansion each Saturday night in an effort to bring a bit of sunshine and enjoyment to hundreds of wounded and disabled ex-servicemen.

They come in wheel chairs and on canes and crutches from Walter Reed, Forest Glen, and Naval Hospital. Who they were or their station in life makes no difference. Their uniform is their passport into the drawing rooms and the terraced gardens of Friendship to enjoy her food, gulp her beer (strong drinks are taboo), and hold plain old-time "bull sessions" among themselves.

But the parties at Friendship are only a small part of what Mrs. McLean is doing on behalf of wounded war veterans. She is a regular visitor at the hospitals, taking the men in the wards presents, helping them to write letters home, talking and visiting with them, and counseling with them on their problems of the future.

In a number of cases she has personally provided disabled veterans, whose disabilities defied ordinary medical attention, with the best doctors in the profession. On more than one occasion she has had discharged disabled servicemen operated on in private institutions at her own expense by experts high in the medical blue book.

And out of her countless associations with ex-fighting men at the hospitals and at her home, Mrs. McLean has seen the dawning of the ugly fact that our war veterans are in the biggest run-around in settling back to civilian life any returning soldiers have ever been given.

And Mrs. McLean has seen veterans get the "round-around" on one very memorial occasion in the past. That was the time of the "bonus march" on Washington in the early thirties. At that time hundreds of veterans were encamped on the Anacostia Flats, living in shacks and misery while attempting to prevail upon Congress to give them the unpaid portion of the bonus the men on Capitol Hill promised after the last war.

For weeks the "bonus marchers" were forced to stand by awaiting congressional action. But Mrs. McLean didn't hesitate. She personally rallied her household servants, valets, and maids together and took down to the veterans of the First Great War cars loaded with food and supplies that actually kept them alive during those hectic days.

Mrs. McLean sees that same situation emerging from this war unless Government stops binding veterans down in endless red tape and delay. And she is determined to fight it before it reaches the critical stage it did in 1932.

The refusal of the national housing authorities to permit a group of American Veterans of World War II (Amvets) to purchase McLean Gardens, which has been declared surplus and thrown on the open market for sale by the Government, is the spark that has made her fighting mad. Hence the letter to which we referred.

And, it is my opinion that if veterans are still to be held back by housing bureaucrats from rights to decent homes in which to live in peace she's liable to hock her million-dollar Hope diamond, if necessary, to give them an assist.

Emergency-Housing Program

REMARKS
OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. LEFEVRE. Mr. Speaker, as a Member of Congress, interested in the retail lumber business myself, I want to take this opportunity to thank my two colleagues, Mr. JENSEN and Mr. MCGREGOR, for their remarks before the Members of the House last week. Both of these gentlemen are practical men, have had personal experience in home building, and, therefore, I recommend that everyone, who was not present at the time their speeches were delivered, read them.

Mr. Wilson Wyatt, the National Housing Administrator, has announced his emergency program, a goal of 2,700,000 homes in the next 22 months; subsidy proposals for building materials; an increase in building labor to 1,500,000 or three times the present number; and an increase in production facilities for building materials, approximately eight times the present capacity. Roughly, 1,200,000 homes must be started in 1946. Seven hundred thousand will be conventional homes, houses built in the customary way on site; 250,000 permanent prefabricated homes, and 250,000 temporary homes. For 1947, 1,500,000 homes must be started; 900,000 conventional homes and 600,000 permanent prefabricated. It is hoped there will be no need for any temporary units the second year of the program.

Mr. Speaker, this is a tremendous problem but the country has tackled other huge problems and has been successful. In days gone by the building industry, which is the second largest industry in our Nation, has handled this housing situation better than in any other nation in the world. They have accomplished this without the red tape that I fear will interrupt and stall the industry by improper legislation at this time.

Veterans' housing needs are serious, but I believe the great bulk of the present needs can be met by proven and available methods if that one great bottleneck of all our troubles, the obtaining of building materials, is broken. Over 6 months has passed since VJ-day and the Office of Price Administration, to my knowledge, has not yet made any realistic approach toward channeling house-building lumber to the trade. Let us hope that a bill will be brought in that will so outline the duties of OPA that production will be accomplished. If prices have to be increased, set up a rule governing the increase to get production, and let that increase be passed along to the ultimate consumer in dollars, so he knows what he is facing, and so do away with the ridiculous black market proceedings we hear about so frequently. The black market is killing off the legitimate distributor and the public is being gypped no end.

A great part of the new housing program involves prefabricated houses. I am not so sure this type of housing is the answer. From my own experience the old type of the so-called canned house was not too satisfactory. Prices, as announced by Mr. Wyatt for prefabricated houses, sound pretty high for the average veteran by the time land cost and necessary utilities are added. A man's home is his castle. He wants something distinctively his own and unless the veteran can get his money's worth, I am opposed to this type of investment. Of course, it is possible the new prefabricated home is a great improvement over the old type. This may be the answer after all, but we must not forget that large group of men in every community throughout our land, who depend on the construction industry for their living. This group includes bricklayers, carpenters, painters, electricians, plumbers, both skilled and unskilled labor, along with the many classes of building supply dealers, rearing to go, as soon as materials are available. Due to the very influential backing of some of these prefabricated house manufacturers, I greatly fear a large portion of building materials that rightfully should go to the legitimate dealers, will be siphoned off to these new Government-encouraged prefabricating outfits. This type of Government subsidized artificial stimulation, to a large degree, is in an experimental stage and is bound to be wasteful and drain off both critical materials and labor unless very carefully supervised and regulated.

I agree with Mr. Wyatt that a program of this magnitude will require the best efforts of the entire building industry. Therefore, conventional building should receive every possible priority so nothing will retard those available skilled building mechanics, waiting to surge ahead.

Local loaning institutions, working with the Government on insured mortgages, having proven very satisfactory, and the mortgagor was pleased, having the advantage of local builders' and local bankers' advice. This should be continued.

Mr. Speaker, I cannot close this article without bringing to the attention of the House this question of export lumber. In taking this question up with Mr. Bowles, he considered the volume involved as being trivial, only approximately 1½ percent of production. I understand the Civilian Production Administration is contemplating exporting 1,000,000,000 feet of lumber in 1946. In addition to this, we plan to ship to foreign lands thousands of doors, trim, brick, bathroom fixtures, and so forth. The lack of these items are what is making the bottleneck in our domestic building program today. Mr. Speaker, what should we do about this? I believe Mr. Wyatt, by his own authority, can stop this; or, is it better to place an embargo by law on these foreign shipments until our domestic demand is somewhere in balance with the supply? We cannot place the blame for this condition on the producer. The producer gets a much

better price for export material and, therefore, OPA is again unrealistic.

I hope that the rumor, that Mr. Peter Stone in the Lumber Division of OPA is resigning, is untrue. He has tried his best to promote workable features and is a practical lumberman. Many times his advice has been overruled. If Mr. Stone is leaving, I hope his successor will be as practical and try to discourage some of the theoretical theories that have been tried.

The builders in our country must provide the great bulk of our housing. Give these men the tools: free them from the shackles of unworkable red tape surrounding Government restrictions and they will produce the greatest assistance in this housing emergency.

Mental Demobilization—Revamp Congress?

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. DOYLE. Mr. Speaker, unanimous consent for me so to do having been given, I am pleased to include in my remarks two significant editorials. Both of them appear in the Long Beach Pacific News printed and distributed at my home city of Long Beach, Calif. The editor of this paper journeyed to San Francisco, Calif., at her own expense, to there attend the sessions of the United Nations Organization. I include the two editorials as follows, Mental Demobilization, dated Thursday, January 3 1946, and Revamp Congress? dated Thursday, January 10, 1946:

[From the Long Beach (Calif.) Pacific News of January 3, 1946]

MENTAL DEMOBILIZATION

Reports from Washington indicate that some Congressmen hesitated to go home for the holidays because they didn't want to face the complaints that demobilization is not being carried out fast enough, even though more than a million men a month are returning to civilian life.

This intense desire to get fathers, brothers, and sons back home again is quite understandable, yet it has a deeper significance than mere emotion. It reveals the swift mental demobilization that is going on in America today. We want to forget war. It's hard to blame people for feeling this way, but the attitude is nevertheless dangerous. Why? Well, this war has caused political, economic, and social dislocations throughout the world, especially in conquered countries, which must be corrected.

If we are too anxious to forget the war, we are not likely to be in a frame of mind that will spur us to stay with these problems until some real progress is made toward their solution. Working them out may take years, but unless they are solved they remain as possible causes of a future war.

We must remember that peace does not come automatically when the guns cease firing. If we are to have real peace instead of a cessation of hostilities then the political, economic, and social maladjustments created by the war must be licked just as effectively as the enemy armies. Until this is done, we should resist mental demobilization.

[From the Long Beach (Calif.) Pacific News of January 10, 1946]

REVAMP CONGRESS?

Congress hasn't overhauled its legislative machinery since 1893. And things have changed quite a bit since then. The boys on Capitol Hill are trying to do business in this dizzy, dynamic age with their old horse-and-buggy methods.

One of the biggest faults among the many in the congressional procedure is that Congressmen have too many things to do—at the same time. For instance, a Senator may be a member of three or four important committees. It is not unusual for two of these committees to meet simultaneously. During that hour an important debate may be taking place in the Senate. As a result, he must either divide his time among the three meetings and not be fully informed on what is going on in any of them, or else he must stick to one and ignore the others. Neither arrangement is desirable.

Another, and more glaring weakness in Congress, is the seniority system which awards membership on the most important committees and assigns the chairmanship of committees solely on the basis of length of service.

Under this method the elderly Congressmen from the Southern States who are returned to office time after time hold the key positions. Some of these men are competent and progressive, but some of them are not.

A system of rotation would give younger and sometimes abler Members an opportunity to serve in important posts, and it would do much to rejuvenate many of the "creaking" committees.

Congress alone can make changes in its legislative machinery. But in view of the antiquity of that machinery we think the question should be put to the lawmakers: How about a thorough streamlining job—now?

Lincoln and New Slaves

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 15, 1946

Mr. CARLSON. Mr. Speaker, under leave to extend my remarks I am including an editorial from the Topeka Daily Capital, issue of February 12, 1946.

This excellent editorial is very timely and I recommend its reading to other Members of Congress. The trend of government during the past decade has been toward a greater centralization in Washington. This trend of over-all control of our governmental and private affairs from the central seat of government is dangerous and must be stopped. After all, the Government cannot support the people—the people must support the Government. Democracy springs from the people and is strong only as the individual citizen directs and controls the affairs of the Nation.

LINCOLN AND NEW SLAVES

"Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich. * * * Let not him who is houseless pull down the house of another, but let him work diligently and build for himself, thus by example assuming that his own should be safe from violence when built."

Lincoln said that.

Other Americans have said it, in a variety of ways, since this Republic was born. But there are those who would have the Nation believe that Lincoln was wrong, that property is an evil, and that the very possession of property in itself is a mark of dishonor.

There are those who foster a philosophy which encourages minorities to "pull down the house of another" so that they may share in the earnings of others.

There are those who preach the defeatist sermons of planned economy, and hold that our way of life and government has failed, and that we must substitute socialism for democracy.

They sneer at the virtues which have meant most in our national life; they declare that our Constitution is outmoded; they insist that government "of the people," for which Lincoln stood, is ineffective, and that we must follow the dictates of those who would make America over.

For a time, the advocates of centralized authority enlisted converts by holding forth promises to divide the wealth. They made war against "big business," and they told the people that every man was entitled to his share. These arguments were advanced in a receptive atmosphere, for big business in too many instances had overstepped its bounds, and it was necessary for the people—acting through their government—to impose curbs on greed and those evils which acted against the public welfare.

As long as the Government was levying high taxes against great corporations, and in that sense dividing up the wealth, the people believed they were on the path of true democracy. They believed the greatest good was being achieved for the greatest number.

But, step by step, Governmental dictation progressed from the big corporations down through the smaller ones, into every business and industry, and finally into the affairs of every citizen.

Today, the man who is industrious and honest and enterprising finds that he is saddled with the burdens of the man who is lazy and without a will to shift for himself. And there is little inducement to "work diligently and build for himself, thus by example assuring that his own should be safe from violence when built."

The citizen who acquires a modest amount of property, a few hundred dollars in the bank or a little grocery store, is subject to having a part of that property taken from him.

It is taken in a multitude of ways. It is dissipated by high taxes. Its value deteriorates through inflation. Its worst enemy is government—the Government which should be of, by, and for the people.

When it is stated that Government is doing this or doing that to carry us through some emergency, the facts of the matter are that the Government, in most instances, is placing penalties upon success for the benefit of the unsuccessful. It is discouraging thrift and initiative; it is encouraging idleness of the worst sort—the idleness of the mind which permits a man to feel that, if he fails to make his own way, others will do it for him.

When the people of any nation surrender their independence and allow a paternal government to direct their affairs with too much latitude, that government turns to dictatorship. When this happens, the people lose their freedom and become slaves.

Emancipation in Lincoln's time was achieved through bloodshed.

But a type of slavery is returning to the United States in a bloodless revolution, and those who accept dependence upon government and become subservient to governmental dictates are wearing chains of their own forging.

Every time Washington announces a subsidy, whether it is for the purpose of helping build needed houses, or whether it is for the promotion of an unworthy enterprise, we are that much nearer the slavery of socialism.

Today's medicine may be tomorrow's poison.

On this birthday anniversary of Lincoln, as on all other significant landmarks in history, it is desirable to appraise the future on the basis of all which has gone before. Any thoughtful consideration of our current problems, and those which are just over the horizon, will develop the conclusion that, while Lincoln might not have been a great figure if he had lived in a later generation, his principles were identified with no single era.

As in his time, we need a Government representative of all the people, and under the command of the people—not a Government representing the interests of powerful minorities, and functioning under pressure of their political threats.

We need a way of living which calls for the best in every man and woman; not one which places a premium upon weakness and improvidence.

With the excuse that it was attacking "big business" on behalf of the people, our Government has itself become the biggest business in the world. Now, more than anything else, the people need protection from what they have created. The Government won through courage and self-sacrifice can be rescued only through a willingness on the part of all the people to look to themselves rather than to Washington for the solution of their problems.

Discrimination Against War Veterans

REMARKS
OF
HON. BERKELEY L. BUNKER
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. BUNKER. Mr. Speaker, my attention as well as that of many of my colleagues with whom I have talked in recent days has been called repeatedly to the flagrant and widespread discrimination against war veterans in the disposal of Government surplus property.

Certainly no class of persons is more deserving than these men and women who served our Nation well. Except for their sacrifices and their comrades' it would have passed into enemy hands.

I am therefore introducing a resolution calling for appointment by the Speaker of the House of Representatives of a seven-member committee to inquire into the extent and reasons for discrimination against veterans at distribution points. Most of the Government property that has or will become surplus was intended to be placed in the hands of the now returning soldier when he was on the firing line—for his use, with his life if necessary—to win the war.

We did not begrudge it to him then, whether it went directly to him or the civilian war worker to implement the manufacture and disposition of arms. He demonstrated his ability to use it efficiently and effectively in war. In peace he is entitled to use it likewise—no longer to defend, but now to advance our economy.

The other measure I am introducing today would give veterans preference, second only to the agencies of the Federal Government, in the purchase of surplus property for their own use or use in their business or profession or on their farms.

These returning veterans are facing serious problems of rehabilitation and we have a moral obligation to discharge to them. They deserve every consideration consistent with justice and it is our duty to assist them in reestablishing themselves as honorable, self-reliant citizens desire to do.

I have no quarrel with the Reconstruction Finance Corporation, which recently inherited the full responsibility for disposing of surplus property. In my judgment, this consolidation will in itself, go far toward simplifying the procedure necessary for acquiring such property. It is the bungling at Pacific coast distribution centers that I am interested in correcting.

Col. Edward J. Kelly

EXTENSION OF REMARKS
OF
HON. JOHN J. COCHRAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. COCHRAN. Mr. Speaker, under the permission granted me, I include as part of my remarks the speech made by Hon. William E. Leahy, a well-known member of the Washington bar, in reference to the service of Col. Edward J. Kelly, who recently retired as head of the Metropolitan Police force of the District of Columbia. It follows:

The career of Col. Edward J. Kelly, in the Metropolitan Police force of the District of Columbia, is a record of exceptional performance and a target of remarkable action for any rookie and member of the ranks, to shoot at in emulation and to strive to equal. It is a monument of honest achievement, more enduring than any words one might use to adorn it and more suitable, just as it stands, than any some sculptor of speech might chisel in his vain attempt to surpass it. It represents the consummation of Colonel Kelly's ambition and it was wrought of his sinews and his strength. It is a gratifying development from the sweat of his brow as he labored long in the vineyard of public service. This testimonial to his commendable accomplishment but attests the constant resolution with which he always pointed the direction of his life; and it is the coveted recognition by his fellow citizens, publicly expressed, that, in the progress of his toil to the peak toward which he set his path, he climbed always up and then still up, with no grade too steep nor way too rough to stay him in the grim but laudable purpose in which he had molded his determination. For every patrolman on his beat this acknowledgment of the conspicuous service of Colonel Kelly constitutes a persuasive and encouraging assurance that he, too, may find at the end of the highway he travels the same opportunity for advancement and distinction, so long as he keeps his feet squarely on the pavement of hard work and strictly between the curb lines of loyalty and duty.

It was just as impossible for Colonel Kelly not to become a policeman as it was for almost any Celt of his day not to wish to be one. He was a cop by nature. He was born to be one. He had every characteristic and trait a good policeman ought to have. First he was a good Irishman; and then his father was a cop before him and a good one, too. The Kellys breathed the atmosphere of the cop. In fact in the Smithsonian Institution today should still be seen the baton contributed to that institution by Colonel Kelly's father, as a relic of those which were once part of the equipment of the old Auxiliary Guard of Washington, with its peculiar spearshaped copper head, which members of the guard were accustomed to use to open shutters of houses in cases of fire or entry. Colonel Kelly's father joined up with the Metropolitan Police when it was first reorganized from the Auxiliary Guard. He had not long before been discharged from Captain Nally's company of the Metropolitan Rifles in which he had enlisted when President Lincoln issued his first call for volunteers. The blood of Lieut. John F. Kelly coursed too hot for work as an apprentice in the brick-laying trade; and, on September 11, 1861, he laid a foundation for his son by becoming a member in the new police force just formed. He was a loyal able police officer, faithful in the discharge of his duties, trustworthy and careful. He won and kept the confidence of his superiors; for we read of him, as the General Inspector of the District, in General Orders of March 23, 1867. And no more apt tribute could have been paid to his leadership, his capacity for good administration and the maintenance of law and discipline within the area of his jurisdiction than we find in his affectionate title conferred upon him by the people of the old Sixth Precinct where he commanded and which included Swamp Poodle within its limits. That spot of song and story, dear to so many, who, in recollection, know, that, out of its loins, issued some of the stanchest and the sturdiest of our citizenry. But Swamp Poodle was then the Poodle; and Lieut. John F. Kelly was known as and called "King of the Poodle."

With such a paternal propulsive force behind him, the introduction of Colonel Kelly as a private in the Metropolitan Police force—on October 3, 1906—was simply the burgeoning of inheritance and the inevitable rsult of an irresistible impulse; but, at the same time, to the department it was reliable guaranty, too, that it had enlisted a promising recruit. And Colonel Kelly has never violated that guaranty or broken that promise. He began as a patrolman where his father had commanded, in old No. 6; and from that day when first he took his oath, throughout the course of his long race of service, he built for himself a veritable ladder of successive promotions, with every rung of it constructed of merit deserved and recognition compelled. His file is replete with commendations and expressions of praise by those whose attention was arrested to such genuine admiration of the effective thoroughness with which he did the job at hand to be done that they felt impelled to transmit their appreciation for official preservation and approval. These refer to him in whatever detail he was appointed and consistently throughout the entire flight of his journey from matriculation on entrance to graduation in self-requested retirement. Individual citizens, associations of citizens, corporations, his superior officers, the Commissioners of the District of Columbia, even the President of the United States, and their Brittanic Majesties have each and all put their names to the convincing proof of Colonel Kelly's excelling efficiency, indefatigable industry, unimpeachable honesty, and tested dependability. These documen-

tary attestations, which will remain imperishable so long as the department exists, now become a permanent source of justifiable pride to Colonel Kelly and reciprocally of our public satisfaction that they who are charged with the responsibility of preserving the peace and protecting life and property within this District did not mistake their man nor err in their judgment when they chose Colonel Kelly to fill the many offices which they entrusted to him and which he has administered so well. But the most pleasing stop which stays the eye to attention upon reading these citations and the most refreshing commentary one may make of them as illustrative and explanatory of the character of the man, is not so much the astonishment one feels at their number as the realization of the diversity in the identities and the station in life of those who subscribed them. They mutely assert as indisputable evidence that no man was ever too humble or person too poor to be outside the earshot of Colonel Kelly when help was needed or assistance asked. With him there were neither race nor creed, humility nor poverty when he could render service to anyone whose rights required prompt vindication.

Perhaps the native intelligence and unremitting energy of Colonel Kelly displayed themselves in no assignment so well and so excellently as in his detail to the Detective Bureau. He was an assiduous, persistent, persevering, tireless detective who never allowed himself to be drawn off the trail by false scents. His zeal was unflagging and his courage unfaltering. No hours were too long for him and no difficulties discouraging. He has solved some of the most baffling crimes ever committed in this District and some of them presented only a cold and helpless start when he began their solution, with no clues to work from and no information to guide. Often his success was phenomenal, of the detective-story type. Frequently that success was the occasion for another citation.

But after detection there came the trial for conviction or acquittal. And here may I be pardoned if I add to that of judges and juries my own personal word of sincere commendation of Colonel Kelly on the witness stand. For 4 years we worked closely together to bring to the bar of justice those accused of the commission of almost every offense in the category of crime. I have never known or seen a witness so accurate in his memory, so fair in his recital of the facts, or so just in the presentation of his case as Col. Edward J. Kelly when he testified from the witness box. He never used a note—no matter how complicated the prosecution. He never had to do so. The correctness of his retentive memory first surprised and then fascinated the court, jury, and counsel. As a witness he was superb. To the prosecuting attorney he was not merely a pillar of strength but a pillow of rest; for, when Colonel Kelly was turned over for cross-examination, the work of the prosecutor was finished. He leaned back in his chair, breathed a sight of relief, and, in the peace of undisappointed confidence, listened in comfort to counsel for the defense as he beat his head against the wall of invincible facts Colonel Kelly had built about himself in the witness chair.

Some old wag of classical days said of the dead, "De mortuis nil nisi bonum." But it is right and just, too, pleasurably to speak of the living, and even to his face. And it is not at all unpleasant to know, in the general testimonial enconium and appreciative eulogy in which the citizens of the District of Columbia join upon this occasion, that theretofore the long and outstanding stretch of exemplary service which Colonel Kelly has given to this city has been recognized and applauded by the Congress of the United States. No greater personal triumph could ever be cherished or achieved than that declared for Colonel Kelly when the supreme legislative body of this District, on April 27, 1945, by special act, distinguished him as the recipient of its public and official commendation. Already the Commissioners had conferred upon him the highest honor it lay within their power to bestow, by promoting him, on November 1, 1941, to the rank of major and superintendent of police from that of assistant superintendent and acting major and superintendent—offices to which they had respectively appointed him during the previous August. But as a personal tribute to his 39 years of devoted duty in the interest of public peace and order, Congress, in that act and on that date, created for Colonel Kelly the unique rank of colonel—a grade theretofore never known—and made it applicable in distinction to Colonel Kelly personally and alone. Surely laurel never rested on a worthier brow.

Colonel Kelly, today your fellow citizens of the District of Columbia honor and congratulate you. To you they extend their voice of warmest felicitation. In the happy acknowledgment of their debt of appreciation, they greet you and wish you well. Your past is secure in their gratitude. Your future in retirement will remain close to them, too, in their prayers for your happiness in the life that lies before. Colonel Kelly, ad multos annos. From here on, "happy sailing on a quiet sea"; and, when finally your ship puts in to port, may the harbor be smooth and the landing peaceful. Your work has merited it. Your host of friends wish that it may be so. May a smile be your welcome always and a warm sun shine till the day is no more. Then, after the twilight and in the dawn of that newer day, we will all be with you still, the most honest-to-goodness cop that Washington has ever known.

Introductory Statement by Chester Bowles to the House Banking and Currency Committee Hearings on the Extension of the Emergency Price Control Act February 18, 1946

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. PATMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

I am very sorry we have had to ask for several postponements of these hearings. I think all of you know that for the past few weeks we have faced a crisis of major proportions on the stabilization front. It was imperative that administration policy be clarified before I could come before your committee to request extension of the stabilization statutes. I appreciate more than I can say the committee's patience in postponing its hearings.

It would be difficult to exaggerate the gravity of the inflationary crisis we face. An expectancy of higher and still higher prices is sweeping the country. The speculative fever is reminiscent of 1929. We can see it in the stock market, in the real-estate market, and even in almost every commodity market.

Everywhere men are betting on inflation. Everywhere the inflationary pressures have reached explosive proportions. It should be obvious to any reasonable mind that only by the most vigorous action—action taken now—can we regain control.

What is at stake is more than our reconversion program. What is at stake is our entire economic future. The answer to our present problems rests with you here in the Congress no less than with us in the executive branch of the Government.

In the next few weeks and months we shall be deciding whether we build a future of prosperity and security for all of us or whether we permit the present inflationary dynamite to go off in an explosion that will smash our economic system beyond hope of repair.

It is, I think, important to review briefly the events that have led up to this crisis. Let me go back therefore to VJ-day.

At that time there was a general expectation that the inflationary pressures would diminish. We expected pay rolls to fall off sharply because of the elimination of overtime, the downgrading of workers, and other factors. And we expected that during the tooling-up period unemployment would reach substantial proportions, further cutting into pay rolls and purchasing power. As a result of all these factors most experts anticipated softening of markets and an abatement of pressure on prices.

At the same time, the whole country was eager to get rid of wartime controls as rapidly as possible. After 4 years of the rigors of wartime controls it was natural for all of us to hope for the speedy restoration of the free market. This was how the country felt; and this was how you in the Congress, no less than we in the executive branch, felt.

The Congress, for example, moved promptly to eliminate the excess-profits tax and to reduce taxes on individual incomes.

In the OPA the staff was put to work to carve out broad areas of the price structure which it was hoped and expected could be exempted from price control during the fall and winter months. And in collaboration with the Department of Agriculture a program, indeed, almost a timetable, based on the expectancy of lower food prices was developed for a progressive removal of food subsidies.

The War Production Board proceeded at once to dismantle its structure of production and other controls. Regulations in batches were pitched into the wastebasket. The same was true of the Department of Agriculture, the Petroleum Administration, the Office of Defense Transportation, and the Foreign Economic Administration.

In all this, needless to say, there was considerable difference of opinion among the various Government agencies; not disagreement on the general policy but disagreement as to timing.

Ordinarily my own record as a prophet is no better than the next man's. But on this issue I happened to be one of those who wanted to play it safe. I was fearful of a repetition of the disaster of 1919 and 1920 when prices soared and then promptly collapsed. I did not feel that price and rent controls alone could carry the burden of inflation control.

Having lived with 4 years of other wartime controls, we could, it seemed to me, take another 6 months or whatever was necessary to be sure we were on solid ground before scrapping those controls.

One element of the program for orderly liquidation of Government control was the wage-price program. It was expected, as indeed it has actually come to pass, that the take-home pay of millions of American workers would be cut drastically. That was why, on August 18, the administration dismantled the complicated and often cumbersome structure of wartime wage controls and restored collective bargaining, setting labor and management free to negotiate wage increases on their own. There was, however, one basic condition—that these negotiations take place within the framework of stable prices.

The President urged management to negotiate wage adjustments in order to cushion

the cut in take-home pay. He pointed out that management could, in general, afford to grant such increases, emphasizing particularly the high profitability of most American industries, the excellent financial condition developed during the war, the protection against the risks of reconversion embodied in the tax laws, and the increase in earnings retained by business resulting from the elimination of the excess-profits tax. But the President emphasized, too, that such wage increases must vary widely from one industry to another depending upon the ability of management to pay these increases without raising prices.

As Price Administrator I subscribed to this policy. Although I knew that it would put some strain on prices, I believed it to be compatible with effective price control and in line with our best labor-management traditions. And indeed I supported the President's entire reconversion program. It was a program designed under the then existing conditions to give us a swift and orderly transition from war to peace.

What, then, produced the crisis which we face today on the stabilization front? Well, first of all, the tooling-up process of reconversion has proceeded faster than anyone thought possible. As a result, while average take-home pay has been cut, the volume of unemployment has not reached the proportions that were feared. That means that total pay rolls have stayed higher than expected with a resulting high demand for all products of our factories and farms.

Second, speculation, which after the last war became a dominant factor only after 5 or 6 months following the cessation of hostilities, this time put in an earlier appearance. The speculators started betting on inflation, and that showed in all our markets. And so, instead of a softening of pressure on prices in key areas of the economy, we have had prices pushing up hard against OPA ceilings all across the board, and prices in the speculative markets which were not under control moving up to new high ground almost from day to day.

Looking back on it, with the knowledge that we have today, and bearing in mind what I have just said about the inflationary pressures, it is perfectly clear that we moved too fast and too soon in stripping off the wartime controls.

Many of the actions taken, reasonable and proper though they may have seemed at the time, have not only meant hardship for our people; they have encouraged hoarding and added fuel to the flames of speculation.

And finally, let me turn to the wage-price policy. On the whole that policy has worked extremely well. Industrial and other wholesale prices as well as retail prices have been held very close to their VJ-day levels, while thousands of collective bargaining agreements involving substantial wage increases have been concluded in an orderly fashion. I am told that 6,000,000 workers have received wage increases during this period.

Nonetheless, the wage-price policy broke down in a number of vitally important areas. Why it broke down in these particular areas can be left to the economic historians and to the theoreticians to decide. It seems to me high time that we stop arguing about "who did what to whom" and get on with the job of meeting a national emergency.

A speculative fever has taken hold of the country. The pressure in the boiler is up to the bursting point. The lobbyists and the profiteers are licking their chops. It is going to take firm and decisive action—it is going to take teamwork and support on every hand—if we are to hold this country on an even keel.

The President last Thursday laid down a new stabilization program. He called upon me to take responsibility for its administration and upon the country to close ranks and see this job through to the finish. I think it is a good program and a workable program, and I mean to put everything I've got into making it succeed. I am confident that the American people will give the President the support he has asked for.

Let me turn now to the program itself, and specifically to the wage-price aspects of that program. I am not prepared this morning to give you all the details. Many of them have still to be worked out. But the basic policy is clear and understandable. Let me say once more, and as strongly as I know how, that the basic principles are good. They are workable. If we have congressional as well as public backing, they will enable us to keep inflation under lock and key and to maintain stability in our American economy.

On the wage side, control has been reestablished. This does not mean a wage freeze. Wage increases within the industry patterns already laid down since VJ-day will be approved by the Government. Every effort will be made to speed up action and to establish streamline procedures. I expect to have an announcement about how this can be accomplished within the next few days.

What does this new policy mean to prices? It means that manufacturers will no longer be required to wait 6 months before the wage increases which they have granted will be taken into consideration in setting their prices. If for any reason an industry—operating at normal volume—is in hardship price adjustments will be granted. These price adjustments will be designed to assure the minimum level of peacetime earnings for that industry during the coming year.

Does this mean general price increases throughout the entire economy? Does it mean a retreat to a new price line—to a new higher level of prices? Emphatically it does not, and it is vitally important that we understand why this is so.

First of all let's remember that the number of industries which have been or are likely to be forced below their prewar earnings for any reason is relatively very small. The present pattern of wage increases can be, and in many instances has already been, established in scores of industries with no price consequences whatsoever. It is generally true of such industries as the food processing and petroleum industries where labor cost is a relatively small part of the total sales dollar. It is true of the apparel industry and many others where labor costs represent a higher proportion of total costs—but where profits generally have been abnormally high. It is less true of some of the metal-using industries where labor costs, direct and indirect, represent a sizeable factor in the total price.

The result of this new wage-price policy will, as I say, not necessitate a retreat from the present price line. It will mean a bulge in one relatively narrow section of that line—a bulge which must not be allowed to spread.

Food prices represent 40 percent of the total cost-of-living line as reported by the BLS index. This new policy will have little or no effect on food prices. Provided Congress continues the present food subsidy program, the line on food prices can be held, as it has been held for 32 months, at roughly present levels.

Rents represent 19 percent of the cost-of-living line. This new policy will have little or no effect on rents. The rent line can and must be held.

Apparel represents about 12 percent of the cost-of-living line. This new policy will have little or no effect on apparel prices. It is my belief that we can continue to step up apparel production at roughly the present average of prices.

And what is true of food prices, rents, and apparel prices is generally true of furniture prices, the prices of house furnishings, and services. It is in some of the metal-using industries, a relatively small section of the cost-of-living line, where some price increases will be needed.

But let me make the situation clear beyond all question. The price line simply must be held. The prices of food, rent, and apparel must be kept from rising. On that all-important sector there can be no retreat.

There will, of course, be loud crys from the "now I want mine" boys. And there will be sober and understandable requests from many farmers for the removal of food subsidies. These objections to a continued hold-the-line policy—both irresponsible and responsible objections—will be based on a plea of fairness. Businessmen will say "labor has had rather general increases in wages. We want general increases in prices." Some farmers will say the same thing.

For this reason, I would like to discuss this subject of fairness of income—group by group. Let me say at the outset that there is probably far more fairness of income distribution in our economy today than at any previous point in our peacetime history. Let me say further that if we strive now to work out all the unfairnesses which remain we shall only succeed in blowing up our entire anti-inflation program with resulting disaster to everyone.

Let us examine first of all the position of labor. There are some people who throw up their hands in horror at the thought of any wage increases at all. Well, let's look at the problem like reasonable men. The fact is that the elimination of overtime and downgrading have sharply cut the take-home pay of millions of American workers.

There are all kinds of figures tossed around about basic wage rates, straight-time hourly earnings, and average hourly earnings. But let's remember that it is take-home pay that buys groceries and pays the rent. And when take-home pay is cut, the family has got to tighten its belt, as the President pointed out in October. The pattern of wage increases established over the past 3 months in most instances provides adjustments that go only part way toward making good the loss in take-home pay.

These wage increases, and others which will be coming along in certain other fields, do not represent a new advantage to labor. They represent a cushioning of the blow that millions of individual workers have had since VJ-day. They do not give labor an unfair advantage as compared to other groups in the community. They are designed rather to maintain something approaching the balance we had in wartime.

Under the new wage-price policy, wages generally will be stabilized according to the new patterns established since VJ-day. A further increase over the present pattern would make economic stabilization impossible. But the fact that many increases have occurred and others will occur in industries where pre-VJ-day contracts are still in effect is, in my opinion, healthy, proper, and in the interests of everyone of us.

How about business? Business is doing very well. American industry on the whole is extremely profitable. Only limited areas of it have been affected adversely by the shift from war to peace. The food industry, the textile and clothing industry, the department stores, the service trades—none of these industries has had to reconvert. They have kept on producing right straight through. They were very profitable during the war, they are very profitable today, and they are going to stay very profitable for a long time to come.

Corporation profits as a whole before taxes are expected to total in 1945 some $22,000,-

000,000 compared to a little under $25,000,000,000 in 1944. It will be said that most of this profit was earned in the first half of the year while the shooting was still going on and that since VJ-day the situation has been entirely different. We don't have the full details of profits quarter by quarter for 1945, but it is significant, I think, that the boards of directors of American corporations declared a billion and a half in dividends in the final quarter of 1945—the period of economic readjustment. This was just as much as they declared in the final quarter of 1944. And total dividends last year were right up to the 1944 level. Needless to say, I know none of my business friends who have had their salaries reduced since VJ-day.

Now it is true that in the reconversion area—and I mean by this not only those industries which have stopped producing war equipment and are now producing civilian items, but also industries like steel which have had to change the character of their production—operations are less profitable at the moment than in other parts of the economy. But let's keep our perspective. All these industries together make up less than 15 percent of the American economy.

No one can know for sure how these industries are making out now. Nonetheless their outlook for 1946 as a whole is extremely favorable. For one thing, they face an almost unlimited demand for their output. Once they really get rolling they will be producing far more than they ever produced before the war, and increasing volume means costs and rising profits.

That the outlook for these industries is bright is confirmed by the fact that the stocks of corporations in the reconversion area have not been lagging behind in the general boom on the stock market. That is why until recently we felt it fair to ask the reconversion industries, as well as all others, to wait 6 months after negotiating wage increases before concluding that price relief was necessary.

So let me say once more—let's keep our sense of perspective. We are not confronted with a situation in which scores of industries and hundreds of thousands of firms are on the verge of bankruptcy. The very opposite is true. On the whole, American industry is extremely profitable. Only 15 percent of it is affected materially by the transition from war to peace. Its prospects, in general, were never brighter. And as I pointed out before, we have never in our entire history had a period in which there was less hardship in American business. In 1945 bankruptcies fell for the third successive year to an all-time low of 810. This compares to 22,900 bankruptcies in the boom year 1929.

Finally, how about our farmers—the group whose extraordinary record during the war is perhaps least appreciated, the group which for more than a generation has profited the least when times were good and suffered the hardest blows in times of adversity.

In 1939 our farmers, representing 25 percent of all of our people, had only 9 percent of our national income. When the experts stress the gains which our farmers have made during this war, they often fail to mention the low levels from which they had to start.

Nevertheless it is a fact that our farmers, like the rest of us, have done rather well since the days before the war. Today net operating income per farm is more than three times as great as it was in 1939, and the increases have been pretty general. On VJ-day the experts generally prophesied that farm prices and farm income would drop rapidly in the following months. But again the experts were wrong. In December the cash income of our farmers, after seasonal adjustments, was 2 percent higher than in August.

To those of our farmers who are inclined to criticize labor and deplore the increases in wages which have occurred, let me point out one all-important fact. The decrease in farm income which they expected 6 months ago has failed to materialize largely because total factory pay rolls in our cities did not drop to the extent expected—because employment held up and increases in wage rates offset in part the loss in take-home pay due to a shorter workweek.

It is not too much to say that our farmers today hold the key to economic stabilization largely in their hands. For unless food subsidies are maintained beyond July 1 the control of the present inflationary dangers will become impossible.

If food subsidies were withdrawn, food prices would rise promptly and dangerously. The index, which has been held steady since May 1943, would immediately rise more than 8 percent. This would force a major increase in the cost of living. This in turn would force compensating wage adjustments on a broad scale. As surely as day follows night we would be started on a spiral of wage and price increases leading directly to disaster.

Very properly, our farmers hate subsidies. I don't blame them for that. Subsidies are a necessary evil, and the quicker we can be rid of them without blowing up our economy, the better off we will be.

But subsidies are absolutely vital to the success of our program. I am hopeful and confident that much as our farmers may dislike them, they dislike and fear inflation more.

The stabilization program has meant much to our farmers. The prices he receives have risen on the average exactly the same percentage in this war as in the last—113 percent. But the prices he pays, including interest and taxes, have risen only 40 percent this time against 94 percent the last time—for the single reason that price and rent controls have been in effect. A good example is farm machinery. In the First World War it rose in price, on the average, 68 percent. The increase since 1939 has totaled only 14 percent.

If the present price line is broken—if inflationary forces break loose—there is no group in America which will more surely suffer disaster and heartbreak than our millions of farm families.

I have come to know our farmers well and feel that I understand many of their problems. I sympathize deeply with their concern over the future. The leaders of farm organizations are my friends. I have confidence that they will rise to the present emergency in the same statesmanlike way in which they have supported price and rent controls during the most critical period of the war.

So much for price and wage policy and its effects on our economy. We have a bulge in our line and a threatened break-through. We must stop the break-through, seal off the bulge, and continue to hold the line where it is. This is our new program. It is a program that will work. It is a program that will stabilize the American economy. To those people who are betting on inflation in the stock market and in the commodity markets, let me say, "You are betting on the wrong horse. There isn't going to be any inflation. We're going to hold the price and rent line as we've held it since May 1943—all the speculators, lobbyists, and pressure groups to the contrary notwithstanding."

It is, of course, expanding production which will bring us to the point where price, rent, and wage controls can be dropped. Production is the only answer to inflation. There are some who say, "Yes, but under price control production is impossible." The record clearly proves that this is nonsense. During the war industrial and farm production under price control rose fully five times as much as in World War I. Today, production is surely at the highest point ever achieved in peacetime. Unemployment is at the lowest peacetime point in 20 years with as many people on our pay rolls as in our best wartime year.

What are those 52,000,000 workers doing if they are not producing? Why is it that industry after industry is crying for more and more employees? Why is it that reconversion has been accomplished in record time? Why is it that every business forecast indicates rapid increases in production throughout 1946? Why are retail sales continuing to higher and still higher levels—all under a program of price control?

As production recovers from recent shutdowns let's forget this propaganda talk about price controls making production impossible. Let's take off our coats, forget our differences, and get out the goods. That's the way, the only way, to get rid of price control without the most disastrous inflation this country has ever seen.

It should be perfectly clear to all of us that we are going to have to retrace some of the steps we have taken since VJ-day. As I pointed out, we're going to have to abandon early liquidation of the subsidy program. We cannot permit an increase in the price of food. The fact that we were ready to liquidate that program, and indeed made a beginning, should provide assurance that that program will not be continued a single month beyond what is necessary for the continued stabilization of our economy.

Furthermore, we shall probably have to restore some of the production controls which were abandoned last fall. Obviously, we shall move with discretion and only where the need is very clear. But we shall see to it that the orders that are necessary to get clothing for our veterans and building materials for the construction industry will be put into operation promptly.

And I mean to make the fullest use of the authority under the Second War Powers Act to prevent hoarding. If there is any doubt on that score, let me dispel it now. That is one thing we simply must not tolerate. Speculators take notice.

If we are to win through in our fight against inflation it will take the best efforts we can put forth in the executive branch of the Government. More than that, it will take action by the Congress. I urge that you renew, without amendment and at the earliest possible moment, the stabilization statutes. The speculative fever in this country has reached such a pitch that it can be overcome only if it is unquestionably clear to everybody that the Congress, no less than the executive branch of the Government, is determined that inflation shall not come. Under other circumstances I would not urge the reenactment of the legislation without amendment. But the dangers today are great. Any sign of weakness will be quickly and greedily seized upon by the speculators and other enemies of inflation control. Delay in reaching a decision will do irreparable damage to the entire program.

I further urge with all the vigor at my command that the Congress enact at the earliest possible moment legislation to stop the inflation in the real-estate market. If this inflation is permitted to continue unchecked it will undermine the construction industry just as it did after the last war. And it will strike a body blow at any hopes we may have for a secure and prosperous economic future.

Mr. Wilson Wyatt has recently developed a magnificent veterans' housing program. It will not only provide the housing which the veteran so desperately needs at reasonable prices, but it will also put the housing industry generally on a firm and solid basis such as it has never before enjoyed. Legislation to prevent inflation of real-estate prices is imperative if this program is to have a chance of success.

Gentlemen, the program the President has laid down is not a perfect program. Under

the circumstances which we face there can be no perfect program. But it is a good program and a workable program. It will prevent inflation, which benefits no one and spells disaster for all of us. And I want to say as strongly as I know how that it is a fair program. Under it we shall not be able to eliminate every inequity in our economic system. That, I am afraid, will never be possible. But we can and we will do broad justice to all the economic groups of the country.

Clearly this program of economic stabilization—or any program of economic stabilization which might have a chance of success—will be attacked by every irresponsible pressure group in the land, such as the group that demanded the removal of all price controls on February 15—last Friday—at the very height of this inflationary crisis.

In the past 4 years of price and rent controls Congress has courageously resisted the pressures of these groups. Congress has consistently turned down their periodic drives for needlessly higher prices, rents, and profits. By taking this stand Congress has, so far, saved the people scores of billions of dollars and prevented a disastrous inflation. Over and over again on this vital issue Congress has proved that the people's case is in good hands.

Let me repeat that it is not unfair or unreasonable to ask American business to live with its present generally high level of profits, with adjustments in prices limited only to those who really need them. The vast majority of businessmen are as reasonable, sensible, and patriotic as any group in the land.

Let me repeat that it is not unreasonable or unfair to ask the farmer to accept the present general level of prices for his products. Some months ago it was expected that farm incomes would decline in 1946 some 15 percent below the levels of 1945. It is now perfectly clear that farm incomes will not decline. If anything, they will go up from the 1945 level. That is due in no small part to the wage increases which have helped to prevent a decline in total wage income. Such a decline in wage income would have resulted in a decline in farm income, too.

Finally, it is not unreasonable or unfair to ask labor to accept temporary Government controls over wages and some cut in their take-home pay as a result of reduced overtime. Much as we might wish to prevent that cut, there is no way in which we can do so without precipitating an inflation in which the workers, like everyone else, has everything to lose and nothing to gain.

You and I and the American people all face a grave responsibility. I am confident that in the face of the danger of inflation we shall close ranks, as the President has called upon us to do, and carry through the program which he has laid down. I am confident that we shall now throw our economic machine—the most productive in the world—into high gear. That is the way, and the only way, in which we can quickly get back to a free market, free collective bargaining, and a free and prosperous America.

Mr. Molotov's Fears

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. MADDEN. Mr. Speaker, H. B. Snyder, editor of Gary Post-Tribune, Gary, Ind., in the following editorial, contributes common sense suggestions to Foreign Commissar Molotov:

MR. MOLOTOV'S FEARS

Foreign Commissar Molotov made a rather hysterical, sword-rattling speech the other day in which he accused Russia's wartime allies of keeping anti-Russian forces under arms in Europe and thus encouraging dangerous talk of a third world war.

He spoke particularly of tens of thousands of troops of the Polish Fascist General Anders in Italy, and hinted that General Anders' troops were preparing to attack the new democratic Poland.

Mr. Molotov can't have forgotten General Anders' Poles were Russia's allies, and that many of them fought nearly 6 years against the common enemy. He can't be ignorant of why these troops are not eager to return to the new democratic Poland, or why the United States and Britain are not anxious to send them back.

Many countrymen of these Polish troops have suffered imprisonment and death for the crime of opposing the present, Soviet-sponsored Polish Government. Is it any wonder that General Anders' men prefer to remain outside Poland?

The United States and Britain cannot deport these men to what seems certain punishment. Further, they and other displaced persons can be useful, especially since the American occupation forces are being sharply reduced.

Perhaps if Mr. Molotov could find it possible to soften his own belligerent tone, to cease calling every anti-Communist a Fascist, and to arrange political amnesty for these men who fought and bled against Russia's enemy, he might hear less dangerous talk of a third world war.

County of Los Angeles Official Reveals Unprecedented Growth of Los Angeles County—The East Moves West—Spiritual Growth Linked With Distribution of Economic Health

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. DOYLE. Mr. Speaker, unanimous consent for me so to do having been granted, I include in my remarks a letter dated February 12, 1946, to me from Wayne Allen, chief administrative officer of my home county of Los Angeles:

COUNTY OF LOS ANGELES,
BOARD OF SUPERVISORS,
Los Angeles, February 11, 1946.

Hon. CLYDE G. DOYLE,
House of Representatives,
Washington, D. C.

DEAR SIR: I thought you would be interested in the following facts which reveal the unprecedented growth which Los Angeles County is now undergoing:

The population of Los Angeles County is now approaching the 3,500,000 mark.

As of January 1, 1946, conservative estimates prepared by the County Regional Planning Commission placed Los Angeles County's population at 3,456,227. This estimate is compiled by applying the current occupational and vacancy ratios in the various districts against the number of dwelling units indicated by building permits.

The Los Angeles Chamber of Commerce, which bases its estimates on a meter count, places the county's population at 3,435,000.

More than three-quarters of a million out-of-State persons came to southern California during the first 11 months of last year by automobile alone.

This statement is based on figures from the Quarantine Office of the California Department of Agriculture. Reports from its inspectors at five southern California ports of entry showed that for the first 11 months of last year a total of 258,715 southern California-bound passenger cars entered the State carrying 759,439 persons. This compared with 185,867 cars carrying 569,758 persons during the comparable period in 1944.

To us, these figures are impressive for they indicate the increasing importance of Los Angeles County in national affairs. Only 9 of the 48 States, for example, had a greater population at the time of the last Federal Census. The figures are also interesting insofar as they tend to support the forecasts now being made that Los Angeles County is entering the greatest expansion era in its history.

Respectfully yours,

WAYNE ALLEN,
Chief Administrative Officer.

As the facts in the letter speak for themselves, I will not comment about these facts except to say that the eighteenth district of California, which I have the honor to represent in this great legislative body, is entirely geographically located within Los Angeles County and therefore not only does my home city of Long Beach, Calif., with an estimated population of 350,000 at this time, share numerically in the total county growth, but each and all of the prosperous growing happy communities of the eighteenth district and the territory between these cities likewise share.

On this floor, I have on other occasions stated that nothing in the experience of mankind—excepting a Nation-wide catastrophe—can stop the natural trend of events, which is—that the East moves West. This has always been true since the earliest landing on our shores. This natural trend of events brought about by all of the natural factors in the experience of mankind will eventually force the powers to be in all the economic realms of our Nation's experience, to make their plans with a just and fair consideration to the deserts and logic of the West. And, I believe in the absence of such sensible consideration by those who claim to, or in fact do, control much of the manufacturing and distribution of the products and wealth of our Nation, there can only result unnecessary postponement of the earliest and fullest development of our great Nation—economic and spiritual. I use the word spiritual advisedly for I strongly feel that only as there is economic security for the resources of the people, all over the Nation—is there the greatest room for spiritual development and growth and strength also. Mr. Speaker, the other busy, prosperous communities in my district, in addition to my beloved city of Long Beach, are as follows: Artesia, Bellflower, Clearwater, Compton, Davidson City, Dominguez, Downey, Hollydale, Hynes, Lakewood Village, Lynwood, Norwalk, Signal Hill, South Gate, and Willowbrook.

Navy Boy Wants to Know About United States Policy

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. REES of Kansas. Mr. Speaker, a 19-year-old enlisted Navy boy who is stationed on Guam, where he has been for several months, wrote an interesting personal letter to his parents. These boys do a lot of thinking.

I believe a few paragraphs from this letter are of sufficient importance to call your attention to them. They indicate some of the things about which many of our boys are thinking these days. I did not secure permission to use the young man's name.

What I wish to discuss is something about which I know little, but it seems to be the general idea around here.

It is that America should be doing something toward betterment of the world. I'll be darned if by reading papers, listening to the news and "what have you," we can figure out what the United States policy is, or what the leaders intend to accomplish. If they continue like they are doing now, even though they think they are accomplishing something, they are in essence doing nothing. They are following in the same old rut.

America seems to be at leisure, while the rest of the countries are struggling for even an existence, in some cases.

Labor differences and internal strife are no doubt a part of forcing mankind into right fields of thought, but those things, more or less, must be subsided if the world is to function as a unit.

It is not that the fellows here know particularly what is best to do, nor do most of them care to take the responsibility to figure it all out, but they are enough interested to look at the question intelligently and to strive in their little way to better things for everyone.

I think they would like to know just what the United States intends to do, in at least three fields, toward accomplishing what everyone wanted done while the war was on—but seems now to have forgotten in order to fight at home, play at the dance halls, et cetera.

One field is the home front—the labor situation, the political set-up, and social conditions. Another field is that of the international movement, the foreign relations of our country, including domestic, social, and the capital adjustments. The third field probably is the least touched but important to the thinkers of America—the religious question in all countries.

If that inside plan the Congressmen and others have figured out for the future were to be exposed, I have a hunch that it would be found rather vague and not substantial under strain. Perhaps no one really knows their true course, but even a course blown leeward by wind is better than being lost.

What say, some of the big boys write out their tentative blueprint and let the public, the fellows overseas and the world at large discuss it? We might pick up some ideas here and there that would benefit them for their duties, as well as instruct us and give everyone an opportunity to be openly a governmental draftsman in effecting a world merger. Certainly no one person feels he can do the job and most persons feel that God is the one to trust and to look to. But, since it is being attempted by mankind to demonstrate this business of humanity, all should be permitted to put their coal in the fire.

"Can we do something here?" the fellows are asking. * * * America fought the war, not to win the war but to win a chance to fight for the peace of the world. Here is the chance and we mustn't muff the wonderful opportunity.

Views of a Young American Industrialist On Present-Day Trends and America's Future

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. WHITE. Mr. Speaker, it is apparent from the many communications being sent to the Members of Congress by thoughtful people in all walks of life that there is grave concern for the future of our country and the preservation of our American way of life and the principle of good government. There is inserted herewith one of these communications containing an address of an eminent young American, the worthy grandson of a successful father:

THE CHALLENGE OF HUMAN ENGINEERING
(By Henry Ford 2d)

It is a great honor to be here as your guest this evening.

What I propose to do is to outline a problem. That may not be very considerate of me, but I take comfort from the fact that problems are the business of the Society of Automotive Engineers, and that you have never failed to rise to any difficult challenge. The problem, in my opinion, is one of the greatest which confronts American industry today, for it concerns human relationships—relationships which can either aid or impede our efforts to achieve greater industrial efficiency; and if you can help to solve it—and I believe it needs the benefit of scientific thinking—you will have done much to increase the well-being and the living standards of America.

The ability of American industry to produce has never had the prestige it enjoys at this particular moment in history. The job of war production has been called a miracle. It confounded our enemies and drew praise from our allies. In a very short time we armed the largest fighting force ever mustered on this continent; we built, armed, and fueled combat ships and planes and tanks in quantities never before imagined; we put billions of dollars of weapons into the hands of our allies all over the world.

The mechanical principles which made possible this war-production record are not new to any of us—standardization of parts, line assembly, the use of large, high-cost machine tools. These are the principles all of us have used for many years in the manufacture of automobiles. They are the principles of mass production, and no group of men deserves a larger share of the credit for the rapid development of the mechanics of mass production than you men assembled here tonight.

Mass production is not an end in itself, but a means to an end. It is a tool.

In war, mass production is a tool for making the weapons of war—as many as possible, as fast as possible. We used the tool better than other nations because we had more practice with it and because we were better equipped to use it efficiently.

In peacetime the use of the tool of mass production thrives best in a highly competitive democratic economy, for mass production is a tool which free people use in peacetime to make more and better products at less and less cost. It is a tool for raising the standard of living.

All of us would agree that a standard of living is not a question of money, but of things and opportunities. People are prosperous and enjoy a high standard of living when great numbers of them can afford a great many things and services—refrigerators, automobiles, radios, homes, good food, education, recreation, and all the rest. Through the peacetime use of the tool of mass production, American industry has already made this country a land with an incomparably high standard of living.

And the use to which we can put mass production to bring millions of things and opportunities within the price range of millions of people has in no way reached its limit. It is obvious, for example, how much better off we would be in this country if it were possible to sell automobiles for half their prewar prices. Millions of people who never owned a car could have one. Families which have one could have two. Tens of thousands of private enterprises serving the automobile industry and the people who drive automobiles would benefit, and would expand. Cut the cost of refrigerators in half, cut the cost of radios in half, cut the cost of homes, clothing, and other manufactured articles in half, and the people of America would find themselves vastly better off.

We continually talk about higher incomes, and higher wages, and more money. That is all right. A man should be ambitious. He should try to increase his income. But in our discussion of higher incomes, we must never lose sight of the universal advantages of lower costs—of more and better products brought within the budget of more and more people.

In the face of what peacetime mass production has already accomplished in raising our standard of living, in the face of current world praise of American industry's ability to produce great quantities of things in a short space of time, we may be tempted to think that the potentialities of mass production have been exhausted—that we have come to the end of this road to national well-being. Such a notion is absurd. The mechanics of mass production can still be greatly improved, and they can be more widely adapted.

But there is a whole vast area in which we are only beginning to make significant progress—what we might call the field of human engineering. Machines alone do not give us mass production. Mass production is achieved by both machines and men. And while we have gone a very long way toward perfecting our mechanical operations we have not successfully written into our equations whatever complex factor represents man, the human element.

I am suggesting, therefore, that we try to rewrite the equations to take into account the human factor. If we can solve the problem of human relations in industrial production, I believe we can make as much progress toward lower costs during the next 10 years as we made during the past quarter century through the development of the machinery of mass production.

In approaching the complex problems of human relations, I believe that management must take the initiative for developing the relationships between labor and management. Labor has a great opportunity to achieve stature through assuming greater

responsibility. But I consider that management is in charge, that management must manage, and that the test of management is whether or not it succeeds.

Mass production did not invent the human equation—but it did alter it in a number of important respects which we may have been slow in taking into account. Under mass production large numbers of people flocked to the assembly line, each to perform a highly specialized routine duty. Mass production produced great concentrations of people—and a problem of communicating with them. And it produced the difficult problem of specialization, where the human being loses sight of the social usefulness of what he does.

How badly we have taken the human factor into account is indicated by many statistics. The Department of Labor shows that a total of 216,000,000 man-days were lost between 1927 and 1941 as a result of strikes alone.

I am not here concerned with the justice of these strikes or their injustice. I am saying that some 216,000,000 man-days of work were lost. This idleness was expensive—to the strikers, to the companies and to the Nation. And that cost was part of the Nation's cost of production. Consider how many thousands of automobiles, radios, refrigerators, and other useful and needed products could have been manufactured with 216,000,000 man-days of labor. Or, to put it in another way, consider how much lower would have been the cost of the things that were manufactured if production had not had to absorb the expense of these work-stoppages. Furthermore, when a production line stops, the jobs and purchasing power of hundreds of thousands of people in related businesses all over the country are affected.

We must remember, too, that strikes are by no means the only measure of lost time. That loss, indeed, is only a fraction of the time lost through industrial inefficiency and through mass unemployment. We are all aware of the fact that the man-days lost through unemployment during the same years—1927 to 1941—were of tremendous proportions.

I do not need to tell you that costs are also closely related to the productivity of the individual American worker. We take pride in this productivity, and as a matter of fact we in America cannot compete in world markets with our high wage rates if the American worker does not continue to be productive.

Recent statistics on productivity are confusing because of the factor of war. War necessarily brought into industry a great many less experienced men and women. The armed forces took away a great many skilled workers.

Other prewar mass production industries have found, as have we at Ford Motor Co., that even after allowance for these unusual circumstances the recent record of productivity is not encouraging. We keep detailed records of the time it takes to perform various operations. Those I am about to cite are in every way comparable—that is, the operations have not been changed so that more time should be allocated to their performance. Let me give you the number of minutes required in December 1940 compared to July 1945 to perform certain operations

One group of operations which took 96 minutes in 1940 took 128 minutes 5 years later. Another which took 1,188 minutes in 1940 took, 5 years later, a total of 1,943 minutes to perform. A third group took 28 minutes in 1940 and 49 minutes 5 years later.

On the whole, productivity per worker in our plants declined more than 34 percent during the war period.

I have already pointed out that some of this was inevitable, a result of the war, and I should like to say that I am emphasizing these figures merely to demonstrate how great is the need for improvement in the productivity of the individual worker.

As we look at these problems in human relations, we feel that the solution must be found through a closer understanding between management and labor. If we cannot succeed by cooperation, it doesn't seem likely that we can succeed by any exercise of force. We cannot, for example, expect legislation to solve our problems. Laws which seek to force large groups of Americans to do what they believe is unfair and against their best interests are not likely to succeed. In fact, such legislation can lead to exaggeration of the very problem it is designed to solve. And when freemen give up the task of trying to get along with each other, and pass the buck to Government, they surrender a substantial measure of their freedom.

That, then, is the problem I wanted to lay before you this evening. Let me summarize by stating it more briefly: In a free, competitive democracy, mass production is a tool for raising the standard of living by reducing costs and thereby bringing more and better products within the budgets of more and more people. We have not yet solved the problems of mass production, for our failure in human engineering is creating waste and inefficiency which handicaps the very purpose of mass production—lower costs.

I do not have the answers to this problem. But I am sure that workable solutions can be found if we will only bring to it the same insistent objectivity and willingness to experiment which you and others like you throughout industry have given to the mechanical difficulties in mass production.

In industrial human relations, then, we have a new and relatively unexplored frontier. And beyond this frontier lie opportunities greater perhaps than any of us can imagine.

There are many considerations which we must take into account as we work toward a solution of this problem. I can name some that have occurred to me, and you will think of others.

I assume, for example, that all of us agree that labor unions are here to stay. Certainly, we of the Ford Motor Co. have no desire to break the unions, to turn back the clock to days which sometimes look in retrospect much more attractive than they really were. The truth of the matter is that the unions we deal with rose out of the very problem we are discussing—the human problems inherent in mass production. We do not want to destroy the unions. We want to strengthen their leadership by urging and helping them to assume the responsibilities they must assume if the public interest is to be served.

It is clear, then, that we must look to an improved and increasingly responsible union leadership for help in solving the human equation in mass production. Union leaders today who have the authority to affect industrial production on a vast scale enjoy a social power of enormous proportions. If they are going to be real leaders, they must accept the social obligations that go with leadership.

What is needed today is industrial statesmanship—from both labor and management. Instead, we have a tradition of industrial antagonism Men who in their private lives would not think of entering into a brawl on the street have over the years found themselves blasting each other in the public press by colorful name calling. This tradition has given rise in some circles to the theory that open conflict is inevitable. I have even heard it said that strikes are helpful in "clearing the atmosphere."

With such unhappy theories I do not hold. Modern man, who has done so much to reduce the manpower loss caused by disease, can certainly hope to reduce the manpower loss from industrial conflict. The public interest requires that we find ways to eliminate industrial warfare without impairing or diminishing the rights which both management and labor must continue to enjoy.

We will always have some honest differences of opinion. But we can certainly deal with these controversies more wisely and efficiently. If we are to have industrial-relations program and labor-relations staffs, and spend as much money on them as we do, we should do it expertly and efficiently, bringing to the task the same technical skill and determination that the engineer brings to mechanical problems. We must act on a more human and professional plane.

There is no reason, for example, why a grievance case should not be handled with the same dispatch as a claim for insurance benefits. There is no reason why a union contract could not be written and agreed upon with the same efficiency and good temper that marks the negotiation of a commercial contract between two companies.

In the meantime, there are day-to-day responsibilities of management toward employees which should fit into the whole pattern of the new relationships we seek. Consider, for example, possibilities for improvement in personnel evaluation. Only recently have we begun to develop and use modern techniques which enable us to fit people to jobs, and fit jobs to people, with some degree of science. Too often we have assumed that if a man is a good sweeper he is a good sweeper only, if a man is a good assembler he is a good assembler only. But the results of industrial psychological tests show very clearly that sometimes a good sweeper may also be a good assembler, and an assembler may have qualities of personal leadership that will make him a good foreman. Every company follows a general policy of advancing men in accordance with their capacities. But we can do a more scientific job.

When we have learned to do a reasonably good job of evaluating an employee's capacities at the start of his career, we can do a better job of upgrading. I am not talking now about technical requirements having to do with such things as automatic pay raises and seniority. I mean the development of more opportunities for employees to improve themselves in accordance with their own initiative and desires.

We know that great masses of men work constantly at points below their top capacities, and it is one of our jobs to see that ways and means are provided to help them rise to these opportunities.

Communication between management and employees in large mass-production plants is another important field in which we can work.

In any large group of people working together it is a basic requirement that good lines of communication exist. There will always be plans and estimates, information about new styles and new engineering, and other data, which management must guard closely because they are the very elements on which tough competition is based. But information about company objectives and accomplishments should be made available to all. People want to know what the other people they work with are doing and thinking. They want to know what "the score" is.

It is fairly easy for everybody to "know the score" when there are only 50 employees in a plant. But when thousands of employees work at assembly lines in a single plant they create a problem of communication which has not yet been effectively solved.

In an age in which the world prides itself on speed and efficiency in human communication it is absurd that we should not have been more successful in this field. We have the tools at our disposal—movies, radio, coordination conferences, newspapers, the graphic arts, posters, and all the rest. It is good business to see to it that the members of our industrial teams get information to

make them conscious of the fact that they are on the team. This applies all along the line—shop employees, office workers, supervisory and executive personnel.

I think we can lick this job of better communication. Informed employees are more productive, certainly, than uninformed employees.

I shall not attempt to point out other areas—and there must be many—in which we can work toward better human engineering in mass production. The important thing, it seems to me, is to recognize the problem for the vital one it is and to move forward in hope and confidence and intelligent experimentation toward workable solutions.

As a starting point for continuing efforts in that direction, perhaps management and labor would today agree:

1. That the job of American industry—management and labor—is to make at lower and lower cost more and better products to sell for lower and lower prices.

2. That the only way that job can be done is through understanding and sensible cooperation between management and labor.

3. That the spirit of that cooperation must be a sense of joint responsibility. The public is the "boss," not management or labor. Both labor and management must accept their share of responsibility to the public welfare and live up to their commitments.

4. That mass production has demonstrated its ability to bring high wages, and that higher wages can come only out of greater production and lower costs.

5. That, while no single human institution or industry can promise complete security because of the complexity of modern civilization, management and labor can work toward more certain, more stabilized employment.

6. That American industry should be a place of opportunity—a place in which men and women can grow and develop into better jobs.

If these are our articles of industrial faith, then we are squared away to attack the problem of making mass production more efficient by giving the same hard-headed attention to human factors that we have given so successfully in the past to mechanical factors. The only approach we can take is to live up to the best industrial statesmanship of which we are capable. If we give the best we have, we can hope to get the best in return.

Consequences of the Strike Settlements

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Henry Hazlett from the New York Times of today:

ECONOMICS AND FINANCE—CONSEQUENCES OF THE STRIKE SETTLEMENTS

(By Henry Hazlitt)

It would be pleasant to think that the strike settlements of last week promised a durable industrial peace and that the President's new Executive order seemed likely to solve the problems of production and inflation. But sober analysis does not appear to justify either conclusion.

The strikes were settled in effect, though not always in form, by compulsory arbitration applied against the employers. The decision of the General Motors fact-finding board, that the wage increase in that company ought to be 19½ cents (or 17.4 percent) an hour, set the pattern for the other disputes. This is the figure around which all the settlements have clustered—18½ cents for Chrysler, 18 cents for Ford, 18½ cents for the steel industry, 19 cents for the Aluminum Corporation of America, 18½ cents for the General Motors electrical division.

This was inevitable. When the President's fact-finding board in the General Motors case recommended a wage increase of 19½ cents an hour, it was setting a standard increase for organized labor in general. For the General Motors workers were already in the upper third of American income receivers, and any substantially smaller increase offered to other unions by other boards would have been resented as discrimination on the part of such boards.

It was in vain, therefore, that the General Motors board warned that its decision was based solely on the "particular merits" of that case and was not a "formula * * * to be applied in other cases."

And it was because Mr. Truman himself partially recognized this that he recommended an 18½-cent-wage increase in the steel industry case without even waiting for his own "fact-finding" board to reach a decision or even waiting, according to the President of the United States Steel Corporation, for the board to hear the testimony or evidence that the company had to offer.

In view of the national application of the new wage increase, the way in which its amount was originally hit upon seems capricious and haphazard. It was determined from the particular situation of one of the biggest corporations in the country. It was based on a dubious principle combined with a dubious guess. The dubious principle was that employees are "entitled" to continue to receive practically peak wartime weekly wages even when they cease to work as many hours. The dubious guess (the GM board frankly admitted that its assumptions cannot be proved) was that General Motors was going to have a working week averaging only a fraction over 40 hours in 1946, and that a 19½-cent increase would therefore make up the entire loss of earnings from the reduction of the wartime hours worked in 1944.

By its compulsory arbitration and by the new Executive order the Government has put itself in the business of fixing wages. The Executive order provides that no employer will henceforth be entitled to price relief if he grants a wage increase without prior approval of a Government agency. This provision seems in effect to destroy free collective bargaining. The Federal Government has been buying off existing strikes at the cost of an unprecedented peacetime wage increase on top of unprecedented wartime wage increases. But it may be doubted whether it has bought industrial peace. For other unions will demand at least equal increases. And unions have come to feel that they are striking, not to force employers to pay higher wages, but to force the Government to force employers to pay higher wages.

It is obvious that the new wage level cannot be sustained without raising the existing price level. The $5-a-ton increase in steel prices, therefore, is merely symptomatic. It is true that the complicated and equivocal new wage-price order treats wages and prices together, but it does not treat them on the same basis. It appears on its face to grant an increase in wages of more than 50 percent above prewar levels, while holding profits of individual industries down to their prewar levels. Profit control appears under the order to be more rigid and more definitely established as a principle than ever before.

The new order is accompanied by a great deal of lip service to production, but rigid industry-by-industry profit control of the type contemplated is not calculated either to balance production as among different commodities or to encourage maximum volume of production in general. And in the President's statement accompanying the Executive order last week no mention was made of the increase in the country's money and credit supply or of the continued unbalanced Budget which must in the long run increase it further. This is the basic cause of inflation. Until it is dealt with no measures dealing with the symptoms can be successful.

Lincoln and the Present Crisis

EXTENSION OF REMARKS

OF

HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. CHENOWETH. Mr. Speaker, under leave to extend my remarks I wish to include a statement that appeared in the Denver Post under date of February 10. In these brief observations, Mr. Oscar O. Whitenack, who is editor of the page appearing in the Post known as the Open Forum, calls attention to the crisis existing in our National Government today, and raises the inquiry as to where the Lincoln is today who can lead this Nation out of its present difficulties. Mr. Whitenack's comments will be of general interest to all who are interested in good government, and his statement follows:

On the highway from Louisville to Nashville, near the town of Hodgenville, Ky., there is a building of white marble in which is carefully preserved a log cabin. Why? Because in this cabin Abraham Lincoln was born, February 12, 1809. When he passed away 56 years later, grief-stricken Secretary of War Stanton exclaimed, "Now he belongs to the ages!"

Why was Lincoln the outstanding man of his century?

To answer this question would require volumes, but briefly it was because he was honest, free of demagogery and hypocrisy, and a straight thinker. He clearly perceived the terrible wrong of slavery, for when in New Orleans he saw a young woman sold on the auction block, he exclaimed, "If I ever get a chance to hit that thing, I'll hit it hard."

He saw the absurdity of a new State voting to admit or reject slavery, for no amount of voting could make it a righteous institution. Hence, he joined the new Republican Party whose platform declared that there should be no further extension of slavery into any Territory of the United States. He became a party leader, and in his debates with Senator Douglas and in his Cooper-Union speech in New York, February 27, 1860, he showed himself a master of logic and set forth the principles of Republicanism as no other man could do.

No one ever prepared the way for his own election to the Presidency as did Lincoln, for he drove the wedge that split the Democratic Party. Senator Douglas indorsed the Dred Scott decision which annulled the Missouri Compromise and opened all the Territories to slavery. A newly admitted States could vote to admit or reject slavery as it saw fit. Lincoln saw his chance and against the advice of Republican leaders he asked Douglas this question: "Can the people of a Territory, in any lawful way, against the wishes of any citizen of the United States, exclude slavery from its limits before it became a State?" Douglas answered, "Yes; by failing to provide laws for the protection

of slave property." This won him the election as Senator, but, as Lincoln foresaw, it lost him the support of the South and made his election to the Presidency in 1860 utterly impossible.

The crisis today is as serious as that of 1860, if not more so. Where is the Lincoln who is able to show us the way out?

O. O. W.

Our Failure Adds to European Starvation

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. MADDEN. Mr. Speaker, last November in a speech on the floor of the House, I urged immediate consideration for legislation to provide money to UNRRA for the purpose of feeding the starving men, women, and children of war-stricken countries. Congress acted, but unfortunately in a rather dilatory manner. It is not too late for our Government and the various charitable organizations throughout our country to redouble our efforts in aiding the unfortunate war-stricken nations of Europe.

The following editorial by H. B. Snyder of the Gary Post-Tribune, Gary, Ind., is very timely and should be constructive in carrying out of further duties to these unfortunate nations:

OUR FAILURE ADDS TO EUROPEAN STARVATION

American shipments of wheat to UNRRA, the international relief agency, will be less than half the 400,000 tons pledged for January and February unless the job is speeded up. This is one of the reasons for the new stories predicting widespread starvation unless shipments are greatly enlarged.

Our record in the shipment of other foods is much worse. According to the latest decision, UNRRA is to get 24 percent of the 766,000 tons of fats and oils requested for the first 6 months. This means we are falling down on the job abjectly.

The failure can be blamed on the Agriculture Department and other officials who hurried too fast when peace came to get back to normal conditions. Our attention has been fixed to our domestic needs and not enough to our commitments abroad.

This is the reason gray flour is to take the place of white and why there will be a scarcity of various other foods during the remainder of the year. Even then, millions of Europeans will have barely enough to subsist on and some will die.

Yet, we doubt if many Americans would have objected even to rationing if the truth of the situation had been told them. Why are we so continually led to believe everything is improving when the exact opposite is the case?

There have been droughts in many parts of the world and food supplies, already terribly reduced, have been further cut down. Surely there is nothing particularly difficult in determining how much food there is and how long it will last and then making arrangements to get enough additional supplies to prevent starvation.

But even when that is done and when we have learned our proper share we don't seem to be able to supply the needs out of our vast stores. It is not that they are unlimited for they are not and we cannot provide all the food needed, but we do have enough to supply what UNRRA has requested and it should have been supplied on time.

This is the first time on record that this country has fallen down on its job of Christian helpfulness and it is a disgrace. We have sourpusses to be sure, who don't want to provide anything when it keeps them from having all they want, but they have never represented the American idea and they don't now.

Finally, we are to do what we can without going all out to shoot the works. It is time we got off this dead center and started going somewhere.

American Veterans Committee Urges Congress To Put Ceiling Prices on Old and New Houses—Asks for Passage of H. R. 4761 Against Group Demanding "Freedom To Gouge"

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. PATMAN. Mr. Speaker, there has been considerable discussion during the past few weeks over my proposal to establish a $6,000 yardstick with which to gage the cost of new homes to be built for veterans under the President's housing program. Under this provision the Housing Expediter would have the discretion to raise this ceiling in geographical areas where construction costs and special circumstances made it necessary. He could do this so long as the veteran obtained a house at the lowest possible cost.

Many people have been saying that the veteran did not want a $6,000 house—that he could pay more, and should. Most of these statements have come from the professional lobbyists of the real estate speculators, who now see a fine opportunity to rob the veteran of his GI loan under the guise of helping him to find a home. These people wish to use our scarce building materials to build $15,000, $25,000, and $50,000 mansions, and they care little whether the veteran can afford them or not. They know that in the present market they can make their selfish profits.

Today I received a letter from the American Veterans Committee, expressing the views of the average returning serviceman of World War II. The American Veterans Committee has made a considerable study of this housing problem through its own organization. Last week their national policy committee met in Washington to discuss reports they had received from their various chapters over the Nation. Unanimously these chapters wanted houses for their members at $6,000 or under.

With this Nation-wide backing of the veterans themselves, the national policy committee has endorsed my housing program. They have forwarded their recommendations to me, urging that Congress pass H. R. 4761 with the provision establishing maximum sales prices for existing housing accommodations, and demanding that new homes be built to the $6,000 yardstick.

Under permission to extend my remarks in the CONGRESSIONAL RECORD, I should like to include, for the consideration of the Members the American Veterans Committee letter endorsing this legislation:

THE AMERICAN VETERANS COMMITTEE, INC.,
New York, N. Y., February 14, 1946.
Representative WRIGHT PATMAN,
House Office Building, Washington, D. C.

DEAR MR. PATMAN: In order to halt the rising spiral of inflation in home values, which is working particular hardship on veterans and their families, due to their enforced absence for many years from the real-estate market, we urge that the Congress pass H. R. 4761 with a provision establishing maximum sales prices for existing housing accommodations.

We also urge the Congress to restore to the above-mentioned bill powers to be invested in the Housing Expediter or National Housing Administrator for the establishment of priorities over critically short building materals, and the authority to allocate such materials into the construction of homes at price ranges under $6,000 or, at the discretion of the expediter, at a moderately higher maximum sales price in geographical areas where special circumstances make such higher prices necessary to provide housing in volume.

If the Congress fails to do this, it will in effect be providing homes which veterans will be unable to purchase or rent.

Sincerely yours,
CHARLES G. BOLTE, *Chairman.*

Bonneville Power Rates

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. ANGELL. Mr. Speaker, in the Appendix of the CONGRESSIONAL RECORD, page A752, the figure $16,000,000 appears in error; it should be $160,000,000. I have asked that the permanent RECORD be corrected accordingly, and this request has been granted.

The article to which I referred was a news release by the Bonneville Power Administration with respect to the recent audit prepared by Arthur Anderson & Co., which demonstrates that the $17.50 kilowatt-year rate under which power is distributed by the Bonneville Power Administration is sufficient to repay all Government costs for all projects for which power is now being distributed by Bonneville Power Administration, maintain the properties, and provide a substantial backlog for contingencies at the end of the 50-year repayment period. I include as a part of my remarks an editorial appearing in the Oregonian under date of February 12, entitled "Sound Business," which discusses this audit:

SOUND BUSINESS

Persistent pressure from California and elsewhere for higher rates for Bonneville power ought to be relieved as a result of the audit of the Columbia River power system by the private firm, Arthur Anderson & Co., and the report by Administrator Paul J.

Raver to the Secretary of the Interior. The studies showed that there is reasonable expectation that the cost of each unit in the Bonneville and Grand Coulee projects will be repaid, principally from the sale of power, within 50 years of its completion.

The auditors assumed no responsibility for the bases on which the allocations for repayment have been established. As it stands, Federal development of the Columbia River is a sound business proposition. But it is vulnerable to political influence, from Congress or from the Department of the Interior itself. The people of the Northwest, who are the beneficiaries of the power, irrigation, navigation, and flood-control features of the Bonneville and Grand Coulee projects, must guard against changes which might turn the development into a bad business venture.

The estimated revenues from sale of power during the repayment period are recorded as $1,863,000,000. These revenues, returned to the Treasury of the United States, will repay 93.07 percent of the original cost, operating expenses, and interest. Those who buy farm lands in the Columbia Basin project, where 1,000,000 acres will be given life by water pumped from the Grand Coulee Reservoir, will pay a very small part of the total cost. They will have 40 years in which to pay, and need not start paying until 10 years after they receive water.

There is no objection to the assumption of the great share of the load of repayment by power sales. There is objection when California politicians seek to force an increase in the wholesale rates of Bonneville and Grand Coulee power for the sole reason that they are competitive, in attracting industry, with California power rates. The great cost of the Central Valley project in California, and the relatively small amount of power to be generated at Shasta Dam, have put such a burden on power sales there that Bonneville's rate of $17.50 a kilowatt-year has not been matched.

The audit of the Columbia system, demanded by Administrator Raver, should strengthen the insistence of Northwest Members of Congress that a higher power rate in California is California's bad luck. Oregon can't grow vegetables the year around, and there is no remedy for the fact that Oregonians must pay more for California vegetables than do Californians. The Northwest will not submit to political penalty which would cancel out its natural advantages, chief among which is abundant power.

Labor Aims To Control Government, But Lack of Unity Prevents It

EXTENSION OF REMARKS

OF

HON. PAUL STEWART

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. STEWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan, from the Washington Post of February 17, 1946:

LABOR AIMS TO CONTROL GOVERNMENT, BUT LACK OF UNITY PREVENTS IT

(By Mark Sullivan)

It is frequently said that labor, its unions, and leaders have too much power. Or, more strongly, that labor is more powerful than the Government. If these assertions are mere argumentative assertions they ought not to be accepted. They call for examination in the light of facts.

In New York a union of tugboat workers struck. The Government took over the tugboat industry. The union voted to continue the strike. Essentially this is a refusal to work for the Government. This is serious but hardly composes superiority of a labor union over Government.

The tugboat strike, by interrupting the flow of fuel, caused, or threatened, interruption of some public services, such as schools. But this interruption was indirect. The tugboat workers were private employees of a private industry. Their strike was not a direct strike by employees of Government.

NO RIGHT TO STRIKE?

In Syracuse workers on the waterworks, owned by the city government, struck. This was a direct strike against a government function. There are many examples of this—strikes, actual or threatened, by workers in Government-operated transportation systems, garbage collectors, and the like. These go counter to what has long been accepted as a principle, that Government workers have not the right to strike. As once put by President Roosevelt, they have the right to organize and present grievances, but not to strike.

Whether, and how, government can penalize such strikes, raises a distinction. Under existing law, private employers are forbidden to discharge workers for striking, or to refuse to rehire them on that ground. Presumably government is not subject to this limitation. It may be, varying with different States, and as between the States and the Federal Government, that the civil-service laws give, or do not give government the right to discharge an employee who strikes.

Among government functions interrupted by strikes, schools have a special status. Schools are a direct function of government. Government requires parents to send their children to schools and penalizes any who do not. Only government has authority to suspend this requirement. Only government has authority to close schools.

SCHOOLS GOOD EXAMPLE

Yet schools have been closed by strikes. A closing in New York was indirect; the tugboat strike in a private industry interrupted the flow of fuel. But in St. Louis this month schools were closed by a direct strike of government employees.

Another phase of the issue is presented by picketing. In many cases, pickets prevent a civilian from entering a property in order to work. In some cases, they prevent citizens from entering a property to do business with the owner. In a few cases pickets have prevented the owner or his representatives from entering. These are fairly clear deprivals of rights citizens are supposed to be guaranteed by government.

The power possessed by unions raises the question of the relation between labor and Government. Labor organizations seek as much power as they can get, both within government and immunity from government.

LABOR STRONGEST

This sort of thing is not new. Throughout history groups have tried to control government and often have succeeded.

In America today labor is the strongest group. If labor seeks actually to control government it is following a pattern of history. Actually labor does so seek, in America and other countries. In England labor, acting as a political party, has become the government. In America, CIO, with its political action committee, plainly drives toward first controlling an existing party, and through that controlling government.

If all American labor were united in CIO it might have a good chance to accomplish what the Labor Party in England did. Yet much of CIO's political aims are ruggedly resisted by large groups, notably farmers, and by many individuals, including some within the ranks of labor.

Measured by influence in the Democratic Party and the Democratic administration, CIO has much power. Measured by representation in Congress, it has less.

The major immediate effort of CIO will be to increase its representation in the House in the election in November.

Rural Electrification

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. POAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Claude R. Wickard, Rural Electrification Administrator:

RURAL ELECTRIFICATION MUST BE PROVIDED ON AREA COVERAGE BASIS—LEGISLATION ENACTED BY CONGRESS CALLS FOR SERVICE TO ALL NON-SERVED PEOPLE IN RURAL AREAS; NO EXCEPTIONS

(By Claude R. Wickard, Rural Electrification Administrator)

A few months ago I issued a public statement about rural electrification. It grew in part from my experience in living and working on a farm which did not have central station electric service, and then noticing the changes when the REA services came to my farm. The statement was based in part on my experience in an official capacity and the close association I had been having with the REA program.

The heart of that statement was:

"Rural electrification, if it is to succeed in this Nation as a Government-sponsored undertaking, never can be carried out on a selective basis."

To attempt selective electrification, I then said, "would be undemocratic, alien to our firmly established traditions. If within the areas electrified through the aid of REA, there were to remain darkened regions, we would only be inviting blighted neighborhoods, a depressed farm minority. To permit such conditions by neglecting to provide complete area coverage," I said when I was new to this job, "would be bad for the community and bad for the Nation. * * * If anyone in an area can have electricity, then everyone on the area is entitled to it. * * * That is part of the basic philosophy that animates REA; an implicit condition that goes with every REA loan. * * * REA will not knowingly contribute to the creation of a blighted area by defaulting on its obligations."

After 7 months' experience as Administrator of REA, I am, if possible, even more firmly convinced than ever of the truth of these statements, and I want to repeat them in a magazine which comes very close to a great many of the cooperatives which have borrowed and are seeking to borrow more money through REA.

I find in that early statement one additional thing which I now want to repeat. It is this sentence: "I am certain that our borrowers, their officers and board members, will join with us by doing everything within their power to make electricity available to every farm and rural nonfarm home, every school, church, and community center within their area."

The purpose of REA, as expressed in the Rural Electrification Act of 1936, is to take

central station electric service to people living in rural areas who lack such service. There is no mention of some of the people or even of most of the people, but simply the people—and that can only mean all—who do not then have central station electric service.

It seems to me, therefore, necessarily to follow that an obligation is imposed which neither REA nor any cooperative or other concern which borrows money from it can by any means escape. That obligation is to see to it that, just as soon and just as rapidly as possible, central station electric service is made available to all the rural people of the United States. It seems clear to me that every rural resident, even if he is a one-mule farmer on a mud road away back in the hills, has the right under the law to have central station electricity made available to him.

Of course, nobody believes that the whole of this obligation can be discharged at once, that electricity can be made available instantly to all the people in every rural area. But I believe that all rural electrification can and must be planned that way and that, ultimately, the goal can be reached. I believe—and I think the people of the country concur in that belief—that any rural electrification cooperative which fails to plan that way is falling short of its duty, is defaulting on its obligations.

I said earlier that Congress never intended, in passing the REA Act, to set up a favored, privileged class among rural residents. But Congress did give one group the opportunity of taking the lead in the rural electrification movement. Cooperatives were selected as favored instruments to effectuate the REA program. It is expressly stipulated that cooperatives, democratic business organizations of rural people, are to have preference, together with certain public bodies, at the hands of REA in the making of loans for rural electrification.

The reason for this preference is easy to understand. They can afford to extend their lines into thin territory, to all potential consumers in their areas, more readily than can profit-motivated companies. In short, it is the cooperative which can most easily and readily achieve area coverage in rural electrification. Congress was thoroughly aware of this fact and took it duly into consideration in providing REA with the means of making central station electric service available to rural people who did not then, or do not now, have it.

Because Congress offered this leadership opportunity to the cooperatives, it seems to me to follow that every rural electrification cooperative has a duty, similar to that of REA itself, to do its utmost to carry out the clear intent of Congress in the law which it wrote for taking light into the dark places of this Nation. That intent is, as we have come to phrase it, area coverage. That is the obligation which stems from the preference accorded the co-ops.

Let's think about it for a moment.

In large measure, rightly or wrongly, we have come to gage the degree of our civilization in America by the number and type of mechanical devices we have developed to eliminate drudgery, to make living comfortable. In the early days, the whole economy of this Nation was based on agriculture. Rural life set the national standard of living, and urban dwellers strove to attain it. In modern time, though we still depend upon agriculture for much of our economic stability, the city has far surpassed the country as a convenient place in which to live. Still, the serenity and dignity of living which characterized our early days survive only in rural areas. The only things those areas lack are modern facilities which eliminate drudgery, make living comfortable.

Millions of our young men and young women are coming back from fighting and winning a war for us. Hundreds of thousands of them are returning to the rural areas. They are not going to be satisfied with primitive conditions, and they are going to express their dislike. Anybody responsible for such conditions, anybody who has to explain their existence, is in for a very uncomfortable time of it. It is going to be harder than ever, now, to explain an unelectrified neighborhood next to one which has electricity—the greatest single factor in bringing homes up to a satisfactory American standard of living. I do not want the apologizing job. Do you?

"You" means not merely the cooperatives but the individual members of the cooperatives. Electricity should be available to all on terms that all can afford to pay. It is up to those who have electric service to help their less fortunate neighbors to lift themselves up to a new plane.

The obligation to strive for area coverage is the most important one facing the cooperatives right now, but it is only one of several. The matter of providing adequate, continuous, dependable service must always occupy our attention. As your members learn more and more about using electricity in their everyday living and working, providing service of this high quality becomes more important—and more complicated. Changes and improvements in your systems will probably have to be steady and unending.

The matter of retail rates and minimum bills is another subject on which we are going to have to do a lot of thinking. So is making a record of the equity of each individual member in the cooperative properties. These subjects are in addition to and apart from the pressing day-to-day problems and the continuing need to campaign for adequate wiring, careful planning of plumbing, and careful consideration to equipment selection.

The rural electrification program launched by the Federal Government in 1935 has made much progress, but it is by no means completed. The impetus for the program came initially from the Government and from a few national leaders. Now, with the tough half of the job before us, we must look to the grass roots for the initiative and determination to finish it.

Lincoln Day Address of Hon. James I. Dolliver, of Iowa

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of my colleague Hon. JAMES I. DOLLIVER, at Logansport, Ind., on February 12, 1946:

Ladies and gentlemen, the kindness of your invitation has brought me here on this Republican and American occasion. I cannot proceed without mentioning the very pleasant relations I have had with your own Congressman, Representative CHARLES HALLECK, in the brief time I have been in Congress. I have come to hold an affectionate regard and high admiration for him. As chairman of the congressional committee he is a leader of the Republican Congressmen and he merits that title by virtue of his energy and aggressiveness. You good Republicans of the Second Indiana District have not only rendered yourselves a good service in electing Representative HALLECK, but you likewise have sent to the Halls of Congress a man who is useful to the Nation as a whole.

Tonight we observe the birthday of the first great national leader of our party—the patron saint of the Republicans. Lincoln was a great Republican; he was also a great American. He summed up in his career the virtues of our way of life and of our system of government. Wherever in the world virtue, honor, and freedom are revered, Lincoln's name is among those venerated by all.

Last fall, in returning to Washington from my district, I took occasion to go with my family to the Lincoln shrines that extend through Illinois, Indiana, and Kentucky. I was anxious that my children should see the places where this great American had lived and that they should come to know something of the reverence and affection with which his name is remembered by the communities that knew him best.

For instance, at Lincoln's New Salem in Illinois we saw the very community in which he lived during his young manhood. The State of Illinois has reproduced there the town of New Salem as it existed in Lincoln's time, with the log cabins the various business establishments, the flour and saw mill, and all the other appurtenances of a pioneer town, including the post office where Lincoln served briefly as postmaster. I must say it is one of the best restorations of its kind that I have seen in the country.

Then we came on to Spencer County, Ind., where Lincoln spent his boyhood after moving from Kentucky and before he went further out on the frontier of Illinois. You good people of Indiana have done yourselves proud in erecting there a substantial limestone structure commemorating Lincoln: with the remains of the Lincoln cabin and the revered resting place of Lincoln's own mother, Nancy Hanks.

We next went to Kentucky to see the marble structure over the humble cabin where Lincoln was born.

And finally we went back to Washington where the form of Lincoln has been imperishably reproduced in gigantic size by the sculptor, Daniel French, in the magnificent Lincoln Memorial on the banks of the Potomac.

The story of the man is summed up in that pilgrimage from log cabin to capital through pioneer life, through the early struggle of the young lawyer to the final act of the drama of his life in saving the Union, freeing the slaves, and becoming a martyr to his own high principles.

If America had produced no other great man or if there had sprung from our soil no other noble character, surely here is an indestructible human monument to the American system, a product of such rare quality, of such outstanding excellence, that human beings all over the earth in the far reaches of the future will revere the name of Abraham Lincoln.

Of course, Lincoln was many-sided, but there is one especial quality of his about which I wish to speak tonight: namely, his love of freedom. I think it is no exaggeration to say that our whole social system in Lincoln's day had been cursed by human slavery. Developed from a small beginning, it had become inextricably entwined with the economy of the South. It was the basis of their social system and one of the forms of wealth which was deemed by many of our fellow countrymen to be essential to economic well-being.

By reason of the fact that it involved human bondage, slavery was utterly incompatible with the fundamental ideals of Americanism. Freedom and human slavery are opposites; the two cannot exist in the same atmosphere. As Lincoln quoted so eloquently from the Scriptures: "A house divided against itself cannot stand." And he continued, "This Nation cannot survive half slave and half free."

Not only was the Nation divided geographically by the institution of slavery, but it also

was divided intellectually, emotionally, and economically. Accordingly, the great task that Lincoln performed was to bring unity out of that disunity, to rebuild the house that was divided, and to reunite through the terribly ultimate instruments of fratricidal strife the two sections of the United States of America in a bond of brotherhood which shall forever be indissoluble.

Lincoln was a devotee of freedom. He was a constant adherent of liberty. From his earliest youth he never wavered in the resolution to hit slavery hard if he had the chance, and strike it he did when on January 1, 1863, he signed the Emancipation Proclamation, making free a race of men. The name of Lincoln is synonymous with the word "liberty." It would be an interesting speculation to determine the attitude of Lincoln toward our present day problems in America. Probably his attitude is summed up best by his magnificent statement in his second inaugural address:

"With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in, to bind up the Nation's wounds, to care for him who shall have borne the battle and for his widow and orphan, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

Thus it is apparent that Lincoln's philosophy in the closing days of the Civil War encompassed some of the very problems with which we are confronted today. But we may be certain that, above all other things, he would insist upon maintenance of liberty in America. He would have led the influence of the United States to the maintenance of liberty throughout the world.

For instance, I cannot imagine Abraham Lincoln being a party to a secret agreement whereby the United States without any right or authority agreed to barter away the independence of other peoples in this world at the close of a long and costly struggle in which they were involved. Indeed, I cannot imagine Lincoln being a party to any vicious secret agreements between our country and any other nation, whatever the pressure or whatever the ostensible reason for such behind-the-scenes diplomacy.

The American people are entitled to know what the foreign policy of their Government is. They should not be misled by their Chief Executive into the belief that open covenants are openly arrived at and then, months later, discover an agreement made which was disclosed by the President not even to the Secretary of State.

On the domestic scene, I doubt that Lincoln would have tolerated the spectacle of the Federal Government dipping into the personal and private affairs of every American citizen. The vast bureaucracy which has been built up in Washington during these New Deal times of the past 13 years would shock the Civil War President beyond any measure. It is difficult for anyone to discover the rationality behind the vast increase of bureaucratic government with which we are presently afflicted. One is driven to the conclusion that the New Deal administration would like to turn the American Government into a form which would ignore the rights of local self-government and which would inflict upon the citizens the totalitarian regimes which lately have been so prevalent in Europe. This kind of dictatorship is utterly foreign to our American genius.

I am sure you are not strangers to this kind of thing. Examples could be multiplied, but I cannot help but mention the case of the grocer in my district who, by inadventence, charged 15 cents instead of 14 cents for a can of Campbell's soup, whereupon he was hauled before a kangaroo court and required to pay a substantial fine. This is but one out of the multitude of petty tyrannies which have come into being under the New Deal in the United States.

For one, I hope the American people wake up to this danger before it is too late, and return to power in the Halls of Congress the Republican Party. In all sincerity I say to you that it is the one hope of saving the country. The Democratic Party is tied hand and foot by the New Dealers. Even if they would, they cannot escape the net of their own making. The fact is that the people of the United States will get a change of direction in the policy of this Government only when they turn out the Democratic Party and return the Republicans to power.

For example, ever since the inaugural of the New Deal President in 1933 there has been an ever-increasing public expenditure. In the last Republican administration, the largest annual Federal appropriation amounted to approximately $3,000,000,000. This amount was constantly increased until, at the peak of the New Deal peacetime expenditures, the annual Federal appropriation amounted to $9,000,000,000. This is entirely apart from the war expenditures which all of us recognize were necessary.

But the fact is that the present administration comes up today with a staggering debt of $275,000,000,000—nearly $2,000 for each man, woman, and child in the United States. This is a situation that cannot be laughed off and cannot be shrugged away. It is a financial fact that must be faced, and sooner or later the American people must do so. The Democratic Party will not and cannot face it. This is demonstrated by the recent Budget presented to the Congress by the administration which does not balance; far from it. Expenditures for the first peacetime year since the close of World War II are scheduled at $35,000,000,000, with an estimated income of $31,000,000,000, leaving a deficit of $4,000,000,000. The Budget message does not attempt to disguise this incredibly unsound situation.

It has been truthfully said that the surest way to wreck popular representative government is to destroy it upon the rocks of financial incompetence and extravagance. Certainly these past 13 years have demonstrated beyond all doubt that the Democratic Party cannot administer the financial policies of our people effectively. I have often been tempted to smile a bit ironically at the adulation the Democrats pay to Andrew Jackson. Judging from their talk, he is the patron saint of the Democratic Party, and yet he abhored a public debt above everything else. For the first and only time in American history, during his administration Jackson wiped out any public debt of the United States of America. When Jackson's administration came to a close, there was not one penny owed by this country. What a far cry from the present Democratic leadership which has involved us in a stupendous and staggering debt and which still continues to involve our people in the deep waters of financial insecurity.

Only by electing a Republican Congress in 1946 and a Republican President in 1948 can the American people have any assurance of a change of direction away from unlimited deficit spending and unbounded bureaucracy. The time has come, in my judgment, to secure a change of direction from those destructive and totalitarian policies: to bring our people back to Constitutional Government, to restore local self-government, and to embark the United States and its people upon a new period of prosperity, leadership, and well-being.

Please do not think I am pessimistic about our country. Far from it. With the right kind of leadership, the United States can even more fully be recognized as the foremost Nation of the earth. One fact has emerged from this war with utter and absolute certainty—the gigantic productive capacity of the United States. Many people may not realize it, but the fact is that our own country can out-produce all the rest of the world combined. This kind of productive capacity has come to us because of our free enterprise system, because of the liberty which we and Lincoln cherish. Let us see to it that today's liberty is maintained. Let us never deviate from the ideals of the man whose birthday we commemorate on this day.

Housing and Education of Veterans

EXTENSION OF REMARKS

OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the national headquarters of Veterans of Foreign Wars:

VETERANS OF FOREIGN WARS URGE HOUSING FOR VETERAN STUDENTS AND CALL FOR EXPANDING EDUCATIONAL FACILITIES

Citing the fact that 12,860,137 veterans from the armed services will be demobilized by the end of this year, the Office of Vocational Rehabilitation and Education of the Veterans of Foreign Wars today urged the expansion of education facilities in the United States.

With current figures of the Veterans' Administration revealing that a total of 657,333 veterans have applied for education assistance under the provisions of Public Laws 16 and 346, the VFW officials also called upon the people of the United States to open their doors and rent living quarters to the hundreds of thousands of veterans who are anxious to continue their education. Since the original law was passed 380,000 applications for educational aid have been approved by the Veterans' Administration with 258,000 not yet located in schools.

"The present rules of the Veterans' Administration prevents them from interfering in any way with the institution that a veteran wants to attend," the VFW office pointed out, "but this problem is directly in the lap of our school authorities. Something must be done and the action had better be forthcoming soon. There was a day when a boy would think of college only if someone in his family had had the advantages of higher education and knew what was best for their children. Today, however, the veterans are school and college conscious because they see in it their means of advancement."

Pointing out that thousands of veterans are being refused admission to universities due to the lack of housing, teachers, and classrooms, the VFW called for planning and direct action from the educational system of the Nation. In New York there is the threat that this month 15,000 high-school graduates will be turned away from school doors because of the influx of veterans who have been given first chance at facilities available.

"The veteran is being urged to utilize the smaller colleges in the Nation," the VFW office stated, "but that alone will not alleviate the future situation. Housing, expanded colleges and universities, physical plants, and the retainership of qualified instructors are all problems that must be met and met within the near future unless education be denied the millions of veterans plus the youngsters of the Nation who will continue education if given the proper opportunity."

Permanent UNO Headquarters

EXTENSION OF REMARKS
OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks on the subject of a site that has today been selected in my district as permanent world headquarters for the United Nations Organization, I want to place in the RECORD the following chronological résumé of this historic event:

In December 1945 the Congress of the United States by a concurrent resolution of both Senate and House "invited the United Nations to locate the seat of the United Nations Organization within the United States of America."

This invitation was discussed at considerable length in the Preparatory Commission and was finally accepted and a subcommittee was appointed to select the actual site. The area of selection was narrowed by the whole committee to some spot on the eastern third of the United States, and finally ended as a choice between Hyde Park on the Hudson River, a section near Boston, Mass., and the place on the Connecticut-New York line near Greenwich.

Some of the areas considered, such as Hyde Park, had, through various citizen groups, expressed a local desire to be selected as the seat, and had issued official invitations to the subcommittee which had been ratified by elected officers or by town meetings. Many towns and districts both on the Atlantic and Pacific coasts and inland sent delegations to London, urging the selection of their neighborhood as the logical and most convenient site. The area around Greenwich, Conn., did not send any such delegation, nor urge the selection of itself as the seat of the UNO.

The actual selection was announced on February 3, 1946, by Mr. Stoyan Gavrilovich of Yugoslavia, Chairman of the United Nations Site Selection Subcommittee, which had inspected a number of the proposed areas within a period of a few weeks. In a 35-page report, the 7-man subcommittee unanimously gave its first choice to the 42-square mile section covering parts of Fairfield County, Conn., and Westchester County, N. Y.; taking in parts of the towns of Stamford and Greenwich, Conn.; and Harrison, Rye, North Castle, and Pound Ridge, N. Y.

No statement was given as to the need for such a large area, which is some twenty-odd times larger than the principality of Monaco, an independent sovereignty for the past several centuries, and also is greater in extent than such ancient free states as Andorra, and is two-thirds as large as Europe's prewar tax-free paradise of Liechtenstein.

Also, no statement was made as to the exact terms under which the area would be secured to the United Nations Organization, other than by a treaty with the United States for relinquishment of all national rights over it.

Some concern was immediately expressed by the inhabitants and property owners of the district, as well as by those responsible for the railroads, motor bus, and truck lines, and other utilities which have the main trunks between New York and Boston located within the proposed enclave.

As Representative for Fairfield County, the Fourth Connecticut District, naturally the inquiries came to me. I asked for legal advice in regard to protecting the interests of my constituents not only in their property rights but in their inchoate rights as American citizens to choice of their dwelling places and preservation of their homesteads.

The legal status of the proposed UNO area was found to be very unclear. Preliminary studies are all that have as yet been undertaken by our State Department on the exceedingly complex question. A draft of a convention, or treaty, which was drawn up in London in December 1945 takes no account of individual property rights, but only touches on the ownership by the National Government, which has no such rights under its Constitution nor under the constitutions of the States of Connecticut or New York.

The drafted paragraph reads:

(c) The Government of the United States shall be responsible for expropriating and compensating, so far as necessary, all interests in the land conveyed to the United Nations.

(d) If, and insofar as, the land is not presented as a free gift to the United Nations, the United Nations shall pay to the Government of the United States a fair price for any land conveyed, which sum shall be credited to the United States in the accounts of the United Nations and be set off against contributions due from the United States. In default of agreement, the price shall be determined by an expert selected by the President of the International Court of Justice.

The provisions suggested in this draft of a treaty will, of course, have to be ratified by the UNO in London, or after its transfer to temporary headquarters in New York City. Following that, and before the provisions can have any effect or any steps can be taken under the treaty as drafted, the whole treaty will have to be ratified by the Senate of the United States with a two-thirds vote as provided in our Constitution.

Immediately on announcement of the selection of a site, the attorneys general of Connecticut and New York studied the draft treaty and expressed their belief that there are no constitutional or statutory barriers in either State which would interfere with concluding or fulfilling the terms of the treaty.

On February 6, in London, the site committee of the UNO voted to recommend to the General Assembly that private residents of the selected area be allowed to remain on their former properties for an indefinite period as tenants of the UNO, except in such zones as might be restricted for special nonresidential purposes by the UNO. The question of taxes for such hold-over residents, and for the communities and States losing taxable property to the international Organization was referred for study to a legal subcommittee.

The site committee expressed its hope that it would not be necessary to obtain title through condemnation or expropriation, but that purchase through private agreements could be worked out in every individual case.

All these placatory expressions of desire to proceed along peaceful lines did not fully reassure the residents of the area, particularly in view of reports from abroad in the daily newspapers as to the methods of displacement now followed by some of the governments represented on the UNO site committee.

The citizens of Greenwich, the town selected as headquarters for the UNO, called a meeting for the night of February 5 to discuss the matter and to make known their sentiments as to the disposal of their community by international expropriation.

In response to the invitation of my fellow townsmen and constituents to make known to them my own knowledge and opinion in the matter, I sent a telegram to the town officials which read in part as follows:

The site committee has indicated that it will not oppose the expressed wishes of a majority of the people in the site area chosen. It is my understanding that the townspeople are deeply divided on the issue. In order to accurately gage their true sentiment, I suggest that the issue be quickly submitted to a referendum vote, if the town meeting tonight does not conclusively and formally express the feelings of Greenwich. Whatever action is taken or decision reached by Greenwich and/or Stamford, you may be assured that I will present it as forcefully as I can to the Assembly, to Mr. Stettinius, American Delegate to the UNO, and to the President.

On February 6, I received the following resolution incorporating my suggestion from the town meeting moderator:

We respectfully inform you that representatives of the Town of Greenwich, which includes Greenwich, Cos Cob, Riverside, Old Greenwich and East Port Chester, with a population of 35,000 at its town meeting tonight adopted the following resolutions by vote of 2 to 1 or 110 to 55, 15 being absent:

Resolved, That it is the sense of the meeting that, while the residents of Greenwich are desirous of obtaining world peace through the United Nations Organization, the Town of Greenwich should oppose the placing of the capital of the United Nations Organization in or adjacent to Greenwich; and

Resolved, That a referendum of the residents of Greenwich shall be taken as soon as practicable.

PRESCOTT BUSH, *Moderator.*
HAROLD W. ALLEN, *Town Clerk.*

On February 7, I placed the resolution of the citizens of Greenwich before the Secretary of State, the Honorable James F. Byrnes, and I was assured that the officially expressed sentiment of the town of Greenwich would be transmitted by cable to the United Nations Organization in London without delay.

That this was, in fact, done, was indicated by subsequent news dispatches from the temporary seat of UNO.

Considerable criticism has been voiced in some quarters as to the reluctant

stand taken by the citizens of Fairfield County toward having a world capital set down in their midst. I believe much of this criticism fails to understand the doubts expressed by my constituents. I am sure that all of us are aware of the honor the choice does us and are eager to promote the functioning of this machinery for peace and that we will resist no reasonable demands to provide a site sufficient for the real needs of such an organization. But many others besides citizens of Fairfield and Westchester Counties have expressed their astonishment at the territorial demands or expectations for the headquarters of UNO.

Senator VANDENBERG, one of our representatives to that Organization, made one statement which has met with approval both in the very pro-UNO Washington Post and from the shrewdly well-informed observer Mr. William Philip Simms, whose articles I append:

[From the Washington Post of February 10, 1946]

UNITED NATIONS CAPITAL

Senator VANDENBERG did well to speak out against the "fabulous and fantastic" idea that the United Nations needs 42 square miles of "high-priced area" for its headquarters. "In my humble view," the Michigander is quoted as saying in London, "the equivalent of a comfortable college campus should suffice, and would be far more in keeping with the genius of this precious institution which we serve. Let us not mistake pomp for power." The Senator was echoing many protests already made in this and other countries against the site finders' recommendations. Those protests have at least induced the champions of the North Stamford-Greenwich site to reduce the area they propose to acquire.

What the committee was sent forth to do was to find a suitable headquarters for the United Nations. What it actually did was to select a highly expensive site for a world capital. We think the distinction is plain. An appropriate headquarters would consist of buildings for the General Assembly, the Security Council, the Economic and Social Council and the Secretariat, with a reasonable amount of space for future expansion and possibly an airport. On the other hand, a world capital implies a new city roughly comparable to Washington, including, in addtion to United Nations buildings, stores, office buildings, restaurants, theaters, night clubs, and large residential areas. Only if such a city is to be built could the acquisition of 40 to 50 square miles of expensive land be justified.

We doubt that the General Assembly has any intention or desire to creat a full-fledged world capital at this date. If it does, there are many more appropriate sites than the North Greenwich-Stamford area which could be chosen. Indeed, if that is the intention, the whole question of whether the world capital should be located in the United States might well be reviewed. But we think it is safe to assume that a majority of the delegates have no such plan in mind. They probably want only an attractive and convenient site for a headquarters. In that event, the people who operate the world organization will live in an established American community or communities. We think it would be much better this way. If the Assembly takes this point of view, it will obviously wish to choose a less grandiose site than the North Greenwich-Stamford area—one reasonably close to a city in which the United Nations staff and families could be readily absorbed.

UNO PRINCIPALITY

(By William Philip Simms)

Proud though Americans are to have the UNO's permanent seat in the United States, Congress is far from unanimous on the size and location of the establishment.

Whether the site finally chosen goes to the east coast, west coast, or in between, most Members seem to feel with Michigan's Senator VANDENBERG, that 42 square miles, as proposed by the UNO Commission, borders on the fantastic. Something about the size of a university campus, Mr. Vandenberg said, ought to be ample. Nor does there seem to be any pressing need to locate it in an already thickly populated section where land is at a premium.

Those who share this view are all the more inclined to favor a less ostentatious home for UNO because they know that the UNO expects the United States to bear an equitable share of its expenses. An equitable share of UNRRA, it is recalled, was about 75 percent of the total.

The area of Monaco, world playground on the Riviera, is only 8 square miles. It has a population of 25,000—not counting the thousands of tourists who go there annually.

The entire island of Hong Kong, with more than 1,500,000 inhabitants, is only 35 square miles, yet it includes Victoria, one of the earth's finest ports.

The International Settlement known as Shanghai, together with its suburbs, parks, race tracks, and residential area boasts less than half the space earmarked for the UNO. Yet within it are to be found some of the world's greatest banks, commercial houses, warehouses, docks, harbor facilities, and hotels. Shanghai, before the war, had well over 1,500,000 inhabitants.

The old League of Nations, at Geneva, occupied only a fraction of the space now asked for UNO.

Before the UNO meeting in London, the impression of members supposed to know was that the site would go to the west coast. Some went further than that. They said it was "in the bag" for San Francisco. But when the matter came up, Britain, France, and one or two others put up a strong fight to keep it in Europe. They finally agreed, however, to drop their objections to an American site provided it would be on the east coast.

Europeans would not have so far to travel. They overlooked the fact that half the population of the globe live in Asia. The Greenwich-Stamford location, according to the Australian member of the Commission, W. R. Hodgson, was not among the numerous sites offered. The Commission, he said, "discovered" it themselves.

The Australians still want San Francisco. So do a number of Latin-Americans. The French as well as some others are opposed to any site near New York. They say there are too many high-pressure groups there from every quarter of the globe. Some of the small nations fear the Connecticut selection would make for high costs, part of which they will be called upon to pay. And Congress, which will have to finance the deal—and which would have to buy back both land and buildings if the UNO ever decided to move somewhere else—is generally opposed to the creation of any such principality.

Mr. Speaker, in this matter I believe the emphasis should be placed less on width of territory and more on extending the area of human freedom. That is the purpose for which we look to the UNO with hopeful eyes.

The FEPC Filibuster

EXTENSION OF REMARKS

OF

HON. PAUL STEWART

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. STEWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by C. F. Byrns from the Fort Smith (Ark.) Times Record of February 9, 1946:

A FILIBUSTER DEFEATED A CONGRESSIONAL MISTAKE

(By C. F. Byrns)

The long filibuster against the FEPC bill is expected to end Saturday afternoon with complete victory for opponents of the bill.

The Senate will vote on a proposal to limit debate and force the bill to a final vote. It is conceded the bill would pass if put to a vote. It is likewise conceded that the proposal to limit debate cannot get the required two-thirds majority. So it will fail, and the Senate will have to get on to other business. The FEPC is dead, for the present. Probably it will arise again.

This filibuster differs from many which have been attempted in past years. It differs in the quality of men who have carried it on. It differs in the nature of the proposal they were trying to defeat. This was no shoddy piece of demagoguery. It was a sincere effort of the men from the South to keep the Congress of the United States from making a terrible mistake. They have succeeded. In this instance the men who have conducted the filibuster are entitled to the thanks of the Nation, not to the contempt which so often has rightfully been visited upon men who have used this weapon to defeat a majority bill.

Democracy should function so as to protect the rights of the minority as well as to carry out the will of the majority. If those two objectives seem at times to be directly opposed, then they are directly opposed. Yet each is necessary at times. This was one of the times when the right of a Senator to talk as long as he likes has been used to accomplish an excellent end.

If anyone thinks the Southern Senators who have fought so long against the Fair Employment Practice Commission bill were not truly representative of their people, then he is mistaken. Recently, Senator HARRY BYRD, of Virginia, one of the southern filibusterers, sent telegrams to governors of all Southern States and asked whether they felt their Senators reflected the views of their people. Without exception the replies asserted that the people of their States were opposed to FEPC and commended the stand of their Senators.

The sponsors of FEPC have urged it as a measure to protect the rights of minority groups to an equal break in employment. Perhaps some of them think it strange that anybody should be opposed to such a measure. The southern Senators and others who have opposed this measure are not trying to oppress minority groups. Rather they are trying, with imminent success, to defeat a bill which would do irreparable damage to the rights of minorities of every sort all over this country, in the North as well as the South. If this bill ever became the law, we should see the most powerful, most obnoxious, and perhaps the most numerous of all the bureaucracies armed with power to invade every business in America with six or more persons, dictate who should be hired

and who should be fired, who should be promoted and who should be demoted, applying a racial or religious percentage yardstick to the make-up of the employees of every enterprise. Such an effort could only fan into flame smoldering racial and religious prejudices which happily are being gradually eliminated by increasing tolerance and good will between the varying groups which make up America.

A small example of what an FEPC would mean is an incident which occurred under the temporary FEPC in Dallas a year or so ago. The FEPC there tried to force the Dallas News to quit running classified ads advertising for a colored maid or a white maid. The FEPC said that was racial discrimination and the ad should call for only a maid, without distinction as to color. Some people want colored maids. Some want white. It is sheer stupidity and cruelly unfair to applicants to deny them information as to whether they would be acceptable or to try to force an employer to take one when she wanted the other. If the FEPC bill should pass, that sort of stupidity would become commonplace, backed by law and stiff penalties.

The southern Senators have performed a noble service for the most helpless member of the smallest minority groups in America. The majority in the Senate was wrong, terribly wrong. It is fortunate the power to filibuster existed and was used so effectively.

The Strike Vote

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. HOFFMAN. Mr. Speaker, on February 12 I asked NLRB for copies of the ballots used in the elections held by it to determine whether there should be a strike of General Motors and the steel employees.

The ballots received are as follows:

UNITED STATES OF AMERICA—WAR LABOR DISPUTES ACT—OFFICIAL BALLOT

For employees of certain companies having collective-bargaining agreements with United Steelworkers of America, CIO.

Major issues involved in the dispute:

The demand of United Steelworkers of America, CIO, for a $2 per day increase in wages for employees covered by contracts between certain companies and United Steelworkers of America, CIO.

Efforts being utilized for settlement of the dispute:

The Secretary of the Department of Labor has been advised of the dispute and is making appropriate settlement efforts.

MARK AN "X" IN THE SQUARE OF YOUR CHOICE

If you spoil your ballot, return it to the Board's agent and obtain a new one.

Do you wish to permit an interruption of war production in wartime as a result of this dispute?

Yes ☐

No ☐

Do not sign this ballot. Fold and drop into ballot box.

UNITED STATES OF AMERICA—WAR LABOR DISPUTES ACT—OFFICIAL BALLOT

For employees of certain plants of General Motors Corp.

The major issues involved in this dispute and affecting all employees covered by the contract between General Motors Corp. and UAW-CIO are:

1. A 30-percent wage increase.

2. Seniority protection for displaced workers in certain reconverted plants.

3. The establishment of rules in each plant for permanent transfer between occupational groups and for filling vacancies and new positions.

The major local issues involved are: Shift preference; an elimination of piecework and incentive systems; elimination of spread rates for production jobs; the application or establishment of local seniority agreements; operation of grievance procedures; production standards.

Efforts are being made to adjust this dispute by direct negotiation between the parties and by Commissioners of Conciliation of the Department of Labor.

MARK AN "X" IN THE SQUARE OF YOUR CHOICE

If you spoil your ballot, return it to the Board's agent and obtain a new one.

Do you wish to permit an interruption of war production in wartime as a result of this dispute?

Yes ☐

No ☐

Do not sign this ballot. Fold and drop into ballot box.

Mr. Speaker, after looking them over, how would you vote if you were an employee?

The Argentine Situation

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. LUTHER A. JOHNSON. Mr. Speaker, an excellent statement concerning reasons for the issuance of the Blue Book by our Government with reference to conditions in Argentina is contained in an article by Mr. Roscoe Drummond, chief of the Washington bureau of the Christian Science Monitor, and appearing in the February 15 issue of that newspaper, and under leave granted I submit same herewith:

(By Roscoe Drummond, chief of the Washington bureau of the Christian Science Monitor)

WASHINGTON.—The charges contained in the United States Government's blue book go far beyond any ordinary diplomatic dispute between Argentina and the United States.

The issue is not one of recognition versus nonrecognition. It has nothing to do with intervention versus nonintervention. It is in no way a personal controversy between bluff, plain-speaking Assistant Secretary of State Spruille Braden and Col. Juan D. Peron, who would like to regularize his Argentinian dictatorship by rigged elections February 24.

Only incidentally is the issue one of American-Argentinian relations.

The real issue is whether the Western Hemisphere is to become an asylum for European nazism—a shelter for those who, failing to kill freedom in the world up to now, are using it to prepare for another try.

It is whether the other American Republics are to stand by idly while in Argentina, Germans proceed to construct a complete duplicate of the military-industrial dictatorship they fashioned at home.

The issue is whether we are watching the seeds of a transplanted nazism be watered and nourished in the Western Hemisphere or whether they are to be subjected to the roughest diplomatic, political, and economic drought which the Western Hemisphere jointly can muster against them.

It is whether, having fought a World War to prevent being conquered by nazism, the victorious nations have to count themselves helpless to cope with resurgent nazism in the peace.

Now the United States is giving to the world in general and to the Western Hemisphere in particular its detailed and documented case that the Argentine regime has been and still is a willing tool of Hitlerism, that it is the home of active and powerful German agents, that it knowingly is providing the base for a new totalitarian war machine, that it is preparing the springboard for a World War III.

At last, fortunately, the facts, many of which already have been printed in Roland Hall Sharp's dispatches in the Christian Science Monitor, are fully in the open, factually supported and officially sponsored by an American Government which has no purpose other than to serve the true interests of Pan-American unity.

But there is no purpose to be served in preserving just a facade of inter-American unity and permitting that facade to cloak and nestle the forces of its own destruction.

It now is evident that the United States, along with the other American republics, made an honest mistake in holding out the good neighborly hand at Mexico City to the Argentine regime, and in accepting, as though they were given in good faith, the pledges that regime gave at the time that in declaring war on Germany it meant to clean out the Nazi agents in its midst. At San Francisco the United States honored that political mistake and reluctantly acted to seat Argentina as a charter member of the United Nations.

While the Peron dictatorship was assuring America and the other United Nations that it was repudiating the Axis, acting to expel its agents and join the Allies, it was assuring the Germans that this was just convenient double-talk. Its assurances to the Germans proved correct. Its assurances to the Allies proved false.

There was understandable pressure by the other American Republics to get Argentina back into the family fold at Mexico City, and at that time the United States did not have a sufficiently final and proved case to resist that pressure. Since then, the evidence has veritably piled in from captured Nazi documents and from the verified testimony of German political and military leaders. The evidence is that the Argentine regime has been in "complicity with the enemy" before the war, during the war, and since the war.

Until this enemy-accomplice regime either falls of its own weight or is effectively repudiated by the Argentinian people—who themselves are victims—it is difficult to see how the American Republics can do business with a western hemispheric Hitlerism.

Deliberate Starvation Must Stop

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1946

Mr. LEMKE. Mr. Speaker, if we are to have permanent peace, it must be a

peace based upon justice. If we are to have permanent peace, starvation of millions of the vanquished people, a la Morgenthau plan, must cease. The time has come that we realize that the people of no nation were responsible for World War II. That those responsible for World War II, as in all wars, were the rulers, not the people. Again we must realize that one atrocity does not make another atrocity right.

If we are to have permanent peace the Atlantic Charter must become part of the United Nations Charter. No nation must be allowed to liquidate other nations' people or steal all or part of their territory. These vanquished nations, not all vanquished by Hitler, but some by our own allies, must be assured that they will again be allowed to resurrect their nation without hindrance or interference from any other nation.

It is with these high ideals of Americanism in mind that I call your attention to a letter to the President written by Henry C. Luckey, former Democratic Congressman from Nebraska:

JANUARY 30, 1946.

President HARRY S. TRUMAN,
The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: This letter is written in the most sincere spirit of helpfulness realizing the tremendous responsibilities you are facing.

You undoubtedly have received hundreds of thousands of letters asking what can be done to correct famine conditions and mass starvation and economic confusion in central Europe.

According to the Morgenthau-Potsdam Conference the German people are made responsible for their own welfare. How can this be done with their cities in rubble, their railroads and factories destroyed and stripped, with only 5 to 10 or 20 percent of their industries operating and their fields bare or taken from them? So far there is no semblance of a workable plan for the reconstruction of an European economic entity.

It is not necessary to go into details for these conditions are too well known. Germany has been turned into one great concentration camp the like of which the world has never seen before. By our policies and our apparent approval of this atrocious program of mass starvation we have become responsible for the conditions there now prevailing. By our course we are sabotaging every tenet on which Christianity is founded and we are destroying every basis on which a just and lasting peace can and must be built. Did we lie in 1943 when we promised that the people of the Axis need not fear unconditional surrender to the United Nations—we shall bring food for the starving and medicine for the sick?

As true as there is a just God in heaven these atrocities we now are a party to, will some day rebound against us. A spirit of hate and vengeance cannot build a lasting peace. Only by reestablishing moral norms, and on their basis, can world order and world peace be builded and maintained. If this war results only in vengeance, power politics, spheres of influence and a renewed impetus to imperialism, we have lost the peace and our efforts in World War II have been in vain.

If utter chaos is to be avoided in Europe—which may well engulf the whole world—we must stop deliberate mass starvation and bring about conditions by which these distraught peoples can again rehabilitate themselves, both economically and morally in order to become respectable members of the families of nations.

To aid along these lines the ban on sending relief supplies—food, clothing, and medicines—to the American zone of occupation in Germany must be lifted. Communication by mail must be reestablished. Americans with next of kin in Germany have a right to communicate with their relatives. American religious organizations must be permitted to cooperate with and aid similar organizations in Germany in order to rehabilitate the churches and Christian life. Only the Christian concept can save the world. If this fails nothing is left but force and the atomic bomb—the fruits of a materialistic age.

Mr. President, the evils arising out of the Morgenthau-Potsdam policy can be corrected although much irreparable damage has already been done. You, Mr. President, as the highest authority in the land, have the power to bring about changes for the better. This, in the name of humanity, we urge you to do and to this end you have our full support.

Most sincerely,

HENRY C. LUCKEY,
Member of Congress in Seventy-fourth and Seventy-fifth Sessions.

Atomic Energy and World Cooperation

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. LYNDON B. JOHNSON. Mr. Speaker, under leave to extend my remarks, I include for printing in the RECORD the radio comments of Mr. Paul Bolton, of Austin, Tex., reporting a great address made by Dr. R. H. Montgomery of the University of Texas, who has served his country well in many difficult asignments. This speech impressed me more than anything I have heard or seen with the immediate necessity for effective cooperation of all people and nations of the world, if we are to survive the atomic age. Mr. Bolton's comments follow:

ATOMIC ENERGY AND WORLD COOPERATION

(By Paul Bolton)

Good afternoon, Texans. Today I had a script ready talking about GI education at Camp Swift again. I spent a lot of time on that script. But the GI's at Camp Swift will have to wait.

I went over to the bank at noon today and deposited my pay check and inquired about my balance and felt very set up indeed at its comfortable size, and then I stopped and talked with President Walter Bremond about how terrible prices are on real estate, and I put in the back of my mind, "Do a story soon on real-estate values." But bank accounts and real-estate values seem of very little importance to me right now.

Bank accounts and real-estate values and business deals and GI education, names of returning servicemen, what politician is sniping at what other politician, how many poll-tax receipts Steve Heffington has issued—all of those things aren't very important right now.

Last night I had an argument with my college student daughter over whether advertising is a vice or a virtue and the argument waxed hot and fast and I was very pleased to see her thinking for herself even though our thinking didn't coincide. And I thought some time soon I might make a report on that subject. But it seems utterly unimportant right now.

Because I have just heard a speech, the most important speech I have ever heard under any circumstances.

In the light of that speech nothing is important except what that man talked about.

The speaker was Dr. R. H. Montgomery. He didn't say anything perhaps you haven't already read. But hearing him say it, seeing him sweat with earnestness, I wish I had the power to put across to you the sincerity, the earnestness, the urgency.

Bob Montgomery started off calmly to a roomful of business and professional men. Men like myself, engrossed in their own businesses, each with his own prejudices and follies. Governor Stevenson sat up close to the speaker and stayed throughout the speech, because some of it was directed to him, that part about Edwards Plateau. Men like Fred Adams, who makes extracts, and Joe Carrington, who sells insurance and milk cows, Fine Arts Dean Doty, Capitalist Dave Reed, who brought his wife and sat up close, Bob Montgomery started off calmly enough. He said, "I am not going to make any witticisms. I am going to scare the living hell out of you." And I may add, he did just that.

TECHNOLOGICAL ADVANCES

Bob Montgomery explained that in his early days as a professor he evolved a formula. He's been 25 years trying to prove that formula. Here it is: Social changes are forced by technological change. It is a variation of another natural law: Every action must have an equal reaction. Stated in terms I could understand, what he was saying was that every technological advance made by man—the discovery of fire, sails on a sailboat, the rudder on the same sailboat, the bow and arrow, gunpowder—every technological advance has brought about revolutionary change in men's living. But the earlier advances didn't seem revolutionary because they were slow. The sail was used first on a dugout and scores of years passed before it was put on a ship.

But most of the change has come in the last 100 years—in the years the scientist has been free. Some 300 years ago, they burned at the stake the scientist who invented the telescope. Today scientists are free. And technological improvements have been crammed into a fraction of a second of the world's lifetime, a mere 100 years.

Then Bob Montgomery pointed down at Coke Stevenson and said, "Fifty years ago, when I lived out on the Edwards Plateau where you lived, that section was closer to ancient Egypt than it was to our times today. This month this Science News Letter which I hold in my hand printed the technological achievements of 1945 alone, and it took 20 pages of small type to print them."

Then Bob Montgomery paused and looked at his audience, and put his chin in his hand and leaned on the pedestal in front of him and said, "Now man has reached through the veil and seized the power of the gods."

ATOMIC ENERGY

"Over on that blackboard," he went on, and his voice went up an octave, "over on that blackboard is a formula. If you forget everything else you know, remember that formula. *E* equals *M* times *C* squared. Everything, everything we know as matter, is electricity. The amount of electricity which composed this package of cigarettes is equal to the weight of this package times the speed of light squared. In Washington I took my ring to a jeweler and had him weigh it and I applied this formula to that weight. *E*55 equals *M* times the speed of light squared. In this ring, this ring is composed of enough electricity to equal more than 35,000,000 kilowatt-hours of power." Then Bob grinned over at Max Starke, the LCRA man, and

said, "What does that do to your Colorado River dams?"

Then he held up his ring so we could all see it. "The bombs we dropped on Hiroshima and Nagasaki," he said, "they were smaller than the stone in this ring.

"I could carry an atom bomb in a hollow tooth which would kill everyone in London.

"When we dropped those bombs on Japan we picked out the smallest cities in terms of civilian population." And when Bob Montgomery said "we," he meant the first person pronoun because he was connected with that unit of government which selected bombing objectives.

He said, "We killed as few people as we possibly could."

He said, "It doesn't kill with explosive force. It's the heat. That heat vaporizes concrete, rock, steel.

"That bomb over Hiroshima, we held it to explode 5 miles up. It pushed the earth down 36 feet in the center of the explosion.

"We're making bombs bigger now. Some say 20,000 times bigger. That means that, if we exploded one of the new bombs 5 miles up, with one bomb we could kill every living thing from San Antonio to Waco."

And the scientists were not certain, when they dropped the first bomb, whether it would or wouldn't start a chain reaction, exploding other atoms, such as hydrogen, in the air.

"I heard one of them testify," said Dr. Montgomery, "that such a chain reaction was quite probable." One scientist told a congressional committee that carbon was the most likely to be affected in a chain reaction. If that happened, the earth would, in one-seventh of a second, become a sun.

"Now," said Dr. Montgomery, "we have this secret in our hands. We have this power of the gods. But how long will it stay ours? The leading nuclear physicist in the world probably is a Scandinavian who is now working with the Russians. And Argentina, a great many of the leading Nazi scientists have gone to Argentina."

THE NEXT ATOMIC WAR

"Probably the thing we'd like to do," he said, "is to kill off our enemies. We've always had to fight. I don't relish not fighting. I like to fight. But the trouble is, if we fight once more, that's it.

"The next war will simply be the last war. There won't be any people left. Nor any life of any kind. The earth will revert to its primal state of electricity or energy or whatever you want to call it."

ATOMIC PEACE

"But if by some luck we don't have another war, and do learn to use this atomic power?

"Well, you can make anything out of anything. Literally. Right now, today, you can send a dime to a laboratory in the East and they'll make it into whatever you want. Gold. Diamond. A glass of water. Or a shot of cyanide.

"It's in the laboratory experiment stage now. Next year you'll be buying a chemical set for your youngster with which he can transmute elements."

"I asked these scientists," Montgomery went on, "whether for purposes of dramatizing my talk I could say you can have streets paved with gold in Austin if you want them.

"And they said for me to tell you, 'Hell, yes, you can have streets paved with gold. It wouldn't make very good pavement. We can also build pearly gates for them if they'd like.'

"And with their new microscopes they're finding out all about germs. It won't be long, if we live, before curing germ diseases will become a job for a high-school boy.

"Inside a year, in my opinion, every germ disease will be gone.

"We are in fact the last earth-bound generation, if we survive. Our children will have the two things for which man has always sought. On the one hand, endless material, to make anything. On the other, the power of the gods to make it. But if our children survive us, we've got to make this a Christian world. We've got to live in a brotherhood of man.

"I don't like the idea, either, of being brothers to Russians. And Africans, and Republicans. And some Democrats.

"But that's the way it is.

"And it's not something for our children to decide. It's up to us.

"Why just a few months ago I had luncheon with the then Secretary of Agriculture, Wickard. He served a filet steak. After we finished he said 'How was the steak; like your Texas steaks?'

"I replied, 'Well, I never did raise any that good but my neighbors did. Is it a Texas steak?'

"He said, 'Your steak was made by the Monsanto Chemical Co. in St. Louis, out of buttermilk and woodpulp.' "

Well Dr. Montgomery said a lot of other startling things. I don't have time to repeat them all. But one of the men who listened asked him a question. This man was C. M. Ellwell, the book salesman. He said, "Bob, I haven't got a bomb. What in the hell can I do about it?"

And Bob shook his head. "I don't know exactly. Except that you can do your best to tell Washington that we want peace and that we've got to have peace. We probably have to have one world government. A United States of the world."

And that was about all of his speech, but when I left the men were crowded around him, bombarding him with questions. And he was trembling and sweating. Because as he said the scientists and the men who have worked on this deal are the worst scared of all.

And Dr. Montgomery is also ill. He has been told to take a rest or they'll be reading memorials to him. So he's going to make just one more speech. He's going to talk next Monday night at the city library auditorium. He says he will talk as long as two people stay there to listen to him. Because he feels this way about it.

He feels very much as his father used to feel about the unregenerate cowboys in the Edwards Plateau country. His father was a Baptist frontier preacher. And that preacher felt that so long as there was a single sinful cowboy on the ranges, he was responsible for that cowboy's soul.

Bob Montgomery feels that so long as there is a single individual in the world who does not realize what the atomic bomb means, he is personally responsible not only for their souls but for their very lives.

And he is preaching salvation, yours and mine. I hope you go out and listen to him Monday night. I'll guarantee this. If he doesn't make you get religion, if he doesn't convince you that we must have a brotherhood of man, he'll certainly do what he did to that luncheon club today. He'll scare the living hell out of you.

Anniversary of Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 15, 1946

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks, I include an address delivered by me in Cleveland, Ohio, commemorating the anniversary of Lithuanian independence:

Normally, my dear friends, a birthday celebration is a gay and festive occasion. The celebrant is congratulated by his friends and feted by his family in an atmosphere of joy and congratulation. I feel I can speak with authority on this subject, because it happens that my birthday coincides with the birthday of the modern, free Lithuania. I very much fear, however, that the same cannot be said for the birthday we are met here to commemorate today. Because, in celebrating the twenty-eighth anniversary of Lithuanian independence, we find that courageous nation, which should be the true celebrant of the occasion, lying stricken under the occupation of an alien power.

It is quite understandable to me that this anniversary program should be overcast with the grimmest and most foreboding feelings. This deep concern, I am sure, arises not only from a realization of Lithuania's present plight, but from a fear of worse catastrophes to come. I have in mind especially the recent elections conducted throughout the Soviet Union February 10. The Lithuanian people, whose independence is still recognized by the American Government, were forced to vote in those elections as an integral part of the Soviet Union. I do not believe that the full significance of the move on the part of the Soviet has reached the consciousness of either the American people or their Government. The notorious elections of the 14th and 15th of July 1940 were bad news, but from reports I have received, the present elections represent an even bolder usurpation by Russia of the rights of supposedly free men.

The mere fact that Russia has the effrontery to include Lithuania in this universal Russian election is proof positive that she considers Lithuania part and parcel of the Soviet Union. If she is allowed to get away with this without official protest on the part of governments which have pledged themselves repeatedly to sustain the rights of all peoples to self-determination she will consider the matter closed and her predatory objective accomplished. The fact that we still formally recognize Lithuania as a nation will mean little in the face of our tacit consent to Russia's assumption through these elections of control over Lithuania. This is the stuff that appeasement is made of. The nations which should protest let things drift along, while the aggressor nation makes one step after another in pursuit of its nefarious ends. If the United States still holds the position which was expressed by our State Department in 1940, now is the time for it to reaffirm that position. On July 23, 1940, the Acting Secretary of State said:

"During these past few days the devious processes whereunder the political independence and territorial integrity of the three small Baltic Republics—Estonia, Latvia, and Lithuania—were to be deliberately annihilated by one of their more powerful neighbors have been rapidly drawing to their conclusion.

"From the day when the peoples of these republics first gained their independent and democratic form of government, the people of the United States have watched their admirable progress in self-government with deep and sympathetic interest.

"The policy of this Government is universally known.

"The people of the United States are opposed to predatory activities, no matter whether they are carried on by the use of force or by the threat of force.

"They are likewise opposed to any form of intervention of the part of one state, however powerful, in the domestic concerns of any other sovereign state, however weak.

"These principles constitute the very foundations upon which the existing relationship between the 21 sovereign republics of the New World rests.

"The United States will continue to stand by these principles, because of the conviction of the American people that unless the doctrine in which these principles are inherent once again governs the relations between nations, the rule of reason, of justice, and of law—in other words, the basis of modern civilization itself—cannot be preserved."

If, in the words of the State Department, the United States "continues to stand by these principles" then we should raise our voices at this time when they are so obviously being contravened.

In his Navy day speech of last October 27, President Truman voiced the same general principles—these particularly apply to the case of Lithuania.

"We believe in the eventual return of sovereign rights and self-government to all peoples who have been deprived of them by force.

"We shall approve no territorial changes in any friendly part of the world unless they accord with the freely expressed wishes of the people concerned.

"We believe that all peoples who are prepared for self-government should be permitted to choose their own form of government by their own freely expressed choice, without interference from any foreign source. That is true in Europe, in Asia, in Africa, as well as in the Western Hemisphere.

"We shall refuse to recognize any government imposed upon any nation by the force of any foreign power. In some cases it may be impossible to prevent forceful imposition of such a government. But the United States will not recognize any such government."

The issue raised by the Russians' high-handed actions in the matter of the recent elections challenges the conscience of America. Either we mean what we say in these high-sounding expressions of principle, or we do not. When a concrete problem such as this arises, we must speak out or prove faithless to the peoples we have encouraged by stating them. In view of the situation arising out of these elections, I say that our Government should immediately reaffirm and reiterate its recognition of Lithuania as a free and independent nation. Only thus can we keep the record clear and our consciences at rest in the fact of this new form of aggression. Only thus can we prove to the freedom-loving people of Lithuiania that we are neither insensible to their plight nor ignorant of the significance of recent Soviet actions.

In the issue of the national Catholic weekly America for this very date—February 16—I have just been reading a magnificent article entitled "Lithuania Can Only Dream" by Peter P. Cinikas. The story of Lithuania's predicament and the courage of her people in the midst of Soviet oppression is one which should stir the hearts of every Lithuanian. I want to quote some of its revelations as a basis for my second argument:

"Just lately, Vytautas Arunas, special correspondent of Draugas, Lithuanian Catholic daily of Chicago, reported frantic calls from the secret radio of the underground of Lithuania, begging for help and assuring the outside world that the war is still being waged for independence. Further, it has been reported that some 60,000 partisans, or guerrillas, are still hiding out in the dense forests of Lithuania, harassing the Soviet Armies which police the Russian-occupied territories.

"Many reports of new deportations to the various sections of Russia are still coming in. The clean-up before the elections is getting underway, and all the more influential citizens will be gone from their unhappy country before the February elections.

"According to reports coming out of Lithuania's underground, the guerrillas, people in the cities and on farms, and the refugees in the various countries of Europe are even hoping for a war, or something as drastic, to bring them into open conflict with the Soviet Union, in the hope that this may bring them independence."

The passages I have quoted establish one fact clearly—there is fighting going on in Lithuania, more fighting perhaps than in Indonesia.

Mr. Manuilsky, the Ukrainian delegate at the United Nations Conference in London, demanded, until he was voted down on February 13, that a United Nations commission be sent into Indonesia to report on the situation there and the use by the British and the Dutch of troops to put down the native movement for independence. Mr. Manuilsky, it is generally agreed, was acting as the mouthpiece for Mr. Vishinsky. In this case I believe the Communists overreached themselves. Only a blind man could fail to see the similarity between what they are doing in the Baltic states and what they claim the British and Dutch are doing in Indonesia. Mr. Manuilsky demanded that a commission investigate the Indonesian situation because he claimed it was a threat to world peace and the United Nations Organization is supposed to investigate all threats to world peace.

Now I submit that the situation in Lithuania where 60,000 guerrillas are in open resistance to the occupying army is just as great a threat to the peace. If, according to Mr. Manuilsky, there was reason for sending a United Nations Organization commission to Indonesia, there is even more reason right at the present time for sending one into Lithuania. I, therefore, recommend that the United Nations Organization be urged to appoint a commission which shall investigate, without delay, the turbulent conditions in Lithuania to determine whether or not they constitute a threat to world peace.

On October 15, 1940, soon after the Soviet occupation of Lithuania (the first occupation, I mean) President Roosevelt addressed these words to a Lithuanian-American delegation which went to him in Washington:

"It is stated that Lithuania has lost her independence. It is a mistake to say so. Lithuania has not lost her independence; Lithuania's independence has only temporarily been put aside. Time will come and Lithuania will be free again. This will happen much sooner than you may expect."

Roosevelt's prophecy, however, will not come true, if our Government drifts and delays in its policy with regard to Lithuania. We need affirmative action, now, to make his words come true.

I was inspired when I read in the article in America which I have quoted, these historic words which the Archbishop of Kaunas addressed to the Catholic bishops of the world:

"We solemnly declare before God Almighty and our Saviour, His Son, that the Lithuanians are firmly decided to recover their national and political independence and to recreate a real free state. Lithuanians will never consent to become the Russian colony against which they struggled in the past centuries in order to maintain their existence, culture, and Catholic faith. This is why every Lithuanian rebels against any and all suggestions that he undergo the atrocious yoke of atheistic Soviet communism."

Our Government has, up to now, by refusing to withdraw its recognition, aided this determination, at least negatively. It is time now to take positive steps to help Lithuania recreate a real free state.

Wage-Price Policy

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of Febuary 16, 1946:

TRUMAN'S NEW WAGE-PRICE POLICY

It is almost exactly 6 months since President Truman announced a wage-price policy in which 6 months' time was an essential element. That policy failed completely, and its failure has been a national disaster.

Now there is a new policy, in which the Government will attempt to hold a new line on wages and prices. The wage line is supposed to be 18 percent. The price line is not definite, but the measure is to be a price which would insure to industry its 1936-39 level of profits.

President Truman has apparently abandoned hope of regulating wages through fact-finding boards. He makes no reference whatever to that expedient, though it was recently the subject of an urgent message to Congress.

One weakness of that plan was that the boards would be operating independently with no responsibility for a general policy—with no specific line to reach or maintain.

Now he reverts to the principle that wages must be held in line if prices are to be held even to the new line. This, of course, is true. The question is whether as prices rise to the new level they will not drive wages to a still higher level and so on over and over again.

The War Labor Board held prices in line during the war. The National Wage Stabilization Board is the instrument which, under the President's directive, is relied on primarily to hold them now.

Having been whipped on by the administration for 6 months to seek higher wages with no specific limit, will labor accept the jurisdiction of this board now? All this time it has been in nominal existence, without publicity, without functions, without prestige or authority. Can all those essential attributes be conferred upon it now?

Even so, its jurisdiction is not entirely clear. It is subject to definition by the Stabilization Administrator, Chester Bowles, the former OPA chief.

Mr. Bowles' own authority and jurisdiction are not entirely clear, still being in some measure subordinate to Reconversion Director Snyder, who does not share all his views.

We hope that the new plan works.

Wages and prices ought to be stabilized, and if either is stabilized, both must be.

To stabilize both wages and prices is a tremendous administrative task. It could bog down completely in paper work, hearings, rehearings and appeals.

Superhuman diligence and skill may make the program work. If the task proves beyond their capacity, or any capacity, we may have to throw all the controls away and let these adjustments work themselves out in the market. This would be dangerous, and for a while, at least, expensive. But stagnation would be still more dangerous. Abundant production, as President Truman truly said, must be achieved if we are to be saved.

A GI's Tribute to Hawaii

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STIGLER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. STIGLER. Mr. Speaker, we are hearing considerable discussion concerning the admission of the Territory of Hawaii as the forty-ninth State in our Union.

A short time back a subcommittee from our House Territories Committee visited the Hawaiian Islands for the purpose of ascertaining whether or not the islands were ready for statehood.

Recently, I received a letter from a very good young friend of mine, who is one of my constituents and who is a seaman, second class, now stationed at Honolulu.

This friend of mine urges immediate statehood. He writes a very convincing letter why this should be done. His remarks are so interesting I include his letter under leave given me to extend my remarks:

A matter of considerable importance has been brought to my attention. It concerns the proposed resolution adopted by the Hawaiian Bar Association and several other organizations of the Territory relating as to the status of the Territory.

The resolution proposes to present to the Congress of the United States an honest and sincere request that the Territory of Hawaii be admitted into the Union as a State.

At this time I am in the Hawaiian Islands and have had considerable time to observe them. It is of my opinion that the Islands should be admitted into the Union. It is not the mere fact that the natural beauty and resources more than justify admittance. As you know, the people of the Islands were the innocent victims of the attack made by the Japanese that was meant to totally destroy the Pacific fleet on December 7, 1941. The people rose up in great magnitude as did all other freedom-loving peoples to destroy the monster that threatened to engulf the world in slavery. Their record in Italy proves beyond a shadow of a doubt that they sacrificed the lives of their loved ones fighting on the side of God and America.

They went to work, and worked. I understand that strikes here stayed at the low level of seven millionths of 1 percent, the lowest, in fact, in all the world. Some of them worked on Government projects and many more of them worked in the fields producing food, and food is ammunition.

The people of the Islands are very much American. Most of them went to American schools. We and they pledge allegiance to the same flag and they love democracy. They have more than proven their faith in America by dying for it. What more could any people do than to give their lives for the high ideals of democracy.

A vast majority of the people here favor statehood and they have undoubtedly earned it. What greater thing could the Congress do for the people here than to make them all citizens of the United States. It would be a great asset to both the United States and the Territory to gift the Islands with statehood.

Let us not be ungrateful for what they have done. Let us act in their favor.

OPA Prices—Scarcity

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. HOFFMAN. Mr. Speaker, the following is a typical letter from a businessman sent to Congressmen:

M. E. CROW CO.,
Elkhart, Ind., February 14, 1946.

Representative CLARE E. HOFFMAN,
House of Representatives,
Washington, D. C.

DEAR MR. HOFFMAN: If you are a man of average intelligence—and you must be or you wouldn't be in Washington—read the attached editorial from a practical lumberman, and then, if you can, suggest how you are going to get homes for GI Joes under Bowles' and Wyatt's price control. Why should an ex-groceryman and an ex-coffee merchant hold executive positions in the Lumber Branch of OPA? The solutions offered by the stabilizers, theorists, and economists suggest subsidies, but we all know that for every dollar going into Washington we can't get over 50 cents back. Subsidies are a snare and a delusion handed to the American public. It would cost the public much less to pay the necessary price to get production rather than a visionary price and a subsidy. You are offered the suggestion that price control will be removed as soon as supply equals demand and this will never happen under the present regulated economy. This country is still operating under wartime controls, although the war was over last August. Apparently Congress and other Government employees hope to keep us under the rules of war indefinitely. Are you afraid of unlimited production and competitive price? Apparently the President and Mr. Bowles are. Who is continuing the steel strike? Not labor, not management, but a little group of men with almost as much power as Stalin are hamstringing the industry of this country and Congress evidently is sitting idly by seeing it happen. I spent over 3 years in the Navy doing my bit and this is what I come home to.

OPA publicity tells me: "OPA has held the line." Is the OPA doing a good job? Although wages are advancing every day, yet—

It has kept the price of doors down. Result, no doors.

It has kept the price of lumber down. Result, no lumber.

It has kept the price of plaster lath down. Result, no lath.

It has kept the price of glass down. Result, no glass.

It has kept the price of plywood down. Result, no plywood.

It has kept the price of corrugated iron and steel items down. Result, no stock.

It has kept the price of flooring, siding, and bundled lumber down, even below rough prices. Result, no stock.

It has kept the price of butter down. Result, no butter.

It has kept the price of nylon hose down. Result, no hose.

It has kept the price of men's shirts down. Result, no shirts.

I would rather pay 6 cents more for a pound of butter than go without. You are shedding tears over the lack of homes for GI Joe. With the steel strike how do you expect to even get nails for the house? Bureaucratic publicity tells us of the need for prompt Government action to solve the housing shortage. If we will abolish impractical, ill-conceived bureaucratic restrictions, industry quickly can give us the proper action necessary—maximum production of building materials and the recruitment of builders to fabricate them. Most of our strikes today are basically caused by price control or bureaucratic regulations.

On January 15 a CPA news release stated that 80 percent of the southern pine lumber produced was going black market. Those intimately concerned with the lumber business felt that this was a fair if conservative estimate. This means that today mills willing to take a chance are shipping lumber at black-market prices which the home builder is ultimately going to pay while production will remain low because relatively few mills will take this chance. However, if OPA would recognize the situation and adjust their prices to approximate the cost of present small black-market production we would immediately see the beginning of tremendous legitimate production which would go far to relieve the bottleneck which is denying home construction today.

Until we give the law of supply and demand free rein this country will never get back to full production and free competition. Have you ever considered that the manufacturers and businessmen of this country know a great deal more about running their business than the economists and star-gazers whom you have allowed to take over in Washington? Why not be honest and admit that raising wages has raised costs? Why camouflage price control with subsidies? Let us see the actual cost of the house and not hide the facts from the public with public money. Do away with price control and you won't need subsidies to get production.

Maybe you don't like this letter; neither do I like what I have come home to. Are you willing to stop and think and reason? If you don't we will wake up some morning to find that the economy of this country has slipped to such a low level there won't be money left to pay your salary.

Most sincerely,

MARTIN E. CROW, Jr.

Progress of the Motion-Picture Industry

EXTENSION OF REMARKS

OF

HON. AUGUSTUS W. BENNET

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. BENNET of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 18, 1946.

COLUMBIA PICTURES CORP.,
New York, N. Y.

GENTLEMEN: When I was a small boy I remember very well being taken to see the early moving pictures which were then regarded as more or less of a toy.

Still later, when my father was in Congress, I was privileged to attend some of the earliest performances where pictures and sound were combined usually with very weird results.

Through subsequent years I have watched the progress of this infant industry to the point where it has become an industrial and business giant contributing mightily to our country's prosperity and providing countless jobs for skilled Americans.

This progress is a tribute to the perseverance of the early pioneers such as Harry Cohn and Jack Cohn, heads of Columbia Pictures, who overcame great odds, and to

the vision, energy, and business judgment of their successors.

It is hard to imagine what our communities would be like today without the motion picture and it's almost equally hard to see how great projects of public education, campaigns for charity, and similar efforts on a national scale could succeed without the help so generously and cheerfully given by the motion picture companies such as Columbia Pictures and the others, and the people who work for them in various ways.

I wish for Columbia Pictures Corp., an outstanding member of this great family, in the year of its twenty-fifth anniversary of progress, continued and even greater success.

Sincerely yours,

A. W. BENNET.

Veterans' Benefits

EXTENSION OF REMARKS

OF

HON. JOHN B. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks, I am including the most important changes made in the Servicemen's Readjustment Act of 1944—popularly known as the GI bill of rights—as amended by Congress and signed by the President, December 28, 1945. These changes will serve to bring up to date House Document No. 134, Seventy-ninth Congress, first session, titled "Handbook for Servicemen and Servicewomen of World War II and Their Dependents, Including Rights and Benefits of Veterans of World War I and Their Dependents," which has proven so valuable:

AMENDMENTS TO HANDBOOK FOR SERVICEMEN AND SERVICEWOMEN OF WORLD WAR II AND THEIR DEPENDENTS, INCLUDING RIGHTS AND BENEFITS OF VETERANS OF WORLD WAR I AND THEIR DEPENDENTS

EDUCATION AND TRAINING

Extension of time

The time during which a course may be initiated is extended from 2 to 4 years after discharge or end of the war, whichever is later, and the time limit for completing the course is raised from 7 to 9 years after end of the war.

Age limit removed

Any eligible veteran now may receive 1 year of education or training, plus additional education (up to a maximum of 4 years), for total length of active service. He need not have been under 25 years when he entered service, nor need he show that his education was interrupted by war service.

Short intensive courses

Courses are no longer limited to a cost of $500 for an ordinary school year. Short intensive courses may be undertaken and the additional cost prorated against the period of eligibility to which the veteran is entitled at the rate of $500 per school year. No such short course may cost more than $500.

Correspondence courses

A veteran may apply to take a correspondence course under the new provisions, but he is entitled to no subsistence allowance. One-fourth of the elapsed time used in pursuing such a course is charged against the veteran's period of eligibility. Total amount payable for correspondence courses for any veteran is limited to $500.

Subsistence allowance increased

Monthly subsistence allowances are increased from $50 to $65 for veterans without dependents, and from $75 to $90 for veterans with dependents.

VOCATIONAL REHABILITATION OF DISABLED VETERANS

Extension of time

Vocational training under Public Law 16, involving more than 4 years of training, may be begun by a disabled veteran, subject to VA approval, and the time for completing such training is extended from 6 to 9 years after the end of the war.

Subsistence allowance increased

Disabled veterans now will receive a minimum of $105 per month without dependents, $115 with a dependent, plus $10 for the first child, $7 for each additional child, and $15 for any dependent parent. This represents an increase over previous allowances. If the veteran is receiving a lesser pension, he will receive the above amounts while he is in training status. In no event will his pension be reduced by entering training.

GUARANTY OF HOME, FARM, AND BUSINESS LOANS

Guaranty is automatic

These loans may now be made by any lending agency which is subject to examination and supervision by a Government agency, and restrictions of certain Federal laws are removed. A loan becomes automatically guaranteed if the lending agency and the veteran close the deal, the terms being in accord with the provisions of the act. The only other requirement is that the cost does not exceed the appraisal made by a VA-designated appraiser. Loans made by individual lenders (not falling in the class of approved institutions indicated above) must obtain prior approval by VA in order for the loan to be guaranteed.

Amount of real estate loan guaranty increased

Any loan on real estate may be guaranteed up to a maximum guaranty of $4,000 of the loan, as compared with a $2,000 limit under previous law. The Government guaranty remains 50 percent of the total loan up to the maximum amount. The business loan guaranty limit remains at $2,000, or 50 percent.

Amortization-limit extended

Real-estate loans may be amortized over a period up to 25 years, and farm realty loans up to 40 years. Maturity on non-real-estate loans may not exceed 10 years.

Purchase of lots

Proceeds of a loan may be used to purchase a lot in connection with home construction.

Normal value out

Phraseology of the previous law is changed from "reasonable normal value" to "reasonable value" in connection with appraisals of property upon which a guaranteed loan is sought.

Loan purposes broadened

Provisions of the act are liberalized so that loans may be made for all ordinary farming purposes, for any normal business enterprise, and so that existing indebtedness in default may be refinanced in connection with all types of eligible loans.

MISCELLANEOUS PROVISIONS

No deduction from future bonus

That portion of the law (sec. 1505) which provided that any financial benefits received under the act would be deducted from any future bonus authorized, is repealed.

United States veterans in allied service now eligible

Anyone who served in the active military or naval service of an allied government and was a United States citizen when entering such service is eligible for the benefits of the act and of Public Law 16 (78th Cong.). He must, however, be a United States resident at the time claim is filed, and must not be receiving similar benefits from another nation.

Persons on terminal leave

Educational and loan guaranty provisions of the act, and vocational rehabilitation under Public Law 16, are extended to persons on terminal leave or who are being hospitalized pending final discharge. No subsistence allowance may be claimed, however, by persons taking education or training under the act or under Public Law 16. This section is made retroactive to June 22, 1944, when the original Servicemen's Readjustment Act became law.

Artificial limbs

Provision is made to insure ample authority for VA to procure prosthetic appliances for veterans and instruct them in the use of such appliances, including payment of any expenses involved in the veteran's traveling to and from the center where the appliance is fitted and training given in its use.

Office space for service organizations

VA is authorized to provide office space, if available, to paid, full-time representatives of recognized veterans' organizations.

Veterans' Administration procurement of space

The act makes permanent VA's authority to procure necessary space for administrative, clinical, medical, and out-patient treatment purposes by lease, purchase, construction, condemnation, or declaration of taking. This authority previously was limited to 6 months after end of the war.

PROVISIONS NOT CHANGED

Major provisions of the law which remain unchanged are:

Eligibility requirements

A veteran must have served in the active military or naval service on or after September 16, 1940 and prior to the termination of the present war. He must have been discharged or released under conditions other than dishonorable after active service of 90 days or more or because of an injury or disability incurred in line of duty.

Hospitalization program

VA is authorized and directed to expedite additional hospital construction, and to establish all necessary administrative offices to make veterans' benefits more readily available.

Review of discharge

Ample provision is made for review by the War and Navy Departments of unsatisfactory discharge from service. A new amendment, of minor importance, is designed to clarify the intent of the law.

Job assistance

All previous regulations relating to Government assistance in helping veterans obtain employment are continued. The United States Employment Service and the Veterans' Placement Service Board are directed to cooperate in seeing that all veterans, able and willing to work, obtain employment.

Readjustment allowance

Unemployed veterans who register with an office of the United States Employment Service are entitled to a readjustment allowance of $20 per week while unemployed. An eligible veteran may receive such payments up to a maximum of 1 year, depending on length of service. Self-employed veterans with net earnings of less than $100 per month may receive an allowance amounting to the difference between net earnings and $100 in any month, up to a maximum of 1 year, also depending on length of service.

WHERE TO APPLY FOR BENEFITS

Prosthetic appliances: Any VA hospital or regional office.

Education and training: Any VA regional office or at the school you wish to attend.

Vocational rehabilitation: Any VA regional office.

Loan guaranty: Any eligible lending institution as outlined above. If negotiating with a private lender, any VA regional office.

Review of discharge: The War Department or the Navy Department, whichever was your branch of service.

Job assistance: Nearest office of United States Employment Service.

Readjustment allowance: Register at nearest office of United States Employment Service.

Fair Labor Standards Act

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, as the Committee on Labor now considers the question of the Fair Labor Standards Act, I feel it fitting that I should introduce before the Congress a well-written letter from the Farmers Grain Dealers Association of Fargo, N. Dak., signed by Mr. C. H. Conaway as secretary, who writes from a long record of experience on important aspects which will confront this committee as it deliberates on legislation. It is my sincere wish that every Member of Congress will read this important letter:

FARMERS GRAIN DEALERS ASSOCIATION,
OF NORTH DAKOTA,
Fargo, N. Dak., February 12, 1946.

Hon. CHARLES R. ROBERTSON,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN: Referring to my letter of a recent date concerning the inclusion of country grain elevator employees in the Fair Labor Standards Act and further supplementing that letter with information to you which you may file with the committee at your discretion, I enclose a statement to be filed with the committee as an expression of our views concerning pending legislation and any other that may have a like import. You may read this over and if it will be of any benefit to the committee in their deliberations, they may use it as they see fit.

We are definitely opposed to any attempt to include agricultural labor (this includes labor employed by country warehouses) in any legislation that would have a tendency to industrialize the whole labor set-up. The farmer and his country warehouseman have enough troubles of their own without coming under the domination of some arrogant, unreasonable, and demanding labor leader.

Any successful attempt to draw into the fold of labor organizations the farmer and his employees will result in breaking the back of labor in these United States. We have examples of this all around us. We note the headlines this morning that the great city of New York has decided to close all business houses and places of amusement because of a dock workers' strike that has tied up fuel supplies as well as food supplies.

We cannot afford to place the whole country at the mercy of some labor leader. This should be obvious to everyone, especially Representatives in Congress, and should make it imperative that laws be passed pulling the fangs of labor leaders.

We have finished a war of defense and brought it to a successful conclusion. We must now take immediate steps to foreclose the possibilities of an industrial war within our borders.

We are coming closer and closer to the brink of destruction in our attempt to iron out the difficulties of the common man. We have brought the worker up to a point where he is not willing to recognize any act of his or hers as a contribution to his or her own delinquency. Politicians, hope you are not included, have catered to the whims and desires of the common man to a point where he expects social security without any payment of the premium that goes with it.

Use this information in any way that you see fit—it is but an expression of one who lives in the great Northwest.

Sincerely,

C. H. CONAWAY,
Secretary.

OPA Hot Issue

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. HOFFMAN. Mr. Speaker, whether OPA shall be continued beyond June next is an issue that is giving many Congressmen headaches. On the one hand, there are throughout the country millions of consumers who, listening to or reading Bowles' propaganda, are thoroughly convinced that but for OPA the prices of the things they buy would have skyrocketed far more than they have.

As an example, this morning there came to my desk a letter from which I quote these excerpts:

We are of opposite political faiths and your ideas and mine don't jibe nohow. * * * However, in view of the state of affairs in this country today and in the world, frankly, I am losing sleep nights.

Then this:

In the first place, I am heartily in favor of the continuance of the OPA. It has meant in the war years that a little guy like me, on a fixed income, has been able to feed and clothe his family within a reasonable budget.

That is a typical expression of the belief of millions of consumers. Then, there are others—workers in factories, producing essentials for consumers; owners and operators of factories, and some of us—and I am one—who, after listening to complaints about OPA regulations and the way they work out, and to Chester Bowles personally and many of his top-flight men in answer to these complaints, are thoroughly convinced that OPA regulations have created a scarcity of essential merchandise which millions of purchasers with the money in their pockets stand ready to buy; a scarcity which has caused inflation.

Moreover, there are many who, having watched prices soar—butter is now costing seventy-odd cents—fifty-odd which the purchaser pays in the store and the balance in subsidy, but all coming out of the taxpayer's pocket—are equally positive that OPA has not held down prices.

There are merchants throughout the country, and there are millions of would-be purchasers of goods, who know that many times it has been impossible to purchase low-priced, worth-while clothing—yes, many other common items. And many times that scarcity which creates inflation has been traced squarely to the doorstep of OPA, which, before congressional committees, has been forced to admit that many of its regulations have been ruinous.

Note this from the letter of the Democrat who wrote that he was heartily in favor of the continuance of the OPA. I quote:

However, things are already getting way out of line in price—building material, women's and men's clothing. And I can't find underwear for my 4-year-old daughter.

High prices are bad enough, though some think high prices make for national prosperity; but, high price or low price, when you can't buy it, that is something else again.

Because my needs are few, OPA's restrictive regulations have not hit me as they have you. I do not need any new suits, shirts, underwear, handkerchiefs, radios, electric irons, washing machines, refrigerators, oh, dozens of other items, but you do—some of you, anyway—and because OPA follows the policy of limiting the price which producers and retailers may charge now, 1946, to a price comparable to that they charged if they were in business in 1941 and 1942, refusing to make allowances for increased costs, not only are those businessmen and industrialists on the verge of bankruptcy, but they just cannot make the needed merchandise.

OPA was created to attain worthwhile objectives—increased production and the prevention of inflation. The evidence shows that it has done neither, but only yesterday a majority in the House gave OPA an additional billion eight hundred and fifty-four million dollars to hire an additional 1,561 snoopers to enforce its regulations. In my humble judgment, no group of men, however able and sincere, can successfully fix prices on over a million items, render inoperative the laws of supply and demand.

The repeal of OPA would undoubtedly bring added temporary inflation, but supply and demand, American inventive genius, wholehearted cooperative effort on the part of employees, would soon whip it through an abundance of production.

If we were to have an attempt through legislation to prevent inflation, the administration should have adopted the policy offered in a bill introduced by me in 1940 to stabilize, that is, fix, as of a stated period, the prices of things sold and the wages to be paid for services rendered. There is no use attempting to fix the price of the finished product without also fixing, at the same time, the price of the labor that goes into the finished product. But the administration would have none of it. The then President induced Congress to authorize OPA to fix the prices of things—merchandise—but he reserved, and for a political purpose, failed to exercise the right to

stabilize wages. The two must be tied together, as every schoolboy knows.

ECONOMY

While the administration talks economy; while it wants the prices of merchandise fixed, it has no OPA ceiling on its own expenditures for Federal political jobs, Federal political appropriations. Recently, after talking economy, the Department of Commerce asked for a 90-percent increase, the Department of the Interior a 150-percent increase, in employment and expenditures.

ICKES

Honest Harold is out. His announced reason—the President said Ickes didn't tell the truth when, before a Senate committee, he said Pauley, the President's nominee for Under Secretary of the Navy, told him, Ickes, that if he would stop the Government's suit to obtain title to underseas oil lands, he, Pauley, could raise $600,000 for the Democratic campaign fund. Well, Pauley said he didn't; Ickes said he did. Ickes has called upon the Department of Justice to institute legal proceedings to determine whether he or Pauley told the truth before the Senate committee. In the meantime, use your own judgment, or wait until the evidence is in.

SURPLUS PROPERTY

With billions of dollars of surplus property rotting, rusting, thrown into the sea or buried in pits, the Committee on Expenditures in the Executive Departments is once more holding hearings in an effort to learn how the act providing for disposal of this property should be amended so as to expedite its sale with a minimum of loss.

There is so much of it; it is so widely scattered; it is of so many kinds, designed for so many purposes, that the job is a stupendous one. Even if uncomplicated by greedy, grasping individuals and organizations desirous of making an exorbitant profit out of it, there would be more or less favoritism and waste with chiselers and bargain hunters always around. The job is one which no honest, conscientious individual finds attractive.

I have often thought that if, in the beginning, we had turned over the task of selling the more than a hundred billion dollars' worth of surplus Government property to successful retailers of merchandise, we would have saved millions of dollars.

Organizations like Montgomery Ward & Co., Sears, Roebuck & Co., and other houses selling merchandise through the mail, might have—I think they could have—for a stated percentage, given everyone a fair opportunity to purchase.

So far, administrative expenses of the Government agency have been extremely high and, in addition, not only have millions of dollars of property been destroyed or deteriorated in value, but so far only a small part has been sold.

Every week come letters from overseas men complaining of the waste, of the methods of handling of much of this property.

It is my hope that the committee will find a reasonable solution, and that right soon.

Aid of United States Jews Seen Race's Hope

EXTENSION OF REMARKS
OF
HON. PHILIP A. TRAYNOR
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilmington Morning News, Wilmington, Del., of February 18, 1946:

AID OF UNITED STATES JEWS SEEN RACE'S HOPE—DR. A. A. NEUMAN, PRESIDENT OF DROPSIE COLLEGE, TALKS TO FORUM AT Y. M. H. A.

Actions of American Jewry will shape the future of the Jews in Europe and Palestine, Dr. A. A. Neuman, president of Dropsie College for Hebrew and Cognate Learning in Philadelphia, declared last night at the third of the open-forum series at the Y. M. H. A.

Dr. Neuman, who appraised the world outlook for the Jews, said "we in the United States are beginning to appreciate the role we must play in our people's destiny."

"Every Jewish academy, museum, library, and center of education in Europe has been destroyed," Dr. Neuman asserted. "What social, political, and cultural influences Jews of other countries had in other periods of history is now centered in the Jews of America, who must act individually and collectively and contribute to a renaissance of our brethren in other lands."

The speaker, rabbi of the second oldest Jewish congregation in this country, Mikveh Israel, in Philadelphia, warned of danger from the Arabs. He stated "the Arabs have formed a league, but they are unable to unite."

"Palestine will be what we make it," Dr. Neuman continued. "Our will can determine the future of that country."

He discussed the Jews of Poland, Rumania, Hungary, Austria, and Germany, and he said "in those countries the greatest tragedies befell our people."

Dr. Neuman also spoke of the Jews in Russia and termed "their status unparalleled in Jewish history." The speaker was introduced by Rabbi Joseph I. Singer, of Adas Kodesch Synagogue.

The Housing Program

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, every part of the country is confronted today with the housing program. The Congress is confronted with the housing program and housing legislation. All too often this congressional approach is from a temporary angle, and all too often the character of the country and the climate is lost sight of as we attempt to legislate horizontal legislation on this question.

I have long held to the principle that the Office of Price Administration, while worthy in many respects, has failed miserably in others, not the least of which is the building industry.

Under unanimous consent, I include herewith a telegram from the Ireland Lumber Yards, of Grand Forks, N. Dak., the management of which represents the best in American thinking and has had a long record of success, and their success is due to the great contribution they have made to the country they serve:

GRAND FORKS, N. DAK.

Congressman CHARLES R. ROBERTSON,
House of Representatives,
Washington, D. C.:

Modern livable houses cannot be constructed North Dakota for $6,000. Must have full basements, complete insulation, and storm sash, not like California. Whole housing program smells politics. If Bowles would properly adjust prices to material manufacturers, give building industry chance without red tape, problem could be solved. Don't believe better way to create depression than try do all building in 2 years.

IRELAND LUMBER YARD.

Destruction of Fish and Wildlife in the Upper Mississippi River by Lowering Pool Levels

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. STEVENSON. Mr. Speaker, all conservation-minded citizens and lovers of outdoor life and Members of Congress who pride themselves on being good sportsmen will be interested to know what is happening to the fish and wildlife and wildlife resources in the upper Mississippi River and its tributaries since the 9-foot channel has been created and the numerous locks and dams have been constructed in the upper Mississippi, creating the pools on the upper side of all dams. You will be interested to know how the fish and wildlife and wildlife resources are being destroyed every winter by the sudden and arbitrary lowering of the water levels of these pools by the Army engineers on orders from the War Department.

The rapid and sudden drawing down of the pools causes countless millions of fish of all species to become stranded in landlocked areas, to smother in water that has become stagnant, and to die in the mud of shallow pools that have been emptied and covered with heavy ice.

These draw-downs are also detrimental to all fur-bearing animals, such as muskrats, that make the pools their habitat. The stumps and snags in the shallow areas which are exposed when the pools are drawn down make it impossible for sportsmen and State crews to remove the fish trapped in such landlocked areas, while the frozen slush and snow and ice make it practically impossible even to locate such landlocked areas before all fish imprisoned therein have died from suffocation.

For several years I have been concerned over the lowering of the pool levels in the upper Mississippi during the winter months by the Army engineers.

As a Member of Congress, representing the Third District of Wisconsin, I have joined with other Members of Congress to voice the objections of the people of the States bordering the Mississippi River in this area to persuade the Army engineers the lowering of the pool levels in this area is detrimental to the wildlife and food for such wildlife in the upper Mississippi River bottoms.

When Congress passed legislation creating the 9-foot channel and authoring construction of the river dams necessary therefor, Congress did not intend that the pools created by such dams should be used by the War Department or any other Government bureau as storage reservoirs to supply water for navigation in the lower Mississippi.

During the war emergency the War Department contended it was necessary at certain times to raise the level of the Mississippi in its lower areas to float barges and vessels of deeper draft than originally contemplated during peacetime. It was the contention of the War Department and Army engineers that the pools in the upper Mississippi be lowered to provide more water in the lower Mississippi to float such vessels and barges used for war purposes, and to move war craft from the Great Lakes to the Gulf of Mexico. However, we are now out of the war.

As one Member of Congress I do not intend this course of procedure to continue for the benefit of the shipping interests of the lower Mississippi. The use of the water in the river pools in this area to make navigation in the lower Mississipi for commercial interests in other parts of the United States, with the consequent destruction of fish and wildlife in this area, must stop.

The Wisconsin conservation department has called this matter to the attention of the Army engineers in vain and without effect. It is therefore time that legislation be adopted at once by the Congress of the United States clarifying the present Navigation Act so that the War Department and its engineers cannot continue to interpret the act as they are at present. It surely was never the intent of Congress to give the War Department and its engineers the right to destroy the fish and wildlife and to wipe out all the wildlife resources created by years of conservation effort, for the benefit of a few people who are only interested in shipping their products the year round down the lower Mississippi in barges and boats of ever increasing tonnage and draft. The sooner Congress passes legislation making that clear, the better it will be for the conservation of wildlife in the upper Mississippi regions.

The untold benefits of recreation, as well as the commercial benefits created by the conservation of our wildlife resources in this area, cannot be measured in dollars. Surely the benefits derived for us and for our children and grandchildren from the conservation of our wildlife resources is of much greater intrinsic value than whatever dollar profits might be saved by the commercial interests who are filling their coffers while destroying the wildlife of the upper Mississippi, as well as wiping out all the work of our reconversion resources in which all of us are so vitally interested, for which so many conservation-minded people in this country have been toiling for years past.

I do not want to see the recreation and wildlife resources in Wisconsin ruined for the purpose of providing a mere 2 feet of water for a 2-week period over the Chain of Rocks above the city of St. Louis. The profits the shipping interests reap during this short period shall not be used as an argument to lower the pool levels and destroy our wildlife and conservation resources.

All members of conservation and sportsmen's clubs in the upper Mississippi River region have taken a keen interest in this matter.

The Badger State Sportsmen's Club of my home city of La Crosse, Wis., through its legislative committee, speaking for all sportsmen's clubs and conservation organizations in the upper Mississippi River region, have written me asking for a congressional investigation of the upper Mississippi River 9-foot channel draw-downs.

The entire country will want to read this report; and therefore I am asking special permission and the unanimous consent of the House to have the letter of the Badger State Sportsmen's Club set forth in full at this point:

BADGER STATE SPORTSMEN'S CLUB, INC.
La Crosse, Wis., January 14, 1946.

Subject: Request for congressional investigation of upper Mississippi River 9-foot channel draw-downs.

Hon. WILLIAM H. STEVENSON,
House Office Building,
Washington, D. C.

DEAR SIR: Badger State Sportsmen's Club, Inc., of La Crosse, Wis., is appealing to you in an effort to halt the wild fluctuations and winter draw-downs of pools of the upper Mississippi River 9-foot channel system so that conservation may achieve the full benefits derived from a water-level-stabilization program.

This winter, for the third consecutive season, the United States Army engineers have drawn down the pools of the upper river 9-foot channel system to a state where "open river" conditions again existed. These, substantially, are the same conditions experienced for years in the upper Mississippi Valley prior to the establishment of the 9-foot channel.

Since the United States Army engineers announced on December 20 their plan to begin drawing down the pools as of December 22, there have been numerous telegrams of protest from sportsmen sent to President Truman. Sportsmen of the valley have heard no response from him. Instead they have heard indirectly from the Office of the Chief of Engineers, United States War Department, in Washington.

Our organization, which has a membership of 1,829 sportsmen from the city of La Crosse and La Crosse County, Wis., feels that the problem is of sufficient scope to command some attention on the part of the Chief Executive and the Congress of the United States. Our organization feels that it is presenting herewith the interests of conservation in the entire upper Mississippi Valley concerning this problem. At least 25,000 persons will support our contentions.

Our contention is amplified by the press reports from Washington a few days ago quoting Dr. Ira Gabrielson, of the United States Fish and Wildlife Service, and other officials that "sportsmen should hunt and fish for pleasure instead of for bag limits."

It is our feeling that agencies of the United States Government dealing with conservation are working at cross purposes. Millions are spent annually by the United States Government for fish propagation, administration of wildlife and fish refuges, development and protection of forests, and for countless other phases of conservation activity. In the case at hand the United States Army engineers are destroying in a period of only a few weeks much of the work that has been done by the United States fisheries, exclusive of the efforts made by the individual States to make it possible for sportsmen to secure reasonable catches of fish. Migratory waterfowl, too, come in for their share of suffering under the water-level fluctuation program, as well as muskrats. Propagation of aquatic vegetation also is involved in the conservation picture.

We, as sportsmen, are familiar with the 9-foot channel from its early formulative stage to its present-day operations. We feel we have a fair knowledge of its ramifications, including the initial construction expenditure and the annual dredging maintenance costs since the deep waterway was placed in operation.

The 9-foot channel in the upper river was demanded by navigation interests, which visualized great volumes of freight moving by fleets of barges and towboats to various ports along the upper Mississippi.

When the United States Army engineers made their initial investigation of the possibility of creating a 9-foot channel out of the then existing 6-foot waterway, Major Hall, who was the district engineer at Rock Island, Ill., and who was a member of the investigating committee, announced an unfavorable report. Later, another board, as we recall it, returned a favorable report. Congress later appropriated the funds, and the War Department instituted proceedings to condemn through United States courts and otherwise acquire lands that would be flooded.

Construction of the numerous dams, locks, dikes, and land acquisition in the 9-foot channel system, according to the original volume of data presented to the Congress by the United States Army engineers was in excess of $126,000,000. The estimates of the engineers were that $3,000,000 or more would be necessary annually for dredging operations to maintain the 9-foot depth for navigation purposes.

Prior to the 9-foot channel, river levels fluctuated according to precipitation, but not to the extent of the wild fluctuations that we as sportsmen believe have been created by the Army engineers through all months of the year in their manipulation of the canalization program. In those days, we had periods when the water was extremely low, experienced during dry periods. We had periods when the water was high, and others when it was at relatively normal levels.

During the days before the 9-foot channel, sportsmen in the valley enjoyed what they called good fishing. Hunting for migratory waterfowl was generally fair, with shooting in the upper valley being somewhat similar each year to that experienced in other parts of the Nation. Muskrats were numerous in the established marshes, and brought a fair livelihood to trappers during the winter and early spring months.

In the days of the old 6-foot channel the United States Bureau of Fisheries, now a part of the United States Fish and Wildlife Service, maintained fish rescue work on the upper river annually, in an effort to save fish that would otherwise be stranded in landlocked areas during low-water stages. We, as sportsmen, believe this work was

highly beneficial, for many of the rescued fish were returned to the main channel of the Mississippi. Some were sent by the United States Bureau of Fisheries to stock waters in other States.

During the 6-foot channel era, the United States Army engineers were required to do extensive dredging annually in an effort to maintain the required depth for navigation. Continuous dikes of dredged sand lined both banks of the channel in some sections of the upper river, making it resemble a canal.

When the United States Army engineers held their hearings concerning each of the proposed 9-foot channel dams, locks, and dikes in the various cities nearest to the structures, sportsmen's groups were represented to file their protests.

These protests were generated by the fact that the Government maintained the 9-foot channel solely for navigation purposes, and that conservation interests and flood control were not factors. Waterway interests supporting the 9-foot channel made light of the objections of sportsmen, seeking only their goal by whatever means it might be acquired.

The La Crosse (Wis.) Chapter of the Izaak Walton League of America, then the only conservation organization in this community, made an exhaustive study of conservation in relation to the proposed 9-foot channel. Its special investigating committee reached the conclusion that:

"The La Crosse Chapter of the Izaak Walton League of America was opposed to the 9-foot channel program until:

"1. There was definite assurance from the United States Government that water levels would be stabilized.

"2. Soil erosion would be eliminated or drastically curtailed by extensive forestry and erosion control programs by the United States Government and States in the headwaters of the Mississippi and its numerous tributaries.

"Pollution was eliminated.

"4. Fishways were installed on the various dams."

These objections were adopted by practically every other conservation group on the upper Mississippi River, and were followed to a large extent by the Izaak Walton League of America.

The special committee of the La Crosse Chapter of the Izaak Walton League appeared at practically every hearing held by the United States Army engineers in upper Mississippi River communities on the 9-foot channel project to present in the required quadruplicate the objections enumerated above. These objections should be found in the transcripts of the hearings of the United States Army engineers. It might be added that all three members of the special investigating committee of the La Crosse Izaak Walton League still are residing in this community.

Badger State Sportsmen's Club, Inc., wishes to emphasize that it has no quarrel whatsoever with waterway interests at this time concerning the 9-foot channel. The 9-foot channel is something that was forced upon us against our will and best conservation judgment, but we maintain that judicious administration of the channel through stabilization of waters will solve our problem and be to the best interests of navigation.

Our objections through the years about fluctuations of water levels have brought only the response from the St. Paul district office of the United States Army Engineers that it was powerless to intercede in the interests of conservation, inasmuch as the 9-foot channel was designed and intended for navigation purposes.

We will say at this point that an effort was made by the St. Paul district engineer, Col. Lynn Barnes, during the late spring, summer, and early fall of 1945 to stabilize water levels in the channel pools on Saturdays, Sundays, and holidays. This was for the benefit of thousands of fishermen who found relaxation for several hours on those days from their work during the remainder of the week. Except for the flood periods when this stabilization plan could not be effective, sportsmen generally were fairly well satisfied with the results.

There has been some concern among sportsmen of the transition of the 9-foot channel system from one designed for navigation to one intended to act as a series of water reservoirs for the benefit of navigation on the lower reaches of the river during the winter months. We have noticed this tendency of transition since the enactment of the recent Flood Control Act.

We resent, we repeat, any such transition. What we want is stabilized waters. We want to protect some of the common men's heritage of conservation that has been handed down through the generations for those yet to come.

We have been informed, too, and the statement is credited to a representative of the United States Army engineers, that if all of the pools in the 9-foot channel system were drawn down to their original open river status, there would be only 2 feet of water provided for the chain of rocks at St. Louis for a period of only about 2 weeks.

On December 20, 1945, the St. Paul district office of the United States Army engineers sent out to newspapers, conservation agencies, and others interested a notice of the intention to draw down the 9-foot-channel pools, beginning December 22. These notices claimed the Missouri River, because of ice gorges, was not providing adequate flowage for navigation on the lower river.

The late notice gave the States no time to prepare for any measures to counteract damage to conservation interest that might result.

Following is an official protest from the Wisconsin members of the Water Use Council:

"MADISON, WIS.—Conservation interests are receiving no consideration in Army engineers' management of the upper Mississippi River and the upper end of the Father of Waters may well be on its way to a 'biological desert' unless public demand intervenes, the Wisconsin members of the Upper Mississippi River Waters Use Council declared today.

"The Wisconsin members are Adolph Kanneberg, Dr. Edward Schneberger and M. W. Torkelson.

"The Wisconsin members said that Maj. H. J Manger, district engineer at St. Paul, issued a notice on December 20, that conservation on the Upper Mississippi must yield when navigation interests operating on the lower river want the water stored in the upper river pools. All of the 10 pools from Hastings at the mouth of the St. Croix to Cassville near the Illinois line will be drawn down between December 22 and January 1, according to Major Manger.

"'The United States engineers are acting in willful disregard of conservation on that part of the river directly affected by the draw-downs, and attempting to justify their arbitrary action by statements that are hypocritical if not worse,' said the Wisconsin Council members.

"'How', asked the Wisconsin men, 'can a notice issued on December 20, give any notice that will make it possible to prepare for draw-downs beginning on December 22, and continuing through the holiday season, especially in view of the labor shortage? And even if longer notice were given, how could fish rescue work be carried out through the ice which will remain lodged in the shallow pools after the draw-downs? Any effective work would be impossible. The United States engineers have the further effrontery to claim that the advantages to fish and wildlife due to canalization are considerable, even with the winter draw-downs. Such a claim would be only ridiculous if it were not made by the United States engineers who have the power and seemingly the disposition to do what they will with the river in total disregard of everything except navigation on its ice-free portion.

"'The people interested in conservation on the upper Mississippi must realize that they will have to fight for it, otherwise reconcile themselves to the barrenness of a biological desert, where there once was an abundance of game fish, fur bearers, and migratory water fowl.'"

Under date of December 4, 1945, Lt. Gen. R. A. Wheeler, Chief of Engineers, United States War Department, wrote United States Senator ROBERT M. LA FOLLETTE, JR., as follows:

"This winter season no water will be released for power purposes over and above normal discharges and withdrawals required for navigation. Further, in recognition of fish and wildlife interests, the upper navigation pools will be gradually lowered to predetermined levels when and as needed, and they will not be raised and again lowered except as may result from the unpredictable natural increase or decrease in stream flow. The time and the extent of lowering the pools will depend to a large degree on temperature and stream-flow conditions."

We submit herewith, in answer to General Wheeler, a table from the United States Weather Bureau which shows the levels of the various pools prior to the draw-down, and the amount of water that was drained from them. General Wheeler maintained that the pools would be gradually lowered. At the Genoa, Wis., Dam, which creates the pool in front of La Crosse, the draw-down in 1 night was 3.1 feet.

Weather Bureau table follows:

Mean sea-level elevations, Mississippi River pools L/D No. 3 to No. 10, 1945–46

Pool	Normal mean sea level elevation	Reading, Dec. 1, 1945	Reading, Dec. 31, 1945	Lowest first January week, 1946	Draw-down (feet)
No. 3	675.00	674.48	670.19	(1)	[2] −4.3
No. 4	667.00	666.40	663.10	(1)	[2] −3.3
No. 5	660.00	659.34	657.27	(1)	[2] −2.1
No. 5–A	651.00	650.33	647.89	(1)	[2] −2.4
No. 6	645.50	645.00	641.58	[3] 640.48	[4] [5] −4.5
No. 7	639.00	638.90	635.93	[3] 631.27	[4] [5] −7.6
No. 8	631.00	629.89	624.57	[3] 624.33	[4] [5] −5.6
No. 9	620.00	619.28	616.70	[3] 615.98	[4] [5] −3.4
No. 10	611.00	610.84	608.94	[3] 608.94	[4] [5] −1.9

[1] Reports not available until end of month.

[2] This represents the maximum draw-down for the month of December 1945, i. e., December variation.

[3] These are the lowest readings taken the first week in January 1946 and lower than those in December 1945.

[4] This represents the maximum draw-down from the 1st of December until the lowest point reached when drained. All elevations are in mean sea level, 1912 level adjustment net.

[5] The maximum draw-down figures given must be considered as those taken directly above the lock walls and do not represent the fall at any distance above it. The greater the distance upstream from the dam, the less this fall becomes until it reaches the control point where the least change occurs. For example the greatest drop at Lansing, Iowa, which is the control point of pool No. 9 was only 0.9 foot. The greatest draw-down at the city of La Crosse, Wis. (control point of dam No. 8) was 1.4 feet.

In the same letter, General Wheeler said:

"During the war the lowering of the upper Mississippi pools throughout the winter months, as an emergency means to insure passage of essential war traffic on the middle Mississippi, may have resulted in the destruction of some fish and wildlife. Investigation has disclosed, however, that visible evidence of such losses has been small. In addition to the withdrawals for navigation, water was released in the interest of power production at the request of the war agencies concerned."

We take exception to the statement that visible evidences of such losses has been small. We question the source of information, if any.

We can produce persons we believe to be experts, because of their positions in conservation fields, to dispute the claim. We can

produce, also testimony of an almost unlimited number of sportsmen to contradict the assertion.

In the same letter previously mentioned, General Wheeler said:

"In accordance with agreements heretofore made with the fish and wildlife and other conservation interests, all known Federal and State conservation agencies will be informed in advance of the time of actual lowering of the navigation pools. This advance notice made possible the organization of fish-rescue crews if the conservation agencies believe fish will be stranded in shallow pools by the intended operation. Further since conservation interests have advised that the loss of fish occurs primarily because of the rapid change in water surface elevation, the pools are generally lowered at a rate not exceeding one-half foot per day which is not as rapid as would occur under natural conditions."

We reiterate a statement previously made by us in this communication that the St. Paul district office of the United States engineers issued the notice of intention to draw-down the pools on December 20, the draw-down to begin as of December 22. State agencies will tell you they had no time to make any preparations for it.

Badger State Sportsmen's Club wants to emphasize that it filed no protests during the winters of 1943 and 1944 when the United States Army engineers said, and later did, lower the pools to aid wartime navigation on the middle and lower Mississippi. We felt it was the patriotic thing to do, although it meant great losses in the field of conservation on the upper river. Now, with the war over, we feel that conservation should have its inning and should have all the attention possible that can be paid it by the United States Government and its innumerable agencies, including the United States Army engineers, and the several States.

It is our contention that the rapid drawing down of the pools caused countless fish of all species to be stranded in landlocked areas, to smother in water that became stagnant, or to suffocate by being pressed into the mud by the heavy ice.

We submit, too, that the draw-down has been detrimental to our muskrat population, which began to reappear in the established marsh areas during the past year in very limited numbers after being almost annihilated the preceding 2 years.

Sportsmen and State crews are making an effort to remove fish trapped in landlocked areas, returning them to free water. The frozen slush and snow covering the thick ice make it extremely difficult to locate any appreciable number of these landlocked areas.

We question the sincerity, and are probably joined by some State and Federal conservation agencies, in the statement of General Wheeler, made in the above-mentioned letter to Senator LA FOLLETTE, that:

"The department is fully cognizant of the importance of protecting fish and wildlife resources in the upper Mississippi Valley and is cooperating closely with Federal and State conservation agencies. For example, joint studies are under way to determine the best order of lowering the pools in the light of ice conditions so as to protect wildlife, such as muskrats. Such lowering of the pools as may be necessary, whether partial or to natural river level, is determined after careful consideration of the effect of the lowered water levels on all interests and facilities, including fish and wildlife, sewers, water-supply intakes, navigation structures, tributaries of the river, levee districts, existing power developments, railroads, and other features. The Department recognizes that any substantial lowering of these pools is undesirable, and every effort will be made to keep the draw-downs to the absolute minimum consistent with the needs of navigation."

We believe that the numerous conferences held between the United States Army engineers and State and Federal conservation agencies to have been wasted time.

Sportsmen's groups along the upper Mississippi were not consulted, nor was there any effort made to confer with them as to the actual existing facts.

We believe that the United States Army engineers, through their policies of operating the upper Mississippi River 9-foot channel, are trying to camouflage the conservation situation.

We as sportsmen of the Mississippi Valley are becoming disgusted with this situation and want definite action for the protection of our conservation pursuits, both for the generations of today and those to come.

Capt. C. F. Culler, formerly superintendent of the entire Mississippi Valley area for the United States Bureau of Fisheries and now fisheries director of the Minneapolis region of the United States Fish and Wildlife Service, said when the 9-foot channel was being built that fishing would gradually fade out within 15 years after the channel system was placed in operation.

Ray C. Steele, Winona, Minn., superintendent of the upper Mississippi fish and wildlife refuge of the United States Fish and Wildlife Service, has repeatedly warned at public hearings and other conservation meetings of the dangers of winter draw-downs of pools to muskrats and other animals.

In this connection, we understand the United States Army engineers still have considerable land in the Mississippi Valley bottomlands, acquired for flowage, seepage, and other purposes, which has not been turned over to the United States Fish and Wildlife Service. We advocate that this be done, so that the conservation interests come under one general administrative department. As it is now, applications for buildings and permits to use some of the lands in the bottoms are filed with both the engineers and refuge office. In some instances, the agencies are working at cross purposes and not to the best general interests of conservation.

We have found that some of the pool areas are beginning to fill up with silt from the numerous tributaries, but that the winter draw-downs of the past 3 seasons have flushed out to some degree the silt in the main channel. Our observations as sportsmen have been made while on fishing expeditions and through our knowledge of conditions as we have found them, both now and before the 9-foot channel.

One of the most glaring illustrations of the effect of high water-impounding dams on conservation is contained in a booklet by Dr. Ellis of the United States Fish and Wildlife Service on the basis of his findings during an exhaustive investigation a few years ago at Lake Cooper, created by the Mississippi River dam at Keokuk, Iowa. He found fish life there had been drastically depreciated and the lake area filled in substantially by silt.

As sportsmen who help pay the Nation's bills, we want to know if we have to submit to the destruction of our conservation resources of the upper Mississippi while the United States Army engineers pursue what they are pleased to call investigations.

As sportsmen, we are appealing to the Congress of the United States for legislation that will bring about the stabilized water-level condition we seek for the upper Mississippi River.

We appeal to Members of the Congress to arrange for hearings by either full or subgroups of the conservation committee or other committees of the House having jurisdiction over our problem.

We would like to have a hearing in La Crosse, and would arrange for testimony from experts in the field of conservation, recreation, waterways, and other fields concerned with the stabilization plan, as well as property owners, that would require two or more days for presentation. We believe the same committee also should hold a hearing along similar lines in Winona, Minn., to receive the opinions of Minnesota sportsmen and conservation leaders.

We appeal to you to help in the establishment of future water stabilization in the upper Mississippi River 9-foot channel system.

Respectfully,
BADGER STATE SPORTSMEN'S CLUB, INC.,
ALFRED W. RICE, *Chairman*,
Dr. J. M. SPIKA,
Dr. H. A. BARGE,
HENRY KREUZER,
FERDINAND KLICH,
Legislative Committee.

What Communists Stand For

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein statements appearing in the Monitor, of Concord, N. H., of February 8, 1946, on what Communists stand for.

Let us as true and loyal Americans read this platform. In it will be found the roots of much that is happening in the United States today.

The statements follow:

COMMUNIST PROPAGANDA

EDITOR, MONITOR-PATRIOT:

We thought the enclosed excerpts from a Communist propaganda pamphlet now being circulated throughout Europe might be of interest.

Each avowed Communist—including Mrs. Elba Chase Nelson, chairman of the Communist Party of New Hampshire—is recognized as one of the most effective instruments for circulating the latest published creed of communism and the well-recognized 10 commandments of communism which Mike O'Dessa, who has followed the Communist party line for years for the purpose of exposing it to public gaze, has taken verbatim from one of the pamphlets.

Mrs. Nelson, whose attention has been frequently called to the current Red party line, has chosen to remain mute when requested to comment anent Red party purposes, although she has, from time to time, sent you handouts about the right of labor to strike and similar platitudes. Your readers could get a good slant on the prolonging of the present labor struggle if they could be informed of the fancy salaries being drawn by the miscalled labor leaders who not only do not labor but cannot lead the workers anywhere except behind the "8-ball" of lowered income and lost purchasing power.

MICHAEL F. O'TOOLE.

CREED OF COMMUNISM

(By Mike O'Dessa)

I. All Communists know that "to bolshevize" means to "liberate humanity from the slavery created by centuries of Christian barbarities";

II. "To free humanity from the concept of religion";

III. "To free humanity from the concept of national authority"; and

IV. "To free humanity from the concept of private property."

(a) All Communists must remember that our purpose is "to bolshevize the world, no matter how much the cost or in what way";

(b) The task of each individual Communist is "to bolshevize your own surrounding group";

(c) Each such individual knows that his or her task necessarily has "to be limited for the moment"; and

(d) It is the duty of each Communist "to give the working man and woman the illusion that only Communists are free and that only Communist membership and action can free him and her."

COMMANDMENTS OF COMMUNISM—SO-CALLED "DECALOG"

1. Do not manifest the purpose of communism to immature companions.

2. Struggle against those—especially the hypocritical priests, ministers, and rabbis—who say what is more or less true about communism, by denying emphatically that we are opposed to religion, family, and private property.

3. Show with jokes, sarcasm, cynicism, and with a more pleased and happier show of conduct how you are freer without the impediments of religion, making it understood that we who live without religion live better and do more freely what we wish to do.

4. Destroy morals, teaching the inexperienced; create a milieu satiated with that which the clergy of all sects call immorality.

5. Always remove your companions farther from their religion by any and all means, but especially by putting priests, ministers, and rabbis in as bad a light as possible.

6. Destroy the family—especially the Christian family—by planting ideas about freedom in marriage, showing divorce as a more human way of life, and encouraging your people to love, love freely, free love.

7. Educate workers, especially the young ones, to be intolerant of any and all authority, especially police authority.

8. Encourage workers to participate in disorders, to use of brute force, to revenge, and not to have a fear of bloodshed.

9. Be at the forefront in rendering small services to workers; speak loudly and make yourself heard in their behalf; impose yourself into their midst; hide the good which others do for them and make it appear as if you did it; and, to enlist such workers in our cause, be in the forefront of all labor movements and organized opposition to parliamentary proceedings.

10. Struggle constantly against all priests, ministers, and rabbis; against their religions, the morals of all religions, and against their religious organizations and institutions.

Housing Bill

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. PATMAN. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I would like to include the script of a radio program, Congressional Record on the Air, which contains a discussion of housing legislation. It was broadcast over the Mutual network and Washington Station WOL at 8:30 p. m. February 18:

Mr. STUDNEY. From the Nation's Capital you are about to hear the one hundred and thirty-fourth broadcast of Congressional Record on the Air. This well-known public-service feature brings you each week a Member of Congress in a discussion and interview on a subject of national interest. Tonight our guest is a Member of the House of Representatives. He will be introduced to you now by Matthew Warren, ace radio reporter.

Mr. WARREN. Thank you, Ed Studney, and good evening, ladies and gentlemen. For the first time in decades, the house wanted and apartments wanted ads in the classified section of the country's newspapers exceed the house and apartments for rent ads. Across the broad breadth of this land, here in America, the land of abundance, there exists one of the most acute housing shortages in our history—with new housing construction at a standstill since almost the beginning of the war, and with an expanding population the housing shortage is rapidly becoming America's No. 1 problem.

In every city, in every town, in almost every hamlet, it seems the burning question of the day is, "Where can I find a place to live?" And almost unfortunately the man who asks the question most often is a returning GI. American soldiers, sailors, marines, Air Corps men fighting for 1, 2, 3, 4 years to make this a better place in which to live, are coming back. To what? They are coming back to an endless vain search for a place to live; a far cry, indeed, from the pious promises of a year ago. What are we going to do about it? Congress seems to be aroused, for in the House of Representatives as far back as November 20, 1945, one Congressman introduced a bill designed to cure some of the housing headaches; that bill is now being considered by the House Banking and Currency Committee. The author of that bill is our guest on this broadcast of Congressional Record on the Air. He is the far-sighted Representative who long before demobilization envisioned the housing chaos of today. He is Congressman WRIGHT PATMAN, Chairman of the House Committee on Small Business and a member of the House Banking and Currency Committee. At this time, Congressman PATMAN will make a brief address on the housing situation, following which he has agreed to answer some of our questions. It is indeed a pleasure to introduce now Congressman WRIGHT PATMAN, of Texas.

Congressman PATMAN. Thank you, Mr. Warren. I first became concerned with the housing situation late last summer when the War Department announced the speed-up of its demobilization program. It was announced that nearly 3,000,000 men coming home from the war fronts would be looking for homes, and it was quite obvious that, with our already overcrowded conditions, there was going to be no place to put them. The National Housing Administration had estimated that the Nation was some 12,000,000 homes short of the number needed to house our population. And it was generally conceded that our maximum capacity to build was only about 400,000 homes a year.

In addition to this, prices were skyrocketing. National surveys estimated that home prices had jumped 50 percent during the war years. However, in the medium and low-cost homes, the kind we could logically expect our veterans to buy, there was more than a 100-percent increase. Considering these facts, it was obvious that thousands of our veterans would be sleeping in the streets unless something could be done. That was my motive for introducing the housing bill which will come to a vote in the House of Representatives this week.

The measure has a simple objective: To provide the maximum number of homes for our returning servicemen at a price that they can afford to pay. I felt that the crisis was so near and the task of providing these homes so tremendous that only a bold and energetic attack could begin to meet the housing shortage. Therefore, I proposed that the Government and the building industry, working together, attack the housing situation the same way we met similar problems of scarcity during the war.

My housing bill is a legislative foundation upon which the President's housing program will be built. It provides for the appointment of a housing expediter with broad powers to issue directives to other agencies so as to concentrate the Government's attack on the problem. It sets up a priority program to channel scarce building materials into housing for veterans. It also provided for ceiling prices on new and existing homes. It permits the housing expediter to use subsidies as they were used during the war to increase production of building materials. The life of the bill was to be until December 31, 1947—some 18 months. I believe that, if passed, the bill will enable us to meet the President's housing goal of 3,000,000 houses in 2 years, and will provide homes for more of our veterans.

That's all the bill does, Mr. Warren.

Mr. WARREN. Thank you, Mr. PATMAN. There are some points I would like to clear up. Suppose I am a veteran, just returned from overseas. How do I get a house under this program?

Mr. PATMAN. It's fairly simple. You obtain a veteran's priority certificate, work up your plans and specifications with a builder, or you can do it yourself, and take it to your nearest Federal Housing Administration district office. That office is charged with approving your application, helping you to arrange financing, and obtaining a priority certificate to get your building materials. Then you can go ahead and build the house.

Mr. WARREN. Still supposing I am this veteran—how much can I expect to pay for a home?

Mr. PATMAN. That depends, of course, in what section of the country you are living. I intend to offer an amendment to my bill on the House floor establishing a yardstick of $6,000. However, the housing expediter could raise this ceiling in any area where special circumstances, such as higher building costs, would make it necessary. Under this proposal, a house in Washington, for instance, could cost you approximately $7,500. In New York it might go as high as $8,000 in some expensive sections. But it would be a flexible rule, under which the builder could make a profit, and yet give the veteran a home at the lowest possible cost.

Mr. WARREN. That sounds encouraging, Mr. PATMAN. But I haven't seen many places advertised recently that I could buy for $6,000. How do you expect to keep prices to that minimum?

Mr. PATMAN. In the New York area, unquestionably new homes are going to cost the veteran a little above $6,000. However, professional FHA and Veterans' Administration appraisers will be scrutinizing these loan applications to see to it that the estimated building cost and the estimated selling price are reasonable. In other words, speaking frankly, these experts will see to it that the veteran gets his money's worth.

Mr. WARREN. But suppose I'm not a veteran. I'm just an ordinary citizen who must have a place to stay, or who wants to buy a house. Can I get one?

Mr. PATMAN. In the early months of the program, I am afraid you would have to step aside and give the veteran who has been overseas for 4 years first chance. However, there is considerable reason to hope that once we get production rolling on the scale that is being planned that the nonveteran will be able to get building materials to some extent.

Mr. WARREN. Getting back to this question again of the $6,000 ceiling. Suppose I am a veteran and I want a better house than that. Say I have saved my overseas pay and

can afford a $10,000 home. Can I build one under this program?

Mr. PATMAN. I think you will be able to, if your $10,000 home is actually worth $10,000. The control which will be exercised under this priorities program is more to prevent a real-estate speculator from selling a veteran a $5,000 home for $10,000—not so much to stop the veteran from buying a house he can afford. All of us know that many veterans today are being squeezed into paying exorbitant prices for second-rate homes by some unscrupulous dealers. That's what we want to put a stop to.

Mr. WARREN. How about this proposed ceiling price on existing homes, Mr. PATMAN? It seems to me that it's a very unfair proposition, perhaps, to force me to sell my home for less than I paid for it.

Mr. PATMAN. That is one of the most important points in my bill. Under the formula, I propose the present owner could sell his home for any price he could get for it. However, that selling price would become an automatic ceiling price for the duration of the housing emergency—some 18 months. There has been more misunderstanding on that than any other phase of the legislation. It does completely protect the present home owner—its only purpose is to hold down speculative resales, which have ballooned prices to such dangerous levels. I do not see how anyone, knowing the danger of inflation which faces us, could be opposed to that provision. Especially since it is for such a comparatively short period of time.

Mr. WARREN. Congressman PATMAN, many young couples have dreamed for the past few years about the home they were going to build when the war was over. What can they do about building a home to their own specifications?

Mr. PATMAN. If the mister of the household—or the missus, for that matter—happens to be a veteran, they follow the same procedure as I have outlined, by going to their local FHA office. However, if neither husband nor wife has been in the armed services, they probably will have to wait for a few more months, until the more needy of the veterans are housed.

Mr. WARREN. For my part, I venture to say that most of us will agree to step aside temporarily in favor of the returning GI. However, there is another point. You speak of the magnitude of this program. How many actual houses do you think will be built under the President's proposal?

Mr. PATMAN. Personally, I am quite confident that we can meet our goal of 2,700,000 houses by the end of 1947. To many professional builders and others acquainted with the enormous production problems involved, this figure perhaps sounds fantastic. Many of us thought the same thing when President Roosevelt called for the production of 50,000 airplanes and thousands of other items needed for war. However, I believe this goal can only be obtained if we use every resource available as boldly and energetically as we used our industrial potential to attack these war problems.

Industry and the Government must pull together. Many sacrifices must be made. Some types of building must wait. But we do have an exceedingly able man in Mr. Wilson Wyatt, the Housing Expediter. If he is given the proper support it can be done.

Mr. WARREN. Congressman PATMAN, during the war in many of the war-production centers, trailer coaches filled a very serious gap as emergency housing. Do you think there is a possibility trailer coaches again might serve as housing in the peacetime emergency?

Mr. PATMAN. I certainly do. There is a place for them in the President's program. Many returned servicemen—particularly those who are going to school under the GI bill of rights—are neither ready nor willing to settle down and purchase a home. The house trailer supplies an ideal answer to this veteran's problem. Several universities already are providing modern trailer sites in anticipation of hundreds of their GI students using trailers as university living quarters.

Mr. WARREN. Congressman PATMAN, do you think there is any chance for the construction of additional homes from free sources of material, or will all supplies be channeled into the housing program?

Mr. PATMAN. Bluntly speaking, if the program is carried out as intensively as it needs to be, I doubt seriously whether much additional building can be done. Much depends upon the speed with which we can get production rolling, and that, in turn, depends upon the willingness of Congress to grant subsidy funds that will be needed.

Mr. WARREN. That is a point, Congressman, on which I have heard considerable criticism. I understand Mr. Wyatt wants nearly half a billion dollars of the taxpayers' money to spend on this program. That's a lot of money. What are you going to do with it?

Mr. PATMAN. I think much of the success or failure of the entire housing program depends on whether or not this subsidy fund is provided. At the present time it has been stricken from the bill, and I intend to offer an amendment restoring it from the floor.

This subsidy fund may well be used in the same fashion that similar funds were used during the war, to spur production of materials. Let us take a concrete example. A small brick plant has high operative costs, low-paid workers, or some other factor that makes cost of production so high it cannot compete in the market. The RFC would be authorized to pay this plant their premium price for their bricks. This money would go into more wages, more manpower, more material, to increase its production. During the war our experience was that once this production is stepped up, a factory's cost per unit drops to the point where the subsidy is no longer necessary, and the plant continues at top speed.

Of course, there are two ways of getting this increased production—by price increases and by subsidies. We estimate that $1 of subsidy will bring the same benefit as $3 of price increase, so that subsidies will be the cheaper method of obtaining production. However, in some instances incentive price increases, particularly in lumber, are expected to be given. In this program capacity production is the principal goal.

Mr. WARREN. Thank you very much, Congressman PATMAN. You are to be complimented indeed on your spearheading of this highly worthy and most essential objective in the House of Representatives, and it goes without saying that with our appreciation goes our best wishes for your every success. We appreciate the time you have taken tonight from your busy day to discuss these matters with our Congressional Record on the Air listeners.

Committee on Un-American Activities

REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks, I desire to refer to the statement made by Prof. Clyde R. Miller, Teachers College, Columbia University, New York City, which appeared in the New York Herald Tribune of Friday, February 15, 1946, on the subject of the Committee on Un-American Activities.

This article quoted from a resolution passed by the board of directors of the Greater New York Federation of Churches. The resolution attacked the committee for its "continuous interference with the freedom of our citizens," and for the "irresponsible and un-American utterances of its most vocal spokesman, Representative RANKIN." The resolution further cited an alleged remark by Mr. Nicklas, a former investigator for the committee, in the presence of Chief Counsel Ernie Adamson, to Prof. Clyde Miller.

As Mr. Nicklas has not been with the Committee on Un-American Activities for the past 6 months, I inquired of Mr. Adamson as to whether there was any truth to the remark, as reported by Professor Miller, and Mr. Adamson said that he knew nothing of any private conversation between Mr. Nicklas and Professor Miller, but that any statement by Professor Miller that such a remark was made in the presence of Mr. Adamson was downright false.

Having no intention of letting the matter stop at that point, I decided to search further, so I checked on Professor Miller's record with the files of the Dies committee, and using the Communist Daily Worker, the Communist New Masses among the references as my source, I find that Professor Miller has had a long record of Communist affiliations, the most prominent being, and I refer to the Daily Worker of March 5, 1941, that Professor Miller was a signer of the statement to President Roosevelt, defending the Communist Party and prior to this, the Daily Worker of July 23, 1940, showed Professor Miller as a signer of an open letter to President Roosevelt, protesting against the attack on the right of the Communist Party to use the ballot.

The complete record of Professor Miller's Communist affiliations as taken from the Dies files, is as follows:

CLYDE R. MILLER

American Civil Liberties Union; signer of letter supporting Gerson; Daily Worker, March 4, 1938, page 1.

American Committee for Democracy and Intellectual Freedom; member, national committee; letterhead, September 22, 1939.

American Committee for Democracy and Intellectual Freedom; member, New York committee; letterhead, December 1, 1939.

American Committee for Democracy and Intellectual Freedom; took stand against Columbia University's president, Nicholas M. Butler, on his views; New Masses, October 15, 1940, page 17.

American Committee for Democracy and Intellectual Freedom; signer of appeal on behalf of anti-Fascist refugees trapped in France, sent to Cordell Hull; Daily Worker, July 22, 1940, page 1, column 5.

American Committee for Democracy and Intellectual Freedom, signer, open letter of five-point program to aid refugees, sent to Secretary of State Hull; Daily Worker, July 25, 1940, page 2, column 3.

American Committee for Democracy and Intellectual Freedom; signer of open letter to Nicholas Murray Butler denouncing pro-war stand; Daily Worker, October 7, 1940, page 3.

American Committee for Democracy and Intellectual Freedom-Executive Committee; signer of letter of protest to Nicholas Murray Butler; Daily Worker, October 12, 1940, page 4.

American Federation of Teachers; denouncing red-baiting; Daily Worker, January 6, 1939, page 5.

Appeal to lift Spanish embargo; speaker; Daily Worker, February 4, 1939, page 2.

Associated Film Audiences; member, executive board; undated letterhead.

Boaz letter on Franco in reply to Sedgwick; signer; Daily Worker, March 8, 1938, page 2.

China Aid Council; sponsor; letterhead, May 18, 1938.

Communist Party; signer of the statement to the President defending the Communist Party; Daily Worker, March 5, 1941, page 2.

Conference on Pan-American Democracy; signer of call; News You Don't Get, November 15, 1938.

Conference on Pan-American; sponsor; letterhead, November 16, 1938.

Consumers Union; sponsor; undated circular.

Daily Worker, signer of statement against Franco spy ring; Daily Worker, May 12, 1937, page 1.

Descendants of the American Revolution; member; Daily Worker, February 13, 1939, page 2.

Descendants of the American Revolution; sponsor; pamphlet, Descendants of the American Revolution, back page.

Film Audiences for Democracy; member, executive committee; Film Survey, June 1939, page 4.

Films for Democracy; member, executive committee; Films for Democracy, April 1939, page 2.

In Defense of the Bill of Rights; signer; In Defense of the Bill of Rights, a circular, page 2.

League of American Writers; signer, open letter to Secretary Cordell Hull and the Pan-American Conference; Daily Worker, July 31, 1940, page 7.

Lincoln's Birthday Committee for Democracy and Intellectual Freedom; speaker; Daily Worker, February 13, 1939, page 1.

Open letter to President Roosevelt; signer, protest attack on right of Communist Party to use ballot; Daily Worker, July 23, 1940, page 1, column 6.

The Soviet Union and Present World Affairs, meeting at Mecca Temple Auditorium; sponsor; Daily Worker, March 22, 1938, page 2.

Priorities for Veterans

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mrs. ROGERS of Massachusetts. Mr. Speaker, there is a very strong editorial in the Washington Post this morning regarding the purchase of Government houses by veterans, like the McLean Gardens housing project for the use of the veterans. Mr. Speaker, it is important to pass legislation along this line in order that the rights and the priorities of the veterans be respected. Certain properties, apparently, under existing legislation can be sold to veterans and priorities given the veterans. There was a question under the Surplus Property Act, under paragraph 23, as to whether the veterans could be considered because the District of Columbia is excluded and war housing is excluded. Certainly we must pass legislation to make possible the purchase of housing facilities by veterans. The Surplus Property Act must be amended.

[From the Washington Post of February 19, 1946]

HOMES FOR VETERANS

As we read the regulations on surplus property disposal, veterans have a right to buy housing projects built by the Government during the war. The rule laid down by the Surplus Property Administrator as to the prices they shall pay is as follows:

"Veterans and the spouse and children of deceased servicemen shall be entitled to purchase surplus real property at a price not to exceed a unit price fixed by the disposal agency after taking into consideration the current market value, the character of the property, and, if income-producing, the estimated earning capacity thereof."

Yet the Defense Homes Corporation has rejected the bid of the Veterans Cooperative Housing Association for McLean Gardens and is apparently preparing to sell this choice wartime project to the highest bidder, probably a speculative real estate operator. It may be that the $9,000,000 bid of the veterans' co-op was too low. As to that, we do not know. But the co-op is now asking Defense Homes and the National Housing Agency to put its own fair value on the property, thus giving the co-op a chance to meet it before any deal with other prospective purchasers is consummated. That seems to be in line with what Congress had in mind when it provided priorities for veterans in the disposal of surplus property. We understand that war housing projects have already been sold to veterans' groups under similar arrangements in Ohio and Utah.

The question of wholesale dispossession of existing tenants does not arise, for the veterans' co-op has agreed not to disturb families now living at McLean Gardens. Apartments there are becoming vacant at the rate of about 40 or 50 a month, and these would be turned over to veterans' families as vacancies occur.

It is true, of course, that the National Housing Agency got a special order from the Surplus Property Administrator for the disposition of six war-housing projects in the Washington metropolitan area without waiting for the exercise of priorities. The excuse was "to take advantage of a present favorable market." We think, however, that there are larger considerations in the disposal of these properties than a favorable market. Where veterans have a prior right to buy them at fair market values, that right should be respected. The public interest in seeing that our defenders are properly housed is certainly greater than making a few dollars' profit out of wartime housing projects.

Housing Shortage in the Detroit Area

REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. LESINSKI. Mr. Speaker, I ask unanimous consent to address the House for 1 minute on the housing shortage in the Detroit area and to revise and extend my remarks in the RECORD at this point

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. SPEAKER. I have just returned from Detroit, Mich., where, with Representatives GEORGE SADOWSKI and FRANK HOOK, I have conducted informal hearings on the housing problems of that area.

The hearings were held February 14 and 15, and testimony was presented by representatives of industry, labor, Government, and the public at large on the various blocks and hindrances to the provision of sufficient and adequate shelter to meet the urgent needs of veteran and nonveteran alike.

At the conclusion of the hearings I prepared a summary report containing recommendations based upon testimony and information gained at the hearings. This statement was released to the press at the conclusion of the hearings.

The hearings we have just concluded on Detroit's housing problems have proven to be of great value. The people of the Detroit area have been most constructive in their statements during the hearings. They have given their Representatives in the Congress a clearer insight on the whole of the problem. Industry, labor, local government, and the public at large all indicated in their testimony that solution of the many complex problems involved was a responsibility of the Federal Government.

It was clear that the local governments could not cope with the situation.

It was clear that the local home-building industry's activities were at a standstill.

It was clear that dangerous inflationary trends in prices of used houses and vacant residential land were in evidence.

It was clear that only by the same bold and forthright action which characterized our war-production effort would this problem be solved.

And finally, it was clear that the vast bulk of the people in the Detroit metropolitan area expect this same kind of action from their Government in Washington on this problem. They want and expect quick action on the program submitted to the President on February 7 by Wilson W. Wyatt; they want and expect the prompt passage of the excellent Wagner-Ellender-Taft bill; they want and expect passage of the Mitchell-Kilgore veterans' housing bill; they want and expect passage of a modified Patman housing stabilization bill which will take into account present inflationary costs of vacant residential land.

It is my considered judgment that the people of the Detroit area and the people of the entire nation who are urgently in need of decent shelter, and especially our returning veterans, have a right to expect their Government—their Congress to act on this most vital matter of housing—and to act immediately; to pass the legislation I have mentioned and any other measure needed to implement the excellent program proposed by National Housing Administrator Wilson W. Wyatt.

For my part I shall bend every effort and exert every influence at my command in the direction of securing prompt and favorable action by the Congress on these measures. I have every confidence that my colleagues from Michigan, Representatives DINGELL, O'BRIEN, HOOK, RABAUT, and SADOWSKI, share this view with me.

The time for action on these measures was yesterday. They should have been law today. We cannot do anything to make up the time lost but we can prevent further delays by acting now—today.

Army Stops the Press

REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. WEICHEL. Mr. Speaker, the Army, in order to keep from enlisted men its failure, lies, inefficiency, and the fraud it has practiced on the parents of enlisted men, has now gagged the voice of enlisted men in the South Pacific. The serviceman's paper is not even permitted to print Associated Press and United Press dispatches. Our country has always believed in the freedom of the press and we are denying to our own people the things for which we fought. Mr. Speaker, how long is the President going to carry out such a policy through the armed forces, of which he is the Commander in Chief?

I am including a statement from the Daily Pacifican that has just come to me through the mails from a serviceman in the South Pacific, which prohibited the publishing of the names of the Members of the Congress of the United States:

[From the Manila Chronicle of January 12]

DAILY PACIFICAN IS GAGGED

Thirty-three members of the staff of the Daily Pacifican, United States Army newspaper published in Manila, last night issued the following statement disclosing that severe editorial restrictions and limitations have been imposed on the newspaper.

The members of the staff of the Daily Pacifican have received many inquiries in the last few days asking what has happened to the Daily Pacifican. Our integrity as journalists and our loyalty to the democratic principles for which this war was fought impel us to make the following declaration, which embodies the views of the enlisted men on the staff:

"New restrictions on freedom of expression imposed from above no longer enable us to bring full news and truth to our readers. To keep faith with our readers who have come to expect adequate news coverage and the truth as we see it, from the columns of the Daily Pacifican we are compelled to announce that our hands are tied. As loyal soldiers we execute orders as they are received, but our readers and the American public are entitled to know that orders from 'high above' prevent us from any longer keeping our readers fully informed. It has never been our intention to do anything but keep our readers abreast of the news and serve the best interest of the Army. Under the new limitations, Mail Bag, which has given voice to the views of the GI as he expressed them and as he saw events, has already been subjected to severe editorial restrictions and limitations. We have been denied the right even to print Associated Press and United Press dispatches if they reflect any criticism or dissatisfaction whatever with the official policies of the War Department and our theater commanders. In short, we are prohibited from publishing the whole truth.

"On January 10, 1946, after page 2 was completely made up, we had to remake a new page upon the order of the command, which prohibited us from publishing a list of all the Members of the United States Congress in response to numerous requests by phone and mail to Mail Bag.

"As soldiers we carry out our orders, as citizens and as journalists we tell the truth to the entire world."

RESTRICTIONS PLACED ALSO ON FAMED JOURNAL STARS AND STRIPES

HONOLULU, January 11.—Military censorship finally came to the Honolulu edition of the Stars and Stripes, outspoken Army newspaper, as GI criticism of the demobilization program flared throughout the Pacific.

Stars and Stripes was forbidden Thursday by Lt. Gen. Robert C. Richardson, commanding general of the mid-Pacific, to make any discourteous references to the President, the Secretary of War, the Chief of Staff, or any others in authority in the Army. It was also forbidden to publish soldiers' letters which could be construed to be discourteous or derogatory to authority.

The order holds the paper's staff strictly responsible and subject to disciplinary action for violations, but exempts news received from news services (Tokyo AP).

Twenty-six members of the Pacific Stars and Stripes published here charged today the Army newspaper had been usurped in the present "demobilization crisis" and converted into a "house organ for the War Department."

Increased Cost of Living

REMARKS

OF

HON. PAUL STEWART

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. STEWART. Mr. Speaker, a few days ago I called attention of the House to the disturbed condition of the farmers in a county of my own district. In this morning's mail I received a resolution from the Independent Patriotic Farmers of Logan County, Okla., petitioning the Oklahoma delegation to protect the innocent public by drastic action because our Nation is torn by strikes and lock-outs, and management and labor cannot or will not get together and make settlement of their differences.

The farmers in this agricultural county go on record unequivocably favoring the provisions of the Case bill in its original form.

With some of the major strikes settled by granting an increase to labor and $5 a ton to steel, no one has taken into account the cost to the farmers of producing food. Any reasonable man would know that an approved increase in the price of organized labor and materials that have to be purchased by the farmers in the form of equipment to plant, cultivate, and harvest their crops should be accompanied by an increase in the price of farm commodities.

We have as yet not been able to fathom the most recent ceiling placed on cotton as a raw material for the making of clothing and many other items. Apparently the ones responsible know little or nothing about the food and feed values of the byproducts of cotton. With the agreed increase to organized labor and to the steel manufacturers, a new schedule of increased prices for farm commodities should be approved.

It is our opinion that the farmers in the agricultural States are ready to fight the devil with fire. That is to say, if strikers in industry can deprive the world of such needed articles of housing and husbandry, the farmers can withhold their products from the market, also. We all know it has neven been the disposition of a farmer to go on strike, but should events take such a course, then labor and industry will realize that the farmer can do without new farm machinery a great deal easier than they can do without food.

Mr. Speaker, the resolution passed by the farmers of Logan County is as follows:

We, the Independent Patriotic Farmers of Logan County, hereby call on all farmers of Logan County to join us with the rest of the State and Nation in calling on the Congress to enact legislation which will be effective in controlling strikes by setting up a fact-finding committee to step into labor-management dispute and work out fair and just settlements that will prevent hardships for our entire Nation.

We decry and condemn the stubborn leadership on both sides which cannot and will not reach common sense and permanent solution to their differences without resorting to strikes and lockouts, the continuation of which will destroy the principles of free enterprise in America.

We also appeal to Congress to protect the innocent public, and we think the time has come for drastic action. We take this position because our Nation is torn by strikes and lock-outs, and management and labor cannot or will not get together and make settlement of their differences.

We furthermore resolve that we favor all of the provisions of the Case bill in its original form and that copies of this resolution be furnished immediately to all of Oklahoma's representatives in both the House and Senate in Washington.

Let's Officially End the War

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. LEMKE. Mr. Speaker, during the war we surrendered liberties and constitutional rights that were not ours to sur-

render. In the words of Abraham Lincoln, "Necessity knows no law."

But the war is over. Months ago there was an unconditional surrender of all our enemies. Yet Congress has not seen fit to declare the fact that hostilities have ceased. Congress has not kept its promise that the boys were drafted only for the duration and 6 months thereafter.

The GI boys are returning, and those who have not returned demand that they be returned to their families and to civilian life from which they were taken. The Government pledged these boys that they would be out of the service 6 months after the duration. Yet we are listening to the subterfuge of some generals, interested perhaps in keeping their promotion, and continuing millions of these boys in foreign lands. This may be some of the "one world" lunacy, but the time has come for Congress to act, or when the boys return they will act.

I have talked to a number of Army officers, who are in full accord with the views I express here that the boys should be returned. We have over a million who have enlisted now, and that is twice as many as any general has ever dared suggested as needed for occupation duty and home duty.

I am submitting herewith an editorial that appeared in the Jamestown Sun, Jamestown, N. Dak., by Col. Percy M. Hansen, who speaks with authority. The editorial follows:

LET'S DECLARE AN END TO THE NATIONAL EMERGENCY

(By Col. Percy M. Hansen)

The Army, Navy, and Marine Corps, with the efficient assistance of the rest of United States 130,000,000 people, have retaken the Aleutians, the Philippines, and Guam. They have driven the Japanese and the Germans from Africa, Italy, France, Belgium, and all of the islands of the southern Pacific. They, even, have reclaimed the fatherland of Germany from the German militarists and the home islands of Japan from the Nippon worshippers of Mars. They, with the other members of the United Nations, are in complete control of our defeated enemies.

A patriotic Congress, putting aside for the duration all—or practically all—thoughts of personal or political advantage, turned over to our military leaders the complete control of our national affairs. That these affairs, as far as accomplishing the main objective of defeating our enemies was concerned, were well-handled, is obvious, but it is equally as true that the military mind, which is essentially destructive, is not fitted for peacetime economic or political control of the Nation. This is aptly illustrated by the factual stories of the wastage of billions of dollars' worth of equipment all over the world. It is high time that we, in America, recognize that the military mind functions in much the same manner regardless of whether that mind is Japanese, German, Russian, British, French, Chinese, or American, and, recognizing this fact, make sure that Congress regains its functions of government.

About 18 months ago the writer was eating breakfast in the rather swanky dining room of the Imperial Hotel at New Delhi, India, when two other colonels were ushered to the table. "I am glad to know that we have officers here as low in rank as colonel," he remarked to the newcomers, indicating with his glance several general officers in the room. "Oh, this is nothing," one of the officers replied; "I counted 11 generals on the floor at one time at our last regular Saturday night dancing party here at the hotel."

It was very common talk among these colonels and generals, most of whom were Regular Army officers, that "if we can keep the Army up to 3,000,000 men, most of us can retain our temporary ranks." This remark usually called for the rejoiner that, "Well, if we can't hold the Regular Army up to that figure, we can still hold our temporary ranks if we can put over universal military training."

Congress so far has successfully resisted the attempt to rush through legislation providing for universal military training, but the Army and Navy, like good tacticians, stopped in their frontal attack, have obtained their objective by persuading Congress not to declare an end to the national emergency. So long as Congress can be fooled into delaying the declaration, the United States military party has little to fear.

Hundreds of thousands of American boys are "sweating it out" on military, naval, and marine stations all over the world, not because they are needed there or are accomplishing any good but because Brigadier General Blank, who holds the permanent rank of first lieutenant, captain, or major, wants to retain his stars. The writer received letters from two service men this week, one a marine in the South Pacific and the other a soldier in Manila, and both complained of being held in the service. One wrote: "If the war was still on, or if we were really doing any good here, I would not complain, but we are just being held here while our officers try to think of something for us to do. Why doesn't Congress do something? If they would end the emergency, we would at least know that we would be home in another 6 months. The way it looks from here, we will be here at least another year, and many of us were in hopes we could be back in school by next fall."

A few top-flight football players and the sons of United States Senators and general officers have been released. General MacNider had the effrontery to defend the release of his son by special order "so that he could continue his education." Do not the Members of Congress realize that there are hundreds of thousands of boys just as worthy as the son of General MacNider? Many of these boys are beginning to wonder if they fought for democracy or for special privilege, and only President Truman or Congress are in position to prove to them that the United States still stands for the great principle of "all men are born and created equal." From the standpoint of simple justice, it is more necessary to return to their studies the sons of parents without wealth and political influence than it is to release the sons of generals, Senators, and other persons of wealth and position.

A recent news dispatch says that the morale of many of the 50,000 marines in north China is cracking as the men are becoming convinced that they are mere pawns in a great international game of power politics. The same thing is true of thousands of young men in the Aleutians, the Philippines, Guam, Wake, Okinawa, India, France, and innumerable islands and outlying stations all over the world.

Surely these boys should be back in the United States and ready to resume their studies by the opening of the 1946 fall term, and they will be back if North Dakota's four Representatives in Congress—Senators LANGER and YOUNG and Representatives LEMKE and ROBERTSON—or any other group of Congressmen combine their efforts to see that this is accomplished. A declaration by Congress that the national emergency is over, passed immediately after the reconvening of Congress this month, would assure every serviceman inducted for the duration plus 6 months that he would be returned to civilian life by next July or August. If this is done, all who so wish can resume their studies next September.

If it is necessary to continue the drafting of men after next July or August—and we are not convinced that such action will be necessary—Congress still could secure the return of the men who wish to continue their educations by amending the present law limiting the period of service to 12 months or, at the most, a year and one-half.

I quote further excerpts from the letter of Col. Percy M. Hansen. These excerpts should convince Congress that the time for action has arrived. The GI boys are no longer interested in fake promises; they want action.

Will you, as a personal favor, read the enclosed editorial comment and then drop me a note telling me what you can do to accomplish one or more of the following:

(a) Secure a declaration by Congress that the national emergency is ended so that these hundreds of thousands of men in this country and overseas in the armed services will know that they have a maximum of six more months to serve;

(b) Secure the passage of legislation releasing from the armed services all men who were inducted before VJ-day upon their completion of 1 year, or, at the most, 1½ years of service;

(c) Secure the passage of legislation returning to the United States and releasing from service all men who were overseas on VJ-day.

Seriously, Bill, this is only one of the things that I have in mind in connection with our military set-up. Apparently none of our commentators nor legislators dare to hit at the very heart of the matter—the fact that our entire military and naval set-up must be changed from the so-called caste system, one of lords and serfs, to something more in keeping with a democratic nation—and I have spent considerable time on facts and figures in this connection.

I could quote from several letters received only this week, but knowing how busy you are, I will not bother you with them at this time. I want to say, however, that I am more serious about this than I was the famous (or was it the infamous?) capital removal campaign, and I believe that my service in two wars and in all of the grades from buck private to colonel, has given me an insight into the mind of the former serviceman and his family that would justify my present conclusions.

Will you take time out to give me your opinions on this matter, and an idea of what, if anything, you are willing to do in this matter?

PERCY M. HANSEN.

I am confident that this editorial and the excerpts of Colonel Hansen's letter express the sentiments and the will of the vast majority of the American people and 100 percent of the will of the fathers, mothers, and wives of the servicemen.

There are some fifty bills and resolutions pending in the House and Senate, all having for their object the prompt demobilization of our armed forces, in accordance with the pledges made by the Government when the men were inducted into the service.

The time has come for these Members to get together and agree on one or two of these resolutions or bills. It makes no difference to the GI boys which resolution or bill is taken. All they are interested in is that Congress see to it that the Government keeps its pledge and understanding with them when it inducted them into the armed forces for the duration and 6 months.

School-Lunch Program

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a letter in support of H. R. 3370 from the Honorable Vernon L. Nickell, superintendent of public instruction, State of Illinois:

STATE OF ILLINOIS,
SUPERINTENDENT OF PUBLIC INSTRUCTION,
Springfield, February 13, 1946.

Hon. MELVIN PRICE,
United States Representative, House Office Building, Washington, D. C.

DEAR REPRESENTATIVE PRICE: H. R. 3370 is up for consideration. As you know, this bill deals with the appropriation to subsidize the school-lunch program. The bill, in its present form, gives the administration to the States. This is as it should be.

From the experience we have had in Illinois the past 3 years in connection with the school-lunch program, I am convinced that it is a very worth-while and worthy program. It makes a lunch available through the schools to the thousands of children that otherwise would be forced to go without a balanced and nutritious diet. It seems to me that we learned from the war a lesson that is applicable here. We need to look forward toward developing strong healthy bodies in our youth. A good diet is one of the necessary essentials if we are to reach that objective. In this light the program is one which embodies national security and contributes much toward national defense.

As you know, our State assists in subsidizing the program. If this assistance—both Federal and State—were to be denied the schools, it would be a serious error, I believe. It would deny to our children—our greatest asset—an inherent right to develop the strong bodies which they must have if they are to be entitled to contribute their full and just share as American citizens.

May I urge your earnest, serious, and favorable consideration and support of this bill in its present form on behalf of our undernourished youth?

Sincerely,

VERNON L. NICKELL.

The Case Bill

EXTENSION OF REMARKS
OF
HON. DUDLEY G. ROE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. ROE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Baltimore Sun in reference to the Case bill.

The editorial follows:

HAVING PASSED THE HOUSE, THE CASE BILL FACES THE SENATE

It is in line with the precedents that the Case labor bill, having passed the House by a large majority, enters a period of ominous silence on the Senate side. Of course the bill can seem extreme only by comparison with the policies of administrations whose Attorney General once described them as alliances of clever political leaders with the labor unions. The bill provides for no-strike cooling-off periods during mediation of industrial disputes. Mediation failing, it provides for voluntary arbitration. That failing, it provides the unimpeded right to strike. But it does police this right by attempting to curb violence, boycotts, and wildcat and jurisdictional strikes.

Moderate as the Case bill is, however, there is some doubt whether it really touches the vital issues in the labor problem. It is not at all clear, either, that in seeking commendable ends its backers have always selected wise or prudent means. Nor, as already suggested, does the fact that the House has acted mean that anything like the Case bill is certain to go into the statute books. The fact is that the Senate is less enthusiastic than is the House about the bill, and there is no sign whatever of enthusiasm from the White House.

These signs on the road to enactment are threatening. The evidence is in the fact that labor bills very like the Case bill have passed the House on two previous occasions and each time have failed to come to a vote in a Senate oversensitive to White House pressure. In June of 1940 the House voted by 258 to 129 to amend the Wagner Act in an effort to reach many of the purposes aimed at in the Case bill. In December of 1941 the House passed the Smith bill, which at many points was identical with the Case bill. The vote then was 252 to 136.

The fact is that the House of Representatives—that body of the Federal Legislature most representative of the whole people, dependent at the most frequent intervals on their judgment at the polls, and organized on a regional basis giving maximum assurance against domination by any single pressure group—this body has steadily reflected the undoubted national disquiet at the post-1933 labor policies. But the House view on this matter has been as steadily thwarted in the Senate and in the Executive offices, where it is sometimes easier for highly organized pressure groups to bring their pressures to bear. It remains to be seen whether in this instance again the Executive offices and the Senate will ignore what the popular branch clearly shows to be the popular anxiety on labor policy.

The Need for a Sound Labor Law

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. HAYS. Mr. Speaker, I regret that the parliamentary situation did not permit my giving a complete explanation of the amendment which I offered to the Adams substitute to the Case bill at the time this important legislation was considered by the House.

My amendment embraced the essential features of the amendment to S. 1661 offered by Senators BALL and HATCH, having eliminated the compulsory arbitration features which were included in the original Ball-Burton-Hatch bill.

My amendment adopted the language of H. R. 5367, which I introduced on February 4 and which contains only one addition to the revised Ball-Hatch bill. The addition appears in section 11 and is as follows:

(c) Any employee who fails to perform the duties imposed on him by section 3 (d) of this act (which subsection relates to maintenance of existing conditions pending exhaustion of settlement efforts) shall not be entitled to reinstatement or any back pay from such employer under section 10 of the National Labor Relations Act.

In order to secure consideration by the House of the mediation and arbitration features of the Ball-Hatch bill, I proposed in my amendment to the Adams substitute only those features of the bill which differed in substance from Mr. Adams' plan. My amendment which appears in the RECORD for February 6 on pages 1021 and 1022 eliminated administrative provisions, but if the parliamentary situation had permitted I would have urged consideration of the full plan as embraced in H. R. 5367.

I had previously pointed out to the House that I sought consideration for this plan because it represented sincere efforts by an important group of public-spirited citizens to find a solution to the strike problem through perfecting mediation and arbitration procedure.

I have reference to the Committee to Promote Industrial Peace, whose report was sponsored by Senators BALL and HATCH, and since the recommendations of that committee were not considered by the House Labor Committee I felt that the House should be given an opportunity to pass upon the Ball-Hatch plan as an alternative to the Case bill. The Committee to Promote Industrial Peace was constituted strictly with the public interest in mind, and its members are not involved in labor controversies. The personnel is as follows:

George W. Alger, lawyer, 55 Liberty Street, New York, N. Y.

Harold Evans, lawyer, 1000 Provident Trust Building, Philadelphia, Pa.

Samuel S. Fels, president, Fels & Co., Seventy-third Street and Woodland Avenue, Philadelphia, Pa.

Lawrence Hunt, lawyer, 60 Broadway, New York, N. Y.

William Draper Lewis, director, the American Law Institute, 3400 Chestnut Street, Philadelphia, Pa.; summer address, Northeast Harbor, Maine.

Leon C. Marshall, chairman of the faculty of American University, Washington, D. C.

Charles B. Rugg, lawyer, 50 Federal Street, Boston, Mass.

George B. Sjoselius, deputy Attorney General of State of Minnesota; has charge of legal questions arising out of administration of State labor relations act; State Capitol, St. Paul, Minn.

Kirk Smith, lawyer, 15 Westminster Street, Providence, R. I.

Arthur D. Whiteside, president, Dun & Bradstreet, 290 Broadway, New York.

Donald R. Richberg, chairman, 815 Fifteenth Street NW., Washington, D. C.; coauthor of the Railway Labor Act, the Norris-LaGuardia Act, and the National Industrial Recovery Act. He served as chairman of the committee and as draftsman, without compensation, as did all other committee members.

The statement of the purposes of this bill, which I included in my comments to the House on February 1, page 791, was prepared by the above-named members of the Committee to Promote Industrial

Peace and their names were inadvertently omitted when the statement was submitted to the House. The committee devoted many months to the study of arbitration procedure and their report reflects painstaking consideration of the problem.

Whether the Case bill becomes law or not Congress will be required to give further consideration to methods for settling industrial disputes. A comprehensive revision of basic labor laws based upon our experience with the Clayton, Norris-LaGuardia, and Wagner Acts will require further study but a beginning has been made. I voted for the Case bill in spite of the criticisms which were offered in debate. It is generally agreed that the bill was improved by certain amendments, and in view of the urgent necessity for some legislation on the subject I think that the House pursued the right course in adopting the bill in its modified form. Our action should have the effect of impressing labor union leadership with the fact that we regard this as a real emergency, and that Congress intends to maintain a stern position regarding strikes and union practices which are against the public interest. At the same time I am anxious that we avoid unworkable methods and certainly we must not deprive labor of fundamental rights.

I have just seen an editorial in the Buffalo Evening News for February 13 quoting in substance my observations on the Case bill and commenting, as follows:

Mr. HAYS correctly appraises the House action as a reflection of present national sentiment.

The wiser labor leaders must know, however, that the one-sidedness of existing labor laws and the flagrant disregard of the public welfare evidenced by so many recent strikes must ultimately bring corrective legislation. Whether a stringent law now could bring order out of our industrial chaos is open to question. But it seems clear that relations between labor and management will move from one crisis into another until the selfish interests of both are subordinated to the public welfare—either voluntarily or by law.

If the Case bill is one-sided, labor's irresponsible militants have brought it upon themselves by a reverse one-sidedness—by foolishly insisting that there must be no balancing of responsibilities under the Wagner Act; by flagrantly abusing their immunity from legal accountability, and by demanding that Government be their ally instead of an impartial umpire.

Their militants themselves have demonstrated the need for corrective legislation that will, first, protect the public against the interruption of services essential to its health, safety, and welfare, and, second, redress the one-sidedness of the Wagner Act so that both unions and employers will be answerable for unfair practices. Responsible labor leaders would be wise to recognize this need and cooperate in meeting it, instead of waiting for the public opinion pendulum to swing so far that it may do real harm to the labor movement.

The Case bill, as Mr. HAYS implies, represents a swing of the pendulum rather than a carefully-thought-out balancing of responsibilities. Legislation better attuned to the latter objective is already before the Senate, however, in the Hatch-Ball bill. It would turn the Wagner Act into an impartial code of fair practices to which both labor and management must submit; effectively outlaw all interruptions of vital public services, and make available a comprehensive procedure for the peaceful and fair settlement of any dispute. The general philosophy and key provisions of this bill are sound, and the News believes that Congress could make no better contribution to permanent industrial peace than to enact it.

Joseph E. Davies' Statement on Atomic Secrets

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. GWINN of New York. Mr. Speaker, Joseph E. Davies, former Ambassador to Russia, has been guilty of moral treason in encouraging Russian spies to steal our military secrets. I call upon the State Department to direct FBI to proceed to arrest those spies.

Ex-Ambassador Davies' statement that "Russia had every moral right to seek atomic bomb secrets through military espionage" is the most shocking and disgraceful statement uttered by a prominent American in recent times, possibly since Benedict Arnold. There is no moral right to defend or advocate the commission of a crime against the United States.

When and if the President consents and the FBI arrests any of their spies, Moscow can now logically express surprise that their secret agents should even be questioned when a former American Ambassador to Russia has told the world that such spies have "a moral right" to help themselves.

The time has come to ask "Pal Joe" Davies who he represents. Is it possible that his law firm has taken on Joe Stalin as a client? If so, is it not time the American people know the whole story back of these shocking invitations to espionage?

Address of Hon. Henry A. Wallace

EXTENSION OF REMARKS
OF
HON. HERMAN P. KOPPLEMANN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. KOPPLEMANN. Mr. Speaker, under leave given to me to extend my remarks in the CONGRESSIONAL RECORD, it gives me great pleasure to insert the thoughtful address by the Honorable Henry A. Wallace, Secretary of Commerce, at a banquet in honor of Chester Bowles, given by the Washington Chapter of the National Lawyers Guild on February 15, 1946:

Tonight we honor Chester Bowles. It is very heartening to stand here and talk about a highly successful businessman—a salesman and merchandiser with a brilliant record—who today at 46 has become one of our most outstanding public servants.

Here we have a man who made a great success in the advertising business—and then quit and settled down to enjoy the things that money can't buy. Apparently to Chester one of the main things that money can't buy is the satisfaction of doing a big, tough job in the public interest. Anyway that is what he has done. And this particular job is one that can certainly be literally described as Herculean.

It is an old saying that an organization is the lengthened shadow of one man. In honoring Chester Bowles it is fitting that we also pay tribute to his coworkers in every city and town throughout the country. And especially should we salute his predecessor and trail breaker, the redoubtable man with the big cigar—Leon Henderson, who lit and carried the original torch in the forefront of the battle against inflation. I think we should honor also the Congress which, conscious of the backing of the overwhelming majority of the American people, has given Chester Bowles the tools to work with. With the Price Control Act as his artillery, and with the welfare of the United States as his objective, Chester Bowles has fought and smashed the crawling and snarling and sniping armies of the lobbyists and won a victory over wartime inflation, an enemy hardly less dangerous than the Axis. I should say he has won—so far, but the battle isn't over.

Chester Bowles set the ceiling prices for 3,000,000 business firms and 14,000,000 hungry landlords. His task involved establishing limitations on millions of different items and for billions of transactions. No problem on the home front approached this in sheer magnitude, and no job was harder.

The OPA has dealt with the most complicated and delicately balanced sector of our whole economy. There are few problems more intricate than the factors which go to make up the price of almost every article. And the ramifications and relationships between different prices are far-reaching and often unforeseeable.

The job entailed much more than the establishment of initial prices. The problems of continuing administration and particularly of enforcement were even more manifold and complex. Before the war, it had been customary to say that the problem of fixing and holding prices was far too difficult for any Government agency to undertake. But this defeatist attitude did not stop Chester Bowles.

Prices are inevitably related to profits, and profits touch the heart of the economic system. Anything that even threatens to embarrass profits always encounters terrific pressures from interested groups with large, cold axes to grind. Anyone familiar with the Washington scene can understand what this means in terms of hundreds of powerful Washington lobbyists. They always tackled Chester Bowles, but he almost always answered "No"—politely, firmly, but positively—because he serves the general welfare.

The OPA under Bowles has been concerned with prices in a period when economic pressures to force price increases accumulated on a scale far in excess of any ever known. The mere fact that the Government spent $300,000,000,000 during the war gives some idea of the explosive inflationary pressures against which the OPA prices have been the first and principal line of defense.

In the rationing field, OPA dealt with matters vitally and directly affecting each of the 140,000,000 people in the Nation. Rationing has meant the withholding of goods from people who are anxious to buy and who are well supplied with money.

In spite of the enormous inflationary pressures of the war, the cost of living between August 1939 and October 1945 rose only 31 percent. The increase from May 1943—the date of the hold-the-line order—was only 3 percent. Wholesale prices rose 41 percent during the past 6 years but less than 2 percent during the past 3 years. Contrast this record with the First World War, when we

had no OPA and no Chester Bowles, in which living costs more than doubled and wholesale prices increased by 148 percent.

It is clear also that price controls have not hampered production. During this war, production doubled, whereas during World War I the increase was only about a quarter. Nor have price controls wrecked business. Business profits have been at an all-time high and business failures at an all-time low.

The administration of the Price Control Act under Chester Bowles has been twice approved by Congress with only minor changes. The Price Control Act came up for renewal in the spring of 1944 and again in the spring of 1945. Extensive hearings were conducted by committees of both Houses of Congress and the act was approved in substantially its existing form on both occasions. It is seldom that administration of any statute has had such exhaustive review and reaffirmation by Congress.

A remarkable and democratic feature of OPA operations, both in price control and rationing, was the work of the local war price and rationing boards. Throughout the war some 5,500 of these boards, composed primarily of volunteer citizens of the local communities, have performed vital functions in rationing and price control. This development constituted a broad move toward democratic decentralization in an age of increasing centralization—even under the stress of war. It has been an unusual application of democracy at the grass roots.

Chester Bowles has developed extensively new methods of public education in Government affairs. With great imagination and resourcefulness he has kept the public informed of what the OPA has been doing and the reasons for doing it. For example, each of the war price and rationing boards has had attached to it a volunteer committee whose function it has been to explain OPA operations to the local community. At the same time Chester Bowles kept in constant touch with industry, labor, and consumer groups, not only informing them of developments, but continuously soliciting their advice and assistance.

Chester Bowles is fighting for the only kind of postwar world which can give assurance of full employment and full production under our system of free enterprise. His battle is against a wild inflation, a boom-and-bust period, which would make economic depression inevitable. In essence he is fighting for an economy of high production, low prices, and high income—and against boom prices which will dissipate purchasing power, choke off production and push us soon into another depression.

The battle against wartime inflation has been won. The victory over postwar inflation is in sight. We must not weaken necessary controls now. If we do, the whole war against inflation will be lost. The lobbyists of the selfish few will fight desperately during the next few months to defeat these controls.

We must not forget that the wildest period of inflation came after, and not during, World War I.

We know that price ceilings will be removed, item by item, just as soon as they can be removed without inflation. There is still a great backlog of demand for rental properties, building materials, clothing, automobiles, and electrical equipment. It is, therefore, essential that the Price Control Act, which expires on June 30, 1946, be continued for another year. The quicker the act is renewed the better it will be for all of us.

Price ceilings have no place in America except in emergencies. If we control monopoly, production will soon increase to the point where under normal conditions competition will control prices. But today most people realize that we must continue price ceilings as long as the emergency exists. According to the Gallup poll, 85 percent of our people realize that an emergency still exists.

Similarly, I have talked with hundreds of Americans, and received letters from many more, who say that they are willing, if necessary, to miss one meal a day in order that the unfortunate victims of the war may eat. So say we all. We shall live up to our traditions and share some of our abundance of food with the starving people overseas.

I would like to let you in on a little secret. Chester Bowles is not a prophet without honor in his own country.

I went to Connecticut, the home State of Chester Bowles, the other day to speak for more effective political action by plain citizens voting at the ballot box. I happened to mention in my speech that Chester Bowles is doing a great job. The cheers of the crowd stopped the meeting for some minutes. And I know that tonight the plain people all over America are still cheering the name of Chester Bowles. Chester, I salute you. Your career of public service is only beginning.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks, I include a statement on universal military training, by Robert M. Hutchins, chancelor of the University of Chicago:

I do not oppose universal military training on the ground that it will hurt the educational institutions of the country. If universal military training is necessary to our safety, the educational institutions must take the consequences without complaining. I favored the Selective Service Act and opposed the Army's plans for the Army Enlisted Reserve Corps, which deferred college students merely because they were college students.

I should add that, if hordes of students are a benefit to a university, the University of Chicago would benefit from universal military training, for it is the only university which offers a boy the opportunity to complete his liberal education and get the bachelor's degree before being drafted.

I do not oppose universal military training on the ground that it is bad for boys or is a poor remedy for illiteracy, ill health, or unemployment. I confess I do not think that the best way to prevent juvenile delinquency is to turn over the young to the care of marine sergeants. And I can conceive of less expensive and more effective methods of dealing with the social and economic evils of our time than putting our youth in the Army. But I lay no emphasis on these issues because the Army and Navy have ceased to emphasize them. The Army and Navy appear to realize that, if universal military training can be defended at all, it can be defended only as a military measure.

I oppose universal military training on the ground that as a military measure it is absurd. And if you ask how a layman, whose only military experience was that of a private in the last war, can contradict the leading military experts on a military matter, I reply that they contradict themselves, for they first show that universal military training is a military anachronism which will weaken the Nation, and then demand it in the name of military strength.

The generals and admirals all insist on the rapidity of technical change. Then they insist that men trained with old weapons are going to be effective in using entirely new weapons. They prove that there is no defense against the atomic bomb, and then ask for an enormous Army to defend us against it. They show that this bomb can be sent into other countries by rockets or smuggled in by agents and then ask for a large Army, Navy, and Airforce to carry it into other countries. They convince us that in an atomic war 40,000,000 of us will be killed in 1 night and then claim that it will be helpful to us to have wasted two or three billion dollars a year in teaching millions of young men close-order drill. They demonstrate that the strength of the country depends on its industrial power and scientific intelligence and then advocate a system which will give us less industrial power and less scientific intelligence, for it will interrupt the training of men for science and industry. They propose, in short, an obsolete, wasteful, and ineffectual method of dealing with the military problems of the atomic age, problems which they themselves admit require an entirely new approach and entirely new ideas.

There is no defense against the atomic bomb. This means that there is no way of preventing the destruction of the cities of the United States, for nobody seriously supposes that there is a secret of the atomic bomb which the United States can keep. If we cannot beat the atomic bomb, we shall have to beat war. There is no other way in which we can save our cities from the fate of Hiroshima and Nagasaki. How we are going to train the survivors of the next war to pick up the pieces, connect the plumbing and telephone wires, and get the water, gas, and electric works going again is a matter of relatively little importance to the majority of us; for the majority of us, or our children or grandchildren, will be killed. Professor Einstein thinks that about two-thirds of the population will be killed, and that is certainly a cautious estimate. But of all the kinds of training which the one-third surviving might need, the most useless is military training. They would need scientific, industrial, perhaps plumbers' and electricians' training, but their military training would do them no good against the atomic bomb.

If we win, that is, if the one-third of us surviving can be said to win the next war, and want to occupy another country, we shall have to get there and shall have to get there in ships or aeroplanes. There may be some need of ships and aeroplanes for transport and a small army for occupation. Universal military training is not needed for such a force. And such a force will probably be blown up anyway at the outbreak of hostilities. Imagine what would have happened to the Hawaiian Islands, to say nothing of the United States Fleet, if three or four atomic bombs had exploded at Pearl Harbor on December 7, 1941.

We cannot beat the atomic bomb, and therefore we must beat war. The foreign policy of the United States, as announced by Mr. Truman in his Navy Day speech, is to have the largest Army, Navy, and Air Force in the world and thus insure peace. This policy is the sheerest folly, and it will end in disaster. A few well placed atomic bombs can make junk of all these vast preparations in a few minutes. We must beat war. Our strength cannot even lie in industrial and scientific power; for our plants and laboratories can easily be destroyed. Our strength must lie in the intelligence and spirit of our people. This intelligence and spirit must be devoted to producing a world which can stay at peace. If all efforts in that direction fail, we must with fortitude bear the consequences and defend the remnants of our country as best we can.

In the attempt to defend the remnants of our country as best we can, military training

is the most useless of all forms of preparation. An educated, inventive, devoted people, united by a common understanding of their common heritage and filled with a determination to defend it—such a people will have the best chance of winning an atomic war and of reconstructing their society amid the destruction which an atomic war will visit upon both the victor and the vanquished. From the standpoint of defense, survival, and reconstruction the best expenditures of $3,000,000,000 a year in the atomic age would be an expansion of education among all Americans, young and old, until all of us were united in a common understanding and all of us had developed to the maximum the potential character and intelligence we were born with.

This is also the best way to beat war, for it is a start toward the formation of that world community which is our only hope. It is insane, when we have just participated in the establishment of a world organization, to proclaim the futility of it by announcing that we are going to base our plans for peace on our own overwhelming military strength. We blast and betray the only hope we have. The time has come to stop this silly, un-American saber rattling, and get down to the task of laying the foundations of a peaceful world.

Additional British Investments in the United States

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Leslie Gould, financial editor of the New York Journal and American:

FORTY-FIVE OTHER UNITED STATES FIRMS IN WHICH BRITISH HAVE STAKE

In addition to its stake in American insurance companies and leading industrial enterprises, Britain's Socialist government owns either the controlling or a substantial stock interest in 45 other American companies, some of these 45, operating in all lines of endeavor, in direct competition with American companies. Others are companies in which the British are the controlling stock interest, or where individuals or companies were substantial investors. These securities are listed, that is, not traded on an exchange. Title to these was taken by the British Government in 1941, when all foreign investments of British nationals and British companies were sequestered. Control of a few enterprises were sold on this market to American investors, such as American Vicose. The others were pledged as collateral for a $425,000,000 RFC loan, now reduced to around $243,000,000.

On the unlisted securities of the 45 companies, the British in 1941 put a valuation of $115,000,000. Today these are estimated to have a value of $215,000,000—or a profit to the British Government of $100,000,000. To date the British Government has refused to sell these securities to Americans, although several offers have been made for controlling blocs. Yet, the British are so badly in need of dollar exchange that they are knocking at the United States Treasury's door for a $3,750,000,000 loan at interest rates lower than the United States Government must pay its own bondholders who will put up the money. Here is a list of the 45 companies with the number of shares pledged with the RFC:

United States Potash Co., 288,750 shares; Delta & Pineland Co., of Mississippi, 2,980 shares; Delta Planting Co., 3,434 shares; Linen Thread Co., Inc., 78,722 shares; Yardley of London, Inc., 30,595 4½-percent preferred and 87,247 common; Ferguson-Sherman Manufacturing Corp., 6,000 A and 1,500 B shares; Oldbury Electric Chemical Co., 8,400 shares; Lea & Perrins, Inc., 2,107 A and 5 B shares; Arkwright Finishing Co., 7,000 shares; Interlaken Mills, 20,000 shares; Distillers Co., Ltd. (Delaware), 850,250 shares; Morganite Brush Co., Inc., 7,500 shares; Mica Insulator Co., 5,394 shares; C. Tennant & Sons of New York, 7,164 shares; American Thread Co., 1,197,000 shares; Joseph Tetly & Co., 4,580 8-percent preferred and 4,000 common; Dunlop Tire & Rubber, 610 first preferred, 31,600 second preferred, 197,300 common; J. & P. Coats (Rhode Island) Inc., 145,000 shares; Clark Thread Co., 180,000 and 18,607 shares; North Georgia Processing Co., Inc., 800 shares; Stowell-MacGregor Corp., 4,399 shares; B. Priestly & Co., 2,500 shares; Firth-Stirling Steel Co., 2,637 7-percent preferred and 10,173 common; Keasby & Mattison Co., 20,140 shares; Funch-Deye & Co., Inc., 12,000 shares; Twenty-five Broadway Corp., 11,300 shares; Baker Perkins, Inc., 1,051 7-percent preferred and 65,851 common; Pacific Molasses Co., Ltd., 3,750 shares; A. J. White, Ltd., 500 shares; Menley & James, Ltd., 1,550 shares; Hecht, Levis & Kahn, Inc., 2,393 shares; Crown Mills, Inc., 5,000 7-percent preferred and 10,000 common; F. W. Berk & Co., 100 shares; American Association, Inc., 158,325 common and $1,487,000 debentures; Spool Cotton Co., 2,500 shares; Jonas Brook & Bros. (U. S. A.), 1,000 shares; Dentists Supply Co., of New York, 100,765 shares; F. W. Cook Co., 1,005 shares; Norma-Hoffman Bearings Corp., 7,029 preferred and 90,000 common; Ensign-Bickford Co., 10,779 shares; Okonite-Callender Cable Co., 1,000 6-percent preferred and $275,000 first debenture 5s; Pembroke Chemical Corp., 235 shares; Josiah Wedgewood, Inc., of America, 215 shares American B stock.

Anglo-American Relations With Russia

EXTENSION OF REMARKS
OF
HON. CHARLES A. EATON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very able letter by Mr. Laurence Hunt, a distinguished lawyer of New York, which appeared in the New York Times of Tuesday, February 12, and which deals with the difficult and urgent problem of international relations as between communistic Russia and the capitalistic English-speaking democracies:

APPEASEMENT SEEN IN DISCARD—ANGLO-AMERICAN ACCORD AGAINST RUSSIA REGARDED AS PARAMOUNT

To the EDITOR OF THE NEW YORK TIMES:

I would like to express my appreciation of the firm, common-sense, and temperate tone of the New York Times editorial, Stalin's New Party Line. The editorial is a healthy antidote both to the irresponsible talk about the inevitable WAR with Russia and the equally irresponsible and even more dangerous talk of those who glibly advocate a policy of appeasement of Russian dynamism at the expense of the vital interests of other nations. This latter point should be especially emphasized at this time for the benefit of those who have already forgotten or deliberately rejected the lessons of the last 15 years of appeasement and war.

There are today in this country several so-called "molders of public opinion" who urge in their syndicated columns or over the radio that Russian dynamism should somehow be appeased at the expense of the British Empire and that the United States should act as a lofty, "impartial" mediator in determining how much of the British Empire or of British interests should be sacrificed to totalitarian Russia's expansion.

UNITED STAND ESSENTIAL

A strong British Empire is essential to the security of the United States. Great Britain, existing alone as a second or third rate power, would not be of much help in time of great need. The vast sea-connected British Empire and the great continental American Empire must stand together in peace as they did in war.

Have our present-day appeasers forgotten what a strong British Empire meant to our national existence in 1940 and 1941? Surely Malta is of more vital interest to us than the Channel Islands. We should be willing to come to the aid of Britain in defense of a strategic part of her empire, however it may have been acquired a hundred or two hundred years ago, just as we should expect the British to come to our aid in the event of a serious threat to the Panama Canal Zone, although we acquired it in a notoriously shady manner.

The policy of appeasing Russian dynamism now being advocated in some quarters is tragically similar to the policy which culminated in the Munich affair, in which, let us not forget, we also played an unhappy part. The names and places and dates have changed, but the grim story remains the same.

The Russian cry of "encirclement" is, if possible, more grimly ludicrous than the same German cry in the 1930's. We should frankly face the fact that the United States is today the chief rival of Russia, which is first trying to reduce the British Empire to an ineffectual second- or third-rate power before directly attacking this country's vital interests.

Russia is, of course, pursuing the old policy of divide and conquer, and it is distressing that Americans who should know better are unconsciously giving aid and comfort to that policy.

MEDIATION UNPROFITABLE

An American policy of mediation between Russia and Britain, based on the sacrifice of vital British interests in the hope that such sacrifices will gain us the loving regard of Russia, will not insure a law-abiding world in which the individual man and woman may achieve an increasing measure of justice and liberty. Selling out the British Commonwealth and its empire in the guise of mediation or any other pompous self-deception is not compatible with the honor and the security of the United States.

Whatever their imperfections may be, the American and British Empires together are the greatest force for the protection of human liberty and man's gradual progress toward a better world. Together we would neither threaten nor need to fear any other nation. Let's stand together and make no bones about it.

There will be world conferences, and many of them will fail. There will be all kinds of international formulas, and they will fade away. There will be glittering slogans, and they will be forgotten.

But if the American and the British peoples have faith in each other's purposes, hope in each other's future, and charity toward

each other's shortcomings, then, as friends, as partners, and as allies, they can go forward together into the future, as far as the human eye can see, in dignity, in freedom, and in peace.

LAWRENCE HUNT.

NEW YORK, *February 11, 1946.*

Address by Director Orvis A. Schmidt

EXTENSION OF REMARKS
OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. LUDLOW. Mr. Speaker, by unanimous consent of the House, I present for printing in the CONGRESSIONAL RECORD an interesting and informative address made by Mr. Orvis A. Schmidt, Director of the Office of Foreign Funds Control, as follows:

I have asked everyone in Foreign Funds Control to come together to hear first-hand about the present position of Foreign Funds Control. I have done so not only because I understand there are a number of rumors on this question making the rounds, but also because I think we are reaching a significant stage in the development of the Foreign Funds Control program. I feel that it is essential that everyone in the control should know the basic facts concerning the status of our organization. Its status affects the welfare and personal position of each of us. Therefore, I want to tell you straight from the shoulder as much as I know of these facts.

We are all aware that foreign funds control has been fundamentally a wartime operation. It was established in April 1940 to protect the assets of countries occupied by the Germans. When we went to war, the objectives of our program broadened and the importance of our operations increased. Throughout the long war years we performed a grade A-1 job. We carried out our objectives effectively and we did it with an economy and efficiency which I think was outstanding. This is not only my own opinion but has been said time and again by numerous authorities. Statements have come from such separate sources as members of the Appropriations Committee in the House of Representatives and the American Bankers Association. As recently as November 16 the bankers association at their Hershey convention adopted a resolution concerning foreign funds control which not only stresses the importance of our operations to the war effort but places the bankers of the United States squarely behind us in our continuing effort to uncover Axis assets held through neutral countries. Here is what the bankers said:

"The association commends the farsightedness of the United States Treasury for having prepared, prior to our entry into the war, the machinery to protect the property of invaded nations and, as the conflict deepened, to have converted this machinery so promptly into an effective weapon of economic warfare against the Axis.

"The effectiveness of these operations immeasurably advanced our cause, saved the lives of many American and Allied soldiers and civilians and was far more important in our overwhelming victory than can be measured merely in its financial-economic implications.

"We wish also to commend the Treasury most highly for the excellent results it has obtained, and is obtaining, in the disclosure of hidden Axis funds at home and in the Western Hemisphere, Africa, Asia, and Europe, particularly in the neutral nations. This hunt should be continued unceasingly to its ultimate completion to prevent any possible resurgence of the enemy system anywhere in the world.

"Financial control, long continued, is, of course, a deterrent to normal international banking relationships. We applaud the Treasury for its diligence in preparing to lift the controls from current banking operations with the liberated nations. We earnestly hope that further relaxations may be effected for all territories.

"Equally deterrent to the resumption of normal finance and trade is the continuance of control on existing frozen balances. Progress by the Treasury in this direction is contingent upon cooperation by neutral and other nations in disclosing Axis assets, now hidden by cloaking and camouflage. We trust these nations will provide sincere and wholehearted evidence of their desire to work with the United States Treasury to this end and thus bring about the prompt unblocking of their own funds and property."

As we all know, the end of the shooting war brought Foreign Funds Control to a new stage. Its program became that of arranging for an orderly unfreezing of the assets of United Nations in a manner which would protect American interests, insure that hidden enemy assets are not released, and in general, carry to completion the wartime objectives of the freezing control.

Our progress in obtaining these objectives has been rapid. General license No. 94 has eliminated our controls over current transactions with all countries of the world other than Germany, Japan, and the neutrals, the latter of which still have the use of their broad general license. Machinery for unfreezing the prewar assets of the United Nations has already been set up in general license No. 95. Defrosting agreements have been negotiated with France, Belgium, Norway, and Finland. The recent negotiations with Holland have been successful and we are expecting daily to receive from the Dutch Minister of Finance a letter that will enable us to include Holland in general license No. 95.

Today the work still to be done consists of the following general types:

1. We must supplement the defrosting procedure by handling the more complicated types of cases on an individual license basis.

2. We must work out with the neutral countries a program for the ultimate unblocking of neutral assets. This is naturally closely related to the problem of eliminating the German interest in any German assets held in or through neutral countries.

3. We must hold the line on the assets of Italy and the satellite countries (such as Rumania, Hungary, and Bulgaria) until a decision has been made as to their disposition.

4. We must continue to ferret out assets of Germany and Japan and keep them blocked pending vesting by the APC, and at the same time must set up appropriate channels to permit the gradual resumption of financial and commercial relationships with those defeated countries.

5. We must continue our important part in application of the proclaimed list.

Although we have already made much progress you can see from the list that there is very important work yet to be done. However, I think we may say today that we have reached the liquidating phases of our operations in that we may now for the first time begin to form a judgment as to the time and resources that will be needed to bring our program to an end.

When we appeared before the Bureau of the Budget and the Appropriations Committee of the House recently, they asked us for our estimate of the time and resources we would need to wind up the control. We replied that by the end of the fiscal year 1947—that is, by June 30, 1947, or approximately 17 months from now—we could bring the Foreign Funds Control program to a point where a separate agency would no longer be required to handle remaining problems. We said that we did not expect to ask for an appropriation for Foreign Funds Control, as such, to carry us beyond June 1947 as an independent agency.

So much for our estimate as to the time; now what about the resources?

Our appropriation for the current fiscal year is $2,000,000. When we appeared before the Appropriations Committee we estimated that we needed $2,250,000 for this fiscal year. The House Appropriations Committee, however, preferred to recommend that we be given $2,000,000. In this connection, the chairman of the Treasury Subcommittee, Congressman LUDLOW, made specific reference to our work on the floor of the House, saying in part:

"We were impressed with the witnesses who spoke for Foreign Funds Control and their evident willingness to meet economic requirements. * * *

"In making a further reduction of $250,000 in the estimate it was our thought that the other controls are now so well systematized and the possibilities of further economies through the extension of the block system are so promising the estimate could stand this additional cut. We have no desire to do anything prejudicial to the excellent service that is being rendered and if new developments in the unpredictable military field should cause Foreign Funds Control to run into financial difficulties we will not be hostile to the consideration of a deficiency estimate."

However, immediately after VJ-day, the Appropriations Committee reexamined all current appropriations in the light of the termination of hostilities. At that time the committee indicated that they would expect us not to return and ask for a deficiency appropriation. Accordingly, this year, which ends on June 30, we have to live within a $2,000,000 appropriation. Our expenditures during the first 6 months of this fiscal year, if continued, would total approximately $2,250,000—which looks like our first estimate was pretty good. Accordingly, we must cut down our expenses immediately in order to live within our resources for this year.

I might point out, however, that such a reduction would have been required anyhow since our appropriation for the fiscal year 1947—which begins July 1—will not exceed $1,300,000. Smooth transition to this reduced level requires that reductions in operations begin well in advance of the next fiscal year.

We have already begun a concerted drive to cut costs. We have just completed the consolidation of our field work into the Federal Reserve banks of New York, Chicago, and San Francisco. This eliminates the expenses of nine Federal Reserve banks and was made possible by the issuance of general license No. 94 which greatly reduced the number of applications received. We have closed the New York Field Investigative Office. We have closed our office in Puerto Rico. We have stopped printing our own documents. The analytical unit has been eliminated. We have turned back costly IBM equipment. The New York Federal Reserve Bank office has moved back into the main building at a substantial saving. They are also reducing the size of their staff, even though they are assuming the field work of five other banks and Puerto Rico. Despite these and other steps we are still not at the point where we can live within our Budget. Hence, additional steps will have to be taken to whittle down our costs and eliminate operations that can be dispensed with in the light of changing conditions. I hope that every one of you, when you see an area where

we can save money, will call it to my attention.

Inevitably, however, we will have to reduce our staff. Where necessary, reduction in force procedures will have to be used. As you know, the Civil Service Commission has set up specific regulations for reductions in force. Each of us has certain rights and certain protections under those regulations. In general, for reductions in force, all employees in like grades and like work are placed in competition in accordance with their status and length of service. When a reduction is necessary at a particular competitive level, temporary appointees go before war service; war service go before permanent. Veterans' status is also taken into consideration. In accordance with regulations, the personnel office has set up panels on all personnel in Foreign Funds Control. Information on your position on the panel can be gotten from the personnel office.

However, in order to make the necessary reductions with the least hardship to individual members of FFC, we have developed a comprehensive program to assist Foreign Funds Control people in working out voluntary transfers to other agencies of the Treasury and the Government. The personnel office, in cooperation with the administrative staff of the main Treasury, has already taken steps to insure that other agencies of the Treasury will look first to Foreign Funds Control to fill vacancies. It is planned that this program will be expanded as soon as possible into an active campaign of selling the qualifications of any people in the Control who want to take advantage of the program. In this campaign, top personnel of the Control will go out to other agencies to find out where the vacancies are and to recommend FFC people who are qualified to fill these posts, whether they are at grade 2 or grade 15. We have found that efforts in placing people to advantage will be facilitated if the personnel office has in its possession an up-to-date Form 57 so that an individual's experience and qualifications are readily available. Hence, we suggest that persons interested in taking advantage of this selling campaign which will shortly be started fill out up-to-date Form 57's and get in touch with Mr. Synan or Miss Miller of our personnel office, who are coordinating the campaign.

I am happy to report that many persons have already found good permanent positions with other agencies and that the experience gained in Foreign Funds Control has been an important factor in individuals' ability to land their new jobs. I think we all recognize that Foreign Funds Control has offered exceptional opportunities for all of us to gain experience and exercise powers and responsibilities that would not be granted to us in ordinary times. We are all beneficiaries not only of those exceptional opportunities but also of the fact that Foreign Funds Control has established for itself an unusual reputation for accomplishment and efficiency. Other governmental agencies with vacancies are usually happy to find qualified Foreign Funds Control personnel to fill them.

I trust that you will not go away today with any impression that Foreign Funds Control is on the verge of collapse and that everyone will be out of a job tomorrow. That is not the case. The 1947 appropriation of $1,300,000—if we got it, and I see little reason why we should not—while well under our present rate of expenditures, is nevertheless, a substantial amount. The problems to be dealt with throughout the next 17 months will be important and difficult ones and we will need a strong staff of experienced Foreign Funds Control personnel to deal with them. Our staff will differ from that which we have had in that we will not handle the large volume of applications or process the large volume of intelligence material that we have in the past. But we will have a lot of work to clear up in the next 17 months.

When the making of this talk was discussed, question arose as to whether it might have an unduly upsetting influence and discourage many people concerning their prospects in Foreign Funds Control. Fear was expressed that it would cause everyone to want to transfer immediately and that there would be an inadequate staff left to deal with the important problems still remaining. After serious consideration of this point, it was felt by the top staff that this is a chance we have to take. We agreed it would not be fair to withhold any information on the ground that such information might cause individuals to act to better their position. We agreed we are duty bound to lay the cards on the table where all may see and determine their own action.

In deciding to plan for the liquidation of Foreign Funds Control, we had to wrestle with one of the big temptations of bureaucracy. As we all know, any agency whose job is nearing an end can think up at least 15 good reasons why it should continue in business. We might have done that. As a matter of fact, there are some of us who believe that certain of the functions which we are performing ought to be performed in a peacetime world. However, we decided that, since we were created for a specific wartime mission, we are going to stop when that mission is accomplished. We will not try to perpetuate ourselves in office or argue for additional appropriations. As public servants, we must recognize that this is our fundamental obligation to the American people. When July 1, 1947, rolls around we want to be able to say that we Foreign Funds Control people did a real job toward winning the war, that when the job was done, we wound up the Control in a thoroughly creditable fashion, and that we all were ready for the next tasks—whether in Treasury, some other agency, or some private business—of building a great America in a peaceful world.

In order to insure that this information would reach all of you, and to make doubly sure that everyone would get it straight—including those who might not be able to be present today—this talk was written down. Mimeographed copies will be available in the personnel office. You may have questions about what I have said. I'll try to answer those which I can now, and should any question arise after this meeting, the personnel office will give you the answer.

Lowell Lithuanian Group in Appeal to President Truman

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following appeal to President Truman by a Lowell Lithuanian group, appearing in the Lowell Sun:

LOWELL LITHUANIAN GROUP IN APPEAL TO PRESIDENT TRUMAN—URGES RESTORATION OF SELF-GOVERNMENT TO PEOPLE OF LITHUANIA, LATVIA, ESTONIA

LOWELL.—Local residents of Lithuanian descent met yesterday at St. Joseph's parish hall on Rogers Street, under the auspices of the Lowell committee for Lithuanian independence, to commemorate the twenty-eighth anniversary of the Lithuanian declaration of independence.

It was resolved at the meeting that an appeal be made to President Truman and the Secretary of State to implement the wartime promises of the Atlantic Charter and restore self-government to the peoples of Lithuania, Latvia, and Estonia by demanding the immediate withdrawal of the armed forces of the Soviet Union from the Baltic States.

PROGRAM PRESENTED

A fine program of entertainment was presented. Under the direction of Miss Veronica Dzedulionis, organist, a musical program was offered consisting of choral numbers by the senior and junior choirs of St. Joseph's Lithuanian Church. Soloists were Miss Helen Saulon, Miss Rutvila Jonis, and John Kasinskas. Speakers were Very Rev. John J. Jakaitis, MIC, of Marianapolis College, Thompson, Conn., and Anthony J. Kneizis, editor of Darbininkas, Lithuanian biweekly, of South Boston. Music was provided by the Valentine family orchestra. The program was in charge of Rev. Francis W. Strakauskas, pastor of St. Jospeh's Lithuanian Church.

THE RESOLVE

The resolution as unanimously adopted yesterday follows:

"Whereas on January 20, 1946, a noted jurist of the Superior Court of Massachusetts publicly made the following remarks:

"1. All the world knows that godless Russia has torn the Atlantic Charter to tatters and enslaved millions all the way from Finland and Poland to Austria and Yugoslavia.

"2. By one shameless appeasement after another we have failed to uphold our American idealism.

"3. Despite the most solemn international obligations to which we have been a party we are now asked to recognize and ratify the so-called realism 'of these accomplished facts—facts of international robbery and unblushing enslavement of whole nations.'

"STATUS QUO

"4. And after that is done, to guarantee the status quo of those subjugated populations by sending our American boys, even without the consent of Congress, to rivet the fetters more firmly on those helpless and hopeless millions, lest their patriotic youth should ever arise to set themselves free, so that they might recover some of those same God-given rights for which our boys were told they were fighting.

"Whereas many notables of state and church were among those present in the gathering of over 1,500 persons who acclaimed the sincerely spoken truths of the learned justice.

"Whereas Lithuania typifies a nation whose people have been enslaved among the millions, a nation which exemplifies the accomplished fact of international robbery and unblushing enslavement by godless Russia, and unquestionably was one of the nations within the contemplation of the distinguished jurist: Now, therefore, be it

"Resolved:

"1. To appeal to the President and Secretary of State to implement the wartime promises of the Atlantic Charter and other policy declarations with actual measures directed toward creating conditions for the restoration of the sovereignty and self-government by the peoples of Lithuania, Latvia, and Estonia, by demanding that the Soviet Union immediately withdraw its armed forces of occupation and its administrative apparatus from the Baltic states, thereby enabling the peoples of the Baltic states to form broadly representative interim governments; that, after the withdrawal of the Soviet occupation forces, direct relief be extended to the peoples of Lithuania, Latvia, and Estonia by UNRRA; that thereafter the sovereign peoples of Lithuania and Estonia be enabled to hold free and unfettered elections; and, finally, that, pursuant to chapter

II, article 4, of the Charter of the United Nations, the Republics of Lithuania, Latvia, and Estonia be admitted to the United Nations."

Second Veterans Group Endorses H. R. 4761, the Patman Housing Bill—Amvets Ask Congress To Place Price Ceilings on Old Homes

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. PATMAN. Mr. Speaker, yesterday I inserted into the CONGRESSIONAL RECORD a copy of a letter received from the American Veterans Committee, endorsing the proposition to impose ceiling prices on existing homes, and asking Congress to pass my housing bill, H. R. 4761.

Today a second organization, the American Veterans of World War II, familiarly called the Amvets, likewise has sent me a letter urging that the Congress take swift action in passing this housing legislation, including ceiling prices on existing homes.

In my opinion we can have no clearer indication of the wishes of the returning servicemen themselves than the views expressed in these two communications. These two organizations represent the voice of hundreds of thousands of our returning servicemen. Their letters are a direct mandate as to what the veterans want and need—houses that they can afford to buy.

Under permission to extend my remarks in the RECORD, I should like to include this letter from Mr. Frank Dee Scriven, national executive secretary of the American Veterans of World War II:

NATIONAL HEADQUARTERS,
AMERICAN VETERANS OF WORLD WAR II,
Washington, D. C., February 14, 1946.
Congressman WRIGHT PATMAN,
New House Office Building,
Washington, D. C.

DEAR MR. PATMAN: In our recent appearance before the Senate Banking and Currency Committee on hearings regarding the Wagner-Ellender-Taft bill, we went on record in support of maintenance of ceilings on existing housing as well as new construction. Amvets' stand is to curb inflation at all of its sources. The deletion of such control on existing housing in your bill will cause inflation in that particular field, bringing about speculative transfer of properties, all of which will work to the advantage of the returning veteran.

Mr. Wilson Wyatt's program has been given our active support, and his program includes the need of ceilings on existing homes. The President's approval of Wyatt's program lends further weight to the need of such price control.

Any emergency housing program that will be effective will take time. Existing housing, then, is all that is now available to the returning veteran. Amvets can see no need for the returning veterans being penalized in attempting to secure such housing in a speculative market caused by a lack of muchly needed control. We hape that you will be personally successful in your fight to reinstate this provision in your act. Amvets support is promised.

Very truly yours,
FRANK DEE SCRIVEN,
National Executive Secretary.

Strikes—Monopolies—The Consumer

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. GOSSETT. Mr. Speaker, is the consumer to be squeezed to death between powerful organized industrial monopoly on the one hand and powerful organized labor monopoly on the other? Have labor bosses and industrial bosses grown more powerful than our Government?

Since coming to the Congress I have continually and consistently fought against such a catastrophe. Industrial abuses through trusts and monopolies is an old story in this country. However, during the last decade we have seen the pendulum swing from an era of industrial oppression to what may well become an era of labor oppression. To borrow the phrase which Mr. Roosevelt once borrowed from Shakespeare, we may be forced to say, "A plague on both your houses."

We should not quarrel with big business or with big labor organizations so long as they operate honestly and in the public interest. To compel them to do this, however, it becomes necessary for the Government to write the rules of fair play and then to enforce those rules as an impartial referee. Although we have not used them effectively, we have on the statute books laws under which we can hold industry liable for its contracts, can punish it for trust violations, can restrain its political activities, and can trim its profits. We have no such laws through which we can exact similar compliance from powerful organized labor.

To keep the record straight and to show that I am as much concerned with the civic responsibility of industry as with that of labor, I wish to make two brief references to the record.

On June 10, 1940, in one of my numerous speeches attacking the farm machinery trust I had the following to say:

In 1927 the International Harvester Co. paid a total compensation per officer of $142,940 to each of 11 officers, $147,524 to each of 12 officers in 1928, $161,193 to each of 13 officers in 1929. The president of International Harvester Co. in 1927 received $353,386; in 1928, $405,909; in 1929, $412,860.

I now want to call to your attention that the International Harvester Co. has lost and is losing many millions of dollars in Europe which will probably be charged to the cost of production of farm machinery in America. Some years back this company lost in Russia a plant worth approximately $38,000,000, a sort of contribution to the Communists. In 1938 they owned two plants in Germany, which plants are now doubtless turning out implements of destruction for the Nazi war machine. They own three plants in France whose fate we cannot yet predict.

On December 10, 1945, speaking against the Bulwinkle bill which would, in effect, exempt railroads from the antitrust laws, I made the following statement:

This bill will further enhance their tremendous economic power. This bill decreases rather than increases the protection to which the people are entitled from gigantic monopoly and domination in the transportation field by the Association of American Railroads.

But now back to the question of reasonable controls for organized labor. The two largest, most recent, and most continuous strikes in this country well illustrate how the activities of big labor unions can affect the public welfare. The United Automobile Workers-CIO is composed of almost a million and a half members, and is the largest union in the world. This union absolutely controls all labor in the automotive industry and the farm-machinery industry of America. These workers produce perhaps 95 percent of the automobiles, trucks, tractors, and farm machinery used throughout this country. While only the General Motors workers have been on strike, so far, the whole UAW-CIO union has the power to completely paralyze the business and economy of the entire country. Apparently, they will continue to demand shorter hours of work and increased wages.

The United States Steel strike, which has just been settled by increasing the price of steel and by increasing the wages paid to steelworkers, has seriously slowed down reconversion and could have paralyzed the national economy. Some steel goes into nearly every item of hardware. The 750,000 members of the United Steelworkers Union-CIO make practically all of the steel of the country. Hence, they have a club over our entire economy. Now, before the strike in General Motors, and before the strike in the steel industry, the workers in these two gigantic monopolistic industries received far above the average wage throughout the country. The worker in the General Motors plant received an average of $1.13 an hour while the worker in the United States Steel plant received an average of $1.14 per hour. Whether or not these wage scales were reasonable, big steelworkers at least had a contract to work for such wages until October 15, 1946. This contract had many months to run, and the strikes were in violation of contract. Why then, did they strike? They struck to take advantage of the present dire need of the products turned out by their plants. They took advantage of the country's emergency. Many other wildcat strikes, strikes in violation of contract, could be mentioned.

Would not a decent regard for the public interest have dictated that these powerful unions await a reconversion of the Nation's industry before pressing their demands? Would it not have been fair to have tightened their belts a little, if necessary, until returning veterans found jobs, and the country got back on its feet in civilian production? They then could

have determined what the traffic would bear in the way of a fair and reasonable wage.

The strike of some 2,000 tugboat workers in the city of New York last week, which came near paralyzing that great city of some 8,000,000 souls, illustrates the powerful weapon in the hands of an organized labor union which has a monopoly of the goods and services in a critical industry. When a union, through its control of a bottleneck can seriously injure millions of people, the Government and the people have a right to demand a prompt settlement of a strike.

While most persons recognize the right of labor to organize, to bargain collectively, and to strike, they do not recognize the rights of labor to abuse these privileges to the general detriment of all the people.

The attitude of some of the big CIO bosses is illustrated in a letter to Congressman SLAUGHTER, of Missouri, written from Kansas City on December 12, 1945. CIO Regional Director Irvin L. Deshelter, condemning the Congressman for urging the passage of legislation for the settlement of industry-labor controversies, said:

> Labor willingly sacrificed during the war, but they are not willing to continue to sacrifice anything now that the war is won, for the benefit of the millionaires of this country.

Such a statement is absolutely false and ridiculous. Most organized labor and most industry profiteered out of the war, industry making more profits and labor higher wages than ever before in the history of the world. In fact, the abuse of cost-plus contracts, the hoarding of labor by industry, together with strikes, slow-downs, padding of pay rolls, the 40-hour week, and so forth, during the war added at least a hundred billion dollars to our national debt. Few people sacrificed during the war except members of the armed forces and their families. Someone has said a grafter is a person whose income exceeds his service to humanity. We have too many folks in this country who are willing, even anxious, to become grafters. We cannot permit profiteering and racketeering to go unrestrained, especially during reconversion, if we are to maintain our national and individual solvency.

There are many perils in the present situation.

Perhaps the greatest danger in permitting strikes in critical industries or in settling them by increasing prices and wages is the threat of inflation. We know that living costs are already up some 30 percent. If strikes and the threat of strikes are to keep pushing prices ever upward there can be no avoidance of inflation. Ford officials say they cannot continue to make cars at present prices. If management and labor both have their way we will probably soon pay $1,500 for a $1,000 automobile and $350 for a $100 plow. Uncontrolled inflation would mean that our dollars, our war bonds, our insurance policies, would become worthless.

Another peril in the present situation is the threat to our form of government. Those who would change or destroy a government first seek to create chaos and confusion. They move in under all sorts of smoke screens. They pretend to be benefactors while taking away the liberties of the people. There are some master minds, wolves masquerading in sheep's clothing, particularly in the councils of the Political Action Committee of the CIO, who are scheming and working to force upon this country some form of national socialism. They want a dictatorship by the big labor bosses. The workingman will, of course, in the end suffer most under such a regime.

Mr. Speaker, among many thought-provoking questions now being asked by many serious-thinking people are these: Are the farmers, small businessmen, school teachers, laborers, white-collar workers, and unorganized folks generally to be squeezed to death between powerful industrial monopoly on the one hand and powerful organized labor monopoly on the other? Will a few labor bosses become the political bosses of America? Is uncontrolled inflation to destroy this Nation? Is the public interest in the matter of strikes to be wholly disregarded? Does the right to strike against the national economy take precedence over all other rights? What limitation, if any, should be placed upon this powerful strike weapon? Will our Nation stumble and fall on the very threshold of her greatness, and will she utterly fail to assume her role of responsible leadership? Will weakness and degredation at home make us impotent in international affairs? Are the exponents of national socialism putting on a barrage of chaos and confusion in order to regiment and control this Nation? Will we one day sit in the ashes of a once prosperous economy and morbidly contemplate what might have been? Have we won a victory over selfish and titanic forces abroad only to be destroyed by selfish and titanic forces at home?

These may sound like crackpot questions. I hope they are. Many good people ask them seriously. I repeat them not because I think them to be probable but because I fear them to be possible. Let us not destroy in a few years what we have built up through centuries of toil and struggle.

Lawyers in Military Service

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 11, 1946

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of Maj. Gen. Thomas H. Green, Judge Advocate General of the Army, on the subject of Lawyers in Military Service, delivered February 7, 1946, at the fifty-seventh annual dinner of the Brooklyn Bar Association, of which Mr. Hunter L. Delatour, a distinguished Brooklyn lawyer, is the president:

I esteem it as a great privilege to be present at the annual mid-winter meeting of the Brooklyn Bar Association and an honor to be invited to talk to you on the work of the Judge Advocate General's Department during the war and since VJ-day.

I bring you no brief case weighted down with statistics, legal opinions, or official reports, but I do bring you the greetings and best wishes of the Judge Advocate General's Department and its 2,800 commissioned officers.

It is about the latter that I wish to talk, for it is they who have done the job—and are still doing it.

Personally, I think they have done an outstanding feat, but perhaps I am prejudiced. However, I have no hesitancy in making such an assertion before this assemblage, because after all, they are your men as well as ours.

They came from the ranks of the civilian bar to the ranks of the Army. We put uniforms upon them and made them into soldiers and officers, but always they were lawyers and in their devotion to the twin professions of arms and the law they contributed mightily to victory.

Moreover, many of them saw combat service before entering our corps and were therefore all the better fitted to become judge advocates when they won their commissions in the Judge Advocate General's Department.

Now that Army demobilization has set in so strongly, many of these soldier-lawyers are back in civil garb, having handsomely earned their discharges. Some of these veterans are no doubt in this gathering. But others are still carrying on and the duties and responsibilities they are fulfilling are quite as pressing and heavy as during the most critical period of the war.

Let me state emphatically that their loyalty and efficiency in these trying reconversion days reflect great credit upon the legal profession of America. They are still meeting an emergency.

I mention this situation in order that you may understand how deeply we still rely upon the members of the legal profession as a whole to see us through the postwar crisis. It is but natural that when the shooting war ended the lure of private practice should exercise a magnetic appeal upon men who left their offices to serve their country in time of peril. Those who are remaining for a while in the service despite their desire to get back to their civilian duties are therefore entitled not only to the gratitude of the Army but to the respect and admiration of their fellow lawyers everywhere.

This fact was deeply impressed upon me only last week when I attended the final graduation exercises at the Judge Advocate General's School at the University of Michigan Law School, Ann Arbor, Mich. The spirit of the young lawyers who received their commissions there just before the school is to be closed down, and who are to replace veteran judge advocates who are now leaving the service, was typical of those who volunteered for service in our corps during the anxious days of 1941. The high morale of these fledgling second lieutenants made me doubly proud of both the Army and the law.

It is for this reason that I prefer to speak tonight upon the human sides of the work of the Judge Advocate General's Department, rather than upon legal technicalities and documentary evidence of its operations.

The legal branch of the War Department and the Army has never before been beset with such a variety of problems and functions as during the present war. They have necessitated the services of the best brains of the American legal profession. The Judge Advocate General's Department has had the

good fortune of commanding the talents and services of many of the ablest lawyers in the Nation. Without them it could not have performed its mission.

The mission of the Office of the Judge Advocate General, reduced to a minimum definition, is to act as the legal adviser to the War Department and the Army. The Judge Advocate General is the chief law officer of the War Department. During this war he has become, because of the magnitude of the Army, the head of the largest law firm in the world.

When war broke out there were but 105 commissioned officers in the Department. The roster today shows a total of approximately 2,800. Simple mathematics reveals, therefore, that some 2,700 of them came directly to the Army from the civilian bar of the Nation.

When you consider that figure you will recognize, first, the fact that the American bar has served the country well; and, second, that the performance of the functions and activities of the legal branch of the Army has been principally in the hands of your own bar associates.

These are the military attorneys who have served as staff judge advocates; administered military justice to the far corners of the world; settled claims from the South Pacific jungles to the Article Circle; investigated war crimes on two sides of the world and prepared indictments; rendered opinions on international law and the Geneva Conventions; protected the interests of the War Department in patents and copyrights; represented the War Department in civil litigation; counseled Army officers in charge of seized war industrial plants and establishments; supervised the military law training of more than 2,600 graduates of the Judge Advocate General's School; interpreted the laws and regulations of the Army and aided in the drafting of legislation; prepared opinions on all phases of acquisition and use of lands for military reservations; passed upon innumerable war contracts; effected adjustments in taxes saving millions to the Government; and participated, with the aid of some 27,000 civilian attorneys, in the processing of more than 8,000,000 cases of free legal aid to enlisted personnel and their dependents.

These are the men who have been entrusted with the responsibility of safeguarding the legal interests of the Army and the 10,000,000 service men and women who have been subject, at one time or another, to the authority of military laws and regulations.

But a few short years ago these men were pouring over reference books in home-town offices; conducting proceedings in behalf of private clients; prosecuting criminals for the Government or States; sitting as judges in the courts of the Nation; teaching law in the universities of the land and otherwise pursuing the peacetime practice of our profession.

Little did they dream that some day they would be isolated on Army bases and other installations in obscure islands of the seven seas settling war claims and winding up Army affairs; or making 1,500-mile hops with their brief cases as a matter of routine in staff assignments; or prosecuting, and in some instances defending, in the interests of American justice, Axis war criminals accused of committing atrocities against our fighting forces and American citizens still too ghastly to believe.

I cite these examples of their responsibilities and their operations to impress upon you the grave importance of their duties and the loyal efficient manner in which they have discharged them. The salient fact is that Americal law has been able to follow the American flag wherever it went only because of the great reservoir of patriotism and talent provided by the American civilian bar.

For the last 4 years and more I have worked with these soldier-lawyers, who have brought into the Army the same high sense of professional ethics and integrity that distinguished their practice of the law in their prewar days. I know their caliber and their record and I say that they have done an excellent job.

I welcome this opportunity to express the appreciation and gratitude of the Judge Advocate General's Department for their unselfish, capable, and devoted service to the law and to the Army. They have added new luster to their profession.

In particular, I applaud them for the excellent account they have given of themselves in the difficult task of administering military law and justice. We in the Army do not claim that it has been perfect. I doubt if anyone would make such a claim for our civil courts. As in every other activity directly effecting the rights, liberties, and lives of individuals, the human equation and the law of averages must be reckoned with. It is as true of Army life as it is of civil life.

Nevertheless, it has been the aim of this Department and those who represented it, to guarantee to every person accused of violations of military law, the type of fair and impartial trial for which American justice, both civil and military, stands.

Not only do we believe that this object has been accomplished in the main, but that the system of military justice established under the laws of the Congress is substantially sound and that despite some apparent faults, it has been carried out during this war in harmony with American traditions of fairness and efficiency.

Let me reiterate what I recently stated before the annual convention of the American Bar Association at Cincinnati, last December, to the effect that it is always at the end of wars, even victorious wars, from the viewpoint of hindsight, that the Army hears most about its errors of both commission and omission.

I have no quarrel with this attitude on the part of the critics. It is always a part of the mopping up operations. Any organization can learn much to its advantage from constructive criticism. The Army is no exception. It might be pertinent to state, however, that the Army has not been reluctant to admit mistakes in military justice during the war and has never been stiffnecked about correcting them to the fullest extent possible. The record is full of instances in which redress has been made when injustices have come to official attention.

Primarily, the court-martial system is designed to help the Army win its battles. The sanctions of military justice are an instrument of command and form the strong right arm of the military commander in the maintenance of discipline and order within his ranks.

Every officer and noncommissioned officer is taught first that discipline and teamwork can best be developed by leadership. There is no substitute for this quality—not only in the Army but anywhere else. Nevertheless, military men also know that when they are dealing with a cross section of the people, they are dealing with weak as well as strong characters, and with refractory as well as obedient human material.

Punishments must therefore be imposed in some cases of wrongdoing and defiance of constituted authority are to be kept under control. At times the penalties, under the stress and tension of combat conditions, are severe. In such instances they are inevitably subject to reexamination by our automatic review system and reduced where justice so demands.

Any impression that hard-boiled justice is the routine or average product of our court-martial system, is not borne out by the facts. The cases that make the newspaper headlines are the exceptions—and those, of course, we always hear about.

A recent survey of several categories of offenses taken from our files shows a standard of fairness and moderation for which I am afraid we receive little credit, so far as the public is concerned.

For example, of 345 prosecutions for murder during the fiscal years of 1942 to 1945, inclusive, 107, or 31 percent, resulted in acquittals and 92, or 27 percent, resulted in findings of lesser included offenses.

Of 473 cases of manslaughter, 296, or 63 percent, resulted in acquittals, and 39, or 8 percent, resulted in findings of lesser included offenses.

Of 307 cases of rape, 160, or 52 percent, resulted in acquittals and 44, or 14 percent, resulted in findings of lesser included offenses.

Court martial sentences in time of peace are strictly limited by maximums established by the President of the United States. During wartime, these restrictions were modified as required by need and the President delegated some of his powers with regard to death sentences and dismissal of officers to commanders in the field.

Perhaps you have noted through the columns of the press, authority to exercise final decision in death cases has now been withdrawn by the President and all such cases both here and abroad must be referred to Washington for review and final action.

The Army systematically examines the cases of general prisoners in the exercise of this power. In my opinion, no penal system of which I am aware, insures a more intelligent and impartial consideration of the rights of persons in confinement and the interests of the public, than the American system of military justice.

At the present time an advisory clemency board, established last June by the Honorable Robert P. Patterson while Under Secretary of War, is reviewing the records of the cases of more than 32,000 general prisoners for the purpose of equalizing justice and exercising clemency in all cases which merit such action.

This board is under the chairmanship of former Associate Justice of the United States Supreme Court Owen J. Roberts. Included on the board is a recognized civilian penal authority and three Army officers, some with combat experience and all familiar with the administration of military justice.

While we in the Army hold that a military prisoner not only is protected by all the rights surrounding a defendant in a United States court and even more, the efforts of the Army to see that every offender obtains fair treatment extend even further.

This is demonstrated by the Army rehabilitation program, under which prisoners are given an opportunity for rehabilitation at disciplinary barracks in both foreign theaters and in this country. By the time the war ended 17,000 men in the United States and 4,000 abroad had been restored to duty by this process.

In fact, approximately one-third of all prisoners sentenced to dishonorable discharge have thus far been enabled to rehabilitate themselves and return to good standing and good citizenship. Not least among the accomplishments of the Judge Advocate General's Department was its vigorous support of the proposal early in the war to establish this program.

Although the number of courts-martial is naturally decreasing with the reduction of the Army in size, other phases of our work are increasing. The pretentious task, for instance, of processing the 32,000 records of cases for clemency consideration by the special boards operating under the Honorable Kenneth C. Royall, the Under Secretary of War, is being done by members of the Office of the Judge Advocate General.

Large numbers of our staff are also engaged in the investigation and prosecution of war criminals in both Germany and Japan, while the tremendous growth in the volume

of claims made it necessary last summer to establish a branch office at the Holabird Signal Corps Depot at Baltimore, Md., to handle the increased business.

The subject of claims is an important one in our postwar activities. Our claims officers are now widely distributed all over the world, settling three types of claims caused by military operations.

The first concerns claims for personal injury, death, or property damage in this country. The second involves claims of a similar nature arising in foreign countries where American troops are stationed and the Foreign Claims Act applies. The third takes in so-called personnel claims filed by service personnel for loss of personal property in transportation, in combat, or in other manners directly incident to service. It was for the purpose of handling claims of the latter type that the branch office was established in Holabird. Up to this time approximately 60,000 claims of this nature have been processed.

The job of settling claims all over the globe has been of such an extensive size that we have adopted a decentralized system of claims judge advocates and claims officers. In the formulation of regulations, we have adopted what may be said to be the average of the conflicting laws of the various States and which follow, in procedure, the recognized commercial claims practice as closely as possible. I might state, parenthetically, that we have not wanted for business.

Many of these claims arise from airplane crashes, troop maneuvers, traffic accidents, maritime operations, etc. We are not ambulance chasers, because we do not have to hunt up clients, but we do insist upon zeal in investigating matters in which we are likely to have an interest. We want to be prepared in the event an administrative claim or the initiation of special relief legislation necessitates a report by the Judge Advocate General.

Moreover, we believe in promptness, as you do in private practice. A fair sample of the speed with which we attempt to work was the Empire State crash of last summer. The airplane which demolished a portion of the tower struck the building shortly before noon. Before the day was over, the accident was being thoroughly investigated from an Army claims office established in the building and staffed by officers from our office and local Air Force officers recruited by telephone. Indeed, most fact claims are being settled within 20 days from the time of filing.

The brief sketch I have given of the abovementioned activities of our Department disclose, I believe, my reasons for stressing the human side of our program. Our work requires trained men, experienced in the law, imbued with a high sense of duty.

Your civilian bar associations have provided them for us. They have done more. Through your war-work committees and your cooperation in our legal assistance plan, you have furnished some 27,000 public-spirited attorneys in civil practice, who have given of their own time and service in behalf of the military personnel of the armed forces and their families.

As you know, the legal-assistance plan is a joint endeavor of the War and Navy Departments and the American Bar Association, to make adequate legal assistance available to servicemen and their dependents.

From reports received by my office it is now established that about 8,000,000 cases have been handled by the Army alone, from the inception of the plan early in 1943, to January 1, 1946. This is an astronomical figure, without taking into consideration the number of cases handled by the Navy.

We are profoundly grateful for this contribution to the welfare and morale of our fighting forces. It has solved not only the headache but the heartache of many an enlisted man or that of some member of his family. I doubt if the public is even dimly aware of the value and sweeping extent of this fine-spirited, voluntary service on the part of members of the bar.

Because of the fact that the legal-assistance plan has been operated on such a large scale, it has brought to light significant trends regarding the types of legal advice sought by thousands of individuals ordinarily unaccustomed to consulting a lawyer.

The experience of the Army in the handling of these matters shows that requests for legal advice fall into five general categories, namely, wills, powers of attorney, taxation, domestic relations, and miscellaneous. The manner in which these categories have changed in the progress of the Army from a state of intensive warfare to one of peace is shown by the following comparison of composite percentages by types of all cases handled by legal-assistance offices throughout the Army;

Types of cases	1943	1944	1945	Last quarter of 1945
	Pct.	*Pct.*	*Pct.*	*Pct.*
Wills	25	25	12.5	5
Powers of attorney	27	26	14	8
Taxation	15	19	35	27
Domestic relations	6.5	7	9.5	14
All others	26.5	23	29	46

These figures reveal that wills and powers of attorney matters were numerous at first but as the war went on and the major shipment of troops overseas was accomplished they declined, while on the other hand the percentage of tax, domestic relations, and other legal problems increased.

These trends are especially apparent when the figures for the last quarter of 1945, which reflect the influence of the ending of hostilities on legal assistance work, are compared with the figures for the year 1945 as a whole and for those for the previous war years.

For example, we see that matters connected with powers of attorney dropped from a high of 27 percent in 1943 to 8 percent in the last quarter of 1945; while miscellaneous matters jumped from 23 percent in 1944 to 46 percent by the end of 1945.

We believe that these facts are not without meaning to the members of the bar as well as to the Army. They indicate that the adjustment of domestic relations and other personal problems, such as real estate, personal property, and contract matters, are the things which are now of most concern to those returning from overseas. Some of these questions they will be able to adjust before leaving the service, but many others will be taken back with them on their return to civil life and will require the assistance of the civilian bar.

Although the fighting is ended and the armed forces are being demobilized at a rate faster than anyone thought possible, there will still be many men in the service for some time to come. These servicemen, particularly on occupational or garrison duty abroad, will also continue to require legal assistance. We in the Army intend to do everything possible to meet this need, which remains basically the same and is diminishing in volume only in proportion to the numbers being separated. However, as lawyers in the Army are also being separated in increasing numbers, more and more of this work, it is evident, will fall proportionately upon the civilian bar.

This leads me to some thoughts regarding the future which I believe are of interest and concern to the profession. In the course of the operation of the legal assistance plan, it has become more and more apparent that these activities have had the broad, general effect of helping large numbers of servicemen and their dependents to realize the value and importance of legal counsel.

Many had never before consulted a lawyer and most of those served undoubtedly have a much greater respect for, and confidence in, the legal profession than they had before. Thus, the profession has obtained the good will of a large portion of our population who have been educated to turn to the organized bar when in need of sympathetic and reliable legal advice and assistance, millions of whom are already out of the service and back in civilian life.

At the same time, this presents a problem to the organized bar as to how best to retain and further develop this gain in public relations with this group. It is manifest that unless affirmative and constructive action is promptly taken in this regard, much of this asset will probably soon disappear.

It is not for me to do more than point out this problem to you with the hope that the profession will find a solution that will benefit it and the public as a whole. Perhaps some feasible program can be worked out so that the large segment of our population which is willing generally to pay within its means for needed legal service, usually of a minor nature, will be able through the organized bar to obtain such service from competent, reliable and sympathetic counsel, when they do not have and do not know a lawyer.

The Army legal-assistance plan basically provided such service through the cooperating bar organizations for servicemen. It is believed that those who have been so served constitute a cross section of our Nation and that the experience had in serving them, if applied to the whole people, would indicate that a small percentage are well fixed financially, about the same percentage are without funds, and the majority are of limited or moderate means. The first group can well afford to pay a lawyer, the second can pay no fees at all, and the last group only reasonable or reduced charges.

The problem is to find a way to make legal service available to members of these different economic levels, particularly those in the last group, who want to, and should, pay reasonable fees commensurate with their ability and the nature of the service rendered, on a sensible and realistic basis.

That, I believe, is the problem facing the organized bar—a problem which has always been present and is only partially the result of our wartime legal-assistance program but which has been clearly demonstrated and made apparent by this unprecedented experiment in providing legal service to such great numbers of persons.

As the Judge Advocate General's office is concerned in providing legal assistance for military personnel, not only now and during the demobilization period but also in the permanent peacetime Army, the action taken by the organized bar on this larger problem will be of importance to us. Consequently, I hope, if it receives consideration, that we may know what, if any, method of referral of servicemen's cases will be available in the future through the organized bar.

Our position in this matter, as on the legal-assistance plan, is one of bringing to the attention of the bar an opportunity to render a public service and to offer our cooperation in working out a program as far as we may be concerned. What should and can be done is entirely a matter for determination by the bar after due consideration of the many factors and elements involved. We only hope that such consideration may be promptly given and the position and disposition of the bar be made known to us so that we can make plans accordingly. I trust that your association, and all the others, will cooperate with the American Bar Association, which I am advised is considering this matter, so that the views and support of all concerned will be coordinated.

And now, in conclusion, let me thank you again for the opportunity of coming here to enjoy your hospitality and discuss some of the affairs of our department.

I have been talking principally about the lawyers in our own corps or those who have worked directly or indirectly with the Judge Advocate General's Department. But they do not constitute the whole story.

I suppose there were at least some 35,000 lawyers and men with legal training in the Army during the course of the war. They did not function there as lawyers, however, although many of them, because of their professional backgrounds, aided in legal assistance work, served on military courts, and performed other services in which their law experience proved useful.

For the most part, however, they were just part and parcel of the rank and file of the Army, slugging it out with the foe on the beach heads of islands and continents, flying bombing missions over most of the world, doing their ordinary duties as plain GI's or commissioned officers along with the rest of their comrades. The bar may well be proud of their record and achievements and of the gold stars which shine on the service flags in many a law office today.

They served in the finest Army in the world. No Army in our history has been as well behaved. We know this from the testimony of the field commanders and from the records of our office. Serious infractions of the regulations governing soldierly conduct were the exception rather than the rule.

I salute the lawyers in uniform who helped not only to attain victory but to maintain the honor, reputation, and good name of the American Army.

Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. FLOOD. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein a speech delivered by me at Webster Hall, New York City, on Sunday, February 17, 1946, at a ceremony commemorating the twenty-eighth anniversary of the independence of the Republic of Lithuania, under the auspices of the Lithuanian American Council:

Mr. Toastmaster, I am happy with the opportunity when I realize that with these remarks I pay tribute on this twenty-eighth anniversary to the rebirth of Lithuanian independence and freedom.

Lithuania is a land that commands our attention. I speak of this remarkable nation that has existed on the shores of the far-distant Baltic Sea from time immemorial. I speak of a proud race of people who, down through the centuries, have remained apart from the Teutons, Scandinavians, Finns, and Slavs; a country of noble heritage, small in size, but truly and properly shaped as a heart. And it is this heart that lies in the military pathway of two great rumbling and crushing empires of history, Germany and Russia.

In the fifteenth century Lithuania had claimed a vast domain extending from the Baltic to the Black Seas, and men and women of Lithuanian blood all over the world thrill with pride when their mind goes back through the pages of history to the brave deeds of Vytautas the Great. This great warrior king was certainly the most imposing personality of his time in eastern Europe, and his martial valor was combined with statesmanlike foresight.

Lithuania is a land of surpassing beauty. It is resplendent with lakes, rivers, and beautiful forests. Few hills are to be observed in the softly rolling country. It is little wonder that the people have a deep passion for their beloved homeland and desire only that all invaders will depart and leave them in peace. They appreciate the beauty of their Baltic home and they tenderly care for the soil which so abundantly nourishes them.

Since the day, a quarter of a century ago, when that clear clarion call to awake as a restored republic was issued at Vilnius, the Lithuanian nation has bent every effort to restore her great natural wealth, political prestige, and position among the nations of the earth. The Government followed an enlightened program of doing those things that were for the best interests of the greatest number of its people.

Man is essentially religious, and in his continued search for God he leaves the mark of culture. Through the instrumentality of her great leaders, the Christian faith was introduced to Lithuania and the cross of Christ was placed on the altar within the newly built church, erected on the very foundation of a pagan chapel. This great people knew that a nation should have its own clergy, and Lithuanian youth was encouraged to take up the study for the orders of the church. Down through the years the Lithuanian clergy have been to the forefront in all things that were for the good of their people, their nation, and their church.

My friends, it is quite correct to say the Lithuanian has a great deal of cultural wealth, and daily in the nation's capitol its trumpeters sent out a call which was really a prayer of thanksgiving to the Maker of Man.

It was customary for the Lithuanian-Americans to observe at this national shrine the Fourth of July. Since a replica of the liberty bell had been sent from America as a gift from the Sons of Lithuania, it was fitting that it should be rung on this occasion. And on this bell appear the words, in Lithuanian, which, translated mean: "Forever toll to Sons of Lithuania. Whoever fails to defend their liberty is unworthy of it." This should serve as a token of the everlasting friendship of America with Lithuania.

Let me read for you the resolution of the Lithuania Taryba given on February 16, 1918. By this resolution the die was cast and Lithuania was pledged to the cause of complete and untrammeled liberty. This resolution read:

"The Taryba of Lithuania, as the sole representative of the Lithuanian people, in conformity with the recognized right to national self-determination, and in accordance with the other conferences of Lithuania held in Vilnius, September 18 to 23, 1917, does hereby proclaim the restitution of the independent state of Lithuania, founded on democratic principles, with Vilnius as its capital, and declares the rupture of all ties which formerly bound this state to other nations."

Only a prophet can accurately foretell future events, but a study of Lithuania's past would seem to indicate that the expression "Kas bus, kas nebus, O Lietuva neprazus," which means, "Come what may, Lithuania will always stay," has always been correct. This mighty and ancient people have been bored to hardship and inured to pain and suffering of nations on the move. They have known hardship in warfare against such redoubtable foes as the Crusaders, the Tartar, and the German. They have passed through the crucibles of hate and have never completely bowed before Slav or German. They have always won through to victory.

Many people were prone to think that with the coming of the Bolshevik in 1940, Lithuania was definitely through as a nation. They were quite willing to designate to her a position subservient to Hitler when his legions marched through the land in the 1941 campaign against Russia. However, one recalls that the Lithuanian is not easily uprooted from the soil that has been his since time immemorial. The size of Lithuanian landholdings has varied between 20,000 square miles centering about the Nemunas River to the vast empire of Vytautas, which extended from the Baltic to the Black Sea. Lithuania has learned one lesson that precludes any desire for grandiose expansion. She wants nothing more nor less than that portion of eastern Europe which is hers by right of continuous settlement and which is approximately 35,000 square miles in extent, with Vilnius as the traditional capital city.

Another Lithuanian proverb is to the effect that if one is in a hurry it is wise to go slowly. Patience is required of those who would move slowly and surely forward, but the Lithuanian is eminently fitted for this role in history. Time does not have a great significance if the true ends are eventually served. The fact that Lithuanians will never be content without complete and full liberty is sufficient reason to believe that they will succeed. They are no strangers to hardship and sorrow. They have been hardened by long periods of resistance to their traditional enemies. They have won notable victories over the pressing Teutons.

During her period of twentieth-century independence, Lithuania demonstrated an amazing national vitality. Her financial condition remained sound from beginning to end. She built up a foreign trade that was gaining in strength until checked by the restrictions of war operations in the Baltic and North Seas. She made notable gains in such fields as education, scientific research, and agronomy. Her levels of living advanced far beyond those prevailing around her. She was definitely facing westward and sought the privileges of western civilization.

In keeping with the principles expressed in the Atlantic Charter, and reaffirmed by the great leaders of the United Nations, the breath of life and the enjoyment of liberty, with God's help, will once again be assured to Lithuania.

All around the world there are some ideas which millions of men hold in common, and one of these is the mixture of respect and hope with which the world looks to the United States of America. Our common liberation includes giving to all peoples freedom to govern themselves as soon as they are able and the economic freedom on which all lasting self-government inevitably rests. The way to make certain that we do revere our traditional American way of life for all is to create a world in which all men, everywhere, can be free. The history of Lithuania is the most eloquent advocate of her right to enjoy this way of life.

To students of history of this country, comparatively unknown outside of Europe, I urge a study of this proud nation and its brave people.

My friends, as we join in paying tribute to Lithuania's day of independence in this year of 1946, it is difficult to foresee with complete certainty the exact status of the Lithuanian nation. Sore and troubled, indeed, has been her tragic lot.

But observance of Lithuanian independence day on February 16 is a grim reminder that this anniversary will not be observed in Lithuania itself. For the 2,500,000 Lithuanians in Lithuania, or the portion of them that survives, are not in a position to celebrate. There is no free Lithuania, nor is there likely to be unless the ideals of the Atlantic Charter are translated into action.

In the course of the devastating war against totalitarianism, which has been successfully concluded on all military fronts, through the mutual efforts and expenditures of blood and material resources of the United Nations, the political sovereignty and independence of many small peace-loving nations was set aside by armies of occupation.

The Republic of Lithuania was a peace-loving nation which was geographically in the path of three military invasions, as a result of which it lost its government and independence. The independence of the Republic of Lithuania has long been and is still recognized by the United States and many other nations throughout the world which have conscientiously proclaimed their allegiance to principles of liberty and equality and the right of self-determination; and the policy of the United States as expressed in the Atlantic Charter and affirmed in the official utterance of representatives of the Department of State has consistently and unequivocably supported the principle of the right of all democratic peoples to choose freely, and without external pressure, the form of government which they desire, and of the restoration of sovereignty to those who have been forcibly deprived of this sacred prerogative.

President Truman, in his Navy Day address on the foreign policy of the United States, on October 27, 1945, declared: "We believe in the eventual return of sovereign rights and self-government to all peoples who have been deprived of them by force. We shall approve no territorial changes in any friendly part of the world unless they accord with the freely expressed wishes of the people concerned. We believe that all peoples who are prepared for self-government should be permitted to choose their own form of government by their own freely expressed choice, without intereference from any foreign source. That is true in Europe, in Asia, in Africa, as well as in the Western Hemisphere. By the combined and cooperative action of our war allies, we shall help the defeated enemy states establish peaceful democratic governments of their own free choice. And we shall try to attain a world in which nazism, fascism, and military aggression cannot exist. We shall refuse to recognize any government imposed upon any nation by the force of any foreign power.

"A permanent peace can be secured only through a mutual respect and consideration of the basic principles of justice and right as they affect all nations, large and small, rich and poor.

"Friends of Lithuania, I pledge to you my unswerving loyalty and aid to your cause. I shall work and speak and fight and vote in the Congress of the United States for the active support of our Nation to that end. The Congress of the United States should, without delay, declare that it is the sense of that great democratic assemblage that the President of the United States and the Secretary of State give active support to the principles and devote their efforts and influence with the nations of the world to secure to the people of the Republic of Lithuania a restoration of their independence and the right of free and democratic election after armies of other nations have left and Lithuanian refugees have been repatriated to their homeland, and use their good offices to place the subject matter of Lithuania upon the agenda of conferences with representatives of other nations within a reasonable time and support the principles I have just expressed when the matter of the independence of the Republic of Lithuania is considered in such conference.

"Foreign policy is probably the most consistent and stable phase of any nation-state's progressive development. Ancient state traditions and historical reminiscences exercise much influence in a nation's international relations. It is a natural process, inasmuch as the nation's policy is never based exclusively upon day-by-day developments and needs. It is an evolutionary process reflecting the experiences of many generations of the past and merging the aspirations of past generations with those of the present generation."

For this reason, the people's servants entrusted with the task of piloting the nation's foreign policy must possess a complete understanding of their nation's history and must be able to visualize the mistakes of the past, no matter how recent, viewed retrospectively in the light of political developments.

Regardless of all the Lithuanian fairness and honesty in foreign affairs, and regardless of the sincere friendship which the government and people of Lithuania felt and openly showed in the relations with Russia—the inevitable happened. On June 15, 1940, Lithuania was occupied by the Russians—with the blessing of the Nazis. The government took upon itself the responsibility in ordering no resistance, for it was obvious that any armed resistance against the overwhelming Russian armies would have forced the small Lithuanian army into the arms of Nazi Germany for an inevitable internment in East Prussia—a perspective which the Lithuanian people wanted to avoid at any price. A year later she was submerged by the Teutonic hordes. After three more years of suffering and hardships, Lithuania was once more occupied by the rising Red tide. Now she lies prostrate, together with a dozen other nations, in a firm grip of Red totalitarianism.

All her fairness, honesty, consistent friendliness were of no avail. Power-greedy totalitarian nations could not resist the temptation to seize the progressive and prosperous little country. Both totalitarian neighbors had a share in the destruction of little Lithuania. Now one of them, Nazi Germany, is beaten down to her knees. Should Russia, the former partner of the Nazis and the winner at the moment, persist in its policies, we may logically assume that, sooner or later, she will meet the same fate as Nazi Germany.

It may be timely to ask ourselves: What direction the post-Atlantic Charter world will take in reshaping its destinies? Will it be a return to the false game of power politics, with the Red totalitarianism replacing the Brown-Black one in an attempt to dominate and subjugate the freemen of the world? Or will it be a return to the policy of fairness and international cooperation for peace among the free and self determining nations, all enjoying the Four Freedoms and the effects of the unadulterated Atlantic Charter, as the English-speaking democracies continue to insist?

Moral leadership rests with the United States and Great Britain. It happens that the United States is also the only really strong military and economic power. If America will only realize her power, and use this unprecedented power for effecting a moral leadership for a better world, humanity will triumph. But if America fails to assume leadership—there will be no happiness for mankind, and other legions of American manhood sooner or later will sail again to die on foreign battlefields.

In its declarations addressed to the Lithuanian people and to the governments of the United Nations during the past 5 years of foreign occupation, the supreme Lithuanian Committee of Liberation repeatedly reaffirmed that the Lithuanian people were linking their destiny with the victory of the Western democracies. The climax has been achieved. The Lithuanian people rejoice with other freedom and peace-loving peoples that the hour of victory arrived and that the moment of final liberation of the many peoples enslaved in the recent years of the evil forces of totalitarianism will soon be here.

Mr. Chairman, ladies and gentlemen, the Government of the United States of America continues to recognize the sovereignty of the Republic of Lithuania. Let us hope and pray that our great Nation never deviates from this position. It is all very well to speak of the history and the traditions and the sufferings of the Lithuanian nation and its people. But to you who have the great honor to be of Lithuanian ancestry and to your friends, I say that there is urgent need that you appeal to our Government pending the reestablishment of national representative government of the Republic of Lithuania, and without prejudice to the sovereign rights of the people of Lithuania to have the United Nations intercede with the Government of the Soviet Union.

1. That repatriation of Lithuanian refugees and deportees from territories occupied by the armed forces of the United States and the United Kingdom to territories occupied by the Soviet Union be immediately stopped;

2. That the military occupation of the territory of the Republic of Lithuania be placed under the supervision of the Inter-Allied Control Body;

3. That the Soviet administration in occupied Lithuania proceed in accordance with international law;

4. That the citizens of Lithuania who were deported to the U. S. S. R. in 1940 and 1941 be released and permitted to return home;

5. That the American relief agencies be given full facilities to extend relief to the inhabitants of Lithuania, and, pending their return home, also to the Lithuanian deportees in the Soviet Union.

At the same time, there must be solemn protest against the reported reign of terror inaugurated by the Soviet administration in Lithuania, more particularly against bloody reprisals, the confiscation of private property, the deportation of its citizens, the suppression of their religious freedom and their individual rights.

My friends, forgive me if I have spoken at considerable length, but your cause, as you well know, is close to my heart, and that heart was touched to its depth with a letter I received from a little 5-year-old Lithuanian boy who now lives in Washington. Please let me read to you his simple and eloquent expression:

"I know that you are very busy and I will try my best to make this letter as short as I can.

"Recently, I have heard how courageously and justly you defended my unhappy country, Lithuania, and her unfortunate people. There are thousands of Lithuanians who would like to heartily thank you. But for them it is impossible since they are not free to do as they want. Living in Washington, I am able on behalf of the unhappy Lithuanian and especially the innocent children to take it upon myself to express their heartiest gratitude and appreciation of everything you have done or intend to do in the future. Just as much thanks as my little heart can hold I send to you.

"I am a small boy, Gabriel Gediminas, age 5 years and 11 months, and crossed the Atlantic at the age of 8 months. I found here in America all that the little children of Lithuania do not have—good, healthy food, lots of orange juice and fruits, warm clean clothes, warm baths, lots of soap, many nice toys and books and crayons. And what is more important—I am free to say my prayers, go to church, speak my mother tongue, and can go where I please. In school they teach me everything that is right and beautiful. I am not forced to do anything against my will. I am not punished unjustly and I can live together with my parents. So, in comparison to the children of Lithuania, I am privileged, and this big difference makes me very happy and grateful to people like you who try to make unhappy people happy and, at the same time, I am so sorry for my unhappy people.

"During the war, I had not experienced any bombardments, hunger, epidemics, and all other war horrors and only because I was lucky enough to arrive in this country. I helped the war effort as much as possible and as much as my age permitted. During air raid practices I saw that all the lights were extinguished and went to the shelter, helped cut tin cans, strained grease, and saved pennies and bought war bonds. And now that I am attending school as a first grade student, I am a paper trouper and have earned 3 stripes.

"I am telling you this, not to praise myself, but just so that you would know that I very much wanted America to win the war and, at the same time, for the well-being of all freedom-loving people of the world and Lithuania. I wish the children could only return and live in free Lithuania and, at least, have part of the freedom we enjoy here.

"Now the war is over and everybody is coming home except the Lithuanians, who are being dispersed because they have no country to come home to and are forced to go where they do not belong.

"And now when Christmas is coming, they are sad and frightened because they do not know where their parents are, and are hungry and in rags, and even though Santa Claus would like to visit them, he is forbidden, because Christmas does not exist for some people. Many times I ask myself why for some people it is very good and for others it is very bad. I know that the Lithuanian children are as nice as other children of the world and yet the Lithuanian children have to suffer so much.

"I know that America is a big country, powerful and just, and that General MacArthur and General Eisenhower fought for those who were underprivileged. Also, there were many boys of Lithuanian descent who fought under them for the freedom of the whole world, including Lithuania.

"I cannot help the Lithuanian children myself. I can only pray. But asking your help in the future, I feel as though I am helping them.

"Thank you for all your help. God bless you. I am praying for you."

The distress signal most frequently heard by ships at sea is "three short, three long, and three short." The call letters are SOS and it would seem fitting to regard this as meaning "Sudiev O Sudiev" Lietuva. Sudiev means "God be with you." May I close this expression of my deep feeling with that word, "Sudiev" addressed to you and to Lithuania. Lithuania is a country which has placed her trust in God, and God will never forsake her.

Dr. Muzzicato Reports on Mission to Italy

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report made by Dr. Charles Muzzicato on medical conditions in Italy as he saw them during a 2-month survey, which took him from Venice to the tip of Sicily.

As National Chairman of the American Medical Relief for Italy (AMRI), Dr. Muzzicato's mission had the full approval of the President's War Relief Control Board. His survey was facilitated by the military permit granted him by the Joint Chiefs of Staff of the U. S. A. and by his attachment to the Allied Commission—Public Health Subcommission—immediately upon his arrival in Italy. Dr. Muzzicato won great distinction as a New York State senator, and to his present duties he brought a background of wide experience acquired while serving in the senate as chairman of the committee on public health.

The report is as follows:

DR. MUZZICATO REPORTS ON MISSION TO ITALY

I have just returned from a land of suffering; a land of hungry, malnourished people; a land of ragged, shivering souls, a land of disease-ridden and pain-wracked bodies; a land of ghastly panorama formed by the utter devastation of war. It is a tragic, unbelievable sight—one that shocks the American visitor with its grim realism. And yet, I came away with pride and admiration for the steadfast courage and tenacity of the people in that destitute land. For despite their terrible lot, the Italian people infuse the outsider with the depth of their faith and the strength of their hope for the future of Italy. They have the will to live—the urge to dig themselves out of the debris of war, to rebuild from the ashes a new life that will assure them of work, bread, and peace. They have conquered despair with fortitude against adversity. This is my overall impression of Italy as I found it and as I left it. But to start at the beginning:

The first indication of what I could expect to find in Italy came into focus as the steamship *Gripsholm*, on which I was travelling, glided into the Bay of Naples. The sight of half-submerged ships in those beautiful waters verily depicted the situation on land.

People—proud-faced, ragged people—struggling in the flood of rubble everywhere, fighting for life against the elements, against illness, against want, against fear, against insuperable odds.

As a doctor, of course, I was mainly concerned about conditions of health and my first conclusion, as I traveled by car from Naples to Rome, was that there was every opportunity for disease to spread—malnutrition, malaria areas, lack of simple ordinary medical care and supplies, devastated and heatless hospitals, homelessness—and hardly any means to arrest its menace.

DEVASTATION COMPLETE

The destruction which unfolded before my eyes as I motored in a jeep from Naples to Rome, was as shocking as it was complete. In many instances, I saw whole towns completely wiped out, deserted, and cut off as dangerous epidemic sectors. I stopped at some half-buried villages to talk with some of the people. I gulped as I noticed entire families from 3-year-old children to an octogenarian grandmother industriously engaged in carrying stones, and mud plaster, trying to rebuild one room of their shattered home in anticipation of the grim winter ahead. Those who had succeeded in putting a small roof over their heads were crowded 10 to 15 in a tiny room. The fear in the eyes of the adults was apparent—fear, not for themselves but for their young. But that fear was mixed with resignation, determination, and will to hurdle the most terrible obstacles they had ever faced.

ROME APPARENTLY NORMAL

As my jeep entered the city of Rome, I was struck with the contrast of the wreckage I had seen and the apparent normalcy of the eternal city. For in terms of physical destruction, Rome is hardly affected by the havoc of war. At first glance, the city seems bustling with life and activity. But this, I discovered, is a superficial impression. The same unemployment, the same economic paralysis, the same hunger, fear, want, and disease prevail as I found in Naples and other places on my way to Rome.

The hospitals, particularly, lack electric power for lighting and fuel for heating. There are few, if any, medicinals, antiseptics, anesthetics, linens, or blankets to be seen. In most cases, patients are admitted only if they can bring some basic hospital necessities. Such a thing as gauze is washed and rewashed and used many times over—a thing unheard of in medical annals.

I saw operations performed without anesthetics, with the patient strapped down and operated upon with crudely fashioned instruments on bare tables. During one particular appendectomy, bleeding vessels were held with fingers and then tied with ordinary thread because of the lack of hemostats and surgical catgut. The wide-open eyes, contorted facial features and screams of the unfortunate patient registered the deep pain and torture he was undergoing. The immunity to pain and suffering which, as a doctor, I had acquired in my long experience, was neutralized by this awful sight.

The maternity hospitals are the most pitiful of all with babies being delivered in the most primitive fashion—improper sterilization, lack of tampons, gauze, rubber sheeting, simple surgical instruments, etc. Added to this is the almost complete lack of milk—mother's milk included, since most mothers are too emaciated and undernourished to be able to produce any—creating the insoluble problem of proper infant feeding. The result is, of course, a high infant mortality rate—a fifty-fifty chance for the newborn to survive beyond its first year.

As I surveyed these conditions in Rome's best hospitals, I asked myself: What can the situation be in the less fortunate areas of Italy? I shuddered as the thought struck my mind and as the fetid icy air of the hospital seeped into the marrow of my bones. I was beginning to dread the continuance of my survey.

NORTHERN ITALY DESCRIBED

Immediately upon leaving Rome to visit the northern areas, the same panorama of destruction I had seen below the city, again came into view. Tears came to my eyes as I observed the damage to the landmarks of architectural beauty in such old cities as Viterbo, Siena, Livorno, Firenze, Pisa, Milano, Verona, Bologna, and scores of others. The hospitals, medical schools, and health centers seemed to have suffered the worst in every respect. Some are wholly shattered, while others are partially destroyed. But one thing that stood out in all of them was the lack of window glass which had been blasted by bomb concussions and which is irreplaceable. Of course, the supply situation in these institutions was even worse than those in Rome. The Germans in their retreat had done a pretty thorough job of stripping them of everything that was movable. Those scenes I had witnessed in Rome hospitals—scenes of painful, primitive operations and treatments—were repeated a hundredfold and the screams and tortures of the patients are indescribable and unforgettable.

It was the same story everywhere I went. I got as far as Venice and decided to return to Rome for a few days' rest and meditation before starting on my mission below Naples to the tip of Sicily. Besides, I had planned to talk with some high government and health officials.

OFFICIALS HELPLESS, TOO

Italy's leaders are fully aware that their country's plight is pregnant with disaster for the social, physical, and economic pattern. Lieutenant General of the Realm, Crown Prince Umberto, with whom I had a long discussion, was emphatic in stating that only a physically virile people could build a healthy economy. "If their energies are sapped by the enervating lack of life's essentials," he said, "then Italy's political and social future will be a sick one."

His Holiness Pope Pius XII, who paid me the high honor of receiving me in private audience, also showed his deep concern for the tragic predicament of his Italian flock. He and the Vatican are doing all within their power to alleviate Italy's suffering. "My blessings to the people of America for their

generosity toward the destitute Italian people," he said as we parted company.

I spoke with Dr. Zanotti Bianchi, head of the Italian Red Cross, and with Prof. Gino Bergami, Italian high commissioner of health. They revealed some figures which, in view of what I had seen, should have come as no surprise, yet shocked me no end. Three and a half million people, for instance, are affected by malaria all over Italy; the increase in tuberculosis incidence is 300 percent; the death rate has increased by leaps and bounds—with one out of every six people slated to die during the winter unless medical help comes in large measure. This is a dark picture, indeed.

SOUTH ITALY SURVEYED

I was ready for the last lap of my survey as I boarded a plane to return to Naples and from there proceed south to visit hospitals in the various provinces and in Sicily. Upon leaving Naples I stopped at Avellino, Salerno, Potenza, and Bari, and just as I was about to proceed to Taranto I was told by health authorities that an epidemic of the bubonic plague had broken out in that province. Most of the area to the south had been cut off, so I decided to fly directly to Sicily.

Palermo was my first stop. But I touched practically every province and major city in that island. I had been under the impression that since Sicily was the first area liberated on the European Continent some progress had been made in rehabilitation. This impression was shattered as I traveled about the island. Transportation and communication facilities between towns a few miles apart are practically impossible, or, at the very best, difficult. Each little village has to be, in all respects, self-supporting—and you can imagine what that means.

The Palermo Tuberculosis Sanitarium is typical of hospitals all over Sicily. Here, doctors have to work without X-ray equipment so important in diagnosing and studying the progress of the disease. There wasn't even a single sulfa tablet, or worse still, no medicines of any kind. Not one pane of window glass remained in the entire institution—a dangerous situation with the winter setting in. When I spoke to medical men about penicillin or sulfa drugs, it was like talking about diamonds. In fact, one doctor in Cefalu Hospital on the road past Termini, told me he preferred a few vials of the drugs to a barrel of the precious stones. This was the general attitude of doctors in the hospitals of every province throughout Sicily.

ITALIANS LOOK TO AMERICA

It is difficult in this report to give an accurate description of the actual conditions. One has to see for himself to believe them. All I can say in summing up is that the Italian people are facing, with typical courage, the gravest crisis in their history. They are in desperate need. And they look to the people of America for help. If you had seen, as I did, the sick, broken, hungry bodies of the Italian people, I feel sure that you would want to do something to help them. If you could have sensed the mental anguish and noticed the fear-consumed bodies of Italy's mothers listening to the hungry or sick cry of their children, you would open your hearts without hesitation. If you could have heard the penetrating screams and groans that rend the hospital air every day, you would give without stint to ease the terrible pain of the suffering.

The time for words is past. Action is needed now to supply the elementary needs of Italy. Nineteen hundred and forty-six will be a decisive year for AMRI, its friends and associates. We must multiply our efforts in unison and go forward to make it a banner year in this humanitarian cause to which we are devoted.

* * * * *

Dr. Muzzicato also wrote a letter to the editor of the New York Times, published in that newspaper under date of January 1, 1946, which letter is as follows:

Anne O'Hare McCormick in her December 26 column brings up a very interesting fact regarding Italy's prewar and present status which points up the complete failure of the Allies to live up to their promises. Mrs. McCormick writes: "During the Fascist regime Mussolini tried to revive the greatness of the Roman Empire. And for a gaudy interval he succeeded in keeping the spotlight on himself and making Italy a key factor in world politics. Because of defeat and its virtual loss of independence, Italy as a nation (today) swings no weight in the international scale."

This is an obviously true but sad commentary on the Allied policy toward Italy, since it becomes apparent that the Allies tolerated a totalitarian Italy in the international scene and now bar from the same scene a government suffering the labor pains of a democratic birth. The Italian people were promised a bright and glorious future by the Allies if they would throw off the yoke of fascism and German domination, and they had faith in the Allied word. Today they are enduring the pangs of untold misery, yet the Allies show a callous indifference toward the problems of Italy and pursue a dangerous game when they allow a nation whose spirit had always been on the side of the democracies to lose faith.

I have just returned from Italy, where for 2 months I surveyed conditions in that destitute nation for both American Medical Relief for Italy (AMRI) and for the Allied Commission to which I was attached as a member of the Public Health Subcommission. I was privileged to talk with people from every walk of life from one end of Italy to the other, and all of them spoke of the complete let-down by the Allies with bitter resentment.

In a conference with Crown Prince Umberto, lieutenant general of the realm, the regent impressed me with the fact that mainly through material help can a strong democratic government emerge and bring forth a new Italy which will be respected in the civilized community of nations. And this point was well illustrated as I traveled up and down the country and noticed the apathy toward local provincial and national government, since the main preoccupation is to earn or obtain a crust of bread and keep hunger and sickness at a distance. By their failure to send the material aid promised to the Italian people, the Allies are weakening, albeit wittingly, the chances of democracy's rise in Italy.

I must say that I was very forcibly struck by that show of innate pride so characteristic of Italians despite their tragic situation. Everywhere I went I was told that nothing was wanted from anybody except the chance to earn their livelihood and so put their country back on the road to complete rehabilitation. That opportunity must not be stymied but rather encouraged and aided by the willingness of the Allies to assure the economic function of the country.

Finally, I wish to say that when I was received in private audience by His Holiness Pope Pius XII, I was carried away by the conviction that moral and spritual values in Italy have not faltered, due to the efforts of the Vatican to reassure the people and assuage their sufferings. Had these values suffered or been shaken as much as the social and economic structure, Italy might have sunk into the mire of chaos and disintegration and might have also lost its nationhood irretrievably.

CHARLES MUZZICATO, M. D.,
National Chairman, American Medical Relief for Italy (AMRI),
160 E. 89th St., New York 28, N. Y.

Briton Takes Gloomy View of Future Under Labor Party

EXTENSION OF REMARKS
OF
HON. BARTEL J. JONKMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Flint (Mich.) Journal of February 13, 1946:

BRITON TAKES GLOOMY VIEW OF FUTURE UNDER LABOR PARTY

(By John Flint)

A boyhood chum of the Reverend John H. Balfour, Imlay City, recently wrote from Edinburgh, Scotland, concerning what he described as "deplorable conditions in the British Empire." John Flint, wondering if it could happen here, would like to quote a bit of what this Scotch banker and author had to say.

"I wish I could come to America, for at present this country is not worth living in. We are in a dreadful mess. Many have not had a happy day since Labor went into power.

"Already the Labor Government is more than halfway through the legislation to nationalize the Bank of England, and the financial structure of the country is threatened. Bills to nationalize the coal mines are to be presented, then iron and steel industry, railways, transport of all kinds, port authorities, civil aviation, communications, all to come under Government control.

"No wonder there is a hesitancy about a United States loan to Britain to put her back on her feet. It will all depend upon how the loan is to be used. It can be of great service, but if it is used for this detestable socialism in furthering the ends of Attlee, Bevin, Cripps & Co., in destroying British industry, then the loan might just as well stay in the United States.

"If you want to start a business, you must obtain a license, and if, after dealing with a dozen Government departments, you eventually get a license, you may be unable to get any stock because all materials are being exported, and you can't get wood, raw materials, or goods of any kind.

"The demand for houses in Ireland by British folks, sick of austerity living and socialism, is heavy, and I don't blame them, for this country won't be worth living in.

"As to living conditions, we are much worse off now than we were during the war. We cannot get more than 2 pints of milk a week. People are freezing in their houses because there is no coal. The coal is there, but the miners get such high wages they prefer to work only a few days a week. If they worked all week, they would have to pay the difference in income tax.

"This coal business is, I am afraid, the result of Russian Communist propaganda and the hope that one day Britain's coal business will be ruined. Whatever happens, Britain and the United States must stick together, for Russia is the world's No. 1 enemy. Look how she is behaving in Persia, the Baltic, and Bulgaria. Once she has recovered, she will be in a position to defy the world.

"Winston Churchill is the most farseeing politician of our day, a believer in free enterprise, and represents the enlightened British man's point of view. What a wonderful difference it would have made if Churchill could have had a hand in all this peacemaking business.

"Attlee is only milk and water. You have that Morrison over in Canada and many of the things he has been saying, as reported

here, are quite untrue and must be taken with a grain of salt. For instance he said, 'It is not the policy of his Government to socialize or nationalize free enterprise, but only to control it if in the opinion of his Government it was not doing its job properly.' Who is to be judge of that? A few whippersnappers of civil servants in some top room of a government building.

"We are told we must accustom ourselves to austerity, that is doing without things and manufacture to export, but not for home consumption. We have had no new clothes, furniture, kitchenware, sheets, blankets, and so forth, for all being manufactured must be exported to get raw materials.

"One of the black clouds overshadowing this country at the present time is fear. Fear of what the Socialists will do next. They have their daggers drawn at anyone who has capital. Capitalist is anathema to the Socialist. That is why they are endeavoring by income and super tax to tax them out of existence.

"Anyone who makes a profit is, according to the Socialist's dictum, a rogue. That's why they thought they should get the American loan free of interest. They say all profits should be ploughed back into the business to improve and repair machinery, and all left over should be paid to the worker.

"They disapprove of companies increasing their rate of dividend, paying bonus shares, or giving the shareholders the benefit of increased business.

"They have played traitor to the servicemen. The jack-in-the-box Morrison with his vitriolic tongue is most unbeloved here. Bevin, the foreign secretary, knows more about trade unions than foreign policy. The other Bevan is responsible for the houses and health and has yet to come into contact with the doctors whom he thinks he will band together as civil servants. Then he wants to nationalize the hospitals. Truly, this country has gone insane.

"I suppose if I were an American I would be a Republican and not a Democrat, is that so?"

Seniority in Congress

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the News-Democrat, Festus, Mo., for February 7, 1946:

SENIORITY IN CONGRESS

One of the local boys has written an article relative to seniority in one of the local industries, which is carried in this issue, and in connection with which we have little information, but the purpose of this editorial is to bring to the attention of the more than 20,000 readers of the News-Democrat the archaic seniority rules that have grown up in Congress, which stand between democracy and the people of this country like a stone wall, and the perpetration of which should not be allowed.

For a long time we have been given to understand that a freshman Congressman or United States Senator is required to sit on the back seat, so to speak, accept places on unimportant committees for a certain number of terms before they are even expected to raise their voices on matters of legislation, despite the fact they are sent there by their constituents to represent them. Now and then a bold newcomer jumps over the traces and says what he thinks, for which he is severely punished and relegated further down the line.

The GI's are doing a lot of squawking about what they call the undemocratic Military and Naval Establishments we continue to maintain, and are demanding that something be done about it, and doubtless the majority of their complaints are justified. Right along that line, it's about time the American people demand that the age-old seniority rules in Congress be thrown out the window.

At the present time the State of Missouri has two freshmen in the United States Senate, and be not deceived, they occupy unimportant places there, and are compelled to bend to seniority rules. However, they do have the privilege of voting, even though they can't speak. This particular congressional district has a new man up there, and likewise he, or anyone else who might be there, is a back seater, hog-tied by the long-haired rules. This, despite the fact he was sent to Congress by a majority of the voters of this district to represent them.

In our opinion, the people of Jefferson County want to be represented, and seniority be damned. A newcomer on the town board is not required to keep his mouth shut when he thinks he should have it open, neither should a Senator nor Representative be required to do so. We believe in democracy from top to bottom, and now's a mighty good time to begin getting the top in order the bottom usually takes care of itself.

School-Lunch Program

EXTENSION OF REMARKS
OF
HON. WILLIAM H. STEVENSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

LA CROSSE PUBLIC SCHOOLS,
La Crosse, Wis., February 15, 1946.
Hon. WILLIAM H. STEVENSON,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR MR. STEVENSON: I have been advised that congressional action is pending on bills to continue Federal aid for school lunches. As you know the school children of La Crosse have received very real benefits from this school-lunch program. At the present time over 3,000 children are making use of it here in the city. I know that the parents of these children are very much in favor of it and would appreciate your support of any measure which would assure its continuance.

With sincere personal regards.

Very truly yours,
R. W. BARDWELL,
Superintendent of Schools.

Our Stake in Indonesia

EXTENSION OF REMARKS
OF
HON. HUGH DE LACY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. DE LACY. Mr. Speaker, under the privilege granted me, I desire to include with these remarks an article on Indonesian-Filipino-American relations by Trinidad A. Rojo, for many years a resident of my congressional district, an outstanding student at the University of Washington and a leader of the Cannery Workers Union, and now a student at Stanford University in California. I believe Mr. Rojo's studious article will be of great benefit to Members of Congress in facing the issues created in Indonesia. The article follows:

INDONESIAN-FILIPINO-AMERICAN RELATIONS AND RACE PROBLEMS

(By Trinidad A. Rojo)

The Philippines and the United States, and in fact, the whole world are vitally affected by what is happening and what is going to happen in the East Indies and southeast Asia.

In reading the news about the revolt in Indonesia it is necessary for us to keep in mind that the Indonesians do not have press agents in the United States and other parts of the world. On the other hand, the Dutch and the British are not only spending millions for propaganda in America and other countries, but also control the sources and channels of news transmission from their possessions to the outside world. News from Java and Malaya must pass through their censorship.

ECONOMIC STAKES

The East Indies is too vital to the Dutch for us to expect them to be impartial and objective about the uprising which is directed toward the overthrow of their empire. According to prewar statistics, the Netherlands Indies produced 5 percent of the world's sugar, 6 percent of its coffee, 18 percent of its tea, 18 percent of its tin, 22 percent of its agave and sisal fiber, 28 percent of its coconuts, 37 percent of its rubber, 75 percent of its kapok, 80 percent of its pepper, and 90 percent of its quinine.

Less than one half of 1 per cent of the people were white and overwhelmingly Dutch. However, they controlled the business economy and government of the country, while the Indonesians, who compose 97 percent of the population, had the least economic and political power.

From the point of view of the rebels this is like the tail wagging the dog instead of the dog wagging its tail.

It is a modern version of feudalism, of which the natives are the serfs. The colony is exploited for the benefit of the mother country and its people rather than for the colony.

On the other side of the ledger the Dutch point out with pride that they have accomplished a great deal in the industrial and cultural progress of the East Indies and that the Indonesians enjoy better health and have increased greatly.

But after three centuries of Dutch mastery the illiteracy of the islands before the war was still 90 percent. Of the annual budget only 50 percent was devoted to education, while 25 percent of the national income was spent in the Philippines.

RACIAL ATTITUDE

These are solid facts. There are other things in the Dutch-Indonesian relationships that are not solid at all—but are like sandpaper rubbed against native sensibilities.

In his book, I Saw the Fall of the Philippines, Gen. CARLOS ROMULO relates an incident which is striking to us, but which is quite typical of the Dutch attitude toward the natives.

He met a high-class Javanese woman, who had been educated in one of the best universities of Europe. He invited her to dine with him at the Hotel des Indies. She refused on the ground that Indonesians were not welcome there, but the general prevailed upon her, hoping the hotel might make an exception. When they were seated and

ready to dine in the restaurant of the hotel, true to form the manager told the lady to leave.

General ROMULO attended secret meetings of the Indonesians, who used in their rallies the pictures of Dr. Jose Rizal, the Filipino hero, the greatest man the Malayan race has ever produced, and that of the late President Quezon.

The reaction of the subject peoples of Asia was summarized by such remarks made to the general: "You Filipinos are lucky. You have your militant President Quezon and America.

"To us no change could be worse. Anybody but the Dutch and the British would be better."

Because of the underground rumblings he heard, the general predicted that if war came, the peoples of southeast Asia and the Dutch East Indies would put up only a token of resistance and would welcome the Japanese. The Dutch, the French and British colonial officials ridiculed him as a charlatan journalist, who stayed a few days in one place and then thought he knew much more than the old-timers did.

It was not long before the colonial officials had to flee hurriedly to save their skins. For the accuracy of his newspaper reports on the attitude of the Asiatics toward their rulers, General ROMULO won the Pulitzer prize.

BRITISH NIGHTMARE

We cannot rely much on the British for unbiased, accurate information on Indonesia. It is true that the East Indies do not belong to England, but the British view with alarm any independence movement in any part of southeast Asia, as if it were a wild forest fire which might spread to Malaya, Hongkong, and India, and endanger here investments and trade routes scattered all around.

In 1934 Winston Churchill, in an article published in Collier's, opposed vigorously the granting of independence to the Philippines, for it would be a bombshell thrown to the white man's burden in Asia. He believed the Americans were committing a big blunder. But the United States, which was regarded as the bungling amateur among colonial powers, turned out to have the right policy.

Borneo and New Guiana are partly Dutch and partly British. Malaya, which is peopled with Malays, like the Javanese, and which produces one-half of the world's rubber and much of its tin and spices, is only across a very narrow strait from Sumatra, one of the principal islands of the East Indies.

The granting of independence or a commonwealth status to Indonesia or French Indo-China would make England by contrast an unredeemed villain in India.

UNITED STATES PHILIPPINE PROGRAM

Because of the independence program in the Philippines, the Filipinos, who fought stubbornly against the Americans at the turn of the century, fought with them before, during, and after the fall of Bataan, as soldiers, guerrillas, defense workers, etc., in the hills, in the fields, in the towns—wherever they had a chance. Because of the policy of the United States in the Philippines, she, more than ever before, captured the admiration and confidence of the peoples of the Dutch East Indies, Malaya, Burma, Indo-China, India, Korea, and China. Thus, America won the psychological war in Asia. She had more to give to the peoples there than the Japanese did. Like Russia, America does not need colonies. She is so rich that she can afford to give away a treasure chest like the Philippines, which, if the Japanese won, would have been a cornerstone of their co-prosperity sphere. This cannot be said of the other colonial powers who want to perpetuate their domination of subject states.

Without the American program in the Philippines, the white man would have been practically washed out, insofar as the attitude of the Asiatics is concerned.

PRINCIPLE AND INTEREST

The suggestion that the United States should line up with her allies to suppress the Indonesians, so that the Americans will always have white allies in the Orient, is a postwar version of the racism advocated by Hitler, who modified it to suit his policy with the Japanese.

Needless to state, the suggestion is contrary to American commitments in Asia, explicit and implied. It is not in harmony with the general principle upon which her policy in China is predicated—open door and national autonomy and integrity.

It is contrary to American tradition. The Indonesians are fighting fundamentally for the same principle for which the Thirteen Original Colonies of this country fought against Great Britain. It is not in harmony with the preamble of the American Constitution, the spirit of the Atlantic Charter, and the United Nations Covenant drafted in San Francisco.

It would ever be poor business on the part of America. Before the war the British and the Dutch monopolized the control of rubber in the world. America was the principal customer of rubber and the other products of the Netherlands Indies and Malaya. Those possessions were isolated from Japan who was virtually defeated when the Americans and Filipinos liquidated the Japanese forces in the Philippines. Surely we did not fight to perpetuate British and Dutch monopolies and imperialistic abuses.

Should the Indonesians have more to say in their government, it is reasonable to assume that they will see to it that America will get a square deal, and not be a victim of monopolistic control.

BACKGROUND AND POSSIBILITIES

A pertinent question is: Can the Indonesians govern themselves? Of course they can, if given a chance.

It is not well known in the West, but it is an incontrovertible historical fact that from A. D. 200 to 1292 a great Mayalan empire arose in Sumatra. This included South East Asia mainland. The magnificent ruins of the big temples, built over Indonesia during this period, which still strike tourists with wonder, attest to the high degree of culture attained by the Javanese empire. From 1292 to 1478 this great empire, which drew its ideologies from India, was superseded by another vast Malayan empire in Java, which controlled the Philippines for 150 years through Brunei, Borneo.

Under these empires the Philippines became an important trade emporium carrying on a flourishing trade with the Chinese, Japanese, Hindu, and Indonesian peoples. People who thought that the islands had been in the infancy of savagery when Magellan landed there will be surprised to know that long before Europeans came in contact with the Filipinos, the Javanese had worked Philippine gold mines, some of which were later rediscovered by Americans.

The East Indies rank fourth as the richest region of the world. It has twice the people of Bulgaria, Holland, Nicaragua, Ireland, Belgium, Bolivia, Cuba, and Finland. Its population is only about 10,000,000 less than the entire population of the South American countries. It is clear to the unbiased observer that the Indonesians have the ample resources, adequate population, historic tradition, large territory, and strategic location needed to build a strong and progressive state.

If given a chance, in due time, with or without the help of the Filipinos, their cousins in the north, the Indonesians will have sufficient strength and number to checkmate a resurgent Japan, which has already reached its optimum population, while the Indonesians have still vacant and fertile lands in Sumatra, New Guinea, Celebes, and Borneo, able to support three times their present number.

The Indonesians are pro-Filipino and pro-American. They are appealing to America for moral support. If the United States serves as a mediator for the formation of a sort of Indonesian commonwealth, a long and bloody war, which might spread to India, will be averted. America will be in a key position to inspire and influence the establishment of a democracy that will complement the Philippine Republic. The Indonesians will, in their hearts, build for America, a lasting monument of admiration and gratitude.

But if the Americans help the Dutch and the British strike down the national aspirations of the Indonesians, the Hindus and other Asiatics, the latter will be hostile to all whites, and the seeds of the next world war will start to germinate.

A Filipino-Indonesian-American triangle would be a handy and powerful lever for durable security in the Pacific. In the event that her friends on the mainland of Asia fail her, America still has the mighty triangular leverage to mobilize for peace.

Now let us disregard for a moment the interest of the Americans, Filipinos, and Indonesians. Let us consider the matter objectively, not as members of this or that race, but as citizens of this planet.

We do not have an inclusive democracy and freedom if a very large section of mankind are politically and economically in bondage. The sparkling friction emanating from that bondage is a constant source of danger which might possibly set off the fuse of world dynamite.

"Follow Through" Makes Projects Grow in Brooklyn

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which recently appeared in Editor and Publisher and which is a well-deserved tribute to Frank D. Schroth, publisher of the Brooklyn Eagle, who has contributed much to the civic improvement of Brooklyn:

"FOLLOW THROUGH" MAKES PROJECTS GROW IN BROOKLYN—SCHROTH'S PROMOTIONS DON'T END WITH AN EDITORIAL ADMONITION

(By Jerry Walker)

In Brooklyn, they follow through.

They just don't plant the seeds and let the trees grow. They make the trees bear fruit.

Too often, says Publisher Frank D. Schroth, of the Brooklyn Eagle, a newspaper promotes a civic improvement but does nothing about it after the last story of a series or the last "this should be done" editorial is printed.

"In the Brooklyn Eagle's promotion campaign," said Mr. Schroth, "we follow through."

MEMORIAL FUND STARTED

As a result, Brooklyn has under way at this moment a public subscription drive for $1,500,000 to erect a World War II memorial building which was suggested in a Brooklyn Eagle competition among New York City's leading architects.

Brooklyn also is engaged at the moment in a practical demonstration of the effectiveness of programs suggested by civic leaders

for the correction and eradication of juvenile delinquency. The Brooklyn Eagle was the forum for those programs.

Not waiting for official agencies to get around to compiling history, the Brooklyn Eagle's live-wire publisher, who took over a sick newspaper 7 years ago, has put into the hands of readers a 64-page booklet telling Brooklyn's role in World War II as "America's Largest Staging Area."

It matters not whether Washington imposes a tongue-twisting designation nor whether the big papers in Manhattan insist it's the "New York Navy Yard," it's the Brooklyn Navy Yard to the Eagle—because Brooklynites have always called it that. And the Eagle, a centenarian in a borough of old and proud families, is a Brooklyn newspaper.

BIBLE OF BROOKLYN

When Mr. Schroth moved over to Brooklyn from Scranton, Pa., and Trenton, N. J., in 1938, he told an Editor & Publisher reporter: "The Eagle used to be the Bible of Brooklyn and it is our job to have it considered again as such."

He added: "With careful management and a lot of luck, we will revive the Eagle."

At times in this revival of the Eagle, Mr. Schroth confessed this week that he had been "mischievous." There was, for example, the discussion he started in 1942 by popping the query: "Should Brooklyn Separate from Greater New York?"

Instead of letting it become an ordinary quarrel in the news columns, the Eagle called in Princeton Surveys of Princeton, N. J., to conduct a thorough study of Brooklyn's relationship to the city of New York. Then especially prepared articles based on the experts' summary were published. The final story was headed: "Princeton group finds secession idea unwise."

So Brooklyn isn't seceding from Greater New York, said Mr. Schroth in retrospect, but adding: "We could have had a lot more fun with the idea if we didn't have a world war to win."

TEXTBOOK PROVIDED

Editor Edwin Wilson, who helps to execute many of Mr. Schroth's "follow-through" programs, reminded the publisher that the Princeton survey has provided the Nation with the first and only "textbook on Brooklyn." Besides, he said, it has been held up in the city council as "the Bible of Brooklyn."

Full of facts, figures, and charts, a pamphlet containing reprints of the survey stories was published by the Eagle and it was sent out to hundreds of interested persons.

The Eagle backs up nearly all of its promotion campaigns with booklets. The War Memorial project, for example, is now held together in a handsome, stiff-cover volume which becomes the official document in the drive for public funds. It tells the story of a quest for an idea for a living memorial by the Eagle, and it sets forth in black and white the prize-winning proposals.

SCHROTH'S DINNER GUESTS

"Forget the money it cost us," said Mr. Schroth, but it is common knowledge in Brooklyn's civic circles that the Eagle has an investment of nearly $25,000 in this one project, which grew out of a careful reading of an ordinary news story—a story in which Park Commissioner Robert Moses was quoted as saying, "It would be a sad thing if the pattern for memorials established following the last war were to be followed after World War II."

Instead of the many small neglected eyesores in neighborhoods, why not build a memorial to all the servicemen of Brooklyn? Mr Schroth answered the question and set the Eagle to work. First he called together half a dozen of the most active civic leaders and told them his plans for a contest for architects' plans.

When the competition closed last April 1, Mr. Schroth laid 243 entries before the judges. On May 27, the Eagle announced the winners, first place going to a proposal for a group of buildings in Brooklyn's new Civic Center, which, incidentally, is being developed after years of pounding by the Eagle. The Eagle's building is just off the Center.

The prize-winning memorial plan would cost $1,500,000, the architect estimated. The Eagle didn't quit with that announcement, nor let the whole matter ride as just another newspaper stunt. Mr. Schroth invited 150 of the borough's leading businessmen and officials to be his guests at a dinner. Then he told them: "Gentlemen, here's the memorial we should build. Commissioner Moses is wholeheartedly behind the project. Let's raise the money by public subscription."

As of this week, without any formal drive as yet, the committee had pledges of $250,000, all received by telephone. The Eagle has made it Brooklyn's project, not just the Eagle's.

SERIES OF 52 ARTICLES

The juvenile-delinquency program is another in which Mr. Schroth has applied the follow-through technique. It began a few years ago when the advertising department, scraping for some extra business, sold a series of "do good" ads on a cooperative sponsorship basis.

"When we saw that that type of copy wasn't accomplishing what it was intended to do," Mr. Schroth explained, "we decided to quit it just as soon as the contracts ran out. We adopted a more fitting way of reaching the people on this question of juvenile delinquency. It was in a series of Sunday feature pages in which 52 persons, from J. Edgar Hoover to Herbert Hoover, who had some practical solution for the waywardness of minors set forth their ideas."

Given special type treatment in the best editorial manner, with illustrations by Editorial Cartoonist V. A. Svoboda, the series ran on the back page of the first section each Sunday. The long list of sponsors was held back until the publication of the articles in a booklet.

When the series ended, the presentation wasn't laid away with an editorial. Mr. Schroth invited the members of the Brooklyn Council for Social Planning to a dinner and he asked how the program suggested by the Chief of the FBI, by the former President as head of the Boys' Clubs of America, by the county judge, the school superintendent, the educators, and all the others, could be translated into action. It would require the services of a trained social worker, he learned. So the Eagle's publisher put up $3,000 for a year's salary.

For a year now, the Eagle's juvenile delinquency program has been tested in a selected area of Brooklyn. Many of the ideas from the series, a juvenile court, parental relations, etc., have been given the acid test of practicality, to the extent that the council has decided to spread the program.

Mr. Schroth is contributing another $1,000 toward the expenses, and Mr. Wilson is giving much of his spare time to serving on the council.

Staging Area—Brooklyn, written chiefly by the staff of the Eagle, went out as a section of the December 9 issue. The front cover was a picture of the cruiser *Brooklyn* sailing beneath Brooklyn Bridge and the back cover contained a photomontage of important war headlines and a picture of the supercarrier *Franklin D. Roosevelt* moving out to sea.

No advertising was contained in the booklet, 150,000 copies of which have been distributed. Its pages, Mr. Schroth believes, carry the story of Brooklyn's part in the war.

A particularly good job was done in compiling the record of E and M award winners.

"We haven't heard of a single mistake," said Mr. Schroth.

Some of the chapter headings in the book are: "Brooklyn, an Atlantic coast port"; "Brooklyn Navy Yard"; "Fort Hamilton"; "Floyd Bennett Field"; "Beachhead landings"; "A woman will remember"; "Radar, rockets, and atomic bombs"; "Volunteer services"; "Patriotism and pageantry"; and "An apple for the teacher."

Following through, the Eagle has arranged a series of Sunday stories on the accomplishments of certain firms and institutions whose story couldn't be told until now.

Extension of OPA

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. ROBERTSON of North Dakota. Mr. Speaker, we are soon to be confronted before this Congress with legislation which has for its purpose the extension of the Office of Price Administration. It is well that we do considerable research before this legislation comes to the floor. Because of the price policies of the Office of Price Administration, there is constantly occurring a greater shortage of many materials.

We were told during the war that nylon yarn was being used for various purposes in the war—cables, and so forth. Now the war is over and nylon is still not available for women's hose. And the situation is even more strange than that because without nylon or silk during the war, women were able to obtain through the good stores of the country 51-gage rayon stockings that were very desirable.

Now the war is over and neither nylon nor rayon hosiery in fine qualities are available. Our capacity for the production of both of these products is quite considerable in this country. Before any extension of the Price Control Act is passed by this Congress, I should like an answer to the reasons for the shortage of both rayon and nylon yarns so essential for the American women.

Under unanimous consent, I include herewith a letter received from Strutwear, Inc., Minneapolis, Minn., explaining the difficulties they have had with the Office of Price Administration. I urge that the Congress read this letter:

STRUTWEAR, INC.,
Minneapolis, Minn., January 25, 1946.

Hon. CHARLES R. ROBERTSON,
House of Representatives.

DEAR MR. ROBERTSON: Under the nylon hosiery order of OPA (MPR 602, November 15, 1945) we are required to make application for a qualified wholesaler's registration number before we ship nylon hosiery bought from other manufacturers (not the nylon hosiery we make ourselves).

We made application on November 27. December 12 OPA in Washington asked us for additional information.

We manufacture women's full-fashioned hosiery and sell to the retail trade. We also buy women's seamless hosiery which we do not manufacture, and sell as wholesalers to the retail trade. We have done this for 20 years. There is no complication as the items are separate and reach the consuming public with all pricing requirements of 602 complied with.

We submitted additional information in a three-page letter on December 18.

On January 4 we telegraphed OPA, no reply; on January 14 we wired again and have received no reply.

In our application we told OPA we buy nylon hosiery from Hanes Hosiery Mills, Winston-Salem, N. C., and asked OPA to find out from Hanes whether or not they consider us a qualified wholesaler.

Hanes, of course, has tried from their end to get Washington to act on this matter. We just phoned Hanes' New York office and are informed by them that they cannot get OPA in Washington to answer the telephone.

Hanes has shipped us nylon hosiery because they consider us one of their distributors and we have in our possession 14,000 pairs which we are forbidden to distribute to the retail stores until OPA gives us a number. Many of our customers have no ladies' hosiery to sell, not even rayons.

Can you do anything to help us get through this red tape so we may conduct our business the same way it has been conducted for 29 years?

Sincerely yours,

K. N. COMER,
Vice President.

American Correspondents Answer Attack on General Stilwell

EXTENSION OF REMARKS
OF
HON. HUGH DE LACY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. DE LACY. Mr. Speaker, on January 14 the New York Herald Tribune and the Washington Post, both excellent American newspapers, carried a column by Joseph and Stewart Alsop. It is indeed regrettable that two such fine journals and two such excellent writers and commentators as these gentlemen usually are should have lent themselves to the attack upon a great American officer, Gen. "Vinegar Joe" Stilwell, which that column contained.

The column accused the general of "narrowness and inability to grasp issues" and of being convinced of "the cowardice of the Chinese or the impossibility of dealing with them." The Alsops also declared that the present agreement in China would have been impossible if Stilwell's dismissal and Wedemeyer's subsequent accomplishment had not restored the balance between Nationalist and Communist governments in China which had been completely upset by the deterioration under Stilwell.

I have talked with General Stilwell and I know his attitude toward the Chinese. It is grossly unfair to say of a man who knew the courage and the determination of the great Chinese soldiers that he ever thought them cowardly. Nor did General Stilwell, whose words of appreciation for the valor and understanding of the Chinese people I have heard again and again, ever conceive that it was impossible to deal with these great people.

Unfortunately, the Alsops apparently lack accurate information on General Stilwell. He is a general and a statesman. Five of the outstanding foreign correspondents who watched his work and his generalship and who know the reasons for his abrupt dismissal from China have spoken in Stilwell's defense. In addition, Richard Watts, Jr., who was editor in chief of the Office of War Information in China at the time, made his own reply through the columns of the New Republic of February 4.

Therefore, Mr. Speaker, under the privilege granted me, I wish to include with these remarks a letter addressed to the Herald Tribune by the five correspondents and a portion of Mr. Watts' article from the New Republic. They follow:

THE EDITOR, THE NEW YORK HERALD TRIBUNE,
New York City.

DEAR SIR: On January 14 you published a column by Joseph and Stewart Alsop which argued that the recall of General Stilwell from China in November 1944, was an indispensable prelude to the present happy truce in that country. Followers of the Hurley affair could be pardoned for thinking that Stilwell's recall and the blank endorsement of Chiang Kai-shek were largely responsible for the renewal of civil war (there had been a truce for years, though a disturbed one, when he was there) and that only Hurley's replacement, and a partial return to the Roosevelt-Stilwell policy, prevented it from assuming catastrophic dimensions. But the Alsops, the elder of whom was aide-de-camp to General Chennault in his bitter fight against the Stilwell military strategy, would like to present matters differently, and the topsy-turvy reasoning of the column is the result.

We wish to take issue also with the personal strictures passed on General Stilwell himself. The Alsops accuse him of being "a man of prejudice, narrowness, and inability to grasp large issues." But it was Stilwell, not Hurley, who understood that China could only fight Japan effectively if she was united, and who wanted to use American aid to help her unite instead of split. Stilwell is charged with wanting to help the Communists overthrow the Central Government. But all he wished to do was to urge the Government to remove troops blockading the Communists to the anti-Japanese front, and to give the Communists at least a little of the lend-lease material, mainly small arms, which they needed for their operations against the enemy. (They never received any.) Finally, to contend that General Stilwell ever said that the Chinese soldier was a poor fighter, or had contempt for the Chinese people, is a malicious untruth. General Stilwell spent many years in China and long periods with the Chinese Army in the field. His whole doctrine of building up the Chinese front was based on his respect for the fighting qualities of the Chinese people. He did criticize an incompetent section of the Chinese high command which prevented these qualities from being put to full use. But do officers who allow their men to starve merit anything else?

Serving in a subordinate role to Chiang as his chief of staff, General Stilwell was in no position to remedy the conditions existing among Kuomintang armies which he felt were unnecessarily prolonging the war, and even jeopardizing the entire China front and the then American strategy. This belief grew into a strong conviction after the Japanese made spectacular successes with small forces and light casualties in the spring and summer of 1944—which Mr. Alsop charges up against General Stilwell's record despite the fact that he could not give orders to even one Chinese soldier on the entire China front.

Therefore General Stilwell took the position that an American must be given top command. Rightly or wrongly, he saw no other way to throw the full weight of Chinese military strength against the Japanese, to wipe out the corruption that had demoralized Chiang's troops during the 4 years, locally nicknamed in Chungking "the undeclared peace," and to prevent the hoarding of American lend-lease military supplies for future use in internal strife.

Mr. Alsop recounts the known fact that Chiang had consented in principle to allowing Stilwell to take over active command of the front. It seems unfortunate that he compares American demands for Chinese reforms, presented by General Stilwell with General Marshall's backing, with terms "which might well have served for a message from the German Government to the unhappy Schuschnigg." The United States was then making no territorial demands on China. It was not trying to compromise Chinese independence but offering an American officer, as Eisenhower was offered to Britain, to take full responsibility for a joint effort to defend that independence. Briefly, as Brooks Atkinson said at the time, Stilwell was trying to get the generalissimo to commit his strength to the anti-Japanese effort. The Chinese people welcomed this, even if the generalissimo and Mr. Alsop did not.

What suddenly prevented this agreed transfer of military command, together with other promised reforms which would have broadened the political base of the Chinese war effort? Mr. Alsop would have us believe the cause lay in a sudden Stilwell tantrum of the variety so recently demonstrated in Washington by General Hurley, who, Mr. Alsop tells us, was so remarkably tactful in Chungking that he was responsible for maneuvering Chiang into originally accepting the American demands.

But Mr. Alsop lets the cat out of the bag when he admits that Chiang never wanted to accept these American demands, that he only agreed because he was so dependent upon American aid. Obviously no amount of anger or ineptness altered this basic condition. Chiang's sudden refusal was a direct result of his learning from General Hurley that continued American aid was no longer contingent upon acceptance of our terms.

We believe that if Stilwell had stayed and become Allied supreme commander in China American arms would have gone to active fronts, where they would have been expended against the Japanese. Spent bullets do not change the balance of power. We believe also that Chiang would have had to reach a political agreement in 1944 instead of 1946. In the meantime, America's name in the East would not have been besmirched by intervention in Chinese civil strife and the bombarding of Chinese villages. American troops would not be guarding bridges side by side with undisarmed Japanese, and it would not have been necessary to send General Marshall to try and clear up the resulting mess.

The Alsop column is widely advertised as factual and not grinding any particular ax. It is particularly regrettable that it should be used to rewrite established history and besmirch a great American soldier who has already suffered, as the good name of the United States suffered, from his defeat in a political fight in which Mr. Joseph Alsop was one of the active protagonists on the anti-Stilwell side.

Very truly yours,

LELAND STOWE.
ERIC SEVAREID.
ANNALEE JACOBY.
GUNTHER STEIN.
JACK BELDEN.

The portion of the article from the New Republic to which I referred, follows:

It is the feeling of American participation on one side in a great internal struggle that gives General Marshall's position its gravest handicap; and it is this heritage of the Hurley

policy which makes a settlement more difficult now than it would have been in 1944 when General Stilwell and Ambassador Clarence E. Gauss were making notable progress toward effecting at least a working agreement. Then there was a general feeling of American goodwill, which now has to be restored with such great effort. Therefore, it seems all the more unfortunate, and even mischievous, when Joseph W. Alsop so flagrantly misinterprets the respective achievements of Stilwell and Hurley as he did recently in the usual excellent column he and his brother Stewart contribute to the New York Herald Tribune.

The Answer Is "No!"

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial by Uncle Dudley in the Boston Globe of February 15, 1946.

Editorials in the Globe signed "Uncle Dudley" are eagerly read by a wide circle of readers who admire his commonsense approach to vital issues of the day. This particular editorial seems to me to be a most timely contribution to the question of continued military service, and I commend its reading to my colleagues in the House of Representatives. The editorial follows:

THE ANSWER IS "NO!"

The announcement by Secretary of War Robert Patterson, before the National Press Club, that the Army will "probably" recommend extension of the draft act beyond its May 15 expiration date, despite record-breaking success of the campaign for a volunteer Army, should put on the alert every citizen who cherishes the traditions of our country.

This declaration is presumably the opening gun of a renewed offensive which, were it successful, would present the United States with the reality of compulsory peacetime military service, though neither the Congress nor the American people have assented yet to any such policy. The fact that the draft continues today, 9 months after the defeat of Hitler and nearly half a year after the surrender of the Japanese, already sets off present procedures in sharp contrast with the policy pursued at the end of World War I. By the 15th of next May, when the so-called selective-service law is scheduled to cease functioning, this country will have been drafting its teen-aged boys into the Army in peacetime for more than a whole year after Germany's downfall and 8 months after the Japanese capitulation. Obviously, proposals to extend the process still further raise questions profoundly important to the future of a free society.

Only a few weeks ago the Army's own spokesman charged with responsibility for rebuilding the Army on a basis of peacetime volunteers, expressed confidence that recruiting efforts could produce a regular volunteer Army of 1,500,000 men by the end of June. With more than 500,000 volunteers taken into service in less than 5 months, and more than 100,000 a month enlisting, his confidence does not seem unwarranted.

Why, then, does the Army—for it is the Army which speaks—though the voice is that of Secretary Patterson—suppose that the American people will accept, or the Congress approve, of continuing a method of compulsory draft in peacetime which is working havoc with the lives of our youth, which is disrupting their education, which is crippling this Nation's prospects in medicine, science, and the professions, which is denying immature young men, not old enough to register their protest at the polls, the right to move into their normal places and assume their normal roles in society?

That is precisely what is taking place, though the war is long since ended. Premedical students are being denied their futures; the Nation, which badly needs medical talent, is being thwarted of its requirements by this ineffably stupid performance. Technical undergraduates are being hauled away from their essential preparation for life—yet, as the late war disclosed only too well, wide development of technical proficiency among the civilian population of this country is essential to the future security of the Nation. Let us remember that far more civilian scientists and technicians went with their knowledge and skills into the war to establish the immense superiority of our arms than from the professional Army. Neither Britain nor Russia failed to digest the lessons given them in this matter by World War I. Germany, which began by ignoring facts (as our Army continues to do), changed her policy when she found that it was destroying her scientific strength.

This indiscriminate draft cannot by any candid assumption be called selective. It is preposterous. Dr. Charles Allen Thomas, of the Monsanto Chemical Co., states that it will take a decade of normal peacetime arrangements for the American universities to fill the gap already widened in our sciences by its operation. Medical authorities affirm that it will be 20 years before the crippling of our public health and medical services can be overcome.

By this system the spirit of active creative inquiry is being disrupted. Yet that spirit is the vital foundation of our national life and of our security as well.

The war has sufficiently impaired the spiritual, moral, and social stability of our Nation already. The war is over. Let us cease to victimize 18-year-old American boys to the obsessions of a hangover war mentality.

UNCLE DUDLEY.

Republicans and World Peace

EXTENSION OF REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of the gentleman from California, Hon. J. LEROY JOHNSON:

Mr. Chairman, ladies and gentlemen, this is my first visit to the State of Maine, and I know I am going to enjoy the experience.

Your delegation in Congress is a most estimable and constructive group. Senator WHITE is the leader of the minority in the Senate. He is probably the hardest-working Senator in Washington. His responsibilities and duties are so burdensome that he finds it impossible to get back to Maine as often as he would like to. Senator BREWSTER is a dynamic and capable Senator with few if any equals in his penetrating grasp of public problems.

Your House Members, ROBERT HALE, MARGARET CHASE SMITH, and FRANK FELLOWS are well and favorably known. Each is a distinct personality. Mr. HALE is ably filling the Hale tradition of excellent public service. Mrs. SMITH is an independent and progressive Representative. Her courage and balance have been manifested many times by the votes she has cast upon various measures. FRANK FELLOWS is one of the best-liked Members of the House. He also is a leader in his own right. As a speaker and debater he has few if any superiors in the House. All in all, you are fortunate to have such excellent Representatives in the Congress of the United States.

The Lincoln Memorial in Washington is the one memorial that gives you the greatest emotional thrill. It is hard to describe what the sculptor has put into the Memorial that gives one the emotional uplift that the sight of the Lincoln Memorial does. The statue of Lincoln gives one the feeling of stability and nobility. He is the one American, above all others, who personifies the fact, stated in the Bible, that man was made in the image of God. His life was one of trials, tribulations, and tragedy. He needs no monument to perpetuate his name. He resides in the hearts of all Americans as no other man in our history.

In his noble and simple way, he met the issues of his day. He boiled them down to the fundamentals. He stated that his problem was to save the Union. He pointed out that a Republic like ours could not be half free and half slave. He saved the Union and, as an incident to its salvation, he freed the slaves, and thereby made all Americans free.

The specific problems that Lincoln faced and struggled with to a solution have their counterpart in America today. The solution of his specific problems may not be applicable today, but the manner in which he sought solutions is applicable today. What we say about Lincoln can add nothing to his luster or his fame. What we do in understanding and solving the problems of our day may really honor him. If we can apply the patience, the toleration, and the courage to the solution of the issues of this hour that he did to the problems of his day, then indeed we will be worthy disciples of Lincoln.

In closing his second inaugural address, Lincoln said:

"Let us strive on to finish the work we are in, to bind up the Nation's wounds, to care for him who shall have borne the battle and for his widow and orphan, to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

To me the overpowering problem of this hour is to see that the peace we attained on VE-day and VJ-day is made a just and lasting peace among ourselves and with all nations.

From the primitive nation of Lincoln's day we have grown into a mighty nation, the most powerful in a physical sense of any in the world. We are a mighty industrial machine, and our natural resources are almost unlimited. On VJ-day we had developed the greatest military colossus of all time. On the land, on the sea, and in the air we were supreme.

But our moral force and our political leadership had and still has the possibility of being even greater. We stand on the threshold of the age that may be the beginning of universal peace, the just and lasting peace among the nations of the world that Lincoln spoke about.

We stand in a unique position to be the leader in developing international peace. The Republican Party has by some of its policies furnished the background and set the stage for such an accomplishment. In 1898 we acquired the Philippines. We were charged with imperialism, but the answer given by McKinley was that the Philippines, when able to govern themselves, should have

their freedom. We educated and trained the Filipinos during the intervening years for self-government. On next July 4 they are starting life as an independent nation. This policy, in my humble judgment, is one of the greatest steps ever taken for world peace. Imperialism is, and may continue to be, a barrier to world peace. We laid down the policy that a group of people who occupy a geographic unit, or who are a racial or economic unit, shall, when able to do so, be granted the right to handle their own affairs. Think what such a policy may do to wipe out repressive colonial policies which keep in subjugation great groups of peoples who really should be free and independent.

In 1922, under Republican leadership, we entered into agreements with the leading naval powers of the world for a reduction of armaments. Many people, looking backward, have scoffed at and criticized our action. I, for one, am proud that our Nation, the strongest of all, offered a plan to reduce the armaments of the world, so that these giant war machines would not offer a temptation for the provocation of a war. We also bluntly offered to scrap the most tonnage and did so. Later the plan was scuttled by Japan, but at least we were willing to sacrifice much naval tonnage to move in the direction of world peace. If we talk about reduction of world armaments in the future, we can do so with the utmost good faith and conviction, based upon past performance.

In 1928 we sponsored the Kellogg-Briand Pact. It laid down the principle that all other means to bring about international accord and to settle international disputes should first be resorted to before resorting to war. It, in effect, outlawed war as a national policy in the settlement of differences between the nations. It was an idle gesture, but it did lay down a great policy, which, if properly implemented, might have maintained peace.

Today we stand in the shadow of the Great War. Scattered in all parts of the world are the mortal remains of 300,000 of our boys who died in the struggle. They were told they were fighting for freedom and they believed it. Over a million of their comrades will carry the scars of the war till the end of their days. We must keep faith with them and see to it that the just and lasting peace for which they gave their all is made a reality.

Just as the curtain was dropping on the great tragedy, known as the Second World War, America dropped two small bombs that not only revolutionized warfare but international statesmanship as well. The atomic bomb has changed our whole outlook and approach to international security problems. Man's destructive power has far outrun his moral progress. The bombs dropped are mere pigmies to what can be developed by our scientists. At last man, literally, had developed the capacity to commit world suicide and leave this earth a barren and lifeless planet. By our aviation and radio development the world has been compressed into such a small space that atomic air raids can be made on any part of the world from any place in the world. A small air raid—as measured by the giant raids made on Germany in 1945—could in the matter of minutes level every large city in the United States and destroy all of its inhabitants. Oceans, mountains, and distance on this earth have been removed, as far as our security is concerned.

What shall we do? Shall we make a "Custer's last stand," hoping that by having more atomic bombs than the rest of the world we shall be the last to survive in the atomic war that may come? Or shall we inject the Christianity we profess into our statesmanship and diplomacy, and save ourselves as well as the rest of the world? Christianity teaches wonderful principles and if followed individually and collectively would result in men and nations living and acting like brothers. It certainly must give you pause—as it did me on a trip through Europe and to Egypt and the Holy Land last summer—to realize that in Europe and around the Mediterranean is where all the world wars have been hatched during the last few centuries. Right in the cradle and near the birthplace of Christianity is where wars are generated. Certainly the religion we profess has not helped implement our statesmanship, or we would not have had these bloody wars. Have we the courage to exercise that vision, in tackling the problem of survival in the atomic age, that we have used in the development of our Nation, socially and industrially, into the greatest in all the world?

The groundwork for a warless world has been laid by the creation of the United Nations Organization. On this foundation we can develop world peace. For generations men have been dreaming of a world of law. That means that world force is subjugated to reason and equity. It means that foreign policy can no longer be a policy dependent exclusively upon the military and industrial power of the nation enforcing it. Nor can it be based on the principle that the taking or holding of territory and subjugating populations is only limited by the capacity of the aggressor to take and hold the territory.

If we do not control the power of destruction that we ourselves have developed, the human race faces destruction. Nothing matters much if what we plan and build can be quickly destroyed, unless we create a world order that will prevent its total destruction. Our hopes, our ideals, our aspirations, and our plans will surely go for naught unless we control atomic power. If we do not neutralize atomic power by concerted action of the nations of the world, we will live under the awful fear that at any time everything we have and cherish may be completely obliterated.

The alternatives we must choose from now are whether we want to live by force or by law. We have associated ourselves with our allies and others to bring peace by the settlement of international disputes on the basis of justice. The organization has started functioning. It provides a world forum for all nations. When they speak and advance ideas the representatives of the world's nations hear them. It provides machinery for keeping the peace by putting force behind the law. It contains the germ of world peace. It is the really effective defense to the atomic bomb. It puts into effect the Christian principles of the brotherhood of man and the Golden Rule.

Has our party the vision and the courage to grasp this opportunity and contribute something lasting to world peace? We pride ourselves on giving freedom to the whole world and saving the people of the world from their own destruction. But the danger of destruction is more prevalent now than ever before unless we control atomic power.

Sometimes I think I begin to see a drift away from the course of international collaboration that will bring us world peace. But if we are to be worthy of the sacrifices of our soldiers and sailors and worthy of Abraham Lincoln, we cannot fail to realize that we are at the crossroads of the world and must take the road leading to law and peace and not the one leading to international anarchy and perhaps destruction.

This does not mean that we are going to give away our independence or our individuality. We need not give away our wealth to make the United Nations work. In fact, a strong America is essential to furnish the leadership to make the United Nations a success. There will be discouragements, and changes in the structure of the Organization may be required. You all know the uncertainties and the lack of confidence in the minds of the Constitution makers. Did it not take a bloody Civil War to finally establish the unity of our country and to prove the inviolability of the Constitution? If the moral power is there and the will to make the United Nations work, it will work and unfold so as to bring justice to the world in international disputes. Time alone will unfold the necessary mechanisms to make the Organization work, if the parties really wish it to succeed.

For the present, we must have a strong military set-up. Unfortunately, the persuasive power of a nation at the conference table today is measured by its military might. The small nations are pleading and praying that we will retain the relative military strength we had at the close of the war. They feel that we are their shield against oppression and domination. Unless we keep strong militarily, we will not be able to exert the influence for justice to small nations and helpless people that a strong America will command.

This, however, does not mean that in the future we cannot lead the nations away from militarism into an age of peace, providing the necessary ground work has been laid, so the great nations will abandon the military road as the path to peace. Such proposals as that of Mr. JOSEPH MARTIN, of Massachusetts, providing for the abandonment by the nations of the world of military conscription can become a reality if the United Nations is properly developed.

Russia offers a perplexing problem. It seems that some are deliberately trying to get us into a controversy with Russia. General Eisenhower has said that we can and we should get along with Russia. Our interests are not hostile and there are no differences that patience and diplomatic skill cannot overcome. And that does not mean that we must play the part of an appeaser. Russia may very likely be so engrossed with the development of her vast frontier and her unlimited resources during the next century that if she feels territorially secure she may be too busy to think of military aggression.

The Republican Party has usually been better in administration than the Democratic Party. You know many a good plan is wrecked in its administration. Already Senator VANDENBERG has contributed some really practical ideas that have found their way into the Charter. But behind the words and sentences are the men who must by administration unfold the purposes of the Charter, in the day-to-day problems as they arise. If we obtain a Republican administration in 1948 then we will be in a position to furnish the leadership that will make the United Nations Organization really work.

An idealist has been described as one with his feet on the ground and his eyes on the stars. America is the leading actor in the great world drama that is now unfolding, that may bring world peace. If we keep our national feet on the ground and our national eye on the star of world peace then indeed the dream of the ages for a just and lasting peace will be attained. The leadership for this accomplishment can be furnished by the Republican Party. Have we the capacity and the vision to meet this challenge and rid the world of the age-old curse of war? I believe we have and I hope you do also.

1946: A Year for Political Decision

EXTENSION OF REMARKS

OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. BENNETT of Missouri. Mr. Speaker, having been granted unanimous consent by the House, I extend in

the RECORD the following address which I delivered to the Missouri Republican Editorial Association, which held its annual meeting this year on February 8, at St. Louis, Mo. In these remarks I make reference to some matters of concern to the general public as well as to the newspaper profession:

Mr. Chairman, members of the Missouri Republican Editorial Association, distinguished guests, my fellow citizens all, I am vastly honored to be invited to address your annual meeting early in what promises to be an historic year for Republican journalism and election victories. They are intermingled and inseparable. I know of no greater asset the Republican Party has nor any group to which it owes greater obligation than its editors, who fight for the party in and out of season. I know you have been especially kind to me in my district. But everywhere Republican editors have always exercised a vigilant and reliable influence for good in the whole party, State, and Nation.

I fancy that as the son of a man who was a Republican editor, I, too, have a little ink in my veins, if not on my hands. I think that I can appreciate some of your trials, tribulations, and rewards, for I have heard much of them. For some 5 years now it has been my opportunity, in Washington, to observe with what cunning and cost Government is restricting and superseding your efforts through its own agencies of "public enlightenment" which subtly regiment public opinion in cooperation with the curious uniformity of intellectual pattern represented by the kept columnists and flannel-mouth New Deal commentators. I said that the Government was superseding your efforts. This has been increasingly true since 1933. War has accelerated it. Permit me to quote at this point a brief paragraph which appeared in that famous Democratic paper, the Baltimore Sun, January 9, 1946, under the byline of Washington correspondent William Knighton. From this we may see the shape of things to come.

"It was announced today that the Joint Congressional Committee on Printing will have to look into the Government printing situation to find out if the Government, through the use of printing equipment purchased during the war, is to become a competitor of the commercial printing industry now that the war is over. James R. Brackett, general manager of the Printing Industry of America, Inc., national trade association, charged in a letter to Senator HAYDEN, Democrat, of Arizona, committee chairman, that during the war the Government accumulated $300,000,000 worth of printing equipment in plants throughout the world, plans for the continued use of which 'constitute a competitive threat' to the existing commercial printing industry. While the printing industry is extremely eager to obtain equipment, Brackett said, very little of the Government-held material has as yet been declared surplus."

While journalistic debasement in Washington has not yet carried its practices as far as those of the late, unlamented Dr. Goebbels, the general direction of Government propaganda has paid that infamous Nazi leader the sincerest form of flattery. The practice of Government departments issuing their own hand-outs, slanted entirely for their benefit, and refusing other comment and information, stifles news at its source. This, combined with the studied efforts of the administration to undermine public confidence in the press, has had an erosive effect on the minds of many people. Many citizens today pay scant attention to editorials except in the sensational left-wing press which gets the scoops from its ideological pals, the bureaucrats. Many rural editors, faced with a Government-enforced and created shortage of newsprint and help, have been forced to surrender the field of editorial writing altogether to the vocal opposition. In lieu of editorials we are seeing more and more Government hand-outs of questionable validity in the local press. Even so, had it not been for the Republican press, America long ago would have succumbed to the enervating effects of the barrage of New Deal thought capsules. Republican editors are known in Washington as patriotic. They are also known to have a soft spot for appeals for free space when Uncle Sam dresses the appeal in the flag. It is not always possible to see the underwear of self-interest beneath the shining and star-spangled outer garments. But they are coming at you in a full-dress, well-financed, and planned attack, my friends. They are not going to pay you for much space, but they are going to furnish you with an ever-increasing load of free copy in big manila postage-free envelopes. You are going to have to buy some extra cylindrical floor files to throw it in or else increase the size of your papers.

THE HIGH PRICE OF GOVERNMENT PROPAGANDA

Did you know that American taxpayers are paying an estimated $300,000,000 per year for Government propaganda? This sum for publicity, promotion, propaganda, and information, selling the alleged necessity for preservation and extension of a multitude of Government services, may annoy some editors who receive it. But enough of it is printed to convince the New Dealers it is worth the effort and expense to continue to send it in ever-increasing volume.

A republic must live by its intelligence, its integrity, and courage. To the people of a republic must be given all the facts to enable them to form correct opinions. But, it is not always facts you get from the self-serving testimony of Government public relations experts. Their objective is sometimes different. They seek to divert public attention from high taxes, official blunders, and debt. They seek to train people in obedience to officialdom by converting public opinion to the preconceived official viewpoint of the administration on domestic and international issues. They seek to glorify officials through propaganda for which the people pay.

There is a table in the lobby of the National Press Club in Washington. To this table each day before noon the various bureaus of government send bundles of their mimeographed releases for the convenience of the Washington correspondents. In one typical week, an interested reporter relates in the July edition of Nation's Business, that he counted on this table, 376 different news releases put out by 36 Federal agencies. These releases contained a total wordage of 217,135. This flow of hand-outs would be great enough to fill a 16-page newspaper for 6 days, leaving normal space for headlines, illustrations, and advertising. One Washingtonian is reported to have a very nice private business of collecting unused releases which aggregate one ton per month of scrap paper salvaged from this one table. Senate Report 1554 of the Seventy-seventh Congress, a report of a committee headed by Senator MILLARD TYDINGS, Democrat, of Maryland, states as follows on page 16:

"The committee circularized some 30 newspapers in the United States in an effort to determine the extent to which various types of information was being disseminated by the departments and agencies. It was discovered that a single week's output of these releases sent to a single average newspaper weighed 16¾ pounds net. If this material were reduced to newsprint it would take 875 columns, each 22 inches long, of newspaper space to reprint a week's releases. More specifically, these releases, if reprinted in the New York Times, would require, exclusive of advertising, the entire space of that paper for five full days."

In 1943 I had the privilege of proving to Elmer Davis, at that time Director of OWI, the unpleasant fact that Uncle Sam was the world's number one publisher and engaged in the business of putting out 441 periodicals when newsprint restrictions were being tightened on private publishers. Uncle Sam has more periodicals than Carter had pills. In addition to periodicals the Government puts out thousands of "valuable" little pamphlets on a variety of subjects designed to suit a wide range of tastes. Two of these recent ones just hot off the press in time to aid the sagging reconversion program are, The Love Life of the Fleas of North America and How To Spend the Weekend Without a Car. Lest you think that the expenditures I have referred to for Government propaganda were necessary in part for the war effort let me make it clear that I am not talking about the expenditures of Government for such purposes. A great many things were done in the name of the war and military secrecy which had no relation to it and are difficult to separate from the sum total. However, some fairly accurate idea of the extent of Government nonmilitary propaganda can be obtained from reference to the cost to the taxpayers of postage-free mail sent out by the executive department of the Federal Government, headed by the President. Exclusive of mail for the Army, Navy, and Post Office, the figures indicate that for 1945 this executive department mail consisted of 1,841,856,000 pieces distributed at a postage loss of $27,628,000 to the United States Treasury.

Government publicity bureaus are also useful in producing magazine articles and books for their bosses. The official receives a high price for his writing and the citizens pay for public information which the Government Printing Office would otherwise distribute in a pamphlet at cost of production. A nice racket.

In addition to all of the foregoing, the Federal press agents offer photographs, radio scripts, mats, and movie scenarios. They prepare billboards and poster advertising. Why doesn't Congress do something about all this? It feebly tried in 1913.

BIRDS OF A FEATHER

In 1913 Congress outlawed the title "publicity expert." It was replaced on the office doors of Government by a wide assortment of high-sounding substitutes. "Director of Public Relations" is the favorite. A Government press agent may also be a "research coordinator," "public counselor," "liaison officer," "executive assistant," or "deputy administrator," "information specialist," "information director," or "analyst of publications." Congress discovered one assistant attorney general was an ex-newspaperman press agent. It passed a law that henceforth Government attorneys must be lawyers. But whatever you wish to call them, there are approximately 150,000 of these publicity hounds engaged in the business of selling the taxpayers, at expense of said taxpayers, upon the wonders of the present administration and its way of conducting the business of Government. They are also cultivating the people's taste for more and bigger public expenditures, requiring more and bigger bureaucracy, more and firmer regimentation, and more Government propaganda and press agents. It's a vicious circle.

Washington newspapers report, and a personal check by me has confirmed, the fact that three high-pressure top-flight Government press agents are now busily engaged in the novel task of making their boss, Henry Wallace, the well-known butterfly chaser and fair-haired boy of the CIO-PAC, look good to conservative businessmen as Secretary of Commerce.

Typical of the way your money is being used to glorify and glamorize the bureaucrats is a five-page mimeographed news release under date of December 21, 1945, from the Department of Agriculture and relating entirely to the Secretary himself. Let me quote from page 5 of this blurb:

"The Secretary is tall, well proportioned, and of distinctly pleasant appearance. He somehow bears a resemblance to Franklin D. Roosevelt as we remember seeing the late President years ago when he was Assistant Secretary of the Navy. The Secretary also has a wholly admirable platform presence. He is a fluent speaker who talks quietly, clearly, distinctly, without any regional twang, and in a well-modulated, fairly deep voice which carries well. His most characteristic gesture seems to be a partly abortive raising of his left hand. His most natural change of expression is to break into a warm genuine smile which conveys friendliness and sincerity. His manner is easy and informal. He frequently displays a lively sense of humor, yet gives one an impression also of firmness of purpose and superior intellectual grasp. What he says comes right from the shoulder. Above all, he impresses you as fair and square, honest and dependable. He is simple, direct, wholly unambiguous, and not given to evasion in the slightest degree. He evinces deep study and full mental grasp of the many problems which engage him. The moment he opens his mouth you are aware that he is thoroughly human, possesses an attractive and vital personality, and is a cultivated American in the best sense."

The release also tells that he likes horseback riding, and bridge, is 6 feet 2 inches tall and weighs 185 pounds. All not very helpful to the farmer. I am sure the average farmer would prefer the money expended for this unnecessary release be spent for production of fertilizer he could spread upon his fields.

I served in Congress with the Secretary before he went into the Cabinet. I know that he is the charming character here portrayed. But, the misuse of taxpayer's funds to print the release is too obvious for comment. When the Republican National Committee exposed it, this release was withdrawn and another issued under the same date leaving off that portion I have just read. The other four pages might well have been left out, too.

It is an insignificant bureaucrat, indeed, who does not have a publicity man, or staff. Only the Congress has foregone this novel adaption to the requirements of modern politics. The story of Congress and its relation to the scheme of Federal Government is almost unknown to the average citizen. Dr. Gallup, the poll taker, says that more than half the people don't even know who their Congressman is. It seems to me that we have here a challenge to the independent and to the Republican press of America. A challenge to tell the people the story of Congress, particularly the work of the minority party in Congress and to emphasize the importance of voting in off-year congressional as well as in Presidential election years. Congress alone stands between the people and a collectivist state. Perhaps I should more accurately say a Republican Congress can so stand. The chance to erect this barrier will be in November.

I am convinced that with your continued loyal help we can and will win, decisively. But, the winning will not be in November or between August and November. The winning will be from here to there. We enter the political arena this year under most favorable circumstances. Indeed, they could hardly be better had we "planned them that way." Let me direct your attention to a few of the issues which to those of us on the congressional front seem most appealing.

SOME ISSUES FOR 1946

I think it almost goes without saying that we Missourians are the shock troops of political battle this year. Truman, Hannegan, and all the rest of the New Deal jobholders will exert every effort to save the President's home State for their ticket. They have said as much. Already they have done so in two State-wide meetings in my own home town. At one of these affairs Mr. Hannegan, Postmaster General and Democratic National Chairman, spoke to the mass meeting of jobholders and exhorted them with this battle cry which I quote: "It is no longer necessary to coddle the Republicans to get them to go along with America. We don't need them. But, we do need and must get a Democratic Congressman who will be true to Truman from each of Missouri's 13 congressional districts in November, 1946."

By the same token it is evident that Republicans, believers in constitutional government and opponents of Trumanism, offspring of Pendergastism, must, whatever their party, put forth every effort to turn back the gang of election thieves and squanderers who would plunder America as they plundered Missouri and Kansas City. A sweeping Republican victory in Missouri in 1946 might even prevent Truman's renomination. Certainly election of a Republican Congress will wither him on the vine until his waning popularity will be so dried from lack of that life-giving sustenance from the Treasury that he will fall off automatically in 1948.

Not the least among our advantages derives from the historically significant fact that the Lord in His infinite wisdom removed from the earthly scene Hitler, Mussolini, and Mr. Roosevelt in April 1945, all, incidentally, in a single anniversary month of the Resurrection. In so doing he did for the American people what they could not do for themselves. He proved no man is indispensable. We must frankly admit that the four-term President had been in office so long that a majority of the voters remembered no one else as President and that he held together as no other man has or can the diverse elements which make up the unholy alliance which is the Democratic Party of today—the bought vote, the radical element, the corrupt big city political machines, and the solid South, where political thinking solidified in 1865 and has not yet thawed out.

For a while it appeared that the new President would be able to hold these discordant elements together. Before entering his present period of strife with Congress he enjoyed first a political honeymoon and then the period of the drift when he sought to let pressing problems solve themselves aided by cordial luncheons with Members of Congress at the Capitol Restaurant and prolonged poker and bourbon sessions on Jefferson Island. Missourians knew what would happen. They knew the same weaknesses always apparent to us would collapse his house of cards. The Presidential oath does not a benefactor make nor high office a hero with Solomon's brain.

Where are we tonight under the farsighted planning of 16 years of New Deal legislation? They say we are in a period of reconversion. A better name for it would be reconfusion. The President whines over the radio because Congress does not do his bidding. "Buck-passing" is an old game. But, if the President's own party majority in Congress doesn't think enough of his program to enact it, then it bears watching.

For years the New Deal has preached class warfare and fanned the fires of racial and religious intolerance. It's poultry is now coming home to roost. Strikes have hindered production and encouraged inflation. But, the President, political prisoner of labor racketeers, seems unaware that no system of government can work unless the people do. Trying to carry water on both shoulders, he has satisfied nobody in his handling of labor disputes. His spider-legged socialistic economists busily spinning their webs around ballot boxes, have not explained why paying more wages for less work is not just as inflationary as paying more dollars for less goods. They stoke the furnace with printing-press money while the Belshazzar's feast continues to the tune of the on-with-the-dance theories of New Deal politics.

Under the Truman New Deal we have finally learned the sordid truth about Pearl Harbor and how we were corkscrewed into war unprepared and without our consent by the secret conferences, deals, and by the plain falsehoods which were handed us before the shooting started, by Executive order, months before Pearl Harbor and an official declaration by Congress. Mr. Truman says the American people are to blame for our defeat in the battle at Pearl Harbor. To the extent that he refers to those who voted for the late President, he is correct. The Commander in Chief appointed the admirals who were admittedly busy exchanging pictures of their pin-up girls while the New Deal furnished the Japs scrap iron and aviation gasoline to use against us.

Under the Truman New Deal we learn of the graft and corruption which prevailed in high places and among members of the late President's own family. We learn how income taxes were avoided and how favors were granted to selected contractors, radio stations, and labor leaders. The New Deal leaders have been and still are preoccupied with seeking safe ways to be dishonest. Harold Ickes is a possible exception. But, if it's too bad for Honest Harold it stinks to high heaven.

Under the Truman New Deal we see lend-lease obligations owed us by Great Britain in the staggering sum of around $25,000,000,000 is to be settled for six hundred and fifty million which we even loan her to pay off with. We learn that billions of dollars we dug up in war taxes have been dished out to foreign nations who used them in many cases—not to help win the war—but to beat America in foreign trade, to advance Communism in some countries and to socialize others. We learn now it is proposed to continue to play Santa Claus to the hottentots and bankrupt nations of the world, who not only will refuse to repay our so-called loans but who will plunder our markets with the funds, so that we lose both our money and our goods—and then they will again call us Uncle Shylock if we don't give more. There will always be a United States of America if the New Deal doesn't give it away. But that's just what the no-good-do-gooders and down-fallen uplifters want to do with it. Charity begins at home. We have some unmet obligations to our veterans and old folks. But they are going to be among the classes of forgotten men of 1946 if the propaganda campaign of the State Department pays off as planned.

The Wall Street Journal of November 13, 1945, was first to expose the State Department's 100-page plan to drum up support in this country for the British loan. They will use the radio, the press, and public speakers to do the job. In this they will be ably assisted by the British, who are such proved experts at molding and directing American public opinion. It may interest you good people to know that in a 560-page report on the Foreign Agents Federation Registration Act, the Attorney General has grudgingly given some very revealing information on the extent to which foreign propaganda is being used in this country to mold the thoughts of our taxpayers. The administration is permitting 34 governments to engage in such activity here, costing millions of dollars annually. The British Information Services have filed a statement, as required by the law, showing that in 1944 the administration permitted them to spend $3,143,000 in this country for propaganda purposes. Figures for 1945 are not yet available. But this annual investment obviously pays off handsome dividends and has for years. The British Empire has more wealth than we and a smaller total debt.

Our own Government engages in a woo-the-British campaign but without comparatively effective results indicated on our profit ledger. The State Department is asking Congress for in excess of $40,000,000 per year to continue to spread American propaganda throughout the world where 850,000 of our

civilian bureaucrats are scattered on various world-saving enterprises. In that proposal you can see the fine hand of OWI which has moved across the Street from Mellett's madhouse to the State Department and plans to continue its work in peacetime under different letters of the alphabet. You may be interested to know how it worked on the British while they were working on us over here. The OWI, now going under the name of the Interim International Information Service of the State Department, sent for the edification of the British our secret weapon, David Cushman Coyle. Comrade Coyle is a well-known New Deal economic philosopher and pioneer exponent of the spend-to-save theory of government which has had atomic effect on the national debt. He is still on the Government pay roll. Well, Mr. Coyle went to England to explain Americans to the English. The following is his report on his 2-year junket at public expense as given to the Washington News September 6, 1945.

"It was most enjoyable. The British just love New Dealers. It was nice to go about lecturing and getting all expenses paid and being buttered up by the British for just explaining to them why Americans chew gum."

Now let us approach our Truman New Deal foreign affairs policy and personnel from another angle. Under the Truman New Deal we learn that Robert Hannegan, of St. Louis, who sat in on the conspiracy to steal the Missouri governorship in 1940 and who had ghost voters registered in his home, has now been promoted to the Cabinet for his services and together with Sidney Hillman controls Democratic patronage. A few new appointments have been made but they are merely New Dealers from the same old deck which has been shuffled many times in the past 16 years. Cohen, Rosenman, and Frankfurter still help rule the roost. Ah, yes, together with certain local assistance. That great foreign affairs expert, who until 1945 was an insurance man in Jackson County, Francis Pendergast, of Kansas City, now holds down a $6,200 per year job with the State Department. Hail, hail, the Pendergast gang's all in Washington now. Maybe the Pendergast influence indicates the trouble with our foreign policy. I want to say a few things about the great Truman New Deal foreign policy which purports to guarantee us the peaceful fruits of costly military victories.

Let me quote a loyal New Dealer, Senator J. WILLIAM FULBRIGHT, of Arkansas, author of the famous Fulbright resolution. Says the Senator:

"I have come to the conclusion that our Government has lost its bearings, that it is drifting about in a fog of indecision, and I believe that the best hope for a wise solution now lies in the wisdom and common sense of the people of this country. * * * The administration has no plan of action, no principles or convictions to guide us. Our actions or policies in foreign affairs seem to be improvised on the spur of the moment. We play by ear without the slightest regard for the harmony of the composition. Such a method of dealing with serious questions of government can only lead to disaster."

Senator FULBRIGHT said all of that and more in a radio address November 23, 1945.

Now listen to sentiments attributed to another Democrat, this time Senator BURTON WHEELER, an anti-New Deal Democrat and an isolationist:

"We are faced with a rivalry between British and Russian imperialism that has its roots deep in the distant past. For the second time in one generation not one of our allies, after the shooting stopped, has wanted any traffic with American principles, ideals, or moral values. The weakness of American foreign policy has backed us into two world wars. There is a third world war in the making. In diplomacy we are permitting ourselves to be sucked into a power bloc on the side of colonial imperialism against Communist imperialism. I am opposed to both. I still favor a democratic republic and free enterprise."

Yes, both the New Dealer and anti-New Dealer, both internationalist and isolationist, in the President's own party, disapprove of the Truman foreign policy. It must be bad. I think we might say that the Truman New Deal has the "atomic ache." It is disheartening to Americans who believed in the glib promises of the late Atlantic Charter to see American soldiers used in a political chess game in China and to guard British-owned coal properties. They do not like the philosophy behind Secretary of State Byrnes' statement that he has ordered American markings removed from our military equipment being used to slaughter Indonesians seeking their freedom from Dutch and British oppression. They are familiar with the precedents for such a policy. They recall that American gangsters remove markings from their own weapons, file them off, in an attempt to escape detection. These are not honorable precedents for the Government of the United States to follow. They will not fool anybody for long. The sordid obvious fact is, after suffering over a million casualties in war, we have now become not the arsenal of democracy but rather the arsenal of empire. As Senator ARTHUR VANDENBERG so well said: "In war we stood by our guns with epic heroism. I know of no reason why we should not now stand by our ideals. If they vanish under ultimate pressures, we shall at least have kept the record straight. We shall have kept faith with those who died."

There are a few other interesting developments under the Truman New Deal on which Republicans need to make their position clear, through the Republican press. One is the proposal to put a premium on loafing, to put unemployment on a salary. It is an offer to provide $25 per week dole for not working 6 months per year. Rocking-chair vacation money you who work must provide in higher taxes. Ointment to take the place of sweat. It is a typical Pendergast-New Deal political blue-plate special, built around pork and bull.

Under the Truman New Deal I have been a member of a committee of the House investigating scandalous conditions in our veterans' hospitals. There we found third-rate medicine for first-rate men and the whole Veterans' Administration has had to be overhauled after 16 years of New Deal neglect. Now they propose to extend socialized medicine to all the people of America, for a slight consideration of a 4-percent additional tax on all incomes, except that those making more than $3,600 per year will not have to pay on that. The forgotten man with a low income gets hit in the purse again. And, of course, if he happens to be a Christian Scientist, he gets it in both neck and pocketbook while he pays for the other fellow.

We have heard a lot about how Americans have been ill-housed, ill-fed, and ill-clothed. What has the New Deal Congress done about it in 16 years? It has brought about food scarcities. We need fewer sacred cows and more butter. It has made it impossible today for a man to find any decent suit of clothes or shirts to buy. It has increased the cost of homes so that the average citizen now seeking shelter finds home ownership and building beyond his means.

Under the Truman New Deal we hear Presidential messages to Congress including 7 of 8 radical CIO legislative proposals plus 10 planks from the platform adopted by the Communist Party at its July national convention in New York. No wonder Democratic Party members gag on it. This is no Democratic legislative program.

Under the Truman New Deal administration we hear a Presidential request for legislation to flood this country with immigrants before our own veterans have all had a chance to find jobs and housing.

Under the Truman New Deal we find that Congress does not take up the matter of demobilization, the majority party preferring to let it be handled by the President and the brass hats who let the boys out only under pressure. We have expected this since Governor Dewey revealed in the last campaign the strategy of Selective Service Director Gen. Lewis B. Hershey, who said: "It is easier to provide jobs in uniform than on another WPA." We find the Truman New Deal unwilling, officially, to declare the war is over and to demobilize unnecessary Government bureaus as well as the armed forces. Why? Because the administration is afraid of, and unprepared, to meet and solve the problems of peace. Its only remedy is to spend more money and ask for more power. We know, and they know, how that prolonged the depression from 1933 to 1941. Now the administration admits it can only survive on a wartime economy with wartime controls indefinitely extended over business, over youth, and over Congress.

So, I say, my friends, that the Democrats are suffering from that dread and fatal disease, "delirium Trumans." They have come to the end of the road. They have their backs to the wall. They are staggering and almost out. Ours will be a certain but not an easy victory in November. We must not underestimate the ramparts of Federal patronage, special privileges for pressure groups and prestige always enjoyed by the aged and defending champion until the challenger knocks him out. It will not be easy to put out the false lights in the swamplands of deficit spending which have run the national debt, including contingent liabilities for congressional authorizations not yet appropriated for, to $636,989,220,145. The national debt was $21,000,000,000 in 1933 when the first New Deal President took office with a pledge to reduce Government expenses 25 percent. It will be difficult to erect a stop-sign against the mad race for pleasure, dollars, and phantom security. It is not always popular to stand up against bigger and better hand-outs from the Treasury for pork-barrel projects and to pressure groups which have waxed so fat and powerful on them that, like the Federal bureaucracy of over 3,000,000 people, they have become Frankensteins and I am not talking about the one who is an official of the CIO United Automobile Workers. It has, indeed, become unpopular in some quarters of this country and among vast parts of our population to speak up for America and her interests and to love this country as much as Stalin loves Russia.

THE REPUBLICAN PARTY OFFERS A CHOICE

Republicans, however, face the tests of 1946 united. Concrete, constructive, and thoroughly American programs have been agreed upon by your minority Representatives in Congress and the Republican majority in the Missouri State Legislature and printed in black and white. I commend them to you for your further study. I shall not dwell on them at length tonight for I am sure you are acquainted with them. They draw the clear-cut issue between radicalism, regimentation, all-powerful bureaucracy, class exploitation, deficit spending, and machine politics as against our belief in American freedom for the individual under laws fairly administered for all, preservation of local home rule, efficiency and pay-as-you-go economy in government, and the protection of the American way of life against either Fascist or Communist trends. We must keep this choice before the people clean-cut. Americans do not want to become simple statistics in a socialized state. They want full voice and participation in the affairs of a prosperous nation, firmly anchored in the solid foundation of a representative and constitutional form of government. But, I repeat, they must be given a clean-cut, definite choice. I am con-

vinced that if this Nation is to be saved, if representative government is to continue, then the Republican Party must lead the way. I call upon you to keep your shoulders to the wheel—1946 is a year for political decision.

Tomorrow we will meet in celebration and to pay respect to the memory of that greatest of Republicans, Abraham Lincoln, himself at one time a Republican newspaper publisher. Were he here at this hour he would draw these issues clearly. There is no doubt on what side of the line he would stand. To each generation of Americans is given, in its own way, the task of preserving our priceless heritage. But, we can draw inspiration from those who charted the original course. Let us undertake our task this year in the spirit of Lincoln, lover of freedom, defender of the faith, soldier of country and of God. I have refrained tonight from talking about Lincoln for there is no new thing I can say of him which you have not heard. It is rather to the spirit and purposes with which he led our party and country that I would direct your attention. There can be no new thing said of a man who was so eternally right that his principles of 80 years ago would still be good today. "Nor," in the words of the poet, "is there any new thing to be said of the mountain, of the stars, nor of the sea. The mountains ever tower in majesty above the shifting clouds, the quiet stars ever keep holy vigil above a tired world, the mysterious sea ever sobs on the shore. But, to mountain, to star, and to sea, man ever turns in reverent homage. And thus it was with Lincoln, for he was mountain in the majesty of his thought, star in the steadfast purity of his purpose, sea in the deep undervoice of mystery and of sadness, and he abides."

I appreciate the courteous reception and attention of you Abraham Lincoln Republicans. Long live the Republican Party! May God bless America!

A Needed Housing Bill

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. MANSFIELD of Montana. Mr. Speaker, I am today introducing a bill making available building materials and facilities for the construction of homes within the price reach of ordinary families and returning veterans. According to information furnished me by John B. Blandford, Jr., director of the National Housing Administration, there is sufficient evidence at hand to warrant the statement that acceptable housing can be built in the $5,000 price range. The need for housing in the lower-cost bracket is great and studies reveal that more than half the families of this country could not afford to build a home costing more than $5,000. Furthermore, as new construction materials and methods are developed through research, there should be a progressive lowering of housing costs and with the will and determination to provide adequate housing at low cost the job can be accomplished.

It is my belief, Mr. Speaker, that the House should give due consideration to my measure because it helps the people who are in greatest need of assistance. The returning GI's are members of average families and they have a right to expect our help in achieving a decent security and a place to live which, over the years, they can afford. Housing is the project which will come closest to the hearts of all Americans and this bill will help to give some degree of assurance to over 3,000,000 American families in the immediate future. This measure will not meet the long-range needs of the Nation, but it will help now. The sooner we get started on my proposed program, the sooner we will crack the inflationary jam of shortages and high prices and begin the great forward movement in employment and production which must carry us through reconversion to stable prosperity. Housing is one of the keys to full employment, to eradicating juvenile delinquency, and to achieving full security for all our people. The time to act is now.

H. R. 5515

A bill requiring that of available building materials and facilities 50 percent be used for constructing homes selling for $5,000 or less, 25 percent be used for housing accommodations selling for more than $5,000, but not more than $8,000, and 25 percent be used for other purposes

Be it enacted, etc., That the President shall allocate, and shall establish priorities for the delivery of, materials and facilities suitable for the construction of housing accommodations in such manner, upon such conditions, and to such extent as he deems necessary in order that of the aggregate supply of such materials and facilities 50 percent thereof will be used for the construction of homes selling for $5,000 or less, 25 percent thereof will be used for the construction of housing accommodations selling for more than $5,000, and 25 percent thereof will be available for purposes other than for use for the construction of housing accommodations selling for $8,000 or less.

SEC. 2. This act shall cease to be in effect June 30, 1947.

Serious Business

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Omaha Daily Journal-Stockman, of Omaha, Nebr., entitled "Serious Business."

Mr. Speaker, recently the Secretary of Agriculture announced that it would probably not be possible to keep their promise to the farmers on the price of hogs and other farm products. It is quite evident that OPA intends to make the farmer pay more for the things he must buy and yet depress the price of things that the farmer must sell.

Mr. Speaker, the past bungling efforts and regulations coming from many Government agencies have caused a shortage of food. Broken promises discourage the farmer. If Government has no integrity, and fails to keep its promise to the farmers, it will certainly cause more confusion, with a reduction of the needed food and fiber. The following editorial represents a sound plan for solving the question of marketing hogs and the saving of feed. This plan would be far better than breaking the Government's promise to the farmer.

The editorial follows:

SERIOUS BUSINESS

The Government has unofficially promised "drastic moves" to obtain food for Europe. Just what action will be taken will not be known until these moves are announced, but that it will be drastic seems reasonably certain. There is no use guessing what will be done to force farmers to sell grain and livestock to build up the exports, because there are too many methods, any one of which might accomplish the desired result.

Methods that could be used range all the way from a "freeze" of grain to an elevation of livestock ceilings. A grain "freeze" would starve the livestock feeder into disposing of stock and expand the meat tonnage at the sacrifice of later volume. It would also make available to Federal buyers sufficient corn to make up part of the shortage of other grain for export. This plan has some backing, especially by those who argue there is more food per bushel available if the grain is used as human food instead of converted into meat.

There is some pressure for a lower ceiling on some classes of stock, particularly heavy hogs, to discourage heavy grain feeding. Some suggestions are heard for a temporary higher ceiling on some animals to encourage early selling.

No matter what action is taken to strip the farms of grain and meat animals, it will be accomplished if the boys in Washington go far enough, simply because they have the power to do it.

It is with hope that we suggest that they do not resort to measures that are too drastic. The more drastic the methods, the more the farmer will be hurt. Whenever Federal action is taken to force artificial increases in tonnage by bringing out of season sales of grain and livestock, the farmer, in the long run, is the one that suffers.

If it is necessary to provide such increases through the sale of unfinished animals, methods should be used which will bring the least repercussion to normal farm practices. Instead of a penalty to producers for feeding the kind of animals our Government frowns upon, why not a bonus for the men who feed the kind Washington wants? For example, instead of driving the ceiling on heavy hogs to $14, as suggested in Washington, why not leave the ceiling on heavy hogs where it now stands, and raise the ceiling for light hogs to $16 or $17? The result would be the same, but with less harm to farmers and certainly much less ill-feeling toward the planners.

Or, probably better, why not raise the ceiling for all hogs to $20 for a period of 4 months, with the price to go back to the present level July 1? Another, off-the-record suggestion, is a much higher temporary ceiling for a period of several weeks only, to hustle them to market.

There is no use saying such things cannot be done. They can be done. The boys in Washington have been given the power to do just about anything they want. If the repercussion is great, which it well could be, the blame is entirely at the door where rests the power.

Our advice to them is to step lightly. They may step on eggs, some bad ones.

Does Big Business Have a Divine Right to Rule?

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. SABATH. Mr. Speaker, one of the factors that has made the German Nation a constant menace to world civilization for a century has been its government by big business. Three times in less than a century the world has been bathed in blood for the sake of German markets, because German big business—the manufacturers, the sellers, the landowners, the mine owners, the steel and coal and dye and chemicals cartels—ran Germany.

It was a terrible shock, then, when C. E. Wilson, president of General Motors Corp., told the world he thought big business should run this country. I can only say, God forbid. We do not want America to become a Germany, Nazi-fied, destroyed, and destroying.

Under leave to extend my remarks in the RECORD, Mr. Speaker, I wish to insert an editorial from the Philadelphia Record which forcefully expresses my views. Regardless of the views of the staff of the House Un-American Committee, America is a Nation founded on democratic principles; it has a government, under Democratic administrations, of the people, by the people, for the people, and we want to keep it that way.

Text of the editorial follows:

BIG BUSINESS STILL TALKS OF "DIVINE RIGHT TO RULE"

There's a sound old-fashioned notion in this country that decisions on national policy should be made by the Government, elected by the majority for that purpose.

Now we hear a suggestion that this idea is all wrong. It comes from an outstanding leader in industry, Charles E. Wilson, General Motors Corp. president.

At the NLRB hearing on unfair labor charges against GM, Wilson described a conference of industrial leaders last month in New York.

The motors, steel, electrical, and packinghouse industries were represented. They had the common interest, said Wilson, that comes from "looking down the same gun." He meant strikes, or threats of strikes.

There was nothing sinister, he said, in the meeting. He denied that the meeting was a symptom, as labor had charged, that there was conspiracy by industry to smash unions. Then Wilson added:

"In fact, it is too bad that that group cannot make the decisions for the country."

Has Mr. Wilson forgotten?

Big business did run the country once.

Behind the facade of Coolidge, Harding, and Hoover. For 12 years.

It ran the country right into the ground, into the debacle of 1929, and it was helpless to stop the disaster that followed.

Let the leaders of industry and wealth run the country again?

As well trust an expert watchmaker to operate for appendicitis.

Such men as General Motors' Wilson are great production experts. They've given most of their lives to production. We admire their skill in that specialty.

But they are not economists or sociologists, or experts in government.

Let nobody make the mistake of assuming that because they are tops in their field they are better versed than the average man in any other field.

Our domestic economy has been snarled. Wilson was right about that. But what reason is there to believe he and his associates could have done any better?

They didn't in the 1920's. And they had a chance, together with labor, last year in Truman's labor-management conference.

They hadn't the courage then to establish some kind of wage-price policy. They can hardly criticize now with a free conscience.

Big business has quite often confided, in public advertisements, that it really wants to run the country.

The National Association of Manufacturers, which apparently has learned nothing from a depression and liberal evolution in government, is clamoring in advertisements for the removal of the shackles of price ceilings and for a willy-nilly balancing of the Federal Budget.

The Society of Sentinels, secret organization of big business names, demands:

Repeal of the Wagner Act, the Fair Labor Standards Act, Social Security, and all laws protecting agriculture.

No group, no special interest, can be trusted to run the Government of these United States.

Ours is a government of all the people. It will only serve all the people as long as all the people have the controlling voice.

Government by the few invariably ends up in government for the few.

Artificial Limb Curbs

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. KELLEY of Pennsylvania. Mr. Speaker, the Subcommittee on Aid to the Physically Handicapped some months ago requested the Federal Trade Commission to undertake the regulation of the artificial limb business. I am pleased to report that the Federal Trade Commission has held conferences with the members of this industry, and wish to have inserted in the RECORD a story from the Washington Daily News, of Saturday, January 16, 1946. This story describes one of the very concrete results of the work of your special committee, and an accomplishment on the part of the Federal Trade Commission which, in my opinion, is sure to result in benefits to all amputees.

AMPUTEES BENEFIT FROM ARTIFICIAL LIMB CURBS, FTC FINDS

The new trade practice rules for the artificial limb industry drawn up by an industry conference in Chicago last December are meeting almost no opposition.

This fact was brought out yesterday at a Federal Trade Commission hearing to consider regulations to govern the $20,000,000-a-year industry. The regulations were patterned after those laid down at Chicago.

Henry Miller, head of the trade practices conference division of FTC, said the regulations had been a protection for veteran amputees.

A representative of the Association of Limb Manufacturers, recently named in a grand jury indictment charging illegal price fixing, said his organization had no objection to the rules.

The regulations provide that artificial limb distributors must not use the term "perfect fit" or any other methods which might mislead the purchaser and outlawed misleading demonstrations.

Surplus Property

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a resolution from the American Legion Post at Bayard, Nebr.

Mr. Speaker, this resolution indicates the growing concern, of thinking people, about the inability of the returning soldier to take advantage of and get some needed surplus property. Something is definitely wrong with the operation of the surplus property law. It is not being administered as intended by Congress. It seems certain that one of the great scandals of the next few years will be that of disposal of surplus property, unless some definite plans are initiated, at once, to prevent this scandal.

The returning soldier should be able, by the presentation of his honorable discharge certificate, to take advantage of and get a fair share of the vast store of surplus property. The following resolution indicates the reaction of the American Legion Post in Nebraska, as it relates to the disposal of surplus property.

The resolution follows:

Whereas veterans are finding it more and more difficult to purchase surplus Government property, to which preferential right has been provided by law; and

Whereas the supply of such property is adequate, but due to conditions beyond the veterans' control, little if any of this property is getting into their hands; and

Whereas the veteran is in need of such property, and as rules and regulations now laid down by the certification agency require that he spend considerable time and expense to appear personally at the headquarters of such certification agency to establish his eligibility; and after receiving such certification he may find it necessary to travel many miles and in the opposite direction to make the purchase of property desired; and

Whereas the certification and disposal agencies have been changed numerous times by Executive order and regulations which further curtails and delays veterans' possibilities of obtaining such property for which he is otherwise eligible: Therefore, be it

Resolved, That Bayard Post, No. 200, American Legion, hereby directs appropriate action be taken to make it possible that the presentation of a veteran's honorable discharge certificate to the disposal agency be sufficient evidence to establish priority and eligibility to purchase any surplus Government property within the limits of fair share distribution. It is further directed that a more uniform method of notification of time, loca-

tion, and type of surplus properties offered for sale be made available to veterans; be it further

Resolved, That a copy of this resolution be spread on the minutes of this meeting and that copies be mailed to the department and national headquarters of the American Legion, the national legislative committee of the American Legion, all Nebraska Members of Congress, and the chairman of the Veterans' Affairs Committee of the Congress.

Adopted by Lincoln-Stone Post, No. 200, The American Legion, Bayard, Nebr., this 6th day of February 1946.

B. W. MOORE,
Post Commander.
T. O. PRATT,
Post Adjutant.

Wilson Wyatt Chooses To Build Houses

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. SABATH. Mr. Speaker, I had the extreme pleasure of meeting Wilson Wyatt, the President's housing expediter and new head of the National Housing Agency, at a banquet last Friday night. I do not recall a time when I have heard a man talk as forcefully, as logically, and as coherently for 40 minutes without once looking at any notes. He has been in office only a short time; but he proved to us he knows housing and he knows the problems he faces; and he has a clear idea of what he is going to do about them.

I know, Mr. Speaker, that you and all Members of Congress are being snowed under by the deluge of propaganda from the real-estate lobby saying Wilson Wyatt cannot build houses. We read all the old arguments every day, and maybe a new one once in a while.

I have faith in Wilson Wyatt, Mr. Speaker, and I feel we should give him every support here in the House. I was struck by an editorial in the Chicago Sun headed "Wyatt's Choice: Houses, Not Business as Usual." Under leave to extend my remarks, I am inserting this editorial in the RECORD because I think it states clearly the decision that the President, Mr. Wyatt, and the country have made. We must have houses.

The editorial follows:

They are beginning to chip away at Wilson Wyatt's housing program. The real-estate men want to eliminate his proposal for ceilings on existing houses. The big producers of materials want no subsidies. The lumbermen want an end to price control. If every special-interest group has its way, Mr. Wyatt will have no program left, and the country will not get the houses it needs.

Which do we want more—lots of houses fast or business as usual? That is the choice. If the housing problem is really an emergency—and the desperation of home-hunting families gives the answer—then only a national crusade will solve it.

One goal is the rapid production of houses that returning servicemen and average families can afford. If the turn-over and upward course of prices on existing houses continue unchecked, however, the inflationary pressure on the cost of new houses will be redoubled. That is why prices of old houses must be controlled.

Another goal is rapid production of building materials. Allowing prices to rocket might get the production, but it would concentrate home building in the high-cost field, whereas those most acutely in need of shelter can pay only moderate rentals and purchase prices. That is why we need selective subsidies, as Mr. Wyatt has proposed.

What is the alternative to Mr. Wyatt's program? Let us remember that "business as usual" has already been tried. President Truman and Reconversion Director John M. Snyder were operating on that principle when they hastily threw off priorities immediately after VJ-day. But the so-called natural forces of supply and demand did not give us a vast program of home building.

Mr. Wyatt knows that if 1,200,000 homes are to be started this year and 1,500,000 in 1947, extraordinary measures on many fronts must be undertaken.

War veterans who know from personal experience the vast productive power of this country will not be satisfied with explanations instead of houses. There will be political retribution for any officials or pressure groups that throttle Mr. Wyatt's plans.

Lincoln Day Address of Hon. Andrew F. Schoeppel, Governor of Kansas

EXTENSION OF REMARKS
OF
HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. RIZLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Governor Schoeppel, of Kansas, delivered at Oklahoma City, Okla., on February 12, 1946:

Mr. Chairman, distinguished guests, ladies and gentlemen, I am always happy to have an opportunity to come to the State of Oklahoma. The State of Kansas and the State of Oklahoma have a great deal in common. We are next-door neighbors. Many of the people of Oklahoma originally came from Kansas; and, up in Kansas, we have many Oklahomans who have come into our State.

In many respects our problems are the same; and I think that we view things in pretty much the same light. Candor makes me state that I would be much happier if Oklahoma was more traditionally inclined to meet these problems by delegating responsibility to the Republican Party, and I cannot help feeling that the solution of these problems would be considerably more satisfactory if Oklahoma became accustomed to applying the Republican remedy to many of her ills. But, notwithstanding this difference that I have with what in the past has usually been the majority of Oklahoma voters, I am still always glad to be here.

But tonight I am especially happy and honored to be invited to address you in this annual and traditional Republican celebration. I assure you that of all the trips I have been called on to make to this State, none has given me more satisfaction or more genuine pleasure than to be here with you tonight.

All over the Nation on this birthday of the first great Republican President, the loyal adherents to the Republican philosophy are gathered. They are gathering, as we are here, to renew again allegiance to the principles of Government which are embodied in the doctrines of the Republican Party.

There is something very incongruous about the rival political party attempting to cling to the names of some of the early American statesmen, such as Jefferson and Jackson. The tendency of the New Deal to allude to the Jeffersonian principles, and to use Andy Jackson's birthday as an occasion for gathering is indeed strange. If there is anything left in what used to be the Democratic Party which either Jefferson or Jackson would recognize without receiving a specific introduction to it, I cannot imagine what it is.

But I do not believe that the most bitter partisan could, under any possible stretch of the imagination, find the slightest fault with the Republican practice of using the birthday of Honest Abe as the occasion for our party meetings.

Abraham Lincoln left upon this Nation a mark and a stamp so indelible that it will endure through the ages. He was a personality who brought to the United States in one of its darkest hours a kindly, humorous, sincere, and genuine quality of leadership, which was at the same time so farseeing and so eternally right that it buoyed us up and carried us through the awful peril which we then faced.

So much has been said and so much written about Lincoln that I certainly shall not try to quote extensively. He furnished the inspiration for many of the noblest expressions of tongue or pen. One such comment about him has struck me so forcefully that I would like to read to you just a short excerpt from the excellent little paper of Peter Witt entitled "Abraham Lincoln, the Man of Sorrow." In starting that discussion, Witt said:

"Abraham Lincoln is the one American in American history all Americans agree on.

"About him more books have been published and speeches made than have been published or made about scores and scores of the best known and the most worthy Americans combined.

"He was the storm center in the fiercest civil war ever fought, the victim of the most malicious slanders ever circulated, and the recipient of the foulest blows ever struck at a President of the United States.

"Before it was possible for Abraham Lincoln to come into his own, millions of Americans had to go through a revolution of thought and feeling.

"The men and women who, in life, called him a gorilla, ridiculed him as a boor, and denounced him as a demagog, in death, framed his likeness, repeated his sayings, and hailed him as demigod.

"He comes down to us as the man who is different. Different not only when compared with his contemporaries, but different when compared with all men who left the imprint of their work on the pages of time. Different because he, and he alone, sinks deeper and deeper into the hearts of men as days of his being grown more distant."

It is this man's birthday that we now celebrate. As we consider together some of our present-day problems, let us keep him in mind.

I have often wondered, as I have considered problems which now beset us, just what Lincoln would have thought—what Lincoln would have said—what Lincoln would have done if he were here now to face these problems with us. I recommend such a course of thinking to each of you. If you try to apply Lincoln's philosophy, I believe you will find an interesting yardstick by which to compare values and standards of this day with those of another time.

It is time for somber reflection and serious thought. As intelligent Americans, we owe it to our country to give our time and attention to the situation we face.

Our Nation was founded in an effort and was born of a determination to preserve and protect human liberty and individual opportunity. Our forefathers came to these shores for that purpose. They gained their independence for that purpose. They formulated

a system of government to preserve and perpetuate it.

For many years this Nation grew, developed, expanded, and became strong by adhering to that great purpose and by practicing as individual citizens and as a Nation the homey virtues of thrift, industriousness, frugality, honesty, and truthfulness. That has been the whole basis of our development. It is written on every page of our history. The United States of America has become in only a little more than a century and a half the leader among nations because first, it loved human liberty, and, secondly, because in both its domestic and foreign dealings it was thrifty, honest, industrious, and truthful.

Today, in this year of 1946, we as a Nation have had a national administration which in the last 12 or 14 years has almost completely abandoned the things that have made us. That administration apparently lost sight of the eternal truths which make men or nations great. It has, both at home and abroad, forsaken many of our traditions and our principles.

It has, at home, sold our birthright for a mess of pottage. It has depreciated our liberties and traded our individual freedom for a passing temporal dole. It has sought to make industriousness a form of personal folly; to make honesty old-fashioned and outmoded and has placed a penalty on thrift. It has lowered human rights and elevated in their place a paternalistic superstate. It has eliminated statesmanship and enthroned demagogery. It has destroyed much that our ancestors had built. It has embraced in our National Government elements which do not subscribe to our traditional principles and which would exchange individual initiative for some form of collectivism. This, in a word, is the plight of the United States of America today.

Lincoln stood for honesty; for straightforwardness; for open and above-board dealing. He was direct and was particularly scrupulous in telling the people the truth. I leave it to your own imagination as we catalog these simple virtues to draw the deadly comparisons as we think of the political treatment accorded our Nation today.

For the few moments that we have together tonight, let us analyze, if we can, first the position of our Republican Party today and what our duties and obligations are in regard to meeting current problems.

First of all, the occupant of the White House and the majority of the Members of Congress are members of another political faith. As a result, the Republican Party does not have control over national legislation or national administration.

But this certainly does not mean that we do not have a vital role to fill. Upon us falls the heavy responsibility of actively participating in public affairs and of raising our voices on each major issue so that all may hear. It is only human nature for a legislative majority to seek to paint the rosiest picture possible and to lull the public into a feeling of security. If there does not exist a militant minority, the people will never know the actual facts.

It is, therefore, our duty to speak now as never before to the end that the American people may realize their plight and may protect themselves from the pitfalls that lie ahead while there is still time.

While we perform this vital task, we must do still more. It is our responsibility to formulate now a sound program and to offer such a program to the American people. There is nothing very helpful about assuring a man that the course of public affairs is all wrong unless one can at the same time show him how it should be corrected. No one can expect to receive a public mandate and to be delegated to public leadership unless he has a cause, an objective, and a goal which he has formulated and which he proposes to attain.

Let me make tonight this one prediction: If our Nation is to avoid the difficulties which have heretofore been the lot of every great world power, it can do so only by again delegating to a militant Republican Party the task of administering our national affairs. And, when that opportunity for leadership again comes to us, we must be ready to assume it and to execute it in a manner which will justify the confidence of the American people.

Let us then review very briefly some of the difficulties which our Nation faces. At the outset, everyone of us knows that as a Nation we are heavily in debt. In fact, if our Nation were a private business enterprise, we would be admittedly broke. It does not do any good to keep reiterating how much money we owe, but just so we won't lose sight of the fact, that figure is somewhat above $278,000,000,000. I do not know how much money $278,000,000,000 is. I do know there are some comparisons which are somewhat helpful. For example, back in 1929, when we were just going into a financial depression, and when one of the contributing causes of our financial plight was an overextension of our credit, we had a rather substantial amount of what we call long-term debt. However, in 1929, if you took all of that long-term debt—both public and private—including all of the mortgages on all of the farms, all of the houses, all of the buildings, and all of the stores in this Nation; if you added to that the bonded debt of all of our industrial and commercial corporations, and the bonded debt of all of our public utilities and all of our railroads; if in addition to that you had added all of the debt of our Federal Government, all of the debts of our 48 separate States, our 3,600 counties, and our 16,000 incorporated towns, villages, and cities; and if you had performed that entire stupendous mathematical computation and reached the sum total of long-term debt against which the productive capacity of our Nation was functioning in 1929, you would have found a total of about $116,000,000,000. That $116,000,000,000 amounts to substantially less than one-half of what our Federal debt alone is today.

That does not mean at all that we are complaining about a single penny of that debt that was regularly and properly incurred for the purpose of prosecuting the war to a successful conclusion. Quite to the contrary, we all know that the victory we have won is priceless. What it cost us in material things is a relatively small part of the price we paid to achieve it. In human suffering, human blood, and human life, its cost was a great deal more.

But, the patriotic willingness of all Americans to pay the cost of victory certainly does not form the basis for justifying extravagance, inefficiency, and downright bungling. Some of our expenditures during the war may not have been wise, but were justifiable because of the emergency. Others can never be excused on any basis. No one can deny that, through the political management of our Nation's affairs, billions upon billions of dollars of this debt was needlessly and uselessly incurred. Our victory was a military one in every sense of the word, and credit for it belongs to the men who fought the war and not to the politicians who held the Nation's purse strings.

But, however this debt was acquired, the fact remains that we have aquired it. It is a mortgage upon everything that each one of us possesses, our homes, our businesses, our bank accounts, our insurance policies, our very existence. And we further must recognize that fundamentally there is only one way in which that debt can be discharged. Governments do not create wealth to pay either public or private debts. You cannot do it by legislation or by executive decree. Wealth is created by what we produce from our land, what we take from the soil or from our natural resources, and what we manufacture, build, and create. Wealth comes not by the spoken word or by the stroke of the pen—it comes from the sweat of the man who labors and from the ingenuity of the man who creates jobs.

Notwithstanding this very obvious truth which is one of the first principles taught in any beginning course of economics, this Nation is repeatedly being urged by some of the high-powered social experimenters who form the inner circle of the New Deal that the thing that should be done is to have this country go on trying to spend itself prosperous by borrowing more and more billions and literally broadcasting them to the winds.

When I was a boy on a Kansas farm, I found that occasionally it was helpful to use a little bit of water to prime a pump. But I knew then what I think this Nation needs to know now—that you are not getting anywhere in increasing your supply of water in the bucket if you keep using more to prime the pump than you get back out of the well. There comes a time when what you have to do is overhaul the pump. What we need to do now is to overhaul the type of national administration we have been having, which just isn't working out in solving the problems of this particular well.

But the financial problem is not the only difficulty that has come to us. We have used our natural resources in a way that is extremely serious. The war, of course, was primarily responsible for this drain. But whatever the cause, the fact is that we have used up so much of them that we must immediately look with new and increased concern to our future needs. In Oklahoma and Kansas, we are particularly familiar with our oil reserves. During the war years alone, we produced and consumed about one-fourth of all of our present proved reserves. At the same time we used nearly one-fourth of our zinc, more than one-fourth of our lead, nearly one-fifth of our copper, and about 7 percent of our iron. Particularly disturbing about iron is the fact that our best reserves, the immensely rich Mesabi Range, in Minnesota, will probably start to play out in about 10 years.

We have virtually no tungsten, platinum, tin, nickel, mercury, manganese, chromite, or asbestos. All of this must be imported. Our reserves of silver are only sufficient to last 11 years; lead, 12 years; gold, 14 years; petroleum, 18 years; zinc, 19 years; and copper, 34 years. Whether we like it or not, in many aspects as a producer of raw materials and natural resources we have taken a long step from being one of the "have" nations toward being one of the "have nots." We must consider this in all of our calculations and in our foreign commitments.

Despite both our financial condition and the state of depletion of our natural resources, we have been characterized in all of the four corners of the earth as being willing to play the role of the greatest spender to the whole of the human race. We have about 6 percent of the earth's population and about 7 percent of the earth's area. We have the most ingenious and self-reliant people. But, we cannot expect to support everybody else on the face of the earth in the style to which they would like to become accustomed. You know there is a limit to how many of a wife's relatives that any man can support. The same applies to nations on a larger scale.

This does not mean, of course, that all of us are not perfectly willing to share what we have of food, clothing, and fuel to alleviate the acute suffering of the defenseless peoples of the world. There is no room for political discussion or differences on this point. But that is not where the New Dealers are willing to stop. Their plans go much further and their secret commitments, the extent of which still is unknown to the American people, seem to have sought to commit this

Nation far beyond simply helping to feed and clothe those in distress.

But I shall have something more to say about that a little later. Let us turn now to another phase of our Nation's problems.

During the past 90 days, we have witnessed in this country the most devastating series of labor disputes and strikes that we have ever known. These unfortunate occurrences are serious whenever and however they occur. Coming as these have, at the moment when our Nation was turning from war to peace and was engaged in a period of tremendous economic change (which we have conveniently labeled reconversion), coming with the suddenness and swiftness that they have, they constitute a tragedy which we can scarcely withstand. They mean millions upon millions of dollars worth of wages which have been lost to American labor. They mean millions upon millions of dollars worth of badly needed consumer goods. They have disrupted the whole of our economic life. Everyone is going to lose by them—labor, capital, and the public.

For these difficulties both management and labor are probably partially to blame. But, by all odds, the largest contributing factor is attributable squarely to the national administration. It has made these strikes possible in at least 3 separate ways.

In the first place, the New Deal has already failed to have any clear-cut and concise labor policy. Neither labor nor management has had any way to determine what the Government would or would not do. Labor could not know to what extent the Government would allow increases in wages under its attempts to control inflation. Management could not tell to what extent, if any, Government would relax price ceilings to permit increased rates of pay. Both were left wholly in the dark as to what they might expect from Government.

In the second place, the national administration has failed to make parties responsible for their own acts and their own contractual obligations. There has been nothing done to impress the parties with the fact that the subject upon which they were dealing was an important one in which the public as a whole had a stake. The matter has been treated more as a contest or a game in which moves and countermoves have been made. The responsibilities which inevitably go with power and authority have not been emphasized nor insisted upon.

Lastly, the national administration has failed to make it crystal clear that Government is always ready to occupy the role of an impartial arbiter. Government should not take sides. It should only make decisions based upon the facts. As soon as Government becomes a partisan, we lose the last semblance of orderly and democratic procedure.

The New Dealers have attempted to carefully conceal what their true purposes are—attempting to court favor in various circles and intimating first to labor and then to management that it will accord to each some special privilege or prerogative. This, I repeat, is not the role of Government. Government should not and must not throw away its whistle and start "carrying the ball." It still must be the referee and must not try to "call the signals" and to run everybody's business.

Every thinking man realizes that in an economy built upon individual initiative and private enterprise it is imperative that we keep always before us the necessity of maintaining purchasing power. It is useless to build automobiles unless the people have money enough to buy them. It is useless to refine gasoline, to make tires, radios, washing machines, build houses, or anything else you want to name unless there is the consuming capacity present to utilize and absorb them. Therefore, we are all desirous of seeing to it that labor receives the full fruits of the labor. To do otherwise is pure folly and forbodes economic disaster.

I do not want to be misunderstood in what I am saying. I have no sympathy at all for the labor racketeer who has no interest in the situation at all except to foment trouble and to create for himself a fancy job with a tremendous salary and a fabulous expense account, or to raise huge funds for political purposes and fail to account for them. Too often that labor racketeer has had little interest at all in the welfare of the workingman whom he seeks to represent.

No more serious charge can be laid at the door of the New Deal than its failure to be fair and to act forthrightly in the labor disputes which have confronted this Nation within recent months.

Again, I pause to think what Abraham Lincoln would have thought of a government that so completely failed to be honest with its citizens on an issue which affects them so vitally.

Lincoln was a friend of labor and gave serious consideration to it in his day. Listen to what he had to say about it in his message to Congress in December 1861, and to this I subscribe:

"None are so deeply interested to resist the present rebellion as the working people. Let them beware of prejudice, working division and hostility among themselves. * * * The strongest bond of human sympathy, outside the family relation, should be one uniting all working people, of all nations, and tongues, and kindred. Nor should this lead to a war upon property or the owners of property. Property is the fruit of labor; property is desirable; is a positive good in the world. That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

Those words are as profound and as rich in meaning today as they were when Lincoln spoke them 85 years ago. But eternal truths never change, and in Lincoln we can find the expression of many of those truths.

If we may now turn to another problem of government, I would like to say that, to me, it seems rather paradoxical that the same administration which so wholly fails to discharge its obvious obligations as I have just pointed out, is at the same time presently occupied with trying to assume unto itself manifold duties which, in a large measure, do not belong to it at all. One of the crying needs of the United States today is a Federal Government which will do well those things incumbent upon it, instead of a Federal Government which undertakes a host of activities which do not belong to it, and which it either cannot or will not properly conduct.

I particularly have in mind now the terrible tendency toward centralization of government wherein we are apparently attempting to build a huge bureaucracy in Washington that will proceed to run all of the affairs of all of the people.

Through recent years, and most particularly during the past decade, we have been moving steadily toward a greater concentration of power in the Federal Government. Step by step we have watched this become an accomplished fact. Today our counties and our States are rapidly approaching the point of being nothing more or less than departments of the Federal Government. The question is whether or not all initiative and all freedom of choice is to be centralized in Washington, or whether we are to continue to rely upon local Government agencies as active and dynamic forces in our scheme of constitutional democracy.

Let me point out a few of its manifestations. Perhaps one of the most basic concepts we have is related to the ownership of land. Since the beginning of time, men have struggled to possess a little portion of the earth's surface—for a home, for a farm, for a store building, or a factory. The ownership of land has been to a certain extent an index of the worth, the possession, and the power of individuals.

Have you considered the extent of the ownership of the land of this Nation today? Do you realize that an accelerated rate, and in some instances, contrary to the expressed will of the Congress, the various agencies of the Federal Government are taking over more and more of the land of the United States?

This has been pointed out many times before, and I recognize that I am no pioneer in calling it to your attention now. But it is so important that I would like to again remind you concerning it. Senator HARRY F. BYRD, of Virginia—who incidentally is a Democrat—in his committee report to the Senate gave us this graphic illustration of the situation. This trend has gone on, until today, the Government either owns outright, or is acquiring the grand total of 395,978,724 acres. Just how much is this, roughly, 396,000,000 acres? Well let's put it another way. The Federal Government and its agencies either own, or are now acquiring, land sufficient in area to comprise the following States: Maine, New Hampshire, Vermont, Rhode Island, Massachusetts, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, West Virginia, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Ohio, Illinois, and Indiana. Twenty-one States in all. Imagine, if you will, a map of this country with these 21 States blocked out. And that still is not quite enough, because in addition to these 21 States, there would be enough left over to create 32 Districts of Columbia.

Think of it—that area comprises approximately one-fifth of all the land in the entire United States—about 20 percent of the total area of the Nation belonging to the Federal Government.

With this concentration of property in the hands of the Federal Government has come another inevitable effect. That one-fifth of the Nation's land has gone off the tax rolls of the States, the counties, and the townships except for occasional token payments. The control of it has passed away from the agencies of local government. It is no longer subject to the fundamental police power of the communities and States in which it is situated. In effect, one-fifth of the country's land has been taken completely away from all local government.

No one objects to the maintenance by the Federal Government of adequate land to aid in the conservation of our forests and our wildlife. No one objects to the Federal Government retaining necessary reserves of mineral deposits from the standpoint of military preparations for the common defense. But this alone is not the purpose for which the Federal Government has accumulated this tremendous total. The New Deal administration has been acquiring this land for every conceivable purpose.

Here again let us stop to consider how completely foreign this tendency is to the philosophy of Abraham Lincoln. You may have forgotten it, but Lincoln had some very definite ideas upon this subject. When he was President a great deal of the land of the Nation was still in the public domain. Lincoln knew that it was necessary to get this land into production in order to make the Nation strong. Lincoln knew that land kept in the public's name and at the same time kept off the local tax rolls was not a factor strengthening our country, but rather weakening it.

Thus it was that Abraham Lincoln was the President who signed the homestead law.

That piece of legislation, more than any other, helped build the empire of the West. It made possible the building of our Western States. It furnished the impetus for the development of a great portion of this country. It made that land an asset rather than a liability; it caused it to cease being a public charge and to commence producing wealth and contributing to the economic strength of the Nation.

But land alone is not the only criterion. Let us look at the matter of the sheer size of government as reflected in the number of employees. The original plan for our form of government contemplated a relatively small Federal Government created to perform the necessary centralized functions and expected to operate on a modest budget and with reasonably few employees. An all-time high in number of employees was reached during the last World War, when the Federal pay roll rose to a little less than a million individuals—to be exact, 917,760. Following that, the number was sharply reduced to around 500,000. But what is the situation today? In April of 1945 the grand total of Federal employees was 3,569,000. And remember this does not include any military personnel. Nor does it include any civilian employees outside the continental limits of the United States. These are the civilian employees in this country only—over 3,500,000 of them.

But today, taking all of our city, our State, our county, our township, and our school employees, we find that we have only 3,184,000. The application of simple mathematics will demonstrate that there are today more Federal employees than there are employees of all forms of local government.

These examples which I have mentioned, the concentration of property in the hands of the Federal Government, and the unprecedented growth of Federal departments, bureaus, and agencies, are only two among the many items we have experienced. New cases arise almost daily, each demonstrating over and over again the plain and undisputed fact that local government is being put on the shelf.

I do not mean to be facetious, because I do not think that this is a matter to joke about. But in all candor, I want to say to you that we have gotten ourselves into a position where, governmentally speaking, "the tail is wagging the dog." Gradually but nevertheless definitely, step by step and bit by bit, we have developed in this country a Federal Government which is encroaching upon us and is crowding local government completely out of the picture.

I do not believe that this is wise. I feel that it is contrary to the very fundamental concept of a democracy. If the people are expected to govern their own affairs, we must have a plan of government which the people can understand. No man, no matter how wise and no matter how diligent, can understand all the ramifications of a Federal Government employing 3,569,000 people and incidentally, in its functions, owning one-fifth of a territory as big as the United States. And, if there exists no one sufficiently wise to understand such a Government, how is it possible to expect the average citizen to diligently exercise his right of franchise and thereby correctly direct the course of his Government?

To make matters worse, it is my firm conviction that the New Deal has resorted to a policy of deception to accomplish much of this centralization of power. One element of our National Government which has received far too little thought has been the practice of organizing Government corporations which exercise governmental powers without ever being subjected to the scrutiny of the elected representatives of the people, without receiving any of their funds from the Congress (notwithstanding the constitutional provision vesting in Congress the power to appropriate all public monies) and which are not subject to any control or audit over their expenditures.

Today, we do not know exactly how many of these Government corporations exist. Comptroller General Lindsay Warren once told a Senate committee that he was surprised to read in the CONGRESSIONAL RECORD about three such corporations about which he had never heard before. One report on such corporations gives their number as 51. Senator BYRD, of Virginia, says there are 55. The Budget Director thinks there are 101.

And, these corporations do strange things. Even Harold Ickes who is no stickler for constitutional proprieties, according to my standards, raised a great fuss because one of them, the Metals Reserve Company, had built a big aluminum plant in Canada at a cost of $68,000,000 and that neither he nor the President knew a thing about it. The Congress was never told when another one, the Copper Recovery Company established a bank located in Brazil and in partnership with the Brazilian Government. Let that soak in for a minute. An agency of our Government goes into partnership with another government to go into the banking business, and your representatives and my representatives are never told a word about it.

If all this bungling was kept at home, it would be bad enough; but it is a great deal worse when it enters into the international picture. And that is exactly what has happened. I have yet never been able to find two informed individuals who have exactly the same idea on what the foreign policy of this country is. The New Deal administration has entered into a program of private or secret commitments. When Franklin Roosevelt passed away, it was virtually publicly admitted that it was almost impossible to tell what kind of promises he had made. We have been undergoing the humiliating experience of discovering our commitments piecemeal ever since. Every few days, we pick up the newspaper to find out that theoretically we are obligated to do something different or to undertake another duty or make another loan. We still do not know the extent of these promises. The only thing that we can be certain of is that it is going to cost us more money. That is absolutely uniform throughout.

As a result, we have lost prestige with foreign countries that it will be difficult, if not impossible, to regain. The common practice of people of other nations of referring to this country as "Uncle Sugar" is but typical of the plight in which we find ourselves. In every international conference, we seem to be unfortunately occupying the middle and function chiefly as a rope for the international tug of war. The uncertainty of our position, the lack of a determined definite foreign policy and the tendency toward one-man government and individualized administration of American policy produced, as an inevitable result, a new and all-time low in American prestige.

This, too, I lay directly at the door of the New Deal administration. The Republican Party has never once failed to go as far as it could in seeking to correct this situation. Let me point out that, at the Mackinac Conference, a forthright declaration of the Republican Party's position was set out. If anything like a comparable move had been made by the New Deal, something concrete could have come from it. We listened in vain for a response.

During the political campaign of 1944, the Republican Party sought to take international affairs out of the realm of partisan politics, and Governor Dewey as the Republican candidate appointed a representative to consult with the then Secretary of State. That effort was largely futile because of the unwillingness of the New Deal administration to permit the formulation of a real American foreign policy.

Again, throughout the San Francisco meetings engaged in drawing up the United Nations Charter, and even more recently in London, Republicans have participated and cooperated. Senator ARTHUR VANDENBERG of Michigan has been particularly outstanding as the leading figure in this Nation's delegations.

The Republican Party can say to the people of America that it has, to its utmost power, tried to discharge its obligation in the field of international relations. Again, I reiterate, our unfortunate plight in this regard belongs directly upon the doorstep of the New Deal administration.

The Republican Party has long recognized the importance of our international relations. It pioneered in the cause of close cooperation with foreign nations. Listen for a moment to the words of an American President:

"After all, how near one to the other is every part of the world. Modern inventions have brought into close relation widely separated peoples. * * * Distances have been effaced. Swift ships and swift trains are becoming cosmopolitan. They invaded fields which a few years ago were impenetrable. * * * With increasing transportation facilities come increasing knowledge and larger trade. * * *

"Isolation is no longer possible or desirable. The same important news is read, though in different languages, the same day in all Christendom. The telegraph keeps us advised of what is occurring everywhere. * * * God and man have linked the nations together. No nation can longer be indifferent to any other."

That was not a New Deal speech. Those words were spoken on the 5th day of September 1901, by a Republican President, William McKinley. McKinley met his death on the following day. And in the excitement attendant upon his assassination, much of the import of this important pronouncement was lost to the world.

Following him, however, Theodore Roosevelt pursued a similar policy. William Howard Taft, who is frequently asserted to have had the best understanding of foreign affairs of any President that this Nation has ever had, was particularly active and effective in promoting sound international relations. Certainly, nothing could be further from the truth than the ill-conceived attempt of the New Deal to charge the Republican Party with being isolationist, unrealistic, and uncoperative in international relations.

If we had the time tonight, I could further trace for you the effects of the bungling kind of administration we have had. Never before in this Nation has the Government of the United States lost the respect of the people of the United States as it has in this moment. Its waste and extravagance can be seen all about us. Its incompetence is written upon the pages of every newspaper and is heard on every news broadcast. A person would have to be thoughtless, indeed, not to see it all about him.

In the face of these facts, I was particularly struck by the naiveness with which the New Deal wants us to swallow all its propaganda. May I give you just one more concrete example. No man would doubt the necessity during the war and during the necessary readjustment period of controlling prices to the end that inflation will not result, if that was being done. The record is otherwise—ask any housewife. Instead of approaching the problem of price controls in a straightforward, down-to-earth manner, it has set up theoretical over-all standards, impractical

and impossible of attainment. Instead of approaching problems realistically, it has built a huge Frankenstein-like monster made up of inspectors, investigators, and snoopers. It has enmeshed American enterprise with so much red tape and uncertainty that literally thousands of little businesses have thrown up their hands and quit instead of trying to carry on. Instead of preserving our national economy, it has done much to strangle it.

But, when the President of the United States in his annual message to Congress about a month ago blandly told the Congress and the people that they had very successfully managed to keep living costs from rising more than 3 percent, he then attained what, in my judgment, was a record for relying upon the credulity of the human race. There is not a schoolboy who takes his pennies to the candy store who does not know better than that. And how we can ever be expected to believe any such statement in the face of the notorious fact that we are paying subsidies out of the Public Treasury in almost every direction, is more than I can understand. What difference does it make if we pay so many cents a pound for butter at the grocery store or whether we pay a few less cents for it and then have a few more cents added to our income tax to pay the subsidy on that butter?

These conditions which we have been discussing this evening, as well as a whole host of others that we could consider if we but had the time, present a genuine challenge to this. The dangers that arise from them are real. They must be met if we are to continue as a free people and a world power. There is no sidestepping of them; we cannot turn back. We cannot evade them—we must overcome them.

Let me repeat that the Republican Party affords the only answer. As a political party we must rise to the challenge, or it will not be met. That is our destiny.

But we cannot fulfill the role that is ours by merely being faultfinders. Everybody recognizes the evils. Many foresee the dangers. What must be given are the answers. To receive the leadership, we must be ready and able to assume it. The Republican Party must give to the American people a program that they will recognize as adequate, progressive, and fearless, and candidates that they will recognize as competent. We must make clear our determination to avoid the mistakes—and at the same time demonstrate our ability to lead.

Again, I think that Lincoln has given us the keynote that will help guide us. In commenting upon the sacredness of his oath of office, he said:

"It was in the oath I took that I would, to the best of my ability, preserve, protect, and defend the Constitution of the United States. I could not take office without taking the oath. Nor was it my view that I might take an oath in order to get power, and break the oath in using the power."

Now, as then, our first concern must be to tell the people the truth. The practices of government by deception must stop. No people can overcome the dangers that beset them unless they know what those dangers are. Their elected officials must tell them. It is criminally wrong to misrepresent the facts involved in public affairs. It is equally wrong to misuse or usurp power. No nation can rise above the level of the moral rectitude of its government and those in official positions.

This Nation needs a return to the fundamental concepts of constitutional government. We need to reestablish the kind of government our forefathers had in mind when they framed the Constitution. We must dare to be honest—honest with ourselves and honest with the American people.

Next, we must firmly resolve to put a stop to the practice of spending more than our Nation's income. We must start living within our means. Deficit financing cannot be permitted to go on forever. The Republican Party should take a firm stand against extravagance in our domestic affairs. We will have to pay the bill sometime. We should start doing it at once.

Again let us turn to Lincoln—who dictated into the Republican platform of 1860 these words in section 6:

"That the people justly view with alarm the reckless extravagance which pervades every department of the Federal Government; that a return to rigid economy and accountability is indispensable to arrest the systematic plunder of the Public Treasury by favored partisans; while the recent startling developments of frauds and corruptions at the Federal metropolis show that an entire change of administration is imperatively demanded."

Further, we must stop making impossible promises to every other nation on the face of the earth. Except for the necessity of mitigating acute human suffering, we cannot afford to go further into debt for foreign nations any more than we can for ourselves. The Republican Party must stand for a realistic approach to our foreign financial commitments.

We must encourage the production of wealth by encouraging capital and labor. We must so construct the financial policy of our Nation as to make it possible for individual initiative and private enterprise to again go forward and to create the wealth which we must have to meet the commitments we have made and to pay for the victory which we have won.

We must stop this concentration of power in Washington, and we must take the Government back to the people where it can be exercised by local agencies which are under the close scrutiny of those who pay for them. Government by secret and devious means such as through boards, bureaus, and Government corporations outside the scrutiny of Congress must stop.

There is not a State in the Union which today is not financially infinitely better off than is the Federal Government. The responsibilities for all such functions of government that can be properly discharged by the States should be immediately returned to them. The Republican Party must have the courage to openly advocate the decentralization of many functions of our Federal Government. We recognize this means opposing the pet theories of many pressure groups. Those individuals who have a particular interest to foster often feel that their aims can best be accomplished by hiding the project at the end of some long corridor of a Government office building in Washington, where the people will never be able to see it. We cannot allow this tendency to prevail. We must be determined to keep the Federal Government out of all activities except those which by their inherent nature absolutely demand national handling.

And lastly we must take stock of ourselves. We must decide once and for all exactly what functions we wish to have Government assume. We must determine to what degree we wish to restrict individual liberties by governmental control. We must keep ever before us the fact that we cannot "have our cake and eat it too." We cannot try to outpromise each other and believe that we can have a Government that engages in the regulation of all forms of human activity and leave us still free men. The fatal error of this kind of thinking has been demonstrated over and over again in a Fascist Italy, in a Nazi Germany, and in every totalitarian government.

Our Nation must decide whether it will be made up of free individuals or of vassals. Having once determined this issue, we should then hue strictly to the line in shaping the kind of government that we have decided upon. Again, the Republican Party must have the courage to lead in this important undertaking.

To the accomplishment of these purposes every patriotic American should pledge himself. As I have said, I believe that they can only be accomplished through the medium of the Republican Party, and only then if the Republican Party adheres to the sound principles which Abraham Lincoln so nobly espoused. But if we have the courage and the conviction our party can lead this Nation from the morass into which it has fallen and upon a genuine crusade for our America.

We have just won history's most terrible war. We have spent the lives of our young men and women to achieve it. We have been fighting to preserve our American way of life. We have fought to keep the right of government for the common people, the. it may be exercised by them and on their behalf.

In peace we may lose it if we do not protect it well.

On another day the man whose birthday we celebrate spoke of another threat to our national existence. Those eloquent words are written upon the heart of every schoolboy and schoolgirl in America. And yet they ring as true today as they did when he gave them years ago. As Republicans, but more as Americans, we should heed them today and should rise to the challenge which they carry.

On this one hundredth and thirty-seventh anniversary of the birthday of Abraham Lincoln I urge that "We here highly resolve that these dead shall not have died in vain—that this Nation, under God, shall have a new birth of freedom—and that government of the people, by the people, and for the people shall not perish from the earth."

Los Angeles County Dairy Area Has Greatest Testing Program—Eighteenth Congressional District, California, Is Portion of This National Achievement in Dairy Industry

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. DOYLE. Mr. Speaker, I am very proud to call attention of Members and all who may read the same, to the write-up which I herein include with my remarks, which article appeared in that authoritative magazine of the dairy industry, to wit, the California Dairyman, published in the prosperous and progressive city of Hynes, which is just one of the numerous busy towns in the Eighteenth Congressional District. This article was in the February 1946 number. I commend its factual recitals therein set forth to my colleagues from Minnesota, Iowa, Wyoming, Colorado, New York. In fact, the record herein printed bears out what I have frequently related about the size of the herds in the Eighteenth Congressional District and in the rest of Los Angeles County. The last line of this article mentions Long Beach, my home city. It does so, however,

merely to fix a sort of boundary line for the area at that point. As the largest herds of these remarkable cows are generally located to the northeast of my home city and in and about the prosperous communities of Hynes, Clearwater, Norwalk, Downey, Artesia, Bellflower, Compton, Lynwood, Southgate, Signal Hill, Lakewood.

The contents of this magazine article will further explain my position taken on this floor at all times in the interests of and for the protection of this great food-producing industry.

Reports to me from time to time show that the herds of the Eighteenth Congressional District, uniformly maintain their high place—up in the top brackets—in all tests.

So, Mr. Speaker, this article further makes it clear that not only does the Eighteenth District of California have the great naval facilities at Long Beach, and the great shipyards there, too, but it likewise has some of the greatest aircraft factories as well as these achieving dairy herds with flourishing towns, small farms, happy firesides; the great oil fields of Signal Hill and Long Beach tidelands, and the world port of Long Beach. These are some of the reasons I remind my colleagues for my varied and expressed interests in legislation relating to industry; agriculture; labor and management; manufacturing; Navy and Army; shipbuilding and marine, and of course, along with all these I mention are the hundreds of thousands of happy homes. But—never enough housing, Mr. Speaker.

Here is the magazine article:

HATS OFF TO THE DAIRYMAN

Los Angeles County dairymen hung up a record of 406.4 pounds of butterfat per cow for all cows in their herds, those milking as well as the dry stock. Figured on the milking herd alone, the year's production amounted to 490 pounds of butterfat, says Earl Maharg, of the Agricultural Extension Service, University of California.

These high rates of production exceed those of any other section in the United States, he points out, and are the result of careful feeding, a rather rapid cow replacement program on the basis of cow-testing records, and good herd management.

Individual high records of production were also attained, he said, citing an animal in North Hollywood which produced 852 pounds of butterfat and another in Azusa, 810 pounds. In addition, there were two herds of over 250 cows each with 506 and 518 pounds of butterfat and one 100-cow dairy with an average of 493 pounds per cow. Seven groups of five selected animals produced from 522 to 722 pounds of butterfat per cow.

"This remarkable production has been achieved by Los Angeles County dairymen in spite of an extremely adverse feed situation, difficulty in securing suitable cows for replacement and trying dairy help conditions. Cow replacement troubles lowered the herd average butterfat production this year as compared to 1944 by some 16 pounds, because dairymen were forced to keep more dry stock and older cows which should have gone to the butcher," said Maharg.

"The feed situation promises little improvement during at least the first part of 1946 because of transportation difficulties. It is more critical now than at any time during the war period. With this condition, dairymen may have difficulty maintaining milk production at comparable levels during 1946."

According to Maharg, there were 20,209 cows under test in the county's cow testing association at the end of the testing year, October 31, 1945. This total is the greatest for any association in the United States and, in fact, exceeds the numbers of cows in all associations in all but six States. He points out that Los Angeles County has the largest number of dairy cows of any county in the United States. This is not due to the size of the county, he says, because 75 percent of the dairy cows are concentrated in a relatively small area between Los Angeles, Long Beach, and the Orange County border.

The House Committee on Un-American Activities

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. SABATH. Mr. Speaker, this great Nation of ours was founded on a new continent, in a new concept of the relations of man to man. It never ceases to thrill me when I read the opening words of our immortal Constitution:

We, the People of the United States, in Order to form a more perfect Union; establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.

It says, "We, the People," Mr. Speaker, that means all the people. It does not mean just a few people who believe themselves privileged. It says and means all the people.

That is why, Mr. Speaker, I have been shocked by the revelations made in recent weeks regarding the procedures of the House Committee on Un-American Activities and the attitudes of its staff. I am not alone, Mr. Speaker, and I think there is not a Member of this House who will not be shocked when the full story is told. It is apparent that the employees of this committee should themselves be investigated.

Under leave to extend my remarks in the RECORD, Mr. Speaker, I am inserting a letter which I wrote yesterday to the chairman regarding the improper procedures of the committee counsel, Mr. Ernie Adamson, and the remarks attributed to one Chester Nickolas, who, I am pleased to have learned since writing the letter, is no longer an employee of the committee. My letter does not and cannot tell the whole sordid story. It does express my sorrow that such people should have been permitted a place on the staff of a House committee. It will be to the interest of the committee to be more careful in selection of the staff and not permit any one member to try to determine the choice or the actions of the committee.

Too, I think the whole House has a duty and a right to know what is going on in this committee, which we have clothed with certain powers to investigate actual un-American activities, and not to indulge in witch hunts. We all remember what the old Dies committee did to our colleague the gentleman from California [Mr. HAVENNER] by conducting a secret "investigation" and a one-man "hearing" deep in the heart of Texas with perjured witnesses, and then making a sudden and unauthorized public disclosure of the secret "testimony." We remember the willful and deliberate smearing of other Members and of outstanding Americans. We know, too, that there were a good many of us honored by investigative files by the old Dies committee. How do we know that this present committee, without the knowledge of its honorable chairman, even without the knowledge of a majority of its members, is not secretly investigating every Member of Congress who does not meet the approval of Ernie Adamson? I wish the gentleman from Georgia would tell us how many Members have been investigated, if any, and who they are, if he knows.

The text of my letter to the chairman follows:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON RULES,
Washington, D. C., February 18, 1946.

Hon. JOHN S. WOOD,
Chairman, Committee on Un-American Activities, House of Representatives, Washington.

MY DEAR MR. CHAIRMAN: I find myself horror-struck at the callous indifference to the express mandates of this body indicated by the Hitlerlike statements of certain employees of the House Committee on Un-American Activities. With full confidence in your own integrity and your freedom from intolerance and bigotry, I cannot believe that you have or have had any knowledge of these statements, as reported in full detail by the daily press; and I am confident you will be as shocked as I to learn that these statements have been mouthed by obscure individuals who, cloaked in the power of a congressional committee, take advantage of that power to flout good taste and the dignity of this body, contemptuous of the rights of citizens and equally contemptuous of their employers, employers, the committee that hires them.

I refer particularly to a recent statement issued by the board of directors of the Greater New York Federation of Churches, affiliated with the Federal Council of Churches of Christ in America. This statement carries within it an extract from the sworn affidavit of Professor Clyde Miller of Teachers College, Columbia University, who reports on a conversation he held with Ernie Adamson, the prolific letter-writer and counsel of your committee, and with one Nikolas, identified as an investigator. Professor Miller's affidavit states that Nikolas, in the presence of Mr. Adamson, remarked:

"You should tell your Jewish friends that the Jews in Germany stuck their necks out too far and Hitler took care of them and that the same thing will happen here unless they watch their steps."

This shameful, degraded type of thinking, this obscene statement that could have been inspired only by a Goebbels or a Streicher, deserves the severest censure. It warrants an investigation by the House Committee on Un-American Activities of its own employees, not only of these two but of all. Such statements as those attributed by Professor Miller to the investigator, without censure from his superior, are as un-American as they are vile, and for counsel and investigator of a committee sworn to defeat subversive activity to publicly exhibit so Nazi-like an attitude and mentality suggests that your committee,

no matter how laudable your purpose, is finding its honest efforts subverted, twisted and torn by your own employees, or even that you may unsuspectingly harbor subversive individuals on your committee rolls.

I am not alone in my deep feeling of indignation. Nor are the directors of the New York Federation alone in their wrath. Great newspapers such as the Washington Post, the Des Moines Register, the Scripps-Howard papers, have called attention to the un-American activities of your committee's own employees, and to the manner in which the employees, especially Adamson, have exceeded their authority, outraged propriety, and mocked the American principles of fairness and honesty, in their attempts to harass, discredit, and destroy American organizations and individuals, possibly without knowledge of the full membership of the committee.

It is significant that the committee gave to Gerald L. K. Smith an open forum to vent that seditionist's Fascist bill before members of the press; yet counsel has admitted he is too busy to go over this man's record of un-American activities and utterances, while he finds time, curiously enough, to bring before the committee in closed executive session Dr. Edward Barsky, an eminent surgeon, because Dr. Barsky is chairman of the Joint Anti-Fascist Refugee Committee, an organization committed to giving succor to Spanish republican refugees, by administering the financial aid given by such groups as Unitarian Service Committee and the Quakers. Is it un-American to be charitable, to extend the helpful hand of kindliness and humanity to men and women and children who are homeless, hungry, ill, and destitute? Yet such a man as Dr. Barsky, such an organization as the Anti-Fascist Refugee Committee, licensed and approved by the President's War Control Board, are commanded, at the whim of your committee's employees, to produce their books and records, submit themselves to the inquisitorial tactics of the Nazi-minded counsel, while the same counsel treats a professed Fascist like G. L. K. Smith with kindness, tolerance, and brotherly understanding.

This incident is not unique. Your committee has publicly chided counsel for his flouting of congressional procedure, and for those letter-writing proclivities which have derogated the dignity of a committee of this House. Despite the fact that counsel has been warned to respect the wishes of the committee not to try the committees' investigations in the press, has time and again advised certain portions of the press of the names of American citizens and organizations he intended to pillory. Radio commentators requested by Adamson to submit their scripts to him discovered the request had been made a public document. The action could have been designed only to smear the commentators and to frighten them from the air. In spite of your public admonitions, counsel has continued his own undignified and un-American way.

Counsel, so much in doubt as to his official functions, cannot even understand the principles upon which this great Nation was founded. He has objected in several instances to use of the word "democracy." He has questioned the Veterans Against Discrimination, most of whom wear the Purple Heart and all of whom are honorable men who risked their lives to destroy Hitler tactics in a world of free men; in a letter to these veterans, and I quote his words, he wrote this shocking sentence: "I wonder if you are sufficiently familiar with the history of the United States to be aware that this country was not organized as a democracy." This is an insufferable arrogation of judicial and legislative powers; the statement, moreover, is virtually a quotation from another professed Fascist, Elizabeth Dilling, three times indicated by the Federal grand jury investigating seditious activities.

In the light of his acceptance of the venomous statement of an underling, I wonder if his demand that the National Committee to Combat Anti-Semitism submit to his inquisition does not reflect the same bitter bias against American citizens who are Jews by religion? In his attack upon this group, Adamson denies a basic tenet of the American Constitution, the right of petition. Again to quote his own stupid words, he accused the Committee to Combat Anti-Semitism of "soliciting money for the purpose of controlling the thoughts of American citizens." I am informed that the membership includes former Secretary of the Interior Harold L. Ickes and Bishop G. Ashton Oldham; and their heinous offense was to petition their friends to support House Concurren Resolution 89, condemning anti-Semitism and racism as un-American. Surely a House Committee on Un-American Activities should welcome such support, and not permit its employees to harass those who are fighting a foreign, Fascist, and un-American ideology.

I am persuaded that counsel has not only imitated but exceeded the unfortunate excesses of employees of the old Dies committee. Such tactics by the Dies committee brought not only the committee but the House of Representatives into contumely and disrespect. Present counsel has shown himself to be acting, not for the whole committee, but for a small minority. To protect the House, and the committee, surely counsel and all employees should be examined carefully, and the unprofessional and unprocedural activities which have led to criticism and public contempt should be forsworn and disavowed.

Respectfully yours,

A. J. SABATH,
Member of Congress.

Democracy Has Fallen in With Bad Company

EXTENSION OF REMARKS
OF
HON. FRANK A. BARRETT
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. BARRETT of Wyoming. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Montana Standard, of Butte, Mont., dated December 14, 1945:

DEMOCRACY HAS FALLEN IN WITH BAD COMPANY

We believe that the people of this country should return to the practice of calling what we have got here a Republic. In the years past it has been variously known as a Democracy or a Republic. But the word democracy has fallen in with bad company in recent years. It no longer means what it used to mean.

We hear of a democracy in Russia. We are told that democracy is what the people of Poland, Rumania, and Yugoslavia have. We are informed that the Communists of China are more democratic than the government of Chiang Kai-shek.

But we get suspicious about democratic freedom of the press when we learn that the Government owns all the printing presses and newspapers. We get more suspicious when we hear that the Bible is being edited to conform to democratic principles. We are rather skeptical about just how free democratic freedom of speech may be when we know that the gestapo or some other organization is always listening in. We wonder about the democratic procedure of tossing a man into jail and leaving him there without a chance to defend himself. We question the seizure of people's property in the name of democracy.

We are curious about how a democratic election might be carried out with the name of only one candidate on the ballot.

In our more than a century and a half of acquaintance with democracy we have never seen it in such queer garb or associating with such strange people. We have begun to question these strange new benefits which masquerade under the name of democracy.

The peoples of the earth, we believe, also are beginning to wonder about democracy. Their lives are regimented and their freedoms curtailed as much under this new-found democracy as they were under totalitarianism.

So democracy has become a word of many and varied meanings. It no longer means what we have believed it to mean over a long period of years.

Like many other words, its connotations have been broadened so that a host of sins are concealed in its flowing skirts.

In recommending that the people of this country take up the use of the word "republic," or republican form of government, we are merely following the dictates of our own Constitution.

Article IV, section 4, entitled "Republican form of government guaranteed; each State protected," says: "The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and, on application of the legislature, or of the executive (when the legislature cannot be convened) against domestic violence."

Actually, there should not be a wide base for argument between usage of the words "democracy" and "republic."

Democracy is defined by Webster as being government by the people; government in which the supreme power is retained by the people and exercised by representation, as in a republic.

Republic is defined as a state in which the sovereign power resides in a certain body of the people, and is exercised by representatives elected by and responsible to them; a commonwealth; also, the form of government of such a state.

The difficulty is, as we have said before, democracy has fallen in with bad company. Until such time as it is rescued and has been shown the error of its ways we should be careful about accepting the things which are being offered under the name "democracy."

Lithuania

EXTENSION OF REMARKS
OF
HON. EDWARD A. KELLY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. KELLY of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I made at a dinner held at the Morrison Hotel, Chicago, Ill., February 17, 1946, to commemorate the twenty-eighth anniversary of the independence of Lithuania:

Speaking for the independence of the Republic of Lithuania, which was established, on February 16, 1918, as a modern nation,

under a constitutional government; a nation that as early as 1569 showed a determination to achieve independence—and their constant fight to retain that status leaves no alternative but to gain that objective—today we celebrate the twenty-eighth anniversary of that memorial day in the history of Lithuania.

The 16th day of February was made possible by the determination of those gallant souls who never quit in their fight to achieve their independence.

With the passing of the Russian revolution of 1905–06, Lithuanians began openly to demand the freedom of their country.

The determination of the voters of Lithuanian Governments instructed their representatives in all four Dumas to fight for the freedom, the political autonomy, and unification of Lithuania.

The Lithuanian representatives of the Duma complied with the wishes of their constituents and always stood for the autonomy of the country, and were persistent in their demands that Lithuanian people be given the opportunity to determine for themselves their political preference.

The first great war had just begun when members of various political factions organized a political club and committee in Vilna.

To the Lithuanians of America they addressed the following impassioned words:

"Strenuous and telling times are here.

"We must emerge free, or die fighting for freedom.

"Lithuanians have vitality and strength enough to be equals of all other free nations.

"We must earn the right to mold our own destiny and our own future.

"Now is the time to take our fate into our hands—now or never."

With that determination the people of Lithuania can be proud, for it has come down through the ages—yes; to the present time—that you assembled here have never faltered in your courage.

During that terrible war, which, like World War II, almost succeeded in wiping out every vestige of civilization and decency, Lithuania had to bear hostile invasion and suffered severely, the country being devastated alike by alleged friend and avowed foe.

No people have a stronger claim to the right of self-government and independence than do the 3,000,000 people of Lithuania.

For this independence has been temporarily set aside because of geographical location.

Many controversial problems have arisen since the shooting of the war ceased.

While official declaration of the ending of hostilities has not yet been declared, the people of Lithuania and American Lithuanians are left in doubt as to what will happen when the actual peace terms are agreed upon.

We must believe in what President Truman said in his Navy Day address in New York City on October 27, 1945, in restating the high principles and the aims of American foreign policy, which is designed to serve peace with justice.

It is a significant and a gratifying fact that the President's 12-point policy clearly embodies and reaffirms all those principles which were set forth in the statement made by the United States Government on July 23, 1940, and in the Atlantic Charter, both of which apply to Lithuania as well as to the other Baltic states.

And I quote:

"From the day when the peoples of these Republics (Lithuania, Latvia, Estonia) first gained their independent and democratic form of government the people of the United States have watched their admirable progress in self-government with deep and sympathetic interest.

"The policy of this Government is universally known.

"The people of the United States are opposed to any form of intervention on the part of one state, however powerful, in the domestic concerns of any other sovereign state, however weak.

"The United States will continue to stand by these principles, because of the conviction of the American people that unless the doctrine in which these principles are inherent once again governs the relations between nations, the rule of reason, of justice, and of law—in other words, the basis of modern civilization itself—cannot be preserved."

This statement was made in connection with the devious processes whereunder the political independence and territorial integrity of the three small Baltic Republics, Lithuania, Latvia, and Estonia—were to be deliberately annihilated by one of their more powerful neighbors.

It was a clear warning to the Soviet Union to avoid unilateral and arbitrary acts and to leave the independence of the Baltic states alone.

However, the Moscow dictatorship, with Hitler's concurrence, thought otherwise, and the illegal act of annexation, based on fraudulent election, which was conducted in an atmosphere of threat and compulsion, followed on August 3–6, 1940.

Today, Russia would gain much in a moral sense to the world, if the annexation of the Baltic states were now made void by the supreme Soviet authority in accordance with the requirements of the Atlantic Charter, and the Baltic states would be relieved.

The principles of our American foreign policy have a direct bearing on Lithuania's international situation and on her future.

For we believe in the eventual return of sovereign rights and self-government to all peoples who have been deprived of them by force.

We shall approve no territorial changes in any friendly part of the world unless they accord with the freely expressed wishes of the people concerned.

We shall refuse to recognize any government imposed upon any nation by force of any foreign power.

In some cases, it may be impossible to prevent forceful imposition of such a government. But the United States will not recognize any such government.

We are convinced that the preservation of peace between nations requires a United Nations Organization composed of all peace-loving nations of the world who are willing jointly to use force if necessary to insure peace. That is why, on the 1st of November, I introduced House Resolution 390, which was referred to the Committee on Foreign Affairs, to carry out the principles of the Atlantic Charter and the 12-point program of the President of the United States.

That we are determined that those nations who enjoyed their sovereign rights before the war will again enjoy the right of self-government, and, to give active support to the principles hereinbefore referred to, that the President of the United States and the Secretary of State give active support, and devote their efforts and influence with the nations of the world, to secure to the people of the Republic of Lithuania a restoration of their independence and the right of free and democratic election after armies of other nations have left, and Lithuanian refugees have been repatriated to their homeland.

I have known American people of Lithuanian descent, and I never knew a more loyal group of Americans—people like Pete Zuris, Anthony Olis, Al Kumskis and many others who have carried on the fight here in America, undying and unselfish in their devotion to the cause of Lithuania's independence, determined, like us all, that Lithuania and other small countries in the Baltic states shall not be used again as buffer nations, for the protection of warring nations.

For it used to be that in discussion of the rights and defenses of nations, the question of control of certain so-called buffer states was frequently raised, and, in many cases, the justification, on a basis of defense, through buffer states, was recognized—but not any more, for with atomic energy and bombs, there is no cause for the words or uses of buffer states.

No man can know a Lithuanian without discovering that a never-dying passion for the independence of his country is eating into his soul.

Out of the depths there comes a cry from this nation which for centuries has been forced to be inarticulate.

It is not a demand for privilege, for territory to which it might have only a historical claim; it is a cry for life, and if we really believe in our own professions, if the traditions of 1776 have not been effaced, if the definition of self-determinism with which President Wilson sought to change the evil systems of lust and avarice in Europe and the rest of the world after the First World War still lives, we Americans must listen to this cry from the core of the hearts of the Lithuanians.

We cannot close our ears to it.

Lumber

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from a lumber company at Broadwater, Nebr.

Mr. Speaker, it is quite apparent that the regulations on lumber, coming from Washington, will work a definite hardship on the small lumber companies and communities, because they are not prepared for a mass production of homes. P. R. 33 will make it impossible for the small lumber dealer to get lumber unless he resorts to illegal methods. It will make it impossible for him to secure lumber which will be badly needed by the farmers for the building of grain bins and the necessary repairs on the farm.

Regulations do not build homes. We need less regulation and more freedom for the individual.

Mr. Speaker, several weeks ago, I called attention to the fact that in 1945 we exported 750,000,000 feet of lumber. We are still exporting a great deal of lumber. The lumber is being exported because the mills can get a higher price for the lumber they export. Lumber is not being finished and processed, because the raw unfinished lumber brings more, in many instances, than the finished lumber. Government regulations have produced this ridiculous situation. The following letter indicates the reaction of the small lumber companies in Nebraska.

FOSTER LUMBER CO.,

Broadwater, Nebr., February 13, 1946.

Re CPA PR 33 and direction 1 to PR 33.

Hon. A. L. MILLER,

House Office Building, Washington, D. C.

DEAR CONGRESSMAN: We wish to solicit your aid in abolishing the above regimentation regulation, originated by Civilian Production Administration and known as PR 33 and direction 1 to PR 33.

If allowed to operate, it will mean the termination of many lumber retailers. There is no way left for them to purchase lumber and millwork and other building materials, unless it be through black-market operation, and most of us won't do that, as we feel, or want to feel, that we are still a democratic people, free to operate, free to buy and sell, not under a communistic or socialistic set-up but through our own free enterprise.

This instrument, evidently constructed by some schoolboys and allowed to be put into operation, is a most devastating and ruthless form of governmental control. Its design will injure—not aid—millions of people.

The primary course of this is to aid the returned GI, but he is swindled from the start, and in the smaller towns he won't even be able to buy a 2 by 4. The farmer and rancher is completely stumped; he can't even buy a board to repair a truck or wagon. Why? Because of a Government regulation that stops distributors from buying building material for distribution, a method employed in foreign countries for many years, and a failure, a back-set to any progressive nation.

We who are in the smaller localities cannot get H/H rating because it is not suited to mass regimentation of homes.

This brief outline should give you an idea of the lethal effect of PR. 33, and when you get into the thing you will find a lot of reasons why the regulation should be done away with. Will you go after this thing and hit it hard?

Yours truly,

K. W. CAMDEN, *Manager.*

The Gentleman From Illinois, Mr. Lincoln

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 19, 1946

Mr. DONDERO. Mr. Speaker, under unanimous consent granted by the House to extend my remarks in the RECORD, I include therein a short article prepared by Thomas I. Starr, of Detroit, Mich., entitled "The Gentleman From Illinois, Mr. Lincoln." Mr. Starr is editorial director of the Michigan Bell, employees' magazine of the Michigan Bell Telephone Co., of Detroit.

This is an especially fine article on Lincoln the Congressman. We all know that he served but one term in the House of Representatives, from 1847 to 1849.

Mr. Starr is also the author of a book published in 1941 entitled "Lincoln's Kalamazoo (Mich.) Address Against Extending Slavery."

THE GENTLEMAN FROM ILLINOIS, MR. LINCOLN

Peter Cartwright was a Methodist preacher, an old-fashioned circuit rider, famous througout Illinois as an exhorter and an evangelist. He hated sin and slavery, and against either he could preach a sermon of great intensity and length.

The same Peter Cartwright, rugged at 60, was a politician—a Jackson Democrat, and a good one. His was the skill to combine preaching with politics, and this dual ability had earned him prominence both in pulpit and in party, and, some years earlier, a term in the Illinois State Legislature. To win that office he had defeated an unknown young stripling from the little village of New Salem. Hence he could claim the distinction of being the only man who ever defeated Abraham Lincoln in a popular election, the only time Lincoln was ever defeated in a direct vote of the people.

But this election was a matter of history in May 1846, when the Whigs of the Seventh Illinois District gave Lincoln the unanimous nomination as their candidate for Congress; and the Democrats picked Cartwright. Once more the rail splitter and the preacher were pitted in the political arena. This time the odds were different. Lincoln was not the unknown stripling from New Salem; he was a highly successful practicing attorney in Springfield. During the preceding 14 years he had served four terms in the legislature, had gained a place of leadership in the Whig Party, and had twice been a Whig Presidential elector. He was known throughout the State of Illinois, if not personally at least by reputation. Cartwright, in the meantime, had gone on preaching, saving souls for the Lord and the Democratic Party.

When Lincoln received the nomination it was generally known and accepted in the convention that he would not seek a second term, if elected to the first. For some years there had been a gentleman's agreement between several leading Whigs in the district that the office would be rotated, and the agreement was binding between three men: John J. Hardin, Edward D. Baker, and Lincoln.

Both Lincoln and Cartwright were good campaigners and each had many loyal friends. Cartwright, however, had an advantage over Lincoln. He could carry his campaign into the pulpits of the district, and he did. Speaking at a revival meeting in Springfield one evening he was approaching the climax of his camp-meeting oratory when he stopped suddenly and shot two questions to his audience:

"Will all of you who expect to go to heaven stand up?"

As he phrased his second question he noticed Lincoln seated on a back seat: "Will all of you who want to go to heaven stand up?"

All who didn't get to their feet on the first question came up on the second, all except Lincoln. Said the preacher, "The sole exception is Mr. Lincoln, who has not responded to either invitation. May I inquire of you, Mr. Lincoln, where are you going?"

"To Congress."

And he did, by a majority of 1,500 votes, carrying 8 of the district's 11 counties by a larger vote than Henry Clay had received in the Presidential race, 2 years earlier.

Given $200 to use toward his campaign expenses, Lincoln returned $199.25 after the election, explaining to the donor that he hadn't needed the money. "I made the canvass on my own horse; my entertainment, being at the houses of friends, cost me nothing; and my only outlay was 75 cents spent for a barrel of cider to treat some farmhands."

Campaign costs for a Congressman have gone up in recent years.

Cartwright had said that a vote for a Whig was a vote for the devil, and, apparently, Lincoln didn't believe in taking chances. It is a matter of record—and the Springfield poll book of that election is still in evidence to prove it—that Lincoln cast his vote for Cartwright.

Lincoln was the only Whig elected to the Thirtieth Congress from Illinois. Today people the world over know that Abraham Lincoln was a President of the United States; but very few, even in the United States, know that our sixteenth President served a term in the House of Representatives.

Lincoln was a war President. He was also a war Congressman. When he took the Presidential oath in 1861 the Nation was on the eve of the Civil War. The United States had been at war with Mexico for nearly 18 months when Lincoln entered Congress. While actual fighting had virtually ended 2 months earlier, when Gen. Winfield Scott had stormed Mexico City in a 2-day battle and had raised the United States flag over the palace, there were still a couple of American armies in the field, and a state of war existed until ended by treaty in March 1848.

During the 16 months between the election and the time he took office Lincoln went about his routine of life as a lawyer. Busy almost daily in the State and Federal courts, he nevertheless kept a watchful eye on the progress of the war, but made few comments on it.

Hostilities between the two nations had been brought about by a number of situations, beginning with the secession of Texas from Mexico. For a time Texas maintained its independence, but shortly came into the United States. Mexico hadn't liked that. But the Texas matter was only one of a number of grievances. Certain pressure groups in the United States had covetous eyes on California and New Mexico, both pieces of Mexican territory. Inclined to be unstable, the Mexican Government was subject constantly to rebel groups within its midst; and American interests, by favoring one group or another, helped to keep it unstable. The southern slave States wanted more areas in which to extend slavery. Secretly President James K. Polk seemed to be operating on the theory of Frederick the Great—take possession first, and negotiate afterward.

The troubles reached the shooting stage when a detachment of American troops, commanded by Gen. Zachary Taylor, was ordered by Polk to enter disputed territory because Polk had heard that Mexican troops had crossed the Rio Grande headed in the direction of the same territory. They met; the battle was on; and Americans were killed. As soon as the news reached Washington, Polk was ready to submit a skillfully worded message to Congress, stating that war existed, and that it had been commenced by Mexico on American soil.

The Whigs as a party were in violent opposition to the spirit of the conflict, terming it a war of aggression and an unlawful act on the part of President Polk to add more territory to the United States. Lincoln commented that the action of the President reminded him of the old farmer who said, "I am not greedy about land; I only want what 'jines' mine."

Lincoln could have gone to Congress in December 1846, had he desired. Edward D. Baker, the incumbent, had resigned his seat to accept a commission in the Army. It was offered to Lincoln, but he declined, possibly because the law business was extremely active at that time for the Congressman-elect. During the month of December, he appeared in four cases in the Menard Circuit Court, once in the United States Circuit Court at Springfield, and six times in the State supreme court.

In addition to his law practice, twice during the spring and summer of 1847 he went out from Springfield to deliver temperance lectures in nearby communities. According to the record, he persuaded three to "take the pledge" at Middle Lick Creek, but met with no success at Langston's Settlement. But he did make one journey, early in July, which is of significance. Lincoln made his first visit to Chicago, 200 miles away, as a delegate to the River and Harbor Convention. The fact that it took him 3 days to make the journey by stagecoach may have been one of the reasons why he was always a strong advocate for the building of railroads and other internal improvements.

At that time, Chicago had a normal population of 16,000. The record states that 20,000 official delegates and visitors from all over the country assembled there for the 3-day meeting. The convention had been called to protest against President Polk's veto of a bill making appropriations for rivers and harbors, and to otherwise strengthen the cause

of internal improvements. While Polk was devoting his attention to the adding of more territory, these delegates were concerned with the development and improvement of that which they already had.

Horace Greeley, who covered the event for the New York Tribune, reported that it was the largest meeting ever held in America. Actually, it was a great Whig mass meeting, although little mention was made of the war. Thurlow Weed, of Albany, was another of the hundred or so newspapermen present. Daniel Webster and Thomas Benton made long and able speeches; so did Tom Corwin, of Ohio. Edward Bates, who was to be Lincoln's Attorney General 14 years later, was the chairman. Another speaker, slightly more conservative in his outlook than others, was David Dudley Field, of New York, and to him Lincoln was asked to make answer. The next day, Greeley's Tribune said, "In the afternoon Hon. Abraham Lincoln, a tall specimen of an Illinoisian * * * was called out, and spoke briefly and happily in reply to Mr. Field." Lincoln was getting to be better known, and his reputation was growing beyond the bounds of the Prairie State.

* * * * *

Lincoln, or possibly it was Mary, had decided that the family would accompany the new Congressman to Washington when the term opened in December. They started getting ready on October 23 by giving a lease on the comfortable Springfield home for $7.50 per month, reserving one of the upper bedrooms—which Mary had caused to be built during a long absence when he was traveling the circuit—for the storing of their furniture.

Mary, in sort of an I-told-you-so attitude, determined that they would go by way of her old home in Lexington, Ky. She had left Lexington 8 years before with not the best of relations existing between herself and her stepmother; but now she could return to visit and take along a Congressman-elect and two fine sons—Bob, 4, and Eddie, a year and a half old—as evidence that she hadn't done too badly for herself.

Two days later, on the twenty-fifth, the Lincoln family commenced the 9-day journey to Lexington. It required travel by stage, river boat, and rail, and the Springfield paper carried this personal note in its next edition:

"Mr. Lincoln, the Member of Congress-elect from this district, has just set out on his way to Washington. His family is with him; they intend to visit their friends and relatives in Kentucky before they take up the line of march for the seat of government. Success to our talented Member of Congress. He will find many men in Congress who possess twice the good looks and not half the good sense of our own representative."

For 3 weeks the Lincolns of Illinois were guests in the home of the Todds of Kentucky. First citizen of the same city, and intimate friend of the Todd family, was Henry Clay, thrice the Whig Presidential nominee. There's an old story that Mary Todd, when a little girl, had once told the sage of Ashland that the man she would marry when she grew up would be the President of the United States. Could he or she have remembered that childish prediction when she presented her tall husband to Mr. Clay? But it is known that Lincoln and Clay visited several times during the stay in Lexington, and Whig policies and the Mexican War were the subject of their conversations. Also, Lincoln heard Clay deliver a 2½-hour oration in Lexington's Market Square; and still ringing in his ears when he took his seat in Congress, 3 weeks later, was the retired statesman's thundering pronouncement that "this is no war of defense, but one (that is) unnecessary and of offensive aggression."

* * * * *

The Thirtieth Congress, which convened at noon on December 6, 1847, was perhaps the ablest and stormiest that had ever assembled in Washington. The Whigs controlled the House, but there were able and noted leaders in both parties. The eloquence of Daniel Webster still contended with the philosophy of John C. Calhoun for the mastery of a Senate wherein sat three of Lincoln's four 1860 Presidential opponents: Stephen A. Douglas, of Illinois; John Bell, of Tennessee; and Sam Houston, of Texas. Houston was a picturesque figure who wore a Navajo blanket as a part of his senatorial attire.

Here also were Hannibal Hamlin, Senator from Maine, and Simon Cameron, from Pennsylvania. Hamlin was to be Lincoln's first-term Vice President; and Cameron, Lincoln's first Secretary of War. Jefferson Davis, who, like Lincoln, had been born in a Kentucky log cabin, and who was destined to become the President of the Confederate States of America, was the Senator from Mississippi. In the House of Representatives were two other noted men who were to hold high offices in the Confederacy: Alexander H. Stevens, the Vice President, and his intimate friend, Robert Toombs, the Confederate Secretary of State.

In the House and Senate of that Thirtieth Congress were many men from both North and South, none of whom ever dreamed that their future was to be so closely associated with that of the lean 38-year-old Whig occupying seat No. 194 in the obscure back row of the House Chamber.

Here in the House was Lincoln's second-term Vice President, Andrew Johnson, the tailor from Tennessee, who would become the President after his assassination. Here was George Ashmun, from Massachusetts, who would be the chairman of the Second National Republication Convention which was to give Abraham Lincoln the Presidential nomination 13 years later. Here also was Lincoln's future Secretary of the Interior, Caleb B. Smith, of Indiana; and two who were to be Lincoln's State Department appointees: George P. Marsh, future Minister to Italy, and Joshua R. Giddings, whom Lincoln sent to Canada as consul general.

Here also was James Pollock, a later Governor of Pennsylvania, whom Lincoln named Director of the Mint; and who, in the darkest days of the rebellion, coined the first 2-cent piece placing thereon the phrase "In God We Trust." As a coin in the United States monetary system, the 2-cent piece was short-lived, but the phrase has been on almost every United States coin since that date.

There were many others of equal fame and comparable ability in that Thirtieth Congress. As a Michigan resident, I cite two future governors of our State, Robert McClelland, of Monroe; and Kingsley S. Bingham, of Green Oak, in Livingston County, who were fellow Representatives of Abraham Lincoln. And Senator Lewis Cass had already served Michigan as our first territorial governor after the British occupation. Some others whose names are woven into the history of America were David Wilmot, of Wilmot Proviso fame, who came to that Congress from Pennsylvania; Horace Greeley, New York editor who undoubtedly remembered Lincoln from the River and Harbor Convention; Amos Tuck, of New Hampshire; Howell Cobb, of Georgia; and Tom Corwin, of Ohio, who was Lincoln's minister to Mexico. Some mention, too, should be made of William A. Newell, of New Jersey, who is credited with the founding of the Life Saving Service, which later was to become the United States Coast Guard. And there are reasons why we should not overlook Robert C. Schenck, Congressman from Ohio. He distinguished himself in the Civil War, became United States Minister to England, and there achieved distinction by introducing to the English the honorable American game of "draw poker."

Foremost on the roster of the House of Representatives was John Quincy Adams, venerable Whig, the fifth President of the United States, who as a boy of 10, and many times thereafter, had looked upon Gen. George Washington when the latter was the leader of the Revolutionary Army.

This was a Congress of able men, and not the least able among them was the gentleman from Illinois, the lone Whig who represented the Seventh District. The great majority of Congressmen who are remembered in later years are so remembered because of some law that bears their name. Not so with Lincoln. No law ever bore his name, but his fame will be perpetuated long after the laws of his Congress are repealed or are forgotten. Not that Lincoln's single term in Congress was spectacular; it wasn't; although there were spectacular moments during which he was the leading figure. Destiny had selected Lincoln to be one of America's greatest Presidents, and this term in the Thirtieth Congress was a part of the apprenticeship he served in preparation for that office.

Lincoln was appointed to serve on two committees, the Committee on the Post Office and Post Roads and the Committee on Expenditures in the War Department. His bills were few, the majority of them dealing with legislation growing out of the reports of these committees.

Early in the session, while reporting out a bill from the Post Office and Post Roads Committee, his unfailing frankness and honesty brought him a stern rebuke from a Member of the House. Lincoln had secured the floor and began, "The Committee on the Post Office and Post Roads is composed of five Whigs and four Democrats. The report has met with the approval of all the Whigs and all the Democrats but one. I want to say further that this"—and right there he was cut short by a Member who in no uncertain terms gave Lincoln to understand that it was not in order to mention on the floor of the House what had taken place in the committee.

To this, Lincoln replied with some embarrassment, "If I have been out of order in what I have said, I take it all back as far as I can." There was much laughter as he continued, "I have no desire, I assure you, gentlemen, to be out of order; although I can never keep long in order."

Lincoln may have been unknown in Congress before this incident, but not after.

As long as our history books record the story of the Mexican War, they will also record the so-called Spot Resolutions. Lincoln was the author and the sole instigator of the Spot Resolutions. They were to become a pain in his political side for some time, causing him some difficulty in his home district where he was given the nickname "Spotty" Lincoln. But painful though they may have been to Lincoln, they were more painful to President Polk. In his first message to this Congress, Polk had accused Mexico of invading the territory of the State of Texas, striking the first blow, and of shedding the blood of our citizens on "our own soil." Fifteen days after this message, Lincoln presented before the House a series of resolutions calling upon the President to inform the House whether the "spot" on which American blood was first shed in the war was not within the territory claimed by Mexico.

Lincoln's Spot Resolutions mercilessly exposed the hollowness of the pleas offered for the administration. He asked questions the President dared not answer, and the evasion which was half forgotten by the country at large was never forgotten by those who knew the sternness of this tall Member from Illinois. Polk had been guilty of unjust aggression, he had sent troops where they should not have been sent, he had wronged the Mexicans, and Lincoln's resolutions were unpitying.

Speaking on his own resolution a few days later, Lincoln said, "The President is in no wise satisfied with his own position. * * * He is a bewildered, confused, and

miserably perplexed man. God grant he may be able to show there is not something about his conscience more painful than all his mental perplexity."

The man who framed such an indictment might be a new Member, but he was not new to legal studies, and he was not a novice in controversy.

Lincoln was not the only Member of the House who spoke on the issue. There was another Whig, a little, sawed-off runt from Georgia, Alexander H. Stevens by name, future Vice President of the Confederacy, and a man with a mighty mind, who spoke for an hour, saying in part, "The honor of this country does not and cannot require us to force and compel the people of any country to sell theirs. * * * The principle of waging war against a neighboring people to compel them to sell their country is not only dishonorable, but disgraceful and infamous."

Little Alex Stevens, from Georgia, and the tall gentleman from Illinois were "charter" members of an unusual inner circle among the Whigs in the Thirtieth Congress. They were the founding members of a group known as the "Young Indians," a group organized for the intent purpose of nominating General Taylor for the Presidency. The center of activities for the Young Indians was around the table in Mrs. Sprigg's boarding house, where Lincoln and several other Whig Representatives resided. The Sprigg boarding house was located on a spot now occupied by the fountain in front of the Library of Congress. It is said that at the Sprigg table Lincoln was the most popular boarder, due largely to his ready fund of stories and illustrative anecdotes, which always found ready listeners. He never told a story twice, and always he appeared to have an endless repertoire, each one of which was pertinently adapted to some passing event.

Mention should likewise be made of one or two other spots which were familiar to Lincoln. There was the bowling alley in James Caspari's hotel, opposite the House of Representatives, on a site which is now a part of the Capitol grounds. Here Lincoln spent many evenings bowling with other Members of Congress and, as usual, delighting them with his stories. As a bowler his average wasn't as high as was his personal popularity with the bowlers.

Another resort of Lincoln was in the post-office of the House. Here his favorite seat, according to newspaper correspondent Ben Perley Poore, was at the left of an open fireplace, tilted back in his chair, with his legs reaching above the chimney jamb. Poore adds, "It was refreshing to the correspondents, compelled as we were to listen to much that was prosy and tedious, to hear this bright specimen of western genius tell his inimitable stories, especially his reminiscences of the Black Hawk War."

Lincoln was always a good friend of the newspapermen. He recognized the power of the press and the need of newspapers. In one of his committee reports he said, "Our republican institutions can best be sustained by the diffusion of knowledge and the due encouragement of a universal spirit of inquiry and discussion of public events through the medium of the public press." He introduced a bill which permitted postmasters at county seats to accept subscriptions for periodicals and newspapers.

For Lincoln the Congressional Library and the law library in the Supreme Court were gold mines of information in which he dug deeply. One librarian recalls that after selecting a pile of books, he would tie them in a large bandana handkerchief, put through the knot a stick which he had brought with him, throw the load over his shoulder and march off to his room at Mrs. Sprigg's. In a few days he would return them in the same manner and go off with another selection.

One day during the first session, there was a commotion in the House, centering around the seat of the aged John Quincy Adams. The old man was suffering a stroke from which he was not to recover. Says the Congressional Globe, the CONGRESSIONAL RECORD of that time, "Mr. Adams was removed to the Speaker's room, where the air was better," and where, 2 days later, he died. During that time the House was adjourned. On one of those days, which was the birthday of George Washington, Lincoln is known to have visited the home and tomb of the first President. For Lincoln this, his first visit to Mount Vernon, was a pilgrimage of devotion on the part of the future President who was to fight to preserve the Union which the first President had fought to create. On the following Fourth of July Lincoln was present when the cornerstone was placed in the Washington Monument.

At the death of ex-President and Congressman John Quincy Adams, Lincoln was one of those named to the congressional committee of arrangements, and later marched with the cortege which bore the body to its temporary resting place in the congressional burying ground.

The Presidential contest between Gen. Zachary Taylor and General and Senator Lewis Cass, as do most Presidential contests, began on the floor of Congress. This gave Lincoln the opportunity to make what is known as his Military Heroes speech. It was a noble piece of rhetoric, and its delivery was a high light of his congressional career. It gave him opportunity to use his matchless ability of narrating illustrative stories. Lincoln, too, had a military background to draw upon for humorous anecdote. Congressman Lincoln's speech of July 27, 1848, is just as humorous and effective to read today as it was nearly a century ago, when it was so devastating to the cause of Lewis Cass, one of Michigan's greatest citizens, who undoubtedly would have made a better President than did Zachary Taylor.

The first stormy session of the Thirtieth Congress adjourned in the middle of August. Mrs. Lincoln and the two boys had already returned to Lexington, and later to Springfield; but Lincoln had party duties to perform. He had been invited to make an extended speaking tour in support of the Taylor-Fillmore ticket. Campaign duties kept him in Washington for a month, and during the following few weeks he spoke once in Maryland, and in nine Massachusetts cities, including twice in Boston. Several times he addressed two or more audiences in a day. In his campaign for Taylor he seemed to be trying out his powers as a stump speaker before audiences as far different from the pioneers of Illinois as one could imagine. He met with great success. Audiences were large and enthusiastic, frequently following him to other towns to hear more.

Closing his campaign tour at a huge mass meeting in Boston's Tremont Temple, he crossed New York State, visited Niagara Falls, and boarded the S. S. *Globe* in the Buffalo Harbor, bound for Chicago, around the Lakes. On the morning of September 28, the *Globe* anchored for an hour or so at Detroit, the one and only time he ever saw the future motor capital. Coming up the Detroit River that morning, he had witnessed a sight which must have brought back memories of a similar event of more than 17 years before. A few miles below Detroit, passengers on the *Globe* had watched the efforts of lakemen to salvage the S. S. *Canada*, which had gone aground on Fighting Island the night before. Back in New Salem, in April 1831, Lincoln's flatboat had gone aground on Rutledge's mill dam in the Sangamon River. Undoubtedly the plight of the *Canada* caused Lincoln to renew his efforts toward the perfection of an idea he had for removing boats from shoals. He applied for a patent on the device before he left Washington at the end of the term, the following March.

Back in Illinois for a short vacation, he also spent some time campaigning vigorously for Taylor, who won the November election. Returning to Washington in December, for the final session of the Thirtieth Congress, Lincoln was named to the committee to plan the inauguration. During the few remaining months of the term he devoted himself faithfully to routine business, participated actively in discussion and debate, and attended to his committee duties.

Many noteworthy incidents in Lincoln's congressional career I have skipped entirely; others are getting only the briefest mention. I have said nothing about his slavery attitude or of the bill he introduced to abolish slavery in the District of Columbia. Perhaps his attitude on slavery can be worded best by quoting from a letter he wrote prior to his nomination for Congress, because these views were consistent with him all during his political career and until near the end of his Presidency:

"I hold it to be the paramount duty of us in the free States, due to the union of the States, and perhaps to liberty itself (paradox though it may seem) to let the slavery of other States alone; while, on the other hand, I hold it to be equally clear that we should never knowingly lend ourselves, directly or indirectly, to prevent that slavery from dying a natural death." (Letter to William Dudley in October 1845.)

His record in Congress shows that he promoted uniform postal rates, that he favored adjusted compensation for soldiers, and that he favored Federal aid for the construction of highways and other internal improvements. One of his notable speeches was in reply to the President's veto message against improvement by Federal aid.

Lincoln never voted or spoke against any measure designed to aid in the conduct of the war. Always he was found to be lined up with the soldiers, voting for all measures favorable to them or to their families. At one time he introduced an amendment to grant bounty lands to men who had served as privates in the Mexican War. He also suggested that bounties be given to all volunteers in the War of 1812. He was faithful to his constituents, performed his duties faithfully, and seldom missed a roll call. Through his ready wit, his capable command of the English language, his unswerving honesty, and his ability to attack his political enemies on the floor of the House, he gained the firm and lasting friendship of both Whigs and Democrats. Very early in his career he secured the friendship of Daniel Webster, and was a frequent attendant by invitation at Webster's "breakfast club."

All sides and periods of Lincoln's life are worthy of study, but inasmuch as the great work he did in later life was so magnificent, it has almost totally eclipsed his political life from young manhood until he came into national prominence.

Most biographers give much less attention to his congressional career than has been given here. They say that he did not come into national prominence until his debates with Douglas in 1858. But I venture to say that he was nationally known, and was something of a political power for nearly a decade before that date.

Came the adjournment of the Thirtieth Congress and the inauguration of President Taylor. Lincoln didn't miss a moment of it. At an early morning hour he departed from the inaugural ball. Somewhere in the crowd he had lost his hat, so he wrapped his cloak around his head to shield it from the crisp March air, and walked the distance back to his boarding house in the darkness of the early morning, little dreaming that a dozen years from that hour he would be the central figure at the inauguration of another President.

The gentleman from Illinois who had occupied seat No. 194 in the back row of the

Chamber of the House of Representatives had yielded the floor for the last time.

* * * * * *

Why was Abraham Lincoln considered a success as a politician and as a President?

To that question there are nearly as many answers as there are people to make answer.

"Lincoln's success," says one writer, "was due to the integrity of his soul and the sublime courage that gave the people faith in him. In him the common man had faith because Lincoln himself was one of the common men, and he never thought of himself as being otherwise. He spoke so simply and so clearly that no one ever had to question what he meant. There were no vague messages to the people that could be interpreted in as many ways as there were interpreters. He spoke naturally and without trickery, and the people understood him. He spoke as one of them gifted with vision, and with a voice that could make their innermost thoughts articulate."

Abraham Lincoln's whole philosophy of life and his every action was summed up in that Cooper Union address, when he said, "Let us have faith that right makes might; and in that faith let us to the end dare to do our duty as we understand it."

Would to God that there could rise up in our troubled land today another Abraham Lincoln.

Julius H. Barnes Urges Favorable Action on Legislation for St. Lawrence Project

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. PITTENGER. Mr. Speaker, hearings on legislation for the development of the St. Lawrence seaway and power project are now in progress before a subcommittee of the Foreign Relations Committee of the Senate. One of the witnesses appearing in behalf of the project yesterday was Julius H. Barnes, of Duluth, Minn. Mr. Barnes' testimony was as follows:

SENATE JOINT RESOLUTION 104, ST. LAWRENCE SEAWAY PROJECT

(Testimony of Mr. Julius H. Barnes, president, National St. Lawrence Association, before a subcommittee of the Senate Committee on Foreign Relations, on February 18, 1946)

Senator HATCH. Will you state your name, Mr. Barnes.

Mr. BARNES. Julius H. Barnes, president of the National St. Lawrence Association.

Senator HATCH. Former president of the United States Chamber of Commerce?

Mr. BARNES. That is right, Senator.

Senator HATCH. Be seated, Mr. Barnes, and proceed in your own way with your statement.

Mr. BARNES. Mr. Chairman, I think you might be interested in knowing that the National St. Lawrence Association is a purely voluntary group. It was formed some year and a quarter ago in order to make a focal point of opinion from men who had served long years in the official study—the Deep Water Association, St. Lawrence Tidewater Associations—some focal point where the opinion could be crystallized and expressed. We were naturally urged to employ promoters and embark on a scale of great membership solicitation. We decided not to do that, to crystallize around these men who had shown their appreciation of the St. Lawrence and the national interests, crystallize around the men in the various communities whom we would select as in our opinion having a reputation for good judgment and public spirit. Today we have in the National Association less than 100 members, yet by our contact through that membership I feel that what I can say today does represent the community opinion of many, many sections and areas and cities.

This St. Lawrence project has been up several times. In 1934 you will recall it did receive a majority of the Senate but not the necessary two-thirds under the treaty form. In 1941, after hearings before the House Rivers and Harbors Committee, that committee did recommend it, 17 to 8, and in 2 weeks Pearl Harbor stopped any further action at that time; it was suspended for the war.

In 1944 after 15 months' suppression of the bill in the Commerce Committee of the Senate, Senator AIKEN made a sacrificing effort to get attention drawn to it, and it was defeated 56 to 25 in that form, still containing some phases which aroused treaty discussion.

It is up again. Senator, I think I express the determination of the whole Middle West, 50,000,000 people, that this question never will be settled until it is settled right; and when I say that, I want to say why I express it just that way. This association will never make a statement of known inaccuracy. It will allow the opponents every freedom of opinion, if they will take the trouble to base their opinion on the consideration of the actual facts. That has not always been done. There is sentiment intertwined with a heartfelt appreciation that this is the greatest national resource left in America today, and a determination to press that point upon the public until public opinion itself and Congress is convinced that that is the truth, that it is not sectional alone, that it has a national application.

We Americans are, as you know, a sentimental people. We fought the Spanish War and we released the Philippines and Cuba without gain, and we have fought two wars since, without any effort to get any material gain, but in our own protection and in response to the appeal of freemen of this world.

It is 32 years ago that I wrote the first article in favor of the St. Lawrence project at the request of Dr. Albert Shaw, of the Review of Reviews, and I wrote it because my lifetime work at that time in grain exporting had given me, I think, an unusual knowledge of what cheap transportation would do in market benefits and in the expansion of traffic; and every experience I have had in the 32 years since—and I have had unusual contacts, at home and abroad—has hardened in me the conviction that the first impression was right, that the vision of what it meant to America was justified, and these last four tragic years have written dramatically, I think, the justification of all the forecasts that we made.

I think that in appearing this way I have a right to express something of personal sentiment, too. My father was in the Bureau of Statistics of the Treasury Department, in Washington, until I was 10 years old, when he moved to Minnesota. My boyish recollection of the Bureau of Statistics was some 20 or 30 clerks. I think they are somewhat larger than that today. But the adaptation to statistics, I am afraid, sometimes creeps out in me. I will try to control it so as to use only those that illustrate some vital point.

Father moved to Minnesota sixty-odd years ago, because, on the map and in the opinion expressed by men of practical business judgment everywhere, the farthest western point of deep-water navigation in the heart of this great continent must be the place of intense business activity and development. He died, over 50 years ago, but he died firm in the faith that that will come; and when I speak of personal sentiment I really am moved somewhat by that parallel endorsement of my business judgment through many types of business.

Moreover, the men with whom he moved to Duluth, the early pioneers, were men of just the type that we are proud of in America. One of my business associates in Duluth up to 20 years ago was Alexander McDougal, who came to the Great Lakes in 1860 and sailed the Lakes when the Soo had only one lock of 8-foot depth. I have heard him tell the resourcefulness of those early pioneers. Before we had lighthouses among the dangerous rocks of Lake Superior, the fishermen were resourceful enough to build wooden frames and put through their waste fish, and the smell and the gulls and the fog always answered the warning light of today. He has told me of the pioneer days in Duluth when at one time we had 150,000 buffalo hides stored there for shipment in the small ships of the early days. Men like that have readapted themselves with the changed conditions. They have been worthy stewards of the advantages that nature bestowed on the Great Lakes and on the area that rests on it—the Middle West.

I remember that, as illustrating what this has meant in the national economy, that he spoke about the rate on the early cargoes of war at $4 a ton—it is not 80 cents. The rate on grain was 18 to 25 cents a bushel—it is now one tenth of that. The development of Lake Superior is one of the romances of America. My accent on it is to show that the men who believed, who staked their fortunes by settling for the development of the far western end of deep-water navigation, were men of such type as we can be proud of, as showing American resourcefulness and energy. Captain McDougal, himself, was the inventor of the whaleback, and the whaleback type was a splendid sea boat. As volume increased in the war carriage of coal and grain, it became necessary also to unload these boats faster. They opened the hatches wider and wider for larger and larger loading mechanism. As you open the hatches wider on the landing boats you weaken them on the edge, and one form passed out of existence; but the boat that is set in the water square is the boat that I have operated for 50 years, after building the first one just after the First War, and it was in service for the Navy, until it was seized at Guam in this last Pearl Harbor Day.

I mean we have tried to do something ourselves for the development of this country. Of course, we want the profits and earnings. That is what maintains business and enables it to spread and expand and hire more men and carry more tonnage, but what I want to get at is the earnestness with which the people of the Middle West now ask your consideration of this great project is based on the demonstration that they themselves did their part in constructing the America that we are all proud of out there.

Now, when father died I went into the grain business as office boy. I ventured with growing years to try the export trade direct. I did it from Duluth because we had a choice of water routes, and I shipped grain in the early days to Buffalo and transferred it to wooden canal boats that were drawn by horses down the towpath, and they are now replaced by Diesel-driven, self-propelled carriers. I operate a fleet of them. We had a choice between shipping to New York by canal or rail, shipping to Baltimore, Philadelphia, or Boston by rail, shipping by water on the lake ships as far as Ogdensburg and Kingston and then they were transferred into a special type of river barge called the pin flap that has passed out of existence since because the type of ship that served that route, with the 50-year-old limitations of 250-foot locks and 14-foot depth of today, just do not suit modern commerce.

Now, west of the St. Lawrence bottleneck that I am speaking of, there has been the finest instance of the keen play of Government and private enterprise that can be found anywhere in the world. The whole world is groping today to find the proper relationship between Government and private enterprise. It will be a shifting frontier guided by experience and argument, but there is no question on the Great Lakes that there was a most beneficial relation between those two phases. The Government deepened the channel successfully. It built successively larger locks and more of them, until there are five great locks today at the Soo. It lighted the channels to mark them, made them safe, and then left to private enterprise the construction of the facilities that used that waterway. That has led to the development, with human ingenuity of a high order, of ships, carriers of bulk cargo particularly on the Great Lakes, that are the marvel of the world. Nothing could be said to exceed the credit to which these men are entitled to have when they have developed a carrier that travels 800 miles up, with no cargo, loads a cargo of ore, carries it back 800 miles to serve the steel mills—and does it all for less than you would pay to have a ton of coal carried across your sidewalk. That, and the docks to fit them, to serve them, were a private enterprise of a high order. It is something that ought to be preserved and developed, because it is a demonstration of the service that Government with its superior resources and authority can contribute in the development of private enterprise, with enormously expanding employment.

Senator HATCH. You think, then, that there is a field for both government and private enterprise, where both can live and both survive?

Mr. BARNES. I certainly do, Senator. I think it is foolish to talk about dominant public enterprise and private enterprise as being something even fixed in their relationship. It will fluctuate with human experience.

Well, I want to emphasize that this early experience in shipping grain all over the world, the economy that it brought, the cheap access to consuming markets in Liverpool and London and Hamburg and Paris, bore in upon me a keen conviction of the worth of that great chain of lakes and of the cheap water highway that served them, more than another man would quite appreciate. I am sure that if we had been using that cheap waterway, reaching into the center of this country, touching the huge forests around the Great Lakes and the newly discovered copper mines and iron mines that helped develop industrial America, that we never could have developed the eastern part of the United States at the same time and had the same economy which did take place and stimulate it. I am satisfied that we never would have lined the streets of our western farm villages with automobiles, if it had not been for the economy of the waterway in marketing the surplus products that they marketed there for years, sir.

I illustrate that, sir, most fitly, in this way. When I was Wheat Director at President Wilson's request, after the Food Administration retired in 1919, I made a study of the effect of this cheap transport cost between our grainfields and the European markets, including with it a study of what it would mean to American grain, particularly, if the European worker ever could set the same table that was common in America, the same concentrated foods that we deem it customary and usual to use, and they do not. These men who were skilled economists reported to me that if European labor ever rose to the same living standards as we had in America, every acre of arable land in Europe would be needed for concentrated foods—cattle, hogs, milk, and so forth—and that their grain areas would have to be shifted overseas to the grain areas of the Dominion of Canada, the United States, Australia, and Argentina. That process is under way. I hope we are in a new way to international expansion that will hasten it, because it will make American agriculture far more secure than it ever can be without it.

I also worked out with Dr. Taylor the estimate that in the 16 States that grow grain, based on the Great Lakes, the total grain production there of substantially 4,000,000,000 bushels a year, wheat, corn, oats, rye, and barley—4,000,000,000 bushels a year—that if you would admit the economic principle that the farm price in that area—and it was, in the export days, at least, determined by the foreign market, less cost of reaching that foreign market—and admit an economy because of this Great Lakes-St. Lawrence highway, of 5 cents a bushel, you would have an annual return to the farms—annually—each year—of $200,000,000 saved.

Now, I was a practical grain merchant for 30 years. I will maintain against any economist that the probability is that the foreign price at which all the supplies and demands of the world crystallized, as in Liverpool or London, that that price is the more stable price, and that an economy in reaching that will reflect itself primarily in the price received by the American farmer, not alone what he actually moves but on the whole level of price, which, after all, is governed by the portion of the crop which does move. If you can picture and believe that on the grain crops alone of this area, this waterway is worth $200,000,000 a year in added returns to the farmer alone, plus other forms of farm product which are affected also by economy of transportation, you can see that it is just economic falsity not to recognize this and open this highway for its 5-cent saving which would be reflected.

Now, these rules do not come into play right now, in our day of subsidy and food control, and artificial food distribution, but inevitably the day is coming when it will be felt and when it can reflect to the benefit of the whole western farming region, and certainly to that extent. I think I ought to say that in the fortunate wide experiences that I feel have helped train me and to crystallize conviction, say my service with the Food Administration when I was President of the Food Administration Grain Corporation for Herbert Hoover, and handled all the shipments not only of grain but milk and sugar and lard and other food products abroad, I touched transportation then on a very large scale. I saw again in a very dramatic, vivid way what an economy of transportation cost meant in the returns to be left in our own hands here. I followed that as Wheat Director. I had the job of making good on the congressional guaranty of $2.20 a bushel for wheat over this country, and I do not think any farmer has ever brought any complaint that he did not get it under the administration, the volunteers, which I organized.

What I am getting at is that that gave me a contact wider than home—contact throughout the world. In 1923, when I was president of the Chamber of Commerce of the United States, I went as head of the American delegation to a Rome conference of the international chamber, with representatives from 60 nations, in Rome in 1923. The French were in the Ruhr. There was danger of war breaking out under that kind of international bitterness. We devoted considerable study to trying to find a formula that would at least form a bridge that Germany could get over its difficulties at that time and take its place perhaps in some self-respecting way as part of the European economy. I met and talked, as I say, with the best business opinion, I think, in 60 countries. It helped to crystallize again my feeling that there is an international relationship that must be preserved and developed to the benefit of our own people, particularly in the agricultural field. Since then the industrial growth has shifted the weight of benefit to the industrial field rather than to agriculture, but both are there. At Rome in 1923—please realize I am trying to qualify as a witness for the statements I want to make, with extreme earnestness, here. I was head of the American delegation. We framed the resolutions that were the basis of the Dawes Commission. When I came home the Secretary of State, Charles Evans Hughes, asked me to come to his office, and offered me the third position on the Dawes Commission, with General Dawes and Owen Young, and I could not take it. What I am getting at is, when I make these statements, the crystallized lifetime conviction of a businessman of fortunately rather wide experience, I want to feel that they are based on an unusual contact—I will have to claim for myself an effort to make my judgment detached and impartial. I try to be.

In 1938, the League of Nations nominated me to be on the League of Nations Waterway Committee, to see if we could internationalize the river waterways of Europe, and then came the war and nothing was done, but I mean that was the basis of experience, which gave me some kind of world acquaintance, and in all these years I have never found a man of wide experience—I have never found a man of any experience—who, looking at the map at that great waterway reaching 2,400 miles from the ocean into the heart of America, has failed to wonder that this country does not see what it would mean to modernize it on the same scale as it has so intelligently and vigorously done on the Great Lakes themselves. I just cannot conceive why men cannot see what that would mean in the national economy, and to argue that the economy is so real that it must divert traffic from the established rail lines or established Atlantic ports is not only selfish but, to my judgment, it is very short-sighted. The stimulant to industrial activity in the Middle West that would follow the opening of this cheap access to new raw material and access to new vast markets, on an all-water route, a water economy, and to all new lands and new peoples, would be so marked in following the development of cheap rates that would follow that the overflow would certainly make up any diversion of traffic in any direction—Atlantic ports, eastern railroads, Lake shippers, coal mining—all those various areas that Secretary Acheson this morning described as being those interested in opposition and resisting.

I would like to just take an analysis of the opposition we face and see what credence it is entitled to have. For example, he named the electric-power industry as one of those that had evinced opposition—and they had. There is an excuse for their early opposition. In World War I this country only generated 14,000,000,000 kilowatt-hours—14,000,000,000. In World War II we generated 230,000,000,000—15 times as much. It was just growing. This country was just becoming a power-driven, modernized industry, a low-production-cost country, that occasions our miracle performance in this last war, and that makes us the world leader in industry today. We will always need electric power, and need more and more of it, year by year; yet the electric industry in the early days did oppose it. I do not think they do as much, now. Certainly, there is not the same bitterness of opposition that there was in 1934 from the power industry. They have changed their mind. They still hesitate about it because they still have fears of the solution of the question of public-power distribution versus private-power distribution, that is going to be settled by a public opinion schooled by discussion and experience. As far as the St. Lawrence power is concerned, it will be 4 or 5 years to develop public opinion in New York State, which will have the control of it. There will be no power to distribute if we do not get consent and generate the power at

least. Then let us settle how we are going to distribute it; but that point of difference of view is used here by those who primarily aim to defeat or to defer the whole St. Lawrence improvement, to start discussion on efforts that help to check it, as it has in the past. That is unworthy of them.

The power industry has much to be proud of. They have shown a falling scale of rates. They have shown great ingenuity in skill and energy of invention, but they were not always that way. It happens out of my personal experience in 1930, when we had widespread unemployment, when business was frightened, and workers were suspending their ordinary grocery and clothing purchases for fear of getting a "blue slip" at the end of the week, with a discharge. President Hoover had the idea that perhaps if we could start with one great industry and promise a period of advance assurance of employment, perhaps others could follow, and we could stabilize into the ordinary buying and selling practices that helped to maintain the retail trade, and from that, reflect into the factory itself, so at Atlantic City I carried the invitation of President Hoover to the leaders of the power and electric utility interests, that if they would agree to do this, to give their workers assurance, 12 months advance assurance of employment, or 6 months, so that they would be relieved of the immediate anxiety that was all over this country, and the panic, that he would dress up a White House reception for them and give them the vivid dressing which would give them a leadership. Now, we had, back there, in the utility industry of that day, such men as Samuel Insull and Hobbs of Associated Gas. They, through mistaken loyalty to their organization, led that great industry to turn down that very large and fair opportunity to become leaders.

As a rule, probably, that was sound business, and they refused it. Three years later, in 1933, they got legislation which was denominated as a "death sentence." What they would have given in 1933 to have public confidence and support for at least reasonable legislation for control of taxes, which were clearly outrageous. They can think it out, themselves, but when we have a man in our national organization today like Owen Young, I think I am justified in saying that the utility attitude toward the St. Lawrence has changed. I do not think we are going to have quite the same opposition there.

Secretary Acheson also said that among the opposition was the coal industry and the mine workers. That is true. And I think they are mistaken. When I see that the statement is made in their behalf that this threatens an expert coal portion of something like ten to fifteen million tons a year, and when I then look at the figures on production of coal, which have risen from 350,000,000 tons in 1932, the heart of the depression, to six-hundred-and-seventy-odd, last year, it seems to me far more important to have a healthy, stimulated business at home than it is to look at any portion that might be lost in export. Even as to that, I am sure they are wrong about it, that we are more likely to have new markets for export coal than we are to have that, by access to the St. Lawrence, on imported coal. Of course, under today's conditions there is no possibility of importing coal from any part of the world. We are shipping all over the world. Secretary Acheson also named as one of the objectors or opposition to the St. Lawrence improvement certain Atlantic ports and their commercial organizations. Here I feel inclined to speak with considerable emphasis and feeling.

I was president of the Chamber of Commerce of the United States for 3 years, in 1922–24, and afterward, called back into service for 3 years more, as chairman, in 1929–31. I knew the men who founded the Chamber of Commerce of the United States—Harry Wheeler and the others of his type; they had a high ideal, under the invitation of President Taft, to make business opinion expressed so fairly and on such exhaustive examination of facts for determining national questions, that their resolution would mean something, would amount to something. They still do that, when they submit a question to their membership, the submission of that question is accompanied by the best statement of reasons for and reasons against, so that we have a chance to measure it. That is not true, I am sorry so say, about the commercial organizations of a city like New York. I belong to all of them—the Chamber of Commerce of the State of New York, Commerce and Industry Association, the Maritime Association. Those organizations adopt a committee report, and in the Chamber of Commerce of the State of New York, 130 years old, with a very honorable tradition and inspiring a great hall, the portraits of the men who built New York port—there, twice, I have risen in my place to object to the adoption of a committee report without an examination of the facts stated.

I pointed out less than a year ago in one discussion of one of their reports condemning St. Lawrence, opposing St. Lawrence, that there were inaccuracies, misstatements in the reasons given in the committee report. I pleaded with them to defer action and appoint a committee to examine the facts, submit the facts both ways to the membership so that each member could have his own judgment instead of accepting a committee recommendation without any knowledge of the reasons on both sides, and I was voted down 65 to 47, the first time, and some of the Members told me, afterwards, that in all of their history this was the first word they had ever heard in favor of St. Lawrence in that hall. I mean that closed mind of of the organization attitude of a great commercial organization like the Port of New York, who say openly that they fear that the opening of the St. Lawrence will divert tonnage that now passes over their docks. I have heard their members argue that the stevadore expenditure would be less. I think they are wrong, but at least they come out in the open and say that there is their selfish reason for opposing something valuable, pronounced by six Presidents, who approved it as one of the great projects of the world, and it passed the examination of skilled engineers and all these departments that carry a responsibility for the public interest.

The second time, I arose against the same action, and it is reiterated. They will probably send someone to express their opposition to a hearing—we expect it; I shall be surprised if they are able to justify any reason in the world for their opposition except the selfish one that they fear tonnage will move on the cheaper route and will reduce that which passes over their docks, and as I say, my business judgment tells me they are mistaken in that. Moreover, it seems peculiarly selfish of the great portion of New York. I have an office there, I belong to all these organizations. I operate a fleet from there. I love the city, I admire it. It attracts the superbrains of the country, but when they get there with a sense of power they just lose something of the perspective which they used to have back in the country, and I tell them so. New York City has had $120,000,000 spent on its inner harbor, of national money. It is served by a $100,000,000 investment in the Erie Canal, that is only useful to the port of New York, yet here it is making objections to the expenditure of $200,000,000 to open a seaway that exists, that only needs improvement, modernization, to open up to a longer seacoast than any we have, longer than the Atlantic, longer than the Gulf, longer than the Pacific, and serve more people than any one of those coasts; and America's whole industrial progress has been favored by the fact that it had, as no other country in the world ever had, three natural seacoasts, and now can have a fourth that would give its national progress a great impetus again.

Secretary Acheson spoke about the opposition of the Great Lakes shipping. I have already expressed my admiration of the inventiveness, the ingenuity, the energy and skill with which carriage of the carriers has been carried to an apex that is a world marvel. I still think that they are entitled to great credit. They are men I like and trust and believe in. They are not a unit, and we have some of their members, like Cyrus Eaton and James Davidson who are members of our association, who see broader than today's supposed private interest of protecting these carriers on the Great Lakes, see the broader vision of what it means if these carriers could go clear to the seaboard for exchange of cargoes. They are not suited for ocean carriage themselves. They are of special type, of great economy, designed to serve the Great Lakes transport itself, where refuge harbors are not far apart and where storms are not so vigorous, and where they do not need twin decks like ocean ships for structural strength. They have shown a remarkable adaptability in cheap carriage. But they had better look out, because if it is true that we are exhausting our natural resources, and we in Duluth are worrying about it, because we are supported by the miraculously rich ore of the Mesabi range. When we are told that the high-grade ore can only last, at the last year's rate of consumption, 21 years more, it is time to look ahead. There is lots of low-grade ore around Duluth. There will be lots to carry, that is going to be in use in the furnaces of the East and of the Middle West, which will need the import of high-grade ore, if this 21-year estimate is right—and I have no reason to doubt it. We need to open the seaway. We need to have access inbound for high-grade ore from Laborador, new discoveries, with some possibilities, from Cuba, where already at Baltimore the Bethlehem Steel runs on Cuban ore; from Chile, where the Bethlehem Steel brings to their Atlantic sea plant ore from Chile; from Brazil. These carriers on the Great Lakes have the protection of distance from these other fields. They will always have an ore. They will always have an ore to carry, high-grade or low-grade. They are just wrong in fearing that and opposing a great improvement like this in the national interest by setting up their single supposedly selfish interest.

The other opposition which Secretary Acheson emphasized was that of the railroads of this country. I want to speak on that, and I want to speak with great restraint but great earnestness; and I have a right to. In 1923, I was chairman of the National Transportation Conference, under the auspices of the Chamber of Commerce, for which they spent $50,000 for a study of the proper relationship between the railroads in newly developed highway transport and the waterways. We had 100 members in that conference, men of high grade. I would like to read you some of the men—railroad executives, in the unanimous conclusion. We had men like President Rae, of the Pennsylvania; Storey, of the Santa Fe; Willard, of the Baltimore & Ohio; Holden, of the Burlington; Loomis, of the Lehigh Valley; Markham, of the Illinois Central; Gray, of the Union Pacific; Eliot, of the Northern Pacific. There were 21 high railway executives, members of that conference, who joined and took part and agreed in the unanimous conclusions of the conference. In its expressions—remembering, a unanimous report, in which they had a chance to argue. This cross-section of constructive management joined in the recommendation that—and I quote from the report; I have it—

"A sound national program of waterway development should be determined and actively prosecuted to this end without delaying progress of work on existing projects or interfering with international nego-

tiations, to render possible the St. Lawrence waterway and power development. A national survey should be made by the United States Army engineers. This survey should include a schedule of priorities to insure prompt completion of adequate waterway units in such order as to best augment the national transportation system."

Here is plain recognition by top-drawer railroad management talent, in the year which was still one of constructive phase of railroading, that they recognized the utility of waterway, and especially would they interfere not at all with the international negotiations looking to opening the St. Lawrence by joint action with Canada.

Well, their recommendations were followed. The Army engineers, through two successive boards, recommended the St. Lawrence improvement, and have repeatedly checked the cost estimates. There has been an effort to confuse the cost of that highway by all sorts of irresponsible estimates, some running as high as a billion and a half dollars. There has been no engineering estimate of these several boards exceeding $600,000,000 for the total improvement, to be divided between Canada and the United States.

I do not know how a hundred businessmen—I do not know how you would ever get advance estimates of cost any more reliable than exist in the official records in favor of the St. Lawrence improvement.

In 1920, also in the twenties which followed that development era in railroading, every western trunk line, eight of them, that based on Great Lakes ports, the president of every one of those eight western trunk lines publicly expressed approval and endorsement of the St. Lawrence project. It is a matter of record. The names are on record, and the words they used in endorsement—Presidents Pennington, Jaffrey, Budd, Howard Elliot, Donnelley, Byram, Scandrett, Felton, Sargent, Holden, and Downes. Not a single western railroad failed to recognize the service it would be to their transportation lines under their direction; and certainly the conditions are more promising for them today than then. But in 1934 the Association of American Railroads was formed, a national association, first, and they have been speaking for the whole railroad industry since. I do not think I am unfair to them to say that it is clear that they are dominated by three great trunk lines—the Pennsylvania, the New York Central, and the Baltimore & Ohio.

I think it is not unfair to wonder why, since 1934, these western trunk-line executives have remained silent, not in opposition; they will not express opposition so much, but they will not repeat their endorsements. I think you can draw your own conclusion, whether, either by organization loyalty, which is a commendable quality, or by the fear of the discrimination and reprisal which is not a commendable quality, and not American, they are keeping quiet and letting the association headquarters here in Washington speak for them in opposition to the St. Lawrence, and the only argument that I can see that they can make with any shadow of justification is the argument that they fear it will divert traffic from their lines leading from Atlantic ports to the west—diverted by superior service and the cheaper costs of transportation. If that is a worthy motive against one of great public interest, every man is entitled to measure whether his conception of public interest exceeds that of the proper protection of a great industry like railroading.

I had a long experience with the railroads. I have known their executives personally back at least in the 1920's, when I acted as chairman of that great transportation conference. I have a great respect for most of them. I think they are terribly wrong in putting this supposed interest to their individual lines against the great public improvement like this. I think their record shows that they have rarely acted in a large, generous, intelligent way toward other forms of transportation. They have a great treasury. They have a weekly newspaper, the Railroad Data. They hire pages of magazine advertising. They lay the emphasis, trying to create a public sentiment that the National Government ought not to extend favoritism to highway and waterway transportation while the railroads have to pay their own way. In none of those advertisements have I seen them make the fair statement that the difference is that any American citizen can put a truck or a passenger car on these highways publicly owned; he can put a boat of any size on the waterways and run it; but let him step on the railway highway and he will be arrested. There is a considerable difference, I think, in attempting a comparison of the relations of the public with those three forms of transportation.

Now, always, railroad policies have been aimed to defeat the economy of water service. The Transportation Act of 1920 and its amendments provided for "fourth-section relief," so-called, allowing the railroads to reduce rates to meet water competition on the single commodities. That is a very unfair power. To reduce rates, if not in the loss area, at least to where they do not contribute their fair share of earnings to railroad maintenance, and meeting the natural economy of a water carrier, and then absorb that in a great, massive bulk of all kinds of carriage that the railroad has, is not fair competition; and they are beginning to see it.

There is being created in this country or rising a great reaction, a revulsion from so-called "fourth-section exemptions." Chairman Land, of the War Shipping Administration, spoke of that in his letter to the ICC only a few weeks ago, when he was obliged to take issue with railroad opposition expressed before the Interstate Commerce Commission against the resumption of coastwise and intercoastal shipping service which had been suspended during the war. He was obliged to officially record his opinion of that character of railroad opposition. For instance, let me read you two paragraphs of his letter to the ICC:

"It is a matter of keen regret to me," he writes, "that at the very first opportunity following the close of hostilities, the railroads have adopted a narrow point of view, reminiscent of the 'dog eat dog' philosophy which so adversely affected their own interests as well as those of the water carriers during the prewar days.

"Objections from the railroads come with bad grace. The rails were not asked to abandon their business to competing transportation. They benefitted by the misfortunes of the water carriers. Under our national economy both forms of transportation are essential. We have not passed a single oppressive act in Congress that has not repeated the principle that the objective of regulation was to preserve to each form of transportation the natural economies that it could offer to the public service."

And I have yet to see one honest-to-goodness effort of the railroads to cooperate with the development of either of the competing forms or surface forms, waterway or highway, in any of their acts.

Now, I speak with great feeling there, because in my long life, back in 1912, as a Duluthan and chairman of the traffic commission, we found that railroad-owned lake ships were carrying sugar westbound from New York, loading it at Buffalo, carrying it up on the Lakes and through Duluth, delivering to the Twin Cities at a lower rate than if we stopped it at Duluth. That did not seem right. We brought an action before the ICC. We won it. The railroads were ordered to establish the same rates westbound to Duluth as to Chicago by water, because the water conditions were substantially identical in distance—not all-rail; we cannot compete by rail. We are 400 miles longer on rail haul; but that was the principle laid down, and it was effective for 2 years, until statutory legislation for the ICC, and in those 2 years, which happened to be years in which by the application of the Bingham Act railroads had to divest themselves of the ownership of these lake steamers, 32 of them, during those 2 years, at the reduced rates which the ICC ordered, 62 cents New York to Chicago and 62 cents New York to Duluth, the succeeding Great Lakes Transit Corp. made a million and a million and a half dollars a year. The rate today has risen from 62 cents to $1.74 to Duluth, and we have lost our equality with Chicago, which is now, I think it is, $1.55. That is, our distribution area has been narrowed by the prejudice shown by railroad interests. They do not own the ships, but by control of the origin of traffic and by implication of prejudice in the divisions and in the allocation of traffic they have had their own way and changed the whole rate structure of the country.

I hope to see some men younger than I am, with the same feeling that I have, do something about it before long.

The net result of it was, after we got this order in 1913, that we then tried to get the still railroad-owned ships to take care of the country grain and dairy trade of Minnesota. When I went in the grain business, Minnesota raised a hundred million bushels of wheat. It raises twenty million today because it has shifted to dairy products, butter, eggs, and frozen meats.

In 1914 the railroads had dairy products on their prohibited list for water carriers. They would not take them, and we could not get them to at any rate. We had to go before the ICC and get an order from them and the ships were equipped on a small scale for dairy products transportation. Now, every ship, until they were disposed of in this war, was shipped with refrigerator space to carry dairy products, the most profitable freight they had. That is what we always had to do with the railroads.

In 1915 they applied to the ICC under the Panama Act for permission to continue ownership. We appeared in oppcsition to that, with our experience, and the ICC decision was that the record showed that the operation of those ships by railroad owners had not been in the public interest, and ordered them to divest themselves of the ships, which they did in 1915 by selling them to a private company, the Great Lakes Transit Corp., set up by Connors, of Detroit, the stevedore king of that port. He invited me to become one of the incorporators and directors. I was one of the first directors, and I put in some money, which I afterward gave to the YMCA when I went into Government service in 1920, so as to have no shadow of private interest.

That has been our experience. How can you blame me for feeling in every fiber of my body that the railroads should show some evidence that they will enter into the same kind of competitive situation that exists in other large units in many other kinds of industry? How can you blame me for resenting that they appear in opposition to the St. Lawrence on the selfish ground that it might divert traffic?

They try to argue from that point. Some of their spokesmen say the St. Lawrence will not be used anyway. Some others say it will divert traffic. They cannot argue both ways. The fact is that it will create new traffic altogether in the Middle West and down the Great Lakes.

You know, one could be such an admirer of American railroads, whose arms reach all over America. The whistle of a locomotive

at night is just a symbol of American energy and the enterprising development of America. But how are we going to get into railroad administration if we do not have the spirit of fair competition that was of such great value in so many other industries, promoted the growth of America, and encouraged the development of new, small businesses which grew into large businesses? The incentive to overcome overwhelming influence against you to develop your own energy and ambition is what we have got to preserve.

I am disturbed about that, and I think other men who have done some thinking about that are also disturbed. Senator AIKEN a few weeks ago in Boston expressed distrust of what he called economic colonialism in America. It does exist. Centers of great wealth in New York and other cities do exercise influence over their western subsidiaries. The manager of a western subsidiary may be perfectly competent to be entrusted with its management, but if he wants to subscribe to the St. Lawrence waterway he gets instructions from New York that he had better not do it. That is not a healthy atmosphere for developing initiative, energy, enterprise, vigor, and adventure in American industry. The railroad industry is using these same methods exactly. It touches all parts of industry. Representatives of railroads are not at all above going to see this man and that and impliedly saying that they just had better not appear as public supporters of the St. Lawrence.

I make this charge with full and mature consideration. It is a serious charge.

But we could have a great railroad industry. We could, by cooperation, development, and in relation with the other forms of transportation, create a web of economy that would serve all industry and the national welfare and the defense of it.

But when the railroads appear here before you with their arguments I ask you to understand what the history of those roads has been, as told by a man who has lived through a great many years.

I know that opening the St. Lawrence would be of the greatest benefit to this country. We would have a second surge of development. This subcommittee, the whole committee, and then the Senate and House will have a chance to do something in a big way, as big as the Panama. The St. Lawrence is the greatest natural resource left in America. The country has grown up to it. We need the power; we need the transportation. The new, war-expanded industries in the Middle West, with the newly expanded populations, need access to new farms and markets, and the farms that surround them will find profitable markets if we can do this thing.

Thank you.

Senator HATCH. Are there any questions?

Senator LA FOLLETTE. I have no questions.

Senator AIKEN. No questions, Mr. Chairman.

Senator HATCH. Just summarizing, as I have listened to your testimony, Mr. Barnes, as to those who oppose these industries, while you have indicated there may be some elements of selfishness in some places, almost altogether you characterize it as lack of foresight and vision?

Mr. BARNES. It was that, but now we have grown up to it, Senator. All we have to do is look at the statistics. The Commerce and Industry Association appeared before the Rivers and Harbors Committee of the House in 1941 with an engineer who testified that we did not need electric power. Our production generation in America then was 160,000,000,000 kilowatt-hours; it is now 230,000,000,000. At what point do they change their minds? When do they start a fresh survey of new conditions?

Senator HATCH. Thank you, Mr. Barnes. Your testimony has been very interesting.

Knoxville Mill Is Island of Harmony in Nation's Ocean of Labor Discord

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1946

Mr. JENNINGS. Mr. Speaker, the management of Appalachian Mills and the 1,200 employees of that company have set an example to the Nation that should challenge the attention of employers and employees throughout the Nation.

I enclose as a part of these remarks a splendid article by Lee Davis appearing in the Knoxville News-Sentinel of Sunday, January 27, 1946:

KNOXVILLE MILL IS ISLAND OF HARMONY IN NATION'S OCEAN OF LABOR DISCORD—APPALACHIAN WORKERS GIVE DINNER FOR FIRM PRESIDENT

(By Lee Davis)

Throughout the country strikes and deadlocks involve almost 2,000,000 people.

And in Knoxville, International Ladies' Garment Workers (A. F. of L.) Local 377, entertain 500 at a dinner and dance in honor of Appalachian Mills President W. A. Brownlee

Imagine how many discouraged Americans must have sat up and taken notice when that News-Sentinel story went out on the wires.

There were no trick angles to that remarkable occasion. We checked into the background and found that the labor-honor dinner for management represented no exaggeration of the long-standing mutual appreciation and respect on the part of smooth, sandy-haired Mr. Brownlee and Local 377.

The explanation for that exceptional relationship? Both the mill president and the local's business agent, angular, youngish Clyde Lee, give the answer in simple and almost identical words.

FORMULA SINCERE

The formula, coming from each in separate interviews, is this:

"Treat the other fellow across the bargaining table as you have a right to expect him to treat you. Try to put yourself in his place and see his side of the picture, too, in order to get an honest perspective of the whole. Sit down to the collective bargaining table with the sincere intention of bargaining straight toward a settlement of the issue in hand. Don't try to mark time or stall, or you had as well not have started the session in the first place."

Almost as handy as the wide main entrance to Appalachian is the open door of Mr. Brownlee's office, situated just inside the entrance and on the workers' main corridor.

"Never liked the idea of a plant head having his office inaccessible and remote from the employees," 48-year-old Mr. Brownlee explained.

WORKERS WELCOMED

"Any Appalachian worker finds a welcome in here at any time. A lot of them do drop in. Not just on union matters, but often with individual problems such as financial and family matters. Whatever it is, I'm always glad to talk it over with them."

Local 377 Business Agent Lee, 36, who started in the mill 15 years ago at $11.20 a week, is perhaps the best authority on the concrete earmarks and results of labor-management smooth sailing at Appalachian, even in these troubled times.

"First, a bit of pre-Brownlee background," he began.

"Our ILGWU local had 200 members signed up when it obtained its charter, December 6, 1940. The membership totals 1,400 now (with 1,200 at present on the Appalachian pay roll).

"The following May the former management agreed to a consent bargaining-agent election. We won, about 3 to 1, and signed our first contract with the company May 15, 1941. But that didn't turn out to be the happy agreement it might have seemed.

"The company soon began taking on nonunion workers; in 4 weeks alone hired 600.

"We went on strike in August, principally for increased wages. When the smoke cleared we had a new contract including an increase and a union shop clause.

"Just a month later Mr. Brownlee became president. That marked the beginning of a new era at Appalachian. Not once since," said the union leader, "has there been a strike or anything like that at our plant."

PUTS CARDS ON TABLE

"From the first day we found the new president ready to sit down at any time, put the cards on the table with us, and go to work to honestly thrash out any complaint or issue. We've matched his sincerity with the same kind of honest effort, as Mr. Brownlee probably would tell you (and he did)."

Then the ILGWU man came up with some samples of the plant head's employer policy:

"The general policy when a shift is cut off is for, say, the machinists, to be carried in that wage classification, although temporarily they may have to be occupied with all kinds of odds and ends of work.

"In this instance a certain machinist was sick when his shift was dropped. When he was able to come back after 3 months, he just took a job as an ordinary worker. Then he got to studying about it and told the shop committee he thought he ought to be back in machinist-pay classification.

"The committee put the matter to Mr. Brownlee. Without hesitation, he spoke up, 'Why, as I see it, there actually is no argument to it. The man is entitled to back pay in line with his regular classification.' And the man got back pay—$325 of it."

TWO RAISES GIVEN

Appalachian workers got a blanket 5-cent raise last May and another 5-cent one in December. "And there wasn't any runaround or stalling involved in those negotiations, either," said Mr. Lee.

"We made a proposal which Mr. Brownlee didn't consider acceptable and he said so right off. He was ready at the next session with a counterproposal which we didn't feel we could take as it stood. We came back next with a counter-counter which wasn't altogether acceptable. Then both sides settled down to working out an agreement, and reached it without any wasted motion."

The union man next cited another facet of the mill president's attitude:

"Some years ago the company set up a cafeteria for its workers and later abandoned the operation. About a year and a half ago the union decided that it would like a go at a nonprofit cafeteria for the employees.

"We took the idea up with Mr. Brownlee. 'Well,' he said promptly, 'take over the cafeteria space and equipment and see what you can do with it. We'll get together sometime in the future on the matter of rent.'

"We have done pretty good with the cafeteria project, plowed back revenue into additional equipment. And Mr. Brownlee has yet to say anything to us about rent."

Local 377's offices and recreation and assembly halls occupy a two-story brick building on the Dale-Fort Sanders Avenue, front corner of the mill property. The union pays the company $20 a month rent and the

latter supplies the heat from the central system.

UNDERSTANDING PAYS OFF

This model management-union understanding can pay off in specific benefits for the outside public as well as for the plant.

Take the case of the Community Chest-War Fund drive. Maynard Baird, Tri-State League of Human Rights director, went out to Appalachian with some appea movies to encourage employee subscriptions.

President Brownlee didn't say "Sure, we're glad to have you show the movie to the workers, and we'll arrange an auditorium for a lunch-hour showing."

"No," said Mr. Lee, "employees were allowed to leave their jobs in order to see the campign film in groups throughout the day.

"Result. Appalachian workers oversubscribed their quota by 130 percent."

Now to circle around again and get another completely different focus on the Appalachian labor-management picture.

"There was the time, about 4 months ago," says Union Agent Lee, "when production took a noticeable drop in one department.

"Our union shop committee went to Mr. Brownlee with the proposal that a committee comprised of two management representatives and two ILGWU representatives investigate the situation together. He studied the idea a moment and agreed.

SITUATION CORRECTED

"The union-company group spent a full 8-hour shift in the department in question, studying production routines and habits.

"On the basis of its findings, the committee worked out suggestions that were adopted, and the result was that the production situation was largely corrected in short order.

"Proper production is equally a matter of pride with the employee and the employer when labor relations are what they should be."

And speaking of production, Appalachian and its workers turned out 12,000,000 pieces of underwear for the United States armed services, lend-lease, and domestic civilian use during the war. For their excellence of war work the mill and its folk were awarded the Army-Navy E pennant and a repeat star.

Here is a list of members of the union's shop committee, or mouthpiece, to show you how representative it is of various types of Appalachian work: Committee chairman, Ralph Hicks, machinist; financial secretary, Ola Childress, machine operator; Paulietta Underwood, machine operator; Bill Mize, knitter; R. T. Kitts, cutter; Charley Lowe, card grinder; Walter Cooper, machinist; and Grace Turbyville, recording secretary.

NEW MEMBERS TRAINED

The ILGWU leader believes another prime ingredient in successful relations is a course of early and comprehensive education for the new union member. Miss Dorothy Knight, Local 377's recreation and education director, is responsible for that department. K. P. Dykes, a plant electrician, is chairman of the education committee.

Each new member is required to attend a new-membership class once a week for 3 weeks (and must have worked successfully at the mill for 28 days to become a full-fledged ILGWU brother or sister). In the new-membership class, rookies are taught union machinery and membership obligations to both the union and the management. They are instructed in the "true meaning of above-board collective bargaining," as to limitations on how union dues can be spent, and the importance of attending membership meetings regularly.

Also there are classes in general school, including the three R's and craftsmanship, and such. Local 377 maintains a large general library in its recreation hall as well as equipment for checkers, cards, and other table games.

Union-sponsored dances and outdoor outings are frequent events.

Each membership meeting begins with a devotional, conducted by Chaplain Bert Hatcher.

HONORED WITH DINNER

Has the foregoing, first and last, given you some idea of the management-labor scene at Appalachian Mills?

Then, extraordinary as it is, it isn't so amazing that ILGWU, Local 377, gave Appalachian President W. A. Brownlee the honor dinner.

Along with Mr. and Mrs. Brownlee, many of the mill's other executives and their wives were on hand, as were the union men and women of all ages, and a galaxy of public officials to boot. Everybody laughed and chatted and danced with everybody else.

Congressman JOHN JENNINGS held the Appalachian relationship up to a troubled Nation as a remarkable example to follow. And that was one speech he has made that didn't get an argument from any quarter.

In the light of President Brownlee's labor record, a glance over some of his personal background might be to the point.

He was only 4 when his family moved from New Orleans, his birthplace, to Knoxville, where he spent a number of his formative years.

WORLD WAR I VETERAN

Young Brownlee's formal education ended when he went into the Army from high school at the outset of the other World War.

He was in 27 months, 18 months with the engineers in France, and was a top sergeant at 19.

"My first experience in directing production workers was not until 1941, when I entered the manufacturing end of the mill operations," Mr. Brownlee says in his somewhat terse way.

He was Appalachian's New York representative from 1924 to 1929, when he came to the home plant here as purchasing agent.

Mrs. Brownlee was formerly Miss Maude Mently, of Gowanda, N. Y. The home is in Westmoreland Heights, and they have two children, William, Jr., 10, and Helen, 6.

Mr. Brownlee likes some hunting and fishing, but seldom plays golf any more. The fact is that his primary hobby probably is his relationship with Appalachian mill folk as a collective union group and as individual friends.

Why Should Schools and Colleges Have So Much Difficulty Purchasing Surplus War Equipment?

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1946

Mr. MUNDT. Mr. Speaker, many Members of Congress have been receiving letters from administrators of our schools and colleges complaining about the perfectly unconscionable delay and confusion which they face in endeavoring to get for their institutions some of the surplus war equipment now deteriorating in warehouses and in stock piles all over America. Despite the fact the disposal of surplus war property is now in the hands of the seventh successive bureaucratic agency designated to handle it, reports are continuing to reach Congress about the difficulty of purchasers to secure this equipment.

Mr. Speaker, I call attention herewith to a letter received by me from a friend of mine in the Middle West who is a college professor. His institution asked him to make some purchases of surplus war equipment for his college laboratories. The experiences he sets forth in the following letter indicate the need for action in the bureaus down town. It is a sorry saga of red tape, bureaucratic delay, and what I once referred to as "gwibitis"—the chronic affliction which attaches itself to a "Gwibit." A "Gwibit," of course, is a member of the Guild of Washington Incompetent Bureaucratic-Idea Throatcutters!

I hope our collective efforts in Congress can soon bring about changes which will reduce the delay and increase the supplies which confront school and college administrators—as well as many other citizens—when they endeavor to pay cash for the surplus supplies of war which are daily decreasing in value.

The letter follows:

HON. KARL MUNDT,
Representative in Congress,
Washington, D. C.

DEAR CONGRESSMAN: You wrote me some time ago asking what progress I was making in obtaining surplus Government equipment for the college. I held off answering your letter in order to include in my report the results of a trip down to Fort Omaha.

It seems to me practically impossible to obtain surplus equipment unless a person has an expense account and can go out and hunt for it. The person to whom you forwarded my list of desired equipment in Chicago sent me a list of available equipment with prices. There were not many of the items that we actually wanted on this list, but we did pick out a few and sent in an order. We were to have priority as a State institution from the 18th of January until the 1st of February. So far I have heard nothing from this order.

In the meantime the office in Chicago wrote and told me that I was in the Minneapolis district and should contact them. The other day I received a list from them which is simply a numbering system whereby I express a preference for certain types of materials and then theoretically receive lists of available equipment. The numbers which would include scientific equipment seem to have been left off this list.

As to my Omaha experience, I went down to the salvage depot just after they had finished a sale of practically all of the equipment accumulated in the warehouse. Max James, who is clerk at the warehouse, spent Sunday afternoon with me and I picked out a bunch of salvage and small lots of things that we might use here at the school. This type of equipment, according to their procedure, need not receive a release from other branches of the service, but can be O. K.'d for distribution by the Seventh Service Command Headquarters personnel. I took this list up to the headquarters and met the officers who would O. K. the list and went over the list with them. Then I returned to the college, made out the proper requisition, and forwarded it to Omaha. As near as I could make out when I was down there, they should have completed putting their O. K. on the list the next day, but, so far, I have heard absolutely nothing from that requisition.

With regard to airplanes and aeronautical equipment, I sent in a requisition to the proper person in the Chicago office about 6 weeks ago. Yesterday I heard from him for the first time and he gave me 7 days in which

to buy a Flying Fortress for $350. The offer does not do me much good because I have to accept delivery of the plane ready for shipment at Altus, Okla. I don't believe the school would want to pay the freight charges on a 33,000-pound fortress to have it sent up here from Oklahoma.

As you can see the present situation for obtaining surplus equipment is not designed to take care of an institution such as ours located at a considerable distance from the warehouses. They want the buyers to come into the warehouse and haul the stuff away. On one or two pieces of equipment such as a testing machine, which on the list was not described so we could tell its capacity or maker, we tried to get information on it so that we would know whether it would fill our needs or not, but we didn't seem to be able to get a description or find out the condition of the machine and we gave up the prospect of buying that. I know that the Minnesota, Iowa, and Nebraska institutions similar to ours have received large quantities of equipment for use in their laboratories, but they were able to get on the spot where the plants were being closed down and grabbed the equipment before it was turned over to the RFC or the new War Assets Corporation. I believe we are going to end up with the same old laboratory we have had for many years.

Thank you for the interest that you have shown in our problems and we do appreciate the help which you have extended to us. With kindest personal regards, I am,

Very truly yours,

L. L. A.

Economic Survey

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1946

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I would like to include a very splendid resolution adopted recently by the Allen County Republican Club of Fort Wayne, Ind. The resolution proposes the establishment of a special Senate committee charged with conducting a realistic survey of our short- and long-range domestic economy. It is presented here for the consideration of my colleagues in both branches of the Congress:

Whereas it is known that wars frequently grow out of the efforts of nations or government cartels to grab land, raw materials, markets, and other wealth; and

Whereas the United States is nearly self-sufficient economically, making it unnecessary for this country to engage in belligerent grabs for raw materials or markets: Therefore be it

Resolved, That a committee of the Senate be appointed for the purpose of outlining a comprehensive and realistic survey of our short- and long-range domestic economy.

First. To determine:

1. The raw materials we lack.

2. The type, character, and volume of our profitable markets both in free and hazardous areas.

3. The measure of their importance in our domestic needs of production and employment.

4. A schedule of necessary acquisitions.

5. A sound program for building up stock piles from areas in which wars might be anticipated.

6. The percentage of deficit in our domestic economy in money and employment, if any, after acquiring the stock piles.

7. Methods of making use of and developing our own synthetic and substitute materials that are equal or superior to raw materials secured from hazardous markets necessitating reciprocal war-breeding arrangements.

Second. To determine:

1. The effect of material and power politics on our military security.

2. The measure and extent of military preparedness—including the need, if any, for peacetime conscription—required by methods of reaching out for materials and markets either directly or indirectly in cartel participation.

3. The contrast in our standard of living under the above system compared with a standard effected out of our internal supply that is available without creating hazards from entangling involvements in sanctions, cartels, monopolies, and the various phases of commercial wars that promote armed conflicts.

Third. To determine:

1. Our internal debt commitments for ordinary fiscal needs including those for the Navy and Army, housing, veteran relief, flood control, road and public building, also including in such Federal accounting all short- and long-term commitments of the municipal and State governments.

2. Our direct and indirect foreign debt commitments by Government or governmental corporations.

3. A consolidated national balance sheet of domestic and foreign commitments and their effect through taxation on the lowering of our standard of living, through decreased savings for reinvestment in productive enterprise, and the curtailment of individual spending for goods and services.

Fourth. To determine:

1. The effect of free trade, reciprocal trade treaties, foreign relief and the like on our standard of living.

2. The projected or anticipated cost of acquiring foreign markets and materials by passive power politics or actual war, reflecting the annual dollar profit value of such acquisitions or sales, after providing a proper reserve for military contingencies.

3. The balance sheet of an adjusted standard of living based upon a "live and let live" policy—and whether this would not be more beneficial from every angle than a policy of opportunitistic economic power politics, based on the open or concealed objectives of world reform and world power.

Fifth. To recommend:

1. To what extent the proposed program would permit us to enter into a world government to which we have been committed and the opening phases of which have met with disagreement among the leading powers.

Let Us Be Honest in Meeting the Need for Housing

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1946

Mr. CURTIS. Mr. Speaker, when we are ill, we usually turn to our doctor. When the Nation needs food, we look to the farmers to produce it. When we are faced with a scientific problem, we turn to the men who are trained in science. As the Congress takes up the housing problem, and ways and means of meeting a great need for lumber and other building materials, would it not be wise to turn to the lumbermen, and see what they have to say about the subject? Too often when we turn to the bureaucrats we get confusion.

I wish to extend my remarks by including a letter addressed to the Nebraska delegation in Congress from Mr. Austin Braun, of Omaha, Nebr., who is an experienced lumber distributor. Mr. Braun is very active in public matters and he has often appeared as a valuable witness before some of our committees.

The letter is as follows:

OMAHA, *February 14, 1946.*

To Nebraska Delegation:

When I was in Washington working on the lumber mark-up for wholesalers, I learned about the 1st of February that Judge Collet had issued an order raising the price of yellow pine lumber $3.25 per thousand feet provided the mills reached certain production goals which were clearly impossible because the month of January was already past and production in the South had been very bad. This advance did not apply immediately; it was to apply on future production if they made the current production increase on which they were not getting an advance. In other words, after the patient was well they would give him the medicine.

A real lumber expert, Mr. Robert Darrah, of the Southern Wholesale Association in Birmingham, Ala., convinced Judge Collet that this was hardly the thing to do, and the good judge finally withdrew his order, and I understand has issued a new one in which he advances yellow pine $3.25 per thousand feet and is willing to continue the advance beyond August 1 if certain production goals are met.

This is not so bad, but on top of this comes a report from Wilson W. Wyatt, the Housing Expediter, to President Truman under date of February 8. In the first place, he announces a goal of 1,200,000 homes, which is impossible, and he wants a lot of prefabricated and temporary prefabricated houses, which is a waste of material. With characteristic starry-eyed approach and with complete disregard for the facts of life, the gentleman estimates that $200,000,000 will be required to encourage increased production, and he is going to do this with premium payments.

I do not know how he arrives at it, but in the last paragraph of his report he says, "In addition, authority from Congress will be required immediately to provide $600,000,000 for premium payments." That is million dollars, boys—not $600 for premium payments. Let me tell you something about premium payments that existed during the war.

The Office of Price Administration, at the urgent hammering of the War Production Board, agreed to advance boards about an average of $4.50 per thousand feet when manufactured from fir or hemlock, but they put definite expiration dates upon this advance or incentive price, and they furthermore provided that when the Army needs on boards was satisfied, the price would be withdrawn. Consequently, instead of jumping in and making all the boards they could at the $5 advance so that the farmers who have never had enough lumber to repair their plants since the war began could obtain some needed materials, the mills worked with each other to restrict the production of boards to just enough to take care of the Army so that they would not kill the goose that laid the golden egg.

I have worked in this lumber business all of my life, and I know every angle of it, and

I can tell you with absolute certainty that if you start paying subsidies, premiums, bonuses or any disguised form of giving money to somebody who does not earn it, you are going to retard production. People who are not handling that type of order or who cannot handle them simply will not run to increased production.

The only thing to do is to make Mr. Wyatt and his crew realize that if they put a realistic incentive price ceiling on all lumber and remove all conditions, they will have production, and they will soon have so damn much production that the price will come down, and it will not take 2 or 3 years to do it. There are a great many sawmills who would like to see a subsidy plan because of these reasons.

It relieves them of acknowledging that they are getting a better price for their stuff, and they have a mistaken idea that their labor will be easier to handle. Those with the political inside expect to get something the other fellow cannot get. They hope he goes broke, and it restricts production because everybody is going to under-produce to keep the subsidy in effect, and for that reason the gravy lasts longer

It is a costly bungling proposition that will surely retard production and cost the taxpayers a horrible amount of money. The price ceilings are too low to encourage production on the present demand for house building lumber with labor costs what they are, and these costs are never going to come down until you get volume production, and you will not get volume production until you have adequate price ceilings. Don't let the boys with the subsidy plan in the door. It is just awful, and it will do nothing but string our Government control.

A good many short-sighted retailers in the big group who have been controlling things in the OPA are for this because they would not have to absorb the subsidy. Your dealers here at home know that if they had the opportunity of providing a job of 100 or 200 houses they would be tickled to death to dicker for a proper price on the lumber when delivered from the car to the job. They have always done that way, but the gang who is engineering this subsidy have no such ideas in mind. They seek to maintain the cost by hiding it by making the taxpayer pay part of it, and in cases of Government construction, all of it.

Yours truly,

ERAUN, RAY EROS. & FINLEY CO.,
AUSTIN ERAUN, *President*.

Shortages of Building Materials

EXTENSION OF REMARKS
OF
HON. JOHN W. GWYNNE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1946

Mr. GWYNNE of Iowa. Mr. Speaker, in accordance with permission heretofore granted, I am including as part of these remarks, an advertisement by the C. W. Chapman Lumber Co., of Waterloo, Iowa.

This company, with many years of experience in the lumber business, now finds itself stymied by bureaucratic regulations and orders from Washington. In calling this situation to the attention of the public, the company is doing a very real service.

One of the amazing things of our times is the development of Government propaganda. Millions of dollars are being spent every year in an attempt to justify expensive bureaus long after their usefulness has ended. It is regrettable that the full story of their wastefulness and bungling cannot be gotten to the American people. The Chapman Lumber Co. is to be congratulated on its attempt to offset the propaganda put out by these Government agencies.

The advertisement is as follows:

To Our Customers:

This is our fourth letter to you about the causes of shortage in building material.

While Rome burned, Nero fiddled. While the bureaucrats in Washington fiddle, the housing shortage grows worse. Listen to this from the Des Moines Register of January 30:

"DEBATE OVER PRICES SLOWS HOUSING PLAN—SUBSIDIES SUGGESTED TO CURB COSTS

"WASHINGTON, D. C.—The Government's program to meet the Nation's housing crisis is being delayed by a heated argument among President Truman's top economic advisers over whether subsidies or price increases shall be used to step up production of scarce materials."

Mr. Wilson Wyatt, the President's housing expediter (that means a bureaucratic hurry-upper), then goes on to explain he has to have more time to make up his mind. But, in the meanwhile, the bureaucrats want Congress to enact a bill that will assure Federal bureaucratic control beyond next June 30.

Right here we want to go on record with these bureaucrats regarding subsidies from the Federal Government for our business. We are opposed to any free gifts or bribes from Washington for our company at the expense of you taxpayers. Subsidies are a cowardly method used by cheap bureaucrats to cover up their bungling. You people are supposed to be fooled by the apparent low prices—but you pay, and you pay plenty, in taxes. If the bureaucrats haven't the nerve to raise the taxes enough to pay for these subsidies or free gifts or bribes, they add the bill to the Federal debt. This is still more cowardly, because they are loading an unbearable debt on your boy who is just back from the Army or Navy and is trying to get started in business or in farming.

As for price increases, this company will do its utmost to keep building prices down to the lowest possible figure, consistent with good material and good service. Under free enterprise, we are forced to do that anyway. If we should attempt to gouge you customers, we would lose you overnight to one of our competitors. What we want is a free flow of building materials right now. We are prepared to take care of you if we are released from nutty regulations and red tape and allowed to go to work.

The methods used by the Federal bureaucrats to take over private business (including the building business) are old stuff. Hitler used the same tactics. They are, demoralize, then move in and take over. Very few people in Iowa are being fooled. We know what is going on, and we are going to keep right on fighting the bungling bureaucrats until Congress fires a few million of them and allows business, labor, and farming to go ahead without the restrictions, regulations, and red tape under which we are struggling.

Congress has the duty to declare at once an end to a state of war. This will repeal many wartime regulations which are hamstringing the country. Congress must also balance the Federal Budget right now.

Your Senators and Representatives in Washington want your help. Write them today. Tell them just what the bureaucrats are doing to your business or farm. They have grabbed a control over your personal life and your business that no local authority would ever dare attempt. Just think what you would do or say if your town mayor, or your county supervisors, or your State governor would ever attempt to mishandle your business or your farm as these Federal bureaucrats are doing. You would not stand for the monkey business for one minute. You elected your Senators and your Representatives to watch over your rights in Washington, and they will help you if you write to them.

Your Senators are: Hon. GEORGE A. WILSON, care of United States Senate, Washington, D. C.; Hon. B. B. HICKENLOOPER, care of United States Senate, Washington, D. C.

Your Representative is: Hon. JOHN W. GWYNNE, care of House of Representatives, Washington, D. C.

C. W. CHAPMAN LUMBER CO.,
By J. H. CHAPMAN.
WATERLOO, IOWA.

OPA Folly

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1946

Mr. SMITH of Wisconsin. Mr. Speaker, it has often been said that Congress should not pass laws which the people do not want. When the Congress passed the Price Control Act, it did so for the purpose and in the hope that the administration thereof would prevent inflation. It was the further hope as expressed in this legislation that rules and regulations would be reasonable and not coercive and contrary to established business practices. It was never designed to control profits or to promulgate capricious rules and regulations subject to the whim of inexperienced bureaucrats.

Mr. Speaker, a few weeks ago the Office of Price Administration was involved with a great many Members of Congress on the subject of regulations involving the pricing of new and used automobiles. A very timely editorial has been brought to my attention by one of the outstanding automobile dealers in my State, Mr. C. H. Pyle, of Racine, Wis. He has sent me an editorial which appeared in the Chicago Daily Tribune for Friday, February 8, 1946. This editorial tells the story of what can happen in the automobile business. In fact it is happening today. Under leave to extend my remarks, I include herein the editorial entitled "Inside Story of the Sale of an Automobile." I am sure that this editorial will be of great interest to Members of the House:

INSIDE STORY OF THE SALE OF AN AUTOMOBILE

A man we know had a 1941 automobile, which had served him faithfully. Oh, the clutch might need replacing, and the motor was noisier than in its pre-Pearl Harbor youth, but it could get over the roads as well as the next one. So what did our friend have to worry about? Plenty! His tires were a mess, and he had need to drive over country roads occasionally at night.

Nobody could tell him where to get some new tires. The ration board couldn't help. His gasoline supplier, who had been very considerate in time of war, couldn't even make a suggestion. The alderman wouldn't see him, and there was no use going to see his ward committeeman, for he was a Republican.

There was only one way out, and that was to get a new car. One fine day in November

the dealer from whom he had bought cars for years asked him to come and see the new models. Yes, he had one car for immediate delivery to such an old customer, and, of course, at $900, the OPA ceiling. The old car would be taken in trade. The ceiling price on the old car was $950; that is to say, the 1941 car with the worn out tires was worth $50 more than the Government said the new car could be sold for.

The two traders who had done business for years had no difficulty in making a deal, and our friend now has no fears of a puncture while driving over a country road late at night. The dealer did not give his customer a new car and $50 to boot. The allowance for the old car was $450, about what the 1941 car will be worth when new automobiles become plentiful. The dealer probably sold the old car for $950, so that the amount he realized on the 1946 car was not $900, but a good deal more than that.

If OPA is going to prevent supply and demand from determining the selling price of new automobiles and old ones Mr. Bowles will have to have one of his hired men in every auto showroom, or he will have to see that persons desperately in need of tires can get them. Meanwhile, the amount paid to his men will be added to the stream of inflationary money which is driving the price of everything upward.

Hawaii as a State

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1946

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Contra Costa County Gazette, Martinez, Calif., of January 30, 1946:

HAWAII AS A STATE

Few persons will quarrel with the recommendation of a House Territories Subcommittee last week that Hawaii be admitted to the Union as the forty-ninth State.

Hawaii has a population larger than any other State at the time of its admission to the Union except Oklahoma. The heterogeneous peoples of the territory live and work together amicably and democratically. The mixed racial complexion of the islands should not be an obstacle to statehood.

In the past the great landholdings concentrated among a few families has been used as an argument that Hawaii is more of a dependency rather than an integrated economic unit, but recently even cynical Harold, Secretary Ickes, has been satisfied on that point.

According to the subcommittee's report last week, labor has made great strides in Hawaii since 1937 and has contributed greatly to the territory's progress. It said there is growing mutual respect and confidence between management and labor in industrial relations. Tribute was paid to the Hawaiian school system which has produced a "literate population capable of discharging the duties of citizenship."

The report of the subcommittee now will be considered by the full territories committee before further action is taken on legislation admitting Hawaii as a State.

However, the time is not far distant when another white star will be pinned on the field of blue.

Hysteria Rules the House of Representatives

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. BIEMILLER. Mr. Speaker, under leave granted on Monday, February 18, 1946, I wish to insert the following editorial from the Capital Times, Madison, Wis., of February 13, 1946:

HYSTERIA RULES THE HOUSE OF REPRESENTATIVES

The Case antilabor bill, which has been passed by the House of Representatives and is now before the Senate, will probably go down in history as a shining example of hysterical lawmaking and of men in high places behaving like a riotous, revenge-minded mob.

The bill is viciously antilabor in its nature. So bad that even the labor hater Representative CLARE HOFFMAN, Michigan Republican, could not find the stomach to vote for it. Although HOFFMAN called the bill unjust and unreasonable he was perhaps more concerned with the soundness of the bill than with the fact that it sets labor back to the old days of rule by injunction.

Being the kind of an intense labor hater he is, HOFFMAN no doubt felt that legislation aimed at stripping labor of its rights should at least be sound and well-considered. And on this ground he has a legitimate complaint. For regardless of the merits of the bill, regardless of whether one thinks labor should be suppressed or not, there is every reason why the bill should not have been acted on.

For the manner in which the House acted is a terrifying example of what can occur in a democracy when a majority refuses to listen to reason. The bill was called up suddenly and placed in order as a substitute to the mild measure based on the President's recommendation for fact-finding legislation.

It had been hastily thrown together. It was never given one moment of hearing before any committee of the House. There was absolutely no attempt to arrive at any sensible or reasonable approach to the industrial strife which besets the Nation.

The bill was hailed with a whoop and a holler. In 4 days of the worst pandemonium in recent years it was twisted and jerked from one side to another by a series of amendments. Parliamentary snarls were so numerous that the Speaker of the House hardly knew what he was doing.

Out of this riot came the Case bill. No one is certain what it does yet, outside of gut the Norris-LaGuardia Act, which protects unions from the arbitrary injunction power of the Federal courts. One thing is certain. The more level-headed Republicans and Democrats agree that it will mean chaos in labor relations. Representative JOSEPH C. BALDWIN, New York Republican, warned the House that the legislation would "boomerang like the Smith-Connally Act," which was passed in the same white heat of unreasoning passion and which the authors themselves now concede was a mistake.

It is incredible that 258 Members of the House could have voted for such a measure. And we here in Wisconsin, the State once noted for the high caliber of its statesmen, should hang our heads in shame. Half of our representation voted for it. Here are the men who were stampeded:

Representative JOHN BYRNES, Republican, from the Eighth District; Representative ROBERT K. HENRY, Republican, from the Second District; Representative FRANK KEEFE, Republican, from the Sixth District; Representative LAWRENCE SMITH, Republican, from the First District; Representative WILLIAM H. STEVENSON, Republican, from the Third District.

Here are the men who voted against it:

Representative ANDREW BIEMILLER, Democrat, from the Fifth District; Representative THAD WASIELEWSKI, Democrat, from the Fourth District; Representative REED MURRAY, Republican, from the Seventh District; Representative ALVIN O'KONSKI, Republican, from the Tenth District; Representative MERLIN HULL, Progressive, from the Ninth District.

Amvets Fight for McLean Gardens

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1946

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statements by J. H. Leib, national legislative director of the American Veterans of World War II:

AMVETS FIGHT FOR M'LEAN GARDENS

(By J. H. Leib, national legislative director, Amvets)

Every Member of Congress has read about the controversy Amvets—American Veterans of World War II—has had with a number of bureaucrats in the Defense Homes Corporation and the Surplus Property Administration.

Amvets welcomes the support of all Members of Congress, newspapers, and public spirited citizens in this great crusade.

We are most appreciative of the full page ads that are currently appearing in the Washington, D. C., newspapers under the signature of Mrs. Evalyn Walsh McLean concerning our attempt to purchase McLean Gardens for veterans of this war.

The officers of Amvets do not know Mrs. McLean personally, nor did anyone in our organization solicit or seek in any manner whatsoever to influence her aid in our housing project. Purely out of her gracious and humanitarian heart is she giving us her assistance and moral support.

It came to our attention indirectly today that last week while Mrs. McLean was making one of her numerous visits to the painfully depressing wards of Walter Reed Hospital, a veteran of this war passed away.

Grieved by this unfortunate incident, we understand that Mrs. McLean returned home and that night read in the newspapers that Amvets had gone to the Congress in an attempt to get a square deal from the Defense Homes Corporation in the sale of the huge Government housing project that bears her famous name.

We believe it may have been this event that prompted her action.

Absolutely unbeknown to Amvets, she inserted the series of full-page ads in all of the District of Columbia newspapers appealing directly to the Congress urging them to see to it that the interests of the veterans be protected in the sale of surplus Government housing.

We are more than grateful for her generous good will and enthusiastic support—and we

shall never forget her kindness. If there were more people like Mrs. McLean this world might be a better place to live in. She apparently is never too busy to go out of her way to help others—and we say, God bless her.

Newly Naturalized Citizens

EXTENSION OF REMARKS

OF

HON. WALTER B. HUBER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1946

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable Tom C. Clark, Attorney General of the United States, February 5, 1946:

Your Honor Judge Holtzoff, ladies, and gentlemen, this is a very solemn occasion. You know, there are no two of us here today who are alike. As many people say, it is very fortunate that my young daughter looks like her mother. Except, you might say, in the case of twins, no two physical appearances are alike. Similarly there are no likes or dislikes that are the same. There are likes and dislikes, aims and ambitions, that various people have; but none are exactly the same. But there is one thing we all agree on; one common aim, one common ambition upon which all Americans agree and see eye to eye. That is American citizenship. That is the common tie, the common bond, that holds the 48 States together.

As has been eloquently expressed, our flag is a symbol of the greatness of 140,000,000 people; it is a symbol of the greatness of the 48 States and the Territories that it represents. It is not just a flag of 13 stripes and 48 stars emblazoned on a field of blue. It represents a pulsating America—that pulsating America that you, after taking your oaths today, will join. It gives you a great protection; it gives you a great privilege. As Attorney General of the United States, I can tell you that there are thousands of people now waiting—waiting in Europe, waiting in the islands of the Pacific, waiting throughout the world—for just one thing, and that is the privilege that is yours this day.

Oh, it is a solemn day for you. It is a day that you should ever remember, because you have been preferred—preferred above the thousands of those who suffered almost unto death throughout Europe—yes, throughout the world. So this day brings to you certain obligations, obligations that you must take seriously.

During the last war and again during this war we heard often of hyphenated Americans. There is no such thing as a hyphenated American. You must wipe out the hyphen. You will be Americans, just as we who are standing before you at this moment are Americans. You must live the life of an American. You must join the American ideals. I know that you will.

You have devoted much study to the history of this great country. I hope that in the future you will find time to devote even more study to it, and that you will study the Government under which you have chosen to live.

Your Government is as good as the interest that you, the citizens, take in it. If you take no interest, your Government will not be the Government that it should be. So in civil life you owe to the Government under which you have elected to live, you owe to those who have fought to make that Government what it is today, your undivided interest, attention, and devotion.

I do not mean just the Federal Government. I mean the government of the State in which you live, or of the District of Columbia. Wherever you live, in your cities or in your towns, take an interest to see that the government is of the best. That is true citizenship.

His Honor, Justice Holtzoff spoke of reverence for law. Of recent years, I have noted, there has been an increased tendency among some people in this country toward disrespect for law, disrespect for government, disrespect for high office in the American system of government. That must not be. You must have, as his Honor has said, a reverence for government, a reverence for law, a reverence for those who are devoting their lives to enforcement of that law and to carrying out the ideals of that government.

I know that it is sometimes difficult to understand our ways. At times, perhaps, you may think that something is wrong. You have, of course, a right to express yourself. One of the freedoms that our flag stands for is freedom of speech. I hope that each of you will always speak out whenever you feel that the matter should be brought into the broad light of public opinion.

My friends, again I say that it is a privilege for me to be here today with you and to welcome each of you into the fellowship of American citizenry. The greatest badge in the world is the badge of American citizenship. As his Honor bestows it upon you, I know that you will wear it, and cherish it with all that is within you, that, if necessary, you will give to it your life, and that it shall not drop tarnished from your hands.

I thank you.

Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1946

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks, I include the following resolution unanimously adopted by a group of citizens gathered in Cleveland under the auspices of the Lithuanian-American Council of Societies on February 17, 1946, for the commemoration of the twenty-eighth anniversary of the declaration of independence of Lithuania:

Resolution on Lithuanian independence

Resolved, To appeal to the President and the Secretary of State to implement the wartime promises of the Atlantic Charter and other policy declarations with actual measures directed toward creating conditions for the restoration of the sovereignty and self-government of the peoples of Lithuania, Latvia, and Estonia, by demanding—

(a) That the Soviet Union immediately withdraw its armed forces of occupation and its administrative apparatus from the Baltic states, thereby enabling the peoples of the Baltic states to form broadly representative interim governments;

(b) That after the withdrawal of the Soviet occupation forces direct relief be extended to the peoples of Lithuania, Latvia, and Estonia by UNRRA;

(c) That thereafter the sovereign peoples of Lithuania, Latvia, and Estonia be enabled to hold free and unfettered elections; and

(d) Finally, that, pursuant to chapter II, article 4 of the Charter of the United Nations, the Republics of Lithuania, Latvia, and Estonia be admitted to the United Nations.

Socialized Medicine

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1946

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter by Dr. Norman Sweet which appeared in the Fort Wayne (Ind.) Journal-Gazette on February 10, 1946:

SOCIALIZED MEDICINE

EDITOR OF THE JOURNAL-GAZETTE:

Without approval by Congress, the socialized medicine has been put into practice by the announcement in Tuesday morning's Journal-Gazette that—"List of physicians here approved for treatment of vets." In fact I have another name for it, i. e., "Political Medicine." Here is discrimination against man, worthy physicians for a selective few who are political favorites. Just 17 Fort Wayne physicians and 6 dental physicians. And the list has been passed to Mayor Baals and this is tantamount to saying these physicians and no others are capable of administering to the relief (no one can cure another except that one who is ill, himself. No exceptions, of vets or anyone else). What a catastrophe. And only the individual who is ill can know who can help him to help himself. For no doctor or physician or anyone ever cured anyone. It is the patients' faith in the doctor or physician and his treatments (called medicine) not the doctor or physician or his treatments that restore health. And faith is psychological. (It is the psychology that cures. No exceptions.) It is stated in this same paper that "a Pennsylvania woman has been sticking Christmas seals on her chest under the impression (psychology) that they would keep her from having tuberculosis. She hasn't had tuberculosis either." This woman had faith in the potency of Christmas seals and she kept well. Need I say more to intelligent people? I believe not.

Now, it behooves all the other (boycotted) physicians in this city (and all over the United States) to dynamically protest this communistic and undemocratic procedure at once. Now, I do not use medicine in my psychoanalytic treatment of my clients and I have many veterans who have been incompetently treated by neuro-psychiatrists, et al., and are now "doing nicely, thank you." But it appears that I will have to have some ignorant political "nit-wits" in Washington pass upon my scientific technique and give me a political "socialized medicine license" before any vet will feel safe to come to see me, professionally, if this dictatorial practice is allowed to continue, unchallenged. And we call this democracy. Angels of Mercy defend us.

NORMAN SWEET.

The Ideological Tides

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1946

Mr. ELLIS. Mr. Speaker, today I submit to my colleagues for their consideration an editorial from the Huntington Herald-Dispatch, published in Huntington, W. Va., and edited by Mr. Raymond Brewster. This thought-provoking editorial deals with a timely subject which is foremost on our minds today.

Here we have a great people with enormous pent-up spending power awaiting merchandise which is badly needed but not forthcoming.

While the country is suffering economic stagnation, the administration is groping helplessly in the dark hoping to pull out of the hat some fantastic utopian plan which will give everyone something for nothing. We still have those who think that by some magic formula we can defeat economic law.

Today we have many years of unprecedented prosperity on our doorstep if we can only break the shackles of an inefficient and socialistic-minded administration and let labor and management do the job in the only way we know how—and that is through freedom of enterprise.

The editorial follows:

THE IDEOLOGICAL TIDES

It may not have occurred to Americans in general that the longer these labor wars last, the stronger may be the trend toward socialism. Social tides lately have run that way in conservative old England. And when the final flop came there, after a period of uncertainty, most of the Britishers seemed to welcome it with a sort of relief.

They did not regard themselves as necessarily "radicals" in our American sense. For the most part, they seemed only to want law and order and a chance to go back to work on almost any reasonable basis. But once across the line separating a "free economy" from the "controlled economy" of a Socialist state, it is hard to tell whether new-fledged Socialists will return to their old principles and shibboleths.

And what of America? Perhaps new ideological tides are running here. Yet, so far, our voters and public demonstrators seem to be concerned mainly with such matters as pay, and more labor organization for the sake of unity, rather than revolutionary principles or anything requiring much deep thought.

One of the most unfortunate facts of the present economic situation in this country, as experts explain it, is the apparent tendency of workers to "work below their ability." This trend apparently comes not from laziness or intent to cheat, but from a notion that there is only about so much work to do in this country, and if the workers speed up they will soon find themselves without jobs.

If such an attitude ever was reasonable, it certainly doesn't look so now, to a clear-headed and open-minded citizen. There is so much work to do in this country, as a result of delayed progress during the war and also as a result of new plans, devices, and enterprises, that most experts say the trend will run the other way, and there won't be enough workers when our expanding economic system really gets on the job.

Rights of Veterans

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1946

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following open letter by Evalyn Walsh McLean, published in the Washington Times-Herald of today:

FEBRUARY 19, 1946.

Fellow citizens of Washington, why is it that our war veterans who, collectively, won the greatest victory of modern warfare are now forced to battle alone and unaided to secure the rights for which they fought in foxholes and on bullet-swept beaches all over the world?

Why are war veterans and their wives and children forced to live under almost unbearable conditions when the Government has more than 500,000 publicly owned homes now declared surplus for sale to the public?

Why are the American Veterans of World War II (Amvets), a splendid organization of young veterans, denied the right to purchase McLean Gardens here in Washington at 89 cents on a dollar by the Defense Homes Corporation when that same Government bureaucracy has approved a bid by a CIO nonveterans' group of 80 cents on a dollar for a public housing project in Dayton, Ohio.

Why are veterans subjected to constant run-arounds in getting their old jobs back or in finding new jobs to the extent that 1,035,995 of them are now on GI unemployment rolls to the tune of $25,000,000 a week?

Why are the men who manned the guns, drove the trucks and jeeps, and piloted the airplanes that brought victory now denied their just rights to purchase surplus war goods, which are being gobbled up by wily speculators with well-filled purses and sold back to veterans at handsome profits?

Why are these same brave lads who a year ago were cheerfully given priorities on anything and everything they required if only they would win the war for us now denied priorities on practically anything?

Why do we, the people of the capital of the world, sit supinely back and watch the saviors of democracy be shoved around and shackled in endless red tape and delays by selfish Government officials and private real-estate interests?

Why don't we back them up in their fight by force of public opinion?

Why, I ask you all?

Sincerely,

EVALYN WALSH MCLEAN.

P. S.—I have absolutely no financial interest whatever in McLean Gardens or any other housing project under consideration.

Henry Morgenthau Discusses Foreign Policy With a Special Emphasis on the Argentine Republic

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 12, 1946

Mr. COFFEE. Mr. Speaker, recently the Honorable Henry Morgenthau made a notable address before the National Citizens Political Action Committee at Milwaukee. In it he forthrightly discusses certain foreign developments. He points out the heavy responsibility of the United States with respect to the growing Fascist menace. He implores our State Department to take a strong stand against Fascist Franco Spain and the current government of Argentina. Here is the speech:

Military victory has been achieved, but the main purpose for which we fought the war—the final elimination of Nazi and Fascist aggression—has not yet been accomplished. In Spain and Argentina fascism is today gaining—not losing—in power. These countries are places of refuge for Nazis, for their wealth, and for their political principles of repression and aggression. So long as nazism remains dominant anywhere, our job isn't finished.

Mr. President and Mr. Byrnes, why don't you do something about it? In the case of Spain, France has taken the initiative of proposing a conference to work out a common policy. In the case of Argentina, Uruguay has taken a similar initiative. In both cases, it is neighboring countries who have most keenly felt the danger to peace and security and the necessity of action. Due to the failure of the United States to assert real moral leadership, Franco and Peron are both gaining in power. We must not allow any mood of let-down, any desire to rush back to business as usual, to control either our foreign or domestic policy. I fear that is precisely what is happening today.

Many people hopefully expected that our military victory would sweep away Fascist regimes everywhere. Why hasn't this taken place? I believe that the explanation is plain. It is to be found in the weak and vacillating policy of the democratic countries. The democracies are torn between the principles for which they fought and an eager impatience to forget all about the war and get back to profitable peacetime trade—business as usual. As a result, the Fascist rulers in Spain and Argentina have come to believe that if they sit tight and don't take too seriously the occasional words of criticism delivered against them, they will be able to pull through stronger than ever.

The United States bears a heavy share of the responsibility for this survival of the Fascist menace. We have emerged from the war stronger and wealthier than ever before. Our cities and our industries are undamaged. But we have not provided a moral leadership that measures up to our strength. Unless we discharge this responsibility we cannot hope to achieve the full purpose for which American lives were spent. Our policy toward Spain and Argentina is a test of our real integrity of purpose.

In the case of Spain, let me read to you extracts from a statement made by the Mexican delegate at the United Nations Conference in San Francisco last June:

"In 1938, at an official ceremony organized to decorate members of the Italian legions who fought in Spain, Franco exclaimed: 'Legionnaires from Italy, soldiers of Imperial Italy, crusaders of the faith and of Occidental civilization, I salute you with the love of a commander and the confidence of a leader, love and confidence born through our comradeship in war. I witnessed your deeds. I felt the warmth of your blood spilled upon the earth of Spain. I am aware of the fact that you abandoned your homes to follow the banners of your Roman legions.' We could mention countless statements in which Franco acknowledges with similar cynical expressions of gratitude the intervention of the Italian legions in his fight against democracy.

"Let me only add that he stated with equal warmth his gratitude to Hitler for the mili-

tary help given by him to Spanish fascism. 'I assure you,' said Franco to Germany in 1937, 'that my gratitude will be deep and enduring.' * * * The German Ambassador at Madrid confirmed this collaboration when he decorated Franco in September 1941 and said, 'The Fuehrer, supreme chief of the victorious German armies, in bestowing this cross upon the generalissimo, the invincible Spanish Caudillo, wishes to testify how intimately are bound together not only our two peoples but especially our two armies whose commanders, officers, and soldiers fought side by side during the first 3 years of this heroic crusade.'

"And still later, in December 1942, at the very moment when the decisive battle of Stalingrad was raging, Franco sent a telegram to Hitler assuring him that he was praying for his triumph. Two days afterwards, he promised Hitler: 'We maintain our traditional policy, our loyalty to the peoples who share our burdens. If some day Berlin is in danger, Spain will send a million men, if necessary, to defend it.'

"Finally, allow me to recall that in a telegram sent to Hitler, Franco said: 'With all my heart, I share your aspirations that the great German Empire may reach its immortal destiny under the glorious sign of the swastika, and under your inspired leadership. Heil Hitler!' "

These facts speak for themselves. Few Americans will be so gullible as to believe the drivel which Franco a few days ago gave to an Associated Press correspondent, when he said that he did not support Nazi and Fascist policies, and that he wanted to progress toward democracy in Spain.

At San Francisco, Assistant Secretary of State James Dunn said: "The United States delegation is in complete accord with the statement of interpretation made by the delegation of Mexico and desires to associate itself with that declaration." The result was that a resolution was passed in San Francisco excluding Franco Spain from membership in the United Nations Organization.

The world was encouraged. This was fine. But what happened next? Unfortunately, little or nothing. After the San Francisco Conference foreign observers almost unanimously reported that the Franco regime was on the ropes, that it would soon be displaced by a new government. Germany was defeated and still nothing happened. At Potsdam the three governments, instead of moving forward, merely reaffirmed the decision already taken at San Francisco. This was an anticlimax, and Franco began to regain confidence. Events since Potsdam have served further to restore his confidence. At the end of the war, our restrictions on trade with Spain were relaxed. Our program to wipe out Axis firms and properties in Spain has not been vigorously pressed; our blacklist has been reduced; our trade with Spain is increasing. We have sold five transport planes to Spain, and we may sell more, under an agreement by which we secure commercial landing privileges for American aircraft. While five airplanes may not seem very much, I don't think we should sell souls to gain a small commercial advantage.

The impression which the Franco regime gains from all this is that, despite a few official statements, our ardor in opposing fascism is just bluff. Recently a prominent Falangist, returning to Spain from a visit to the United States, is said to have given his leader a highly reassuring report regarding present American attitudes toward doing business with Franco Spain. I regret that the President, in an exceptionally long and detailed message on the state of the Union, failed even to mention the growing menace of fascism in Spain and Argentina.

Meanwhile the British Government has made it clear that, while disapproving of the Franco regime, it does not intend to take any action. Answering a suggestion in the House of Commons that Britain break relations with Spain, Foreign Secretary Bevin said: "I am not going to be involved in diversionary tactics of any kind."

The only encouraging event in recent months was the proposal of the French Government last December to Great Britain and ourselves for a 3-power conference on relations with the Franco regime. I am sorry to say that, so far as I know, this proposal has led to nothing. It was rejected by the British. In explaining the British position, Mr. Bevin declared, "When there are so many troubles in the world, I, as Foreign Minister, want to see some of them settled and not create new ones." I wonder what troubles are so serious as to necessitate this pigeonholing of the Spanish problem. In my view, the elimination of fascism is our most important item of unfinished business in the field of foreign policy. It is much more important to the establishment of real peace than many other matters with which foreign offices busy themselves.

I don't believe, however, that Britain deserves all the blame. I have no doubt that vigorous American support of the French proposal would bring the British Government into line. If the democratic countries would speak clearly and with one voice, Franco's days would be numbered. Once the Spanish people become convinced that there is no future for them under Franco, his overthrow will be assured. Despite Franco's rule of terror, his survival is due more to external apathy than to internal strength.

Are we going to permit Spain, which has naturalized thousands of Germans, which has hundreds of millions of dollars of hidden German assets, and airplane and armament factories, to be a jumping-off place for another war in Europe? What are we waiting for? Why did we ever concur with the Mexican delegation at San Francisco, and why did we reaffirm this position at Potsdam? Why hasn't the conference proposed by the French taken place? Which is more important, that we land our airplanes in Spain or that this man Franco be removed? I recommend to the President of the United States and the Secretary of State that they vigorously support the French proposal of a three-power conference and a concerted program which will help the Spanish people get rid of Franco.

So much for Spain.

Now let's take a look at our own record on the Argentine. It is a record of appalling vacillation. Early in 1944, when it had become evident that the new Argentine military dictatorship was pursuing a Fascist course, we withdrew diplomatic representation. But we did not follow through by applying economic sanctions. I have always regretted that such action was not taken in time. Great Britain needed Argentine beef and we were not courageous enough to cut our own beef ration by the 10 percent which would have made good Britain's loss of Argentine supplies. Moreover, our General Staff was fearful that economic sanctions might mean war with Argentina and a diversion of our military strength. All we did was to freeze the balances maintained in the United States by two Argentine official banks, and this step by itself wasn't of much consequence. Had we combined economic with diplomatic measures, the whole course of political developments in Argentina might well have been greatly different. But the diplomatic gesture alone was not enough.

We rapidly tired of our halfway policy of nonrecognition, and a year ago, at the Mexico City Conference, we carried out a spectacular about face. On the initiative of the United States delegation, the Conference passed a resolution which paved the way for speedy resumption of diplomatic relations, for Argentina's admission to United Nations Organization and for her participation in inter-American mutual defense arrangements. All we asked in return was that Argentina go through a few gestures, such as making a formal declaration of war on the Axis, signing the United Nations Declaration, and issuing a few decrees relating to Axis nationals and firms in Argentina. For Argentina this meant merely going through the motions. Of the 94 known Axis agents in Argentina, a recent report indicates that only 11 have been ordered expelled; 12 known agents are at liberty. To be sure, Argentina has appointed public officials to sit in with the management of a large number of Axis concerns, but none of these firms has been eliminated or their ownership transferred to non-Axis hands. Even the gesture of having Government officials share in management has been omitted in the case of the largest and most influential German concerns controlled by Peron's Nazi friends. Instead, these firms get the biggest Argentine military contracts.

This is the fashion in which Argentina carried out the whitewashing job as prescribed at the Mexico City Conference. A short while later, at San Francisco, we railroaded our allies into accepting Argentina as a member of the United Nations Organization. It required a good deal of double talk to do it.

The whitewash, however, was pretty thin, and it soon began to rub off. Mr. Braden, who was sent to Buenos Aires as our ambassador when diplomatic relations were resumed, realized how thin it was. His subsequent appointment as Assistant Secretary of State marked a new and firmer phase in our relations with Argentina.

I applaud Mr. Braden's vigorous attitude. It implies no criticism of his efforts when I say that our Argentine policy is hamstrung by the fault of "too little and too late." Mr. Braden's authority as spokesman for the United States on Argentina has been impaired by our past vacillations, by the Senate's hesitation and delay in confirming his appointment, and by the silence of the President and the Secretary of State on the Argentine problem.

Moreover, economic measures against Argentina are more difficult to apply today than they would have been in 1944. But that doesn't mean that nothing can be done. We aren't selling arms to the Argentine Fascists, but we are selling everything but arms—steel, machinery, chemicals, even transport planes. We're providing Argentina with part of the industrial plant and material on which her swollen armament program depends. We can and should clamp down on these exports, whether or not we can obtain parallel British action. Britain at this time can't satisfy Argentina's requirements alone, and our action would therefore have some effect. Nor do we need to fear that Argentina will suddenly stop exporting food. If she did, we would have to reimpose rationing at home to meet European relief needs, but is this too big a price? We have spent American lives to destroy fascism; we should be prepared, if necessary, to forego a little steak and roast beef. It is only a question of whether our commercial interests should be allowed to overshadow our basic political faith and responsibilities.

There is only one bright spot on the horizon today. Uruguay, a small country bordering on Argentina, has had the courage recently to propose to the other American Republics consultation with a view to concerted action to check this Fascist menace in Argentina.

While we have vacillated, fascism has been steadily consolidating its power within Argentina. Colonel Peron, who learned his fascism as military attaché in Italy, is almost sure to win the coming presidential election. His supporters are organized, the opposition disorganized. His present control of the army and the federal police, and his organized bands of thugs, insure him against any surprises from the ballot boxes. He has taken the Hitlerian step of suppressing free trade-unions and has made a bid for mass support by decreeing wage increases and promising land reforms. The organized,

politically educated workers have recognized these tricks for what they are, but it cannot be denied that Peron has gained a following from the most impoverished rural groups and some of the hitherto less informed, unorganized urban workers. His victory at the polls will intensify the present Fascist trend.

The Association of Democratic Lawyers in Argentina, in a statement entitled "The Nazism of the Impossible Candidate," recently pointed out in detail the close parallel between events in Germany during Hitler's rise to power and recent events in Argentina. Here are some quotes from this statement:

"It is easy to prove that there exists complete parity between Adolf Hitler and the impossible candidate: identity in methods, identity in aims, and identity in the most spontaneous reactions. * * *

"Hitler heads the Workers' Party; the impossible candidate founded the 'Labor Party.'

"Both claim that they are struggling in behalf of the less-favored classes. Hitler says: 'I am struggling for the children of the peasant and workers.' The impossible candidate says: 'We are engaged in the attainment of a higher social aim, encouraged by hundreds of thousands of Argentine workers.' "

The statement goes on to cite many other lessons which Peron learned from Hitler.

If there is anyone who still believes that the presence of fascism is a purely internal matter for the countries concerned, I should like to point out that the Nazis did not so regard it. In Spain and Argentina they have established the basis for an eventual comeback and for a third World War. In both countries about 50 percent of the national budget is devoted to military outlays. In Argentina the large armament program has included the construction of military highways near the Brazilian and Chilean borders. Argentina has her fifth columns in neighboring countries of South America, and in at least one country she succeeded in engineering a military coup d'etat. This is not the sort of thing we can ignore.

Mr. President and Mr. Byrnes, it seems to me that two paths are open to us. One is the path of moral leadership; this path leads to peace and prosperity for all peoples. The other is the path of commercial advantage—business as usual; this path leads to struggle for markets, imperialism, and war. We are a strong and great Nation. Our choice will be of decisive influence. On it will depend the welfare of our children and grandchildren. I submit that, on the basis of our actions to date, it looks as if we are following the second path—the road to imperialism and war. But it is not too late to retrace our steps and get back on the road of moral leadership, peace, and justice. I fervently urge that we do so immediately.

Cut Out the Subsidies

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1946

Mr. PLUMLEY. Mr. Speaker, under permission heretofore granted me to extend my remarks in the RECORD, I wish to include the following editorial from the Suburban List, Essex Junction, Vt., of February 14, 1946:

CUT OUT THE SUBSIDIES

For many years private business in one form or another has been receiving subsidies from the Federal Government. The principle is all wrong, unsound, and if continued, is going to lead to trouble. As a war measure such subsidies may have been justified. But the war is now over and the country must now get back to good sound business sense.

No less a paper than the New York Times has this to say on this important matter:

"Mr. Truman has asked for a continuation of food subsidies after June 30, 1946. He proposes that this extension should be tied down specifically to certain standards. The standard suggested is that subsidies be removed as soon as it is indicated that the cost of living will decline below the present levels. However, in other sections of his recent message the President emphasized that the inflationary pressures on prices and rents with relatively few exceptions are now at an all-time peak.

"Under these conditions it would seem that no reduction in subsidy payments is to be expected on the basis of the standard suggested for their removal. On the contrary, as events in recent weeks have demonstrated, the continuation of a hold-the-line policy in the face of inflationary pressures which are at an all-time peak will necessitate the adoption of new subsidies. Sugar and coffee subsidies are recent cases in point.

"It is estimated that if all food subsidies were removed, the cost of food would rise 8 percent and the cost of living would rise 3 percent. The President states that 'if prices of food were allowed to increase by these amounts * * * it would become extremely difficult for us to control the forces of inflation.' Does not this statement confuse the causes and effects of inflation? The payment of subsidies is clearly more inflationary than a 3 percent rise in living costs would be, because subsidy payments add to the inflationary pressures by increasing the magniture of the Government deficit."

The fallacy of the subsidy payments is that the people who receive them think they are getting something for nothing. That is what is thought of all payments from the Government. But the Government is the people and those subsidy payments all have to be met in tax payments, either direct or indirect.

The top-notch subsidy payments here in Vermont are for milk. The farmers may think they are getting the benefit. No such thing! Such milk subsidies go to the consumer, although the money is paid to the milk producers.

It must be clear that these milk subsidy payments cannot go on forever. There is a strong probability they will be stopped next July. The argument that if milk is increased to the consumer 2 cents a quart that there will be greatly decreased consumption does not stand to reason.

If increased consumption of whole milk is to be thought of in Boston then let the differential between house delivery and store price be fixed at 2 cents a quart instead of 1 cent as at present. Anyone with common sense knows that the difference in cost for such deliveries is more than 1 cent a quart.

Instead of fighting for a continuance of the subsidy the milk farmers and their organizations should plan to operate their business on their own and demand a price in relation to cost of production. The milk business has got to stand on its own feet sooner or later and the quicker the milk leaders meet that situation the better.

School-Lunch Program

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 20, 1946

Mr. PLUMLEY. Mr. Speaker, I am committed to support some kind of a school-lunch program.

As a member of the subcommittee on appropriations for agriculture, I have repeatedly supported the proposition to obtain a rule in order that the school-lunch program and funds therefor might be included in the agricultural appropriation bill. The House has consistently supported the rule and passed the bill containing the appropriation.

We unofficially served notice on the Committee on Agriculture that we felt that it should initiate legislation to relieve our committee of having to obtain a rule.

Now that has been accomplished, and H. R. 3370 is before us for consideration and for our determination as to whether or not the program for food lunches shall be legislatively authorized.

I do not like certain features and provisions of this bill. Amendments will be offered which should be adopted, but after all is said and done we should not spend billions to feed people and children in devastated areas while we let our own children starve. Charity begins at home—and that could be used as a slogan for a reason for not voting for some other measures now before this Congress.

I have suggested certain amendments which I think ought to be made and they will be offered at the proper time. The bill in all probability will not suit everybody in its entirety as finally it comes to the question of its passage.

When every effort has been made to perfect the bill by amendment, I shall vote for it, hoping that before it becomes a law such necessary changes as are not made in the House may be made in the Senate or in conference. Certainly title II should be amended and I am sure that eventually it will be so rewritten as to meet the objections of those who have protested so vigorously against its provisions as discriminatory.

I have every confidence in the Committee on Agriculture, which has devoted many weeks to the consideration and drafting of the bill. To quote the Chairman of the Committee on Agriculture:

The bill provides basic, comprehensive legislation for aid to the States in the operation of school-lunch programs as permanent and integral parts of their school systems. For the past 10 years we have carried on a school-lunch program under legislative authority included in the agricultural appropriation bill. Of course, this is a year-to-year program, as the Appropriation Committee can only authorize the program 1 year at a time. This arrangement, while handicapped by its lack of permanency, has been highly successful, as shown by the following figures covering its 1945 operations:

Public schools	
Number of public schools	208,235
Number of public schools under program	39,467
Number of children attending public schools	24,562,473
Number of children in public schools under program	6,120,065
Parochial schools	
Number of parochial schools	10,049
Number of parochial schools under program	2,970
Number of children attending parochial schools	2,611,047
Number of children in parochial schools under program	460,650
Child-care centers	
Number of child-care centers	1,059
Number of children served	74,000

This year it is estimated that 48,000 public schools are operating under the program, serving lunches to some 8,200,000 school children. In addition it is estimated that there are many public and private schools, serving lunches to some five or six million children, operating outside the program. Hence, the over-all picture is this: There are some fifty to sixty thousand schools serving lunches to some ten or twelve million children. In addition lunches are being served in some 1,000 child-care centers to some 75,000 children. The great draw-back to the program, of course, is its lack of permanency. This lack of permanency makes it very hard for the Department of Agriculture and the schools to plan ahead. This inability to plan their programs ahead keeps many schools, especially the poorer ones, from working toward the programs they would like to have. Moreover, this lack of permanency has kept many of the States from wholeheartedly entering into the school-lunch program.

H. R. 3370 is a two-title bill. Title I permanently establishes Federal assistance to a school-lunch program upon a firm basis. It follows much the same pattern that we have been following for the past 10 years. It establishes as the policy of Congress the dual objective of: First, expanding the market of agricultural commodities by encouraging domestic consumption; and second, improving the health of the children by providing a nutritional school lunch.

Title I of the bill, which applies to public and nonprofit private schools alike, calls for an appropriation of $50,000,000, 75 percent of the funds to be paid by the Secretary of Agriculture to the State agencies and by the respective State agencies to the schools within the program. In States where the State constitutions prohibit the reallocation of funds to nonprofit private schools the Department of Agriculture is permitted to allot funds directly to such schools. Funds going to the States are apportioned on the basis of, first, the number of children from 5 to 17, inclusive, and, second, the need for assistance as indicated by the ratio of the per capita income of a State to that of the United States. Federal funds are matched in the beginning by State and local funds on a dollar-for-dollar basis, and the matching increases progressively as follows: 1948, two State dollars to one Federal dollar; 1949–50, three State dollars to one Federal dollar; 1951 and thereafter, four State dollars to one Federal dollar.

The plan worked out is a State plan. The funds are disbursed by the State agencies to the schools within the State pursuant to agreements entered into between the State agencies and the schools. The agreements, of course, must be in accordance with the provisions of title I and approved by the Secretary of Agriculture. And the bill expressly provides that neither the Secretary of Agriculture nor the State "shall impose any requirement with respect to administration, teaching, teaching personnel, curriculum, instruction, or material of instruction of any school."

Title II of the bill is new. It authorizes an appropriation of $15,000,000 to be apportioned as provided in title I, but only to the public schools. The funds so authorized are to be used by the States, first, to employ and train school-lunch administrators, supervisors, and managers; second, to equip school lunchrooms; and, third, to develop programs of nutrition education. The funds are channeled through the United States Office of Education to the States. The State educational agency must submit a State plan providing for (a) the development and supervision of school lunches by the State agency and limiting the costs resulting from these activities to not in excess of 15 percent of funds apportioned; (b) distribution of funds only to public schools and school systems of high-school grade or under—including nonprofit private schools of high-school grade or under which receive public funds from the State or any school system thereof for payment of teachers salaries; (c) such schools to furnish school lunches on nonprofit basis in accordance with nutritional standards determined by the State educational agency to be consistent with those established by the Department of Agriculture; and (d) such schools to serve meals without cost or at reduced cost to children who are determined by local school authorities to be unable to pay the full cost of the lunch, and with no segregation or discrimination because of inability to pay.

The parochial schools complain because they are not included under this section. In my opinion, while the parochial schools are not included, they can readily obtain all the advantage of this section except the advantages provided for the securing of equipment. As to equipment, I believe the parochial schools should stand upon the same footing as the public schools. The committee thought otherwise. To my way of thinking, if it is right and proper to provide the parochial schools with food it is inconsistent to exclude them from the provision providing funds with which, for instance, to purchase a stove to cook the food on. Such a policy is in line with the reasoning of the mother who gave, if I may coin the phrase, prohibitive consent to her daughter to go swimming:

Mother, may I go out to swim?
O yes, my darling daughter,
But hang your clothes on the hickory limb
And do not go nigh the water.

Mr. Speaker, we have committed ourselves over and over again as to the value if not necessity of a school-lunch program as annually we have passed the agricultural appropriation bill containing the necessary provisions to partially sustain such a program.

I am satisfied that the program is to become permanent.

We may have to change certain details as experience shows what must be done. Certainly there is nothing in the bill which violates State rights, and the features of the measure which require State supervision and cooperation safeguard the people and conserve the rights of everybody—States included.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. HARRY L. TOWE
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1946

Mr. TOWE. Mr. Speaker, under leave to extend my remarks, I include a resolution passed by the Legislature of the State of New Jersey, as follows:

Concurrent resolution memorializing the United States Senate and House of Representatives not to ratify any treaty or agreement with the Dominion of Canada or pass any legislation which may provide for the constructior of the St. Lawrence seaway

Whereas the Legislature of the State of New Jersey, on February 12, 1940, passed a concurrent resolution memorializing the United States Senate not to ratify a treaty with the Dominion of Canada for the proposed St. Lawrence seaway; and

Whereas the Legislature of the State of New Jersey, on January 21, 1941, passed a concurrent resolution reaffirming its position in opposition to the proposed St. Lawrence seaway; and

Whereas it appears that the present Congress of the United States may be called upon to approve or authorize the construction of the seaway: Therefore be it

Resolved by the Senate of the State of New Jersey (the House of Assembly concurring), That this legislature reaffirm its position in opposition to the proposed St. Lawrence seaway because of its economic impracticability, its entire lack of advantage as a defense measure, and its detriment to business in the State of New Jersey; and be it further

Resolved, That the Senate and the House of Representatives of the United States, and particularly the Senators and Representatives elected from the State of New Jersey, be memorialized and requested to not ratify any treaty or agreement for the proposed St. Lawrence seaway or to approve or authorize the construction thereof; and be it further

Resolved, That a copy of this resolution be immediately transmitted to the Secretary of the United States Senate, the chairman of the Senate Committee on Foreign Relations, the Speaker of the House of Representatives, and to each Senator and Representative elected from the State of New Jersey.

What Heaven or What Hell!

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. CANFIELD. Mr. Speaker, 4 weeks ago today, with eight of my colleagues of the House, I was at Hiroshima. The damage was awful. I saw nothing to approximate it in my visits to the blitzed cities of Germany during the war. There were a few remaining concrete pillars, some twisted steel girders, a number of distorted tree trunks, and leaning grave markers. Otherwise, the picture was one of complete flatness, and the rubble of earth, metal, and glass was a

dusty mixture. Native survivors who were 2 miles away from the center of the blast showed us severe X-ray burns that appeared on their bodies where they had colored coverings.

The challenge to the forces of civilized humanity in what took place here at Hiroshima is emphasized in the following poem written by my constituent, Mr. Louis Ginsberg, of 324 Hamilton Avenue, Paterson, N. J., and appearing in the New York Herald Tribune and the Paterson Morning Call:

ATOMIC BOMB

The vast dilemma of the human race
Is pulsing, restless, in the atom's space.

What magnitudes, that slept in shrunken size,
At man's command, are ready to arise?

As in a genii's bottle, what powers are curled
To pour, gigantic, out upon the world?

What holocausts, that slumbered long, are tense
To be unprisoned and to stretch immense?

From what miraculous mote invisible,
Seethes to rush forth what heaven or what hell?

O may the mighty heat that feeds the sun
Melt science and morality into one!

Address by John W. Snyder Before Economic Club of Detroit

EXTENSION OF REMARKS
OF
HON. ALBEN W. BARKLEY
OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, February 21 (legislative day of Friday, January 18), 1946

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Honorable John W. Snyder, Director of War Mobilization and Reconversion, before the Economic Club of Detroit, Mich., on the 18th of February.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INDUSTRIAL STATESMANSHIP AND RECONVERSION

Mr. Brown, members of the Economic Club, ladies, and gentlemen, I should like to express to you and to your president my appreciation for your invitation to appear here today. It appears to me to be a propitious time—before this particularly appropriate group—to discuss the most vital and absorbing subject of the day—reconversion.

We stand today on the threshold of a period of the greatest civilian production in the history of the United States. We are fighting the battle for peacetime production, and we shall be engaged in that battle throughout 1946. This is a time when output is limited, not by consumer demand, but by the ability of business to produce. Our strategy in fighting the battle for production, and the industrial statesmanship displayed, will determine the shape of our postwar economy. Our future prosperity will depend upon the outcome of the campaign.

We are completing the first phase of the reconversion period during which we reconverted our plants to peacetime production. In 9 months the Nation has swung the pendulum from all-out production for war, which we had achieved prior to the defeat of Germany, to the beginning of an all-out production for peace. The attainment of the goal of full peacetime production is beset with difficulties, but the stakes are as high as any we sought during the war itself. The responsibility for success in our new effort rests, as it did throughout the war, on Government, on industry, and on labor.

But there is one great difference. That is the shift in the division of responsibility for production—from the Government, to management and labor. During the war, production was financed by the Government. Our entire war output was planned. The Government built plants when there were shortages, it directed the distribution of men and materials to essential industries; it regulated civilian distribution through rationing. The Government assumed a direct responsibility for production and Government purchasing provided for half of all that was produced.

Now, however, we face a far different picture.

The Government still has many responsibilities, but it has returned to private initiative the direct responsibility for meeting the Nation's demands for foods and services. The Government no longer finances and directs our production except in a few instances. The Government no longer is the most important customer of business. Industry now looks to the Nation's 140,000,000 customers for its market.

The Government's role in reconversion is to assist industry and labor in meeting the responsibilities which are now theirs. I should like to describe for you the steps which the Government has taken, the policies it has adopted, and the course it may be expected to follow in assisting industry and labor to achieve their goals.

During the initial months of reconversion, the Government has followed a planned program of decontrol to give business back its freedom of action and flexibility so that production for peacetime markets would get underway as rapidly as possible.

Our basic strategy of returning to a free competitive economy required that controls be removed unless they were absolutely essential to transition needs.

In judging the need for maintaining controls, we have been faced in some cases with this dilemma:

To keep too many controls too long, would inevitably clog our business economy and delay production.

To lift controls too soon would cause disorderly conditions and seriously delay reconversion.

The Government has consciously leaned to the side of prompt removal as the lesser of two evils. In fact, in a few instances we have found it necessary to restore some of the controls we have removed; for instance, controls over construction, and over wheat.

Lifting controls is not in itself the easy path to full production. It was recognized from the beginning that further action would be needed to locate and remove those obstacles on the road to reconversion that are slowing down or threatening to halt the industrial machine. The Government is working constantly to break production bottlenecks of materials, equipment, and manpower.

There is enough of most materials to meet the Nation's immediate peacetime requirements but a few important materials are scarce enough to affect the speed of reconversion. The Government is maintaining a continuous analysis of the demand and supply of basic materials. The Government's policy with respect to scarce materials and facilities was restated and reaffirmed in an Executive order of February 14, 1946, which reads, in part, "It is the policy of the Government, in order so far as possible to prevent price increases, that there be prompt and firm enforcement, during the present emergency, of Government controls of scarce materials and facilities." Where direct action is necessary to prevent shortages which might delay reconversion, the Government is using three major procedures:

1. It is taking direct action to expand the supply of critical items by such means as labor recruitments, priority assistance to manufacturers in the purchase of equipment or facilities needed to raise output, expediting the release of Army and Navy supplies, and price adjustments where necessity is demonstrated.

2. The Government exercises control over uses of critical materials. Certain materials, such as tin, natural rubber, and burlap, are so scarce that their purchase must be regulated to insure that supply is available for the most essential uses. The channeling of scarce building materials to low and moderate-cost housing is another example.

3. The Government is maintaining controls to prevent excessive inventory accumulation and hoarding as long as materials are in short supply and inflation threatens, in order to protect producers and distributors from artificial scarcities.

A great deal of time and study has been devoted to the wage-and-price problem. The aim of the Government's reconversion pricing program is to bring peacetime goods back on the market at noninflated prices. The formulas for reconversion pricing were laid down immediately after VJ-day. Since then there has been a continuous review of price ceilings on a number of reconversion products.

We have been engaged in setting a wage-price policy which will, as far as possible, and within certain limitations, maintain wage-earner's incomes without breaking the price line. A fair solution of the wage-price problem is essential to successful completion of reconversion. Without that we cannot get into full peacetime production and without full production we cannot win our fight against inflation. Management and labor must come to a fair agreement with each other on the wages to be paid but the Government has an urgent responsibility on behalf of all the people to make sure that rising wages and rising costs do not result in run-away inflation, for everyone of us would suffer if that were permitted.

The Executive order of February 14, to which I have already referred, directs the Price Administrator to provide for an adjustment of price ceilings in any case in which he finds that an industry is in a position of hardship as a result of an increase in wages and salaries. The adjustment is to be sufficient to enable the industry to earn an average rate of profit equal to the rate earned during the peacetime base period applicable to that industry.

We have not reimposed full control over wages because in this period of readjustment all parties agree it is desirable to permit the fullest degree of collective bargaining within the framework of price control. We hope to prevent hardships resulting from drastic reductions in take-home pay but we also hope to prevent inflationary effects on prices. That would defeat the purpose of wage increases and would cause hardships to all persons receiving fixed incomes. And, above all else, our over-all objective is to lay the foundation for a return to the high-wage, low-price, mass-volume economy which has been the great achievement of the American system of free enterprise and the basis of the unprecedented material progress of our country in this past century.

Our policy to attain these objectives has been set down in the Executive order of February 14, which I have mentioned. In it, the National Wage Stabilization Board was directed in that order to approve wage and salary increases which are consistent with the general pattern of wage or salary adjust-

ments already established in an industry. In case there is no such general pattern, the Board may approve increases to eliminate gross inequities between related industries or plants, to correct substandards of living, or to correct disparities between raises in wages or salary rates in the units concerned and increases in the cost of living between January 1941 and September 1945.

One of the principal purposes of the Executive order is to prevent the unstabilizing effect of unregulated wage and price rises. Hence the Stabilization Administrator has been given the authority to provide, by regulation, that wage or salary increases of a particular class shall be unlawful unless made with the prior approval of the National Wage Stabilization Board, if such an increase is judged to have an unstabilizing effect.

To assist in controlling the effect of wage increases or price rises, the Executive order provided that wage increases granted by employers without the approval of the Wage Stabilization Board cannot be used by these employers as a basis for asking an increase in price or rent ceilings.

All arbitration awards and all recommendations made in the future by publicly appointed fact-finding panels, with respect to wage or salary isues, must conform to the standards of the new Executive order. No wage or salary increases shall be put into effect in accordance with such awards and recommendations until they are approved by the appropriate stabilization agencies.

I am firmly of the opinion, and I am sure that you will agree with me, that the provisions of the Executive order of February 14 which I have briefly outlined to you will prove to be of assistance in maintaining a stabilized economy during the transition period until production can eliminate the threat of inflation.

Estimates of industry show that we are on the threshold of volume production in many reconverting industries. Physical reconversion of plants is almost 100 percent complete. I think you will agree with me that the Government's program of "getting itself out of business," and in decontrolling, has been a potent factor in accomplishing this so rapidly.

The Government plunged, immediately after VJ-day, into the greatest liquidating operation in history—closing out the war. A $60,000,000,000 munitions business is being largely wiped off the books. We are closing out and settling contracts, clearing out some plants, selling others, and disposing of surpluses.

A year ago we had a $60,000,000,000 munitions program and procurement averaged about $5,000,000,000 a month. After the defeat of Germany we slashed production goals sharply downward. After VJ-day a wave of contract cancellations cut munitions procurement to a half billion dollars a month. The few remaining munitions schedules are under constant review, and procurement rates will continue to drop. As an illustration, motor vehicles next June will be bought at the rate of only three-tenths of 1 percent of last July's rate.

The change-over of plants from war to peace has been facilitated by the prompt removal of Government-owned property from war plants. This has, in almost all cases, been done within 60 days after a request has been made.

Paralleling contract termination in importance and far outstripping it in magnitude is the task of disposing of the Government's vast holdings of surplus war goods and property. Regulations for the disposal of surpluses have been completed and the problem now is primarily one of merchandising. About $43,000,000,000 worth of goods and property will be declared surplus by the end of 1946 and another $7,000,000,000 worth will be turned over to disposal agencies in 1947. Of course, a great part of this vast store will be instruments of war such as ships, planes, and munitions that will have no civilian use.

Selling this property calls for energetic use of practically all the commercial methods of Nation-wide selling.

The Surplus Property Administration established basic policies and procedures for the handling of surpluses, and the War Assets Corporation has now taken over the disposal operation.

Disposal of the war-built plants and other facilities—some built with private funds, majority owned by the Government—are potentially a valuable national asset. Naturally, the construction during the war had special characteristics. Aluminum and magnesium production, for example, were increased, not only in response to a high level of industrial activity and to new uses for those metals in industry as a whole, but also to meet the purely military demand for planes and bombs. Thus a considerable amount of conversion and adaptation is needed to fit all these facilities into our peacetime industrial structure, but most of them can be used in one way or another, and their integration into our economy is an essential step in putting men to work and producing the goods we need for a higher standard of living.

The effectiveness of the reconversion measures I have described can be measured in statistics of our national production.

At VJ-day, goods and services were being produced in the United States at an annual rate of just over $200,000,000,000, nearly half of which was for war. The war share of output has fallen tremendously while the civilian production has risen very rapidly, with the result that total national production stands at about $180,000,000,000. We are now producing for our civilian market at a rate of $20,000,000,000 more than we were 5 months ago.

But while we have more food for our tables, more gasoline for our automobiles, more of many kinds of consumer goods than we have ever had in our history, we severely lack other products that we need and want. Housing, for example, is our most serious shortage. It is so serious that only a bold, imaginative program such as the one prepared by Wilson Wyatt and announced by the President could hope to come anywhere near meeting the need.

Most consumer durable products—automobiles, refrigerators, washing machines—have thus far been produced in quantities adequate only for show-window display. The very real progress made in converting our industrial plant has not yet shown itself in output. I hope that the events of the past week will remove the barriers to full production and that we'll begin to get the full effects of the magnificent job that business has done in switching from war to peace.

The backlog of consumer needs and the tremendous pool of savings which has been stored up during the war is a new dynamic factor in the life of the American people. The level of national consumption right now is the highest it has ever been in any peacetime year and there is every indication that it will go higher.

We must realize, however, that this immediately favorable situation is in some part caused by deferred demand. It is not necessarily in itself a permanent part of our national life.

We are shaping our economic policies during the transition to take advantage of this situation. Although, for the moment, the pressure of demand is inflationary, we can turn it to our advantage by generally holding the price line and by encouraging the rapid increase of production to meet this ready market. We can use the pressure of this demand acting on our free business economy to expand our production to a level of full employment.

We do not know how long the deferred demand will maintain a level of full employment, but one thing we do know: The time will come when this deferred demand will slacken and we shall once again face the deflationary problems which beset this and other countries in the 1930's, and which were a root cause of the Nazi revolution in Germany. Sustained prosperity can be assured only by a high level of demand supported by high current income and not by deferred needs which are supported by accumulated savings.

We must make sure that our policies in the crucial war-to-peace change-over will not only assist us to achieve full production and full employment during the immediate postwar period but also that they will assist us to maintain production and employment in the future on a steadily rising level without the extreme fluctuations of the past.

In the long run, the development and maintenance of a market for our production must be the yardstick we apply to all policies during the transition. What we do in the next year or two will, in a large measure, determine whether or not we can avoid another 1929 collapse.

You men, as leaders of this great industrial community, are vitally interested in the plans and policies which the administration proposes to put into effect to accomplish the goal of successful reconversion.

I believe that you can expect that the administration will proceed along the following course:

The Government will hold the line on prices, because runaway inflation would be disastrous to worker, farmer, businessman, and consumer alike.

The Government will maintain direct controls as long as they are necessary to break production bottlenecks and to assure adequate supplies for essential reconversion purposes.

The Government will continue to play its present role in the readjustment process by assisting business and labor to break bottlenecks and, above all, by stabilizing the general level of cost and prices as long as there is threat of inflation.

An, finally, the Government will take such measures as are necessary to deal with urgent special problems which threaten the smooth course of reconversion, or constitute a danger to the health and welfare of the people—such as labor-management relations and the housing shortage.

These will be the steps of the administration, but the full responsibility for production must be assumed by American industry and labor.

These two, working together with the cooperation of the Government, will be an irresistible force in overcoming the problems of the months that lie ahead. It is unthinkable that, after joining together to prevent destruction of our form of free government by an enemy outside our country, industry and labor would fail now in meeting the challenge of these times. I know that management and labor are both anxious to be at work—for ahead of us lies the greatest era of plenty this or any other nation has ever known. In closing my message to you in Detroit is "let us go back to work. Let us do the job together."

Excessive Freight Rates on Government Materials

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 21 (legislative day of Friday, January 18), 1946

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "United

States Pays the Freight," published in the Washington Daily News of February 15, 1946, and an editorial entitled "Locking the Barn," published in the Washington Daily News of February 16, 1946, on the subject of excessive freight charges for transportation of Government materials.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of February 15, 1946]

UNITED STATES PAYS THE FREIGHT

(By Peter Edson)

Charges that the Government "has paid and is paying many millions of dollars in excessive charges for the transportation of materials and supplies of the War Department" have now been made public after a year's investigation for the Bureau of the Budget.

The report is a 140-page volume and is one of the most damning indictments of railroad rate-making practices ever made. Credit for making the report belongs fully to Senator BURTON K. WHEELER, of Montana, who asked the Bureau of the Budget to investigate irregularities reported to him on freight rates being charged the War Department for hauling war supplies.

In brief, the report points up five principal methods through which railroads were able to meet excessive rates on Government freight.

1. As a large part of the traffic was between new shipping points, war plants, and bases, there were no established rate schedules. In calculating new tariffs, railroad rate makers arbitrarily fixed them higher than they should have been for hauling commercial freight comparable distances.

2. As much of the war material was classified as new products—landing craft, landing mats, rockets, radar, and combat vehicles, for instance—new tariffs were established. In many cases it is reported these new rates were higher than comparable commercial freight rates on barges, explosives, radios, or autos and trucks.

3. In many of these new rates, railroads were able to put through what amounted to 6-percent increases over established rates. This was done through what are known as ex parte 148 increases, which, of course, needs a little explaining.

In March 1942 the railroads asked for a general 6-percent increase on all freight rates. Interstate Commerce Commission granted the increase, to be effective in November. OPA protested. Going before ICC, counsel for OPA asked that the 6-percent raise in freight rates be set aside as wartime profiteering. ICC listened to OPA's reasoning and on April 6, 1943, suspended the increase as of May 15, 1943.

When it came to setting new rates for the hauling of war materials, however, according to the Budget Bureau investigators, the railroad rate-makers simply ignored the ICC set-aside orders and fixed many new tariffs at 6 percent above established rates.

4. The Government was frequently deprived of reductions in freight rates due it by law from the so-called land-grant railroads—principally roads of the West which were given big grants of public land as a reward for building their lines. Rates on land-grant railroads are by law supposed to be set by the Secretary of War and are not to exceed 50 percent of regular rates. In setting new rates on war freight, it is charged that the railroads did not figure in land-grant deductions.

5. Land-grant deductions were in many cases circumvented by what are known as section 22 quotations, which also needs explaining. Section 22 of the Interstate Commerce Act says, ironically enough, that "Nothing * * * shall prevent the carriage, storage, or handling of property free or at reduced rates for the United States Government, such rates not being available to the general public."

The first part seems to have been ignored, but there was a lot of heavy leaning on rates not available to the general public—higher rates. The Budget Bureau's report shows that the carriers insisted on section 22 quotations wherever possible, and that land-grant deductions should not apply on these special rates.

[From the Washington Daily News of February 16, 1946]

LOCKING THE BARN

(By Peter Edson)

When a special committee of three railroad rate experts was assigned by the Budget Bureau to investigate the War Department's freight bill, only a few people had any idea what a 10 months' headache it was going to be.

From January 1, 1943, to VJ-day—2 years and 8 months—245,000,000 tons of war materials were moved. Ninety percent of that went by rail and 75 percent was freight. The Government's transportation bill was over $4,500,000,000.

Even a 1-percent overcharge would be $45,000,000, but no one can make any accurate estimate of how much excess freight Uncle Sam may have paid. The investigators say there are no adequate statistical records, correspondence files are incomplete and scattered in hundreds of desks. The personnel supposed to check freight bills was never adequate for the job and is now scattered.

O. K.'ed freight bills were paid by the War Department Finance Office, subject only to adjustment by the General Accounting Office. GAO is now running from 2 to 3 years behind in its audits. According to the Budget Bureau's investigators—W. B. Hammer, of the Interstate Commerce Commission, Charles B. Bell, and Emory B. Ussery of Washington—bills of lading were O. K.'ed without preaudit, so there is no real check on the reasonableness of many of the rates charged the Government for hauling war supplies.

Before the reorganization of the War Department in March 1942, every branch handled its own freight shipments. Then the Transportation Corps came into being, and a Traffic Control Division was set up. But it was not until June 1944, when the war was a year and a half old, that a systematic approach was made on freight-rate problems, the Budget Bureau probers report.

At that time the War Department named a standing committee of six to handle rate-adjustment problems with the railroads. The procedure was that if the carriers rejected a rate adjustment requested by the War Department, the case was turned over to the Judge Advocate General of the Army, who instituted proceedings before the ICC.

After June 1944, the Budget Bureau report discloses, many protests were made by the Judge Advocate General and there were some compromises with substantial savings. But there are months of delay in ICC proceedings. And hundreds and hundreds of rates were not even examined.

In the cases of rates that were examined, War Department at first requested that adjustments in payments be made retroactive to Pearl Harbor. But when the railroads protested this was unfair, the War Department blandly gave in to a policy of requesting readjustments only to the date on which the application for adjustment was filed.

That retroactive adjustments could have been obtained, however, was proved in August 1945, when the Navy went to the mat with the Abilene & Southern Railroad, and got a retroactive adjustment from the ICC on rates charged for the movement of armor plate.

While it was impossible for the Budget Bureau investigators to check the hundreds of thousands or millions of bills of lading, some of the gross overcharges were uncovered by spot checking.

The Budget Bureau report recommends in conclusion an eight-point program for reorganizing the manner in which Army, Navy and other departments of the Government examine the rates they are charged for freight movements. Senator BURTON K. WHEELER of Montana, chairman of the Senate Committee on Interstate Commerce, is preparing new legislation to see that it is done.

It sounds like a good idea, even if it may now be a little late to lock the barn.

Poland's Right to Independence

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, February 21 (legislative day of Friday, January 18), 1946

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address entitled "Poland's Right to Independence," recently delivered by me over station WSPR in Springfield, Mass.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On the 1st of September 1939, just at the dawn of a hot and sunny day, Germany launched her unprovoked attack upon the peaceful Polish nation thereby starting the war in which later the whole world became involved. On the first day of the undeclared war the German Air Force bombed more than 30 helpless Polish cities including Warsaw—the old capital and the cradle of Polish culture—Cracow, and practically every larger or smaller town with or without strategic significance. The forces employed by Germany in her attack on Poland constituted the largest army of a nation which had at any time in history been hurled on the first day of the war against an attacked country. It is generally admitted that the German Army and particularly the armored forces outnumbered the Poles in the appalling ratio of 16 to 1.

But the Poles did not hesitate and they did not even wait for the news whether France and Great Britain would declare war on Germany as committed by their treaties of alliance with Poland.

Under the pressure of infinitely stronger and efficiently equipped German troops the Polish Army, despite their self-sacrificing fight, had to fall back to the east. The plan of the Polish high command was to retreat, thereby lengthening the German lines of communication and gaining the protection of strategically better situated eastern Polish territories where the decisive battle was to take place.

Unfortunately, all of these plans came to naught as a result of the most deplorable Soviet invasion which started in the early morning hours of September 17, 1939, in open violation of the Soviet-Polish nonaggression pact.

The capital of Poland, Warsaw, a city without fortification, defended itself for over 3 weeks. I can well recall how the American people held their breath and watched the heroic fight of the slim military garrison of Warsaw and its civilian population. It was an epic which has been equalled only by another heroic fight Warsaw put up against overwhelming odds in August and September, 1944, when the heroic Polish underground

once more rose against the German oppressor.

Two days after the first Germans moved into the smouldering streets of Warsaw—a new Polish Army began forming in France and only a few months later, when the Germans invaded Norway, the Poles, soldiers of a country overrun by the enemy, were already fighting in Norway, which in turn was attacked by the same enemy.

During the campaign in France in 1940, the Polish Army fought on even when Marshal Pétain negotiated an armistice, and, once more refusing to surrender, the Poles left the soil of Europe's continent to carry on the struggle from Great Britain and to fight in Africa.

They fought in Libya, they created an army in Soviet Russia after this country was attacked by Germany. They fought in Italy where they covered themselves with eternal glory capturing on May 18, 1944, the most inaccessible fortress of Monte Casino; they fought in Normandy during the invasion of continental Europe by the Allied forces, and VE-day saw them on German soil after they had helped liberate Belgium and Holland.

There is not one battlefield of this war where the Polish soldier and aviator, robbed of his family and his country at the very outset, would not have shed his blood. Despite the most cruel persecution and most systematic destruction of Poland the Polish underground forces, known as the home army, challenged the Germans for over 5 years, rendering tremendous services to the allied cause. And it should never be forgotten that Poland has managed to contribute to the war effort of the United Nations the largest army from any of the occupied countries.

During the entire war every responsible allied statesman is on record declaring Poland's right to independence. From many such statements I wish to recall at this time one only, but the most official. On September 4, 1941, President Franklin D. Roosevelt announced that he had authorized the transfer of various defense articles to the Government of Poland temporarily having "its seat in London. The President stressed that the transfer of weapons to the fighting forces under the command of the legal Polish Government in exile is taking place under the provisions of the Lend-Lease Act," and he declared "that the gallant resistance of the forces of the Government of Poland is vital to the defense of the United States." This action, the Presidential statement continued, "demonstrated our intention to give material support to the fighting determination of the Polish people to establish once again the independence of which they were so inhumanly deprived."

Poland took her place in our common struggle as one of the United Nations believing firmly that the aim of the war which we concluded victoriously is not to divide the world anew into some spheres of influence and to hand over smaller nations to selfish foreign rulers, but to exalt freedom and crush forever all forces of oppression.

It is now generally conceded that Poland got an unfair deal from her allies. The fact that millions of Poles and the overwhelming majority of her soldiers remain abroad and cannot return to their country which was proclaimed "liberated" is in flat contradition to the obligations assumed by Soviet Russia in the Moscow declaration of 1943, signed by Messrs. Molotov and Eden and our then Secretary of State.

There can be no question about Poland's right to independence and there can be no question about whether the Poles by their sacrifices during the war deserved fully what was promised to them and for which they fought. The question is only whether or not what was given to Poland as a result of the Yalta compromise deserves the name of "independence." For us Americans, this word "independence" means exactly what it means to the Poles, and permit me to put it very clearly. The Polish state will be independent only when a constitutional Polish president assumes authority on Polish soil when Poland is governed by a government led by that president, when her citizens will be given the right to vote freely and to elect their government and the president, when the citizens of Poland are subject to laws made by themselves and not imposed upon them by foreigners, when there is neither political nor social serfdom, when a foreign secret police does not control the government, when there is no terror or violence, deportation or forced labor, when there are no concentration camps and no persecution, and when the Polish soldier, who for 5½ years has been fighting for freedom, is not being deported to Siberia, shot or shamefully treated, but is a servant of his own people and his own government.

A country to which Polish soldiers taking part in this war as our most faithful allies cannot return without endangering their life, cannot be called free and independent.

The 6,000,000 Americans of Polish descent whose sincere and generally recognized American patriotism has never prevented them from preserving the traditions and virtues of their Polish origin, are rightfully full of admiration for the heroic stand of their Polish kinfolks. These American sons and daughters of Poland are actively and generously helping the country of their forefathers. But rightfully they are grieved about what happened to Poland after their sons and daughters have shed their blood on our American battlefields in the same cause for which Polish blood was shed profusely.

I share the grief of our friends of Polish descent in this country. As an American, I am unwilling to permit the compromise exacted from our leaders to prevail. We must continue our fight for the independence of all the countries to which independence was promised as a reward for their fight. We shall continue the fight to redeem our pledges and to keep the word we have given our fallen sons and the sons of Poland.

The Americans of Polish descent can be assured that every American who understands the meaning of American democratic traditions and the real meaning of American obligations stands united with them in their fight for Poland's well-deserved rights to independence.

Seniority Versus Majority

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1946

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper editorial:

SENIORITY VERSUS MAJORITY

The Washington wire tells of a group of "veteran House Democrats" complaining of the organization of 15 younger Members with the avowed purpose of standing up for Democratic political interests. The older Members apparently fear that somebody is about to take the ball away from them. Their names are withheld, including the name of their spokesman.

The younger group is headed by Representative ALBERT GORE, of Tennessee, who states its aim to "answer Republican campaign propaganda and to affirmatively set forth the Democratic position."

Now, the unnamed senior Members may merely resent the brashness of Mr. GORE's group in presuming to know, much less to set forth, what the Democratic position is. Under the dead hand of the seniority system, latecomers in Congress, no matter what pledges they have given their constituents and no matter what their abilities, are supposed to sing small when their elders are talking and in all matters of party line to follow the example of those colleagues who have managed to put in more time in Washington.

Or it could be that the senior Members are not too proud of the positions they have taken and simply do not relish the light in which they themselves would be cast by junior criticism. The truth is, of course, that it is mainly the older Democratic Members who have been playing the Republican side of issues rather consistently for the past 2 years and hence have more than one finger caught in the opposition pie Mr. GORE and his group propose to expose.

Not unnaturally, these collaborationists of the unholy alliance are importuning the party leadership to see that a civil tongue is kept in the younger Democratic heads. "We had better try to settle the fighting among ourselves," they warn lugubriously, "if we want to remain in control in the House." But it is plain that what it takes to keep the Democratic Party in the ascendancy is what the younger Members have to offer.

Mr. GORE and his group know their political history. They know that unless the Democratic legislative position is the liberal progressive position, the party's hope of holding control of Congress is pale, indeed. They know this always has been true, and they can see, if the elders do not, that nothing is more certain to return the House to Republican control than for Democratic Members to vote as if they were Republicans.

St. Lawrence Waterway

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, February 21 (legislative day of Friday, January 18), 1946

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement on the St. Lawrence waterway, made this morning by Hon. Henry A. Wallace, Secretary of Commerce, before a subcommittee of the Senate Committee on Foreign Relations.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Gentlemen, this is, in my opinion, a most appropriate time for again calling the St. Lawrence project up for consideration—and, I hope, for its final approval. Currently our efforts to deal with the multiplicity of problems that are an inevitable aftermath of war are not without success; but the present situation hardly justifies the view that we can safely sit back and let the future take care of itself. This is a time for taking stock of our needs and our resources, for charting a future course to get us around all foreseeable contingencies, and for starting in motion the machinery needed to bring us to the desired goal.

From this point of view, it seems clear that this great project should now be given its final approval. One reason for this is that our national employment objective has been clearly spelled out. Another is that the arguments which gave us pause on earlier occasions have been broken by the hard facts of recent history. Today, the arguments pro

and con are the same as before; but events have left the arguments pro with all their force, while showing the arguments con to be almost entirely without merit.

Twenty-odd years ago, when the St. Lawrence project first had the serious attention of the Department of Commerce, it was possible to argue that all was right with the world, that the Government had only to let our free-enterprise system go its own way and there would be endless prosperity for everyone. Today, we cannot forget the excesses of the boom and the collapse, or the ravages of the great depression.

A little over 10 years ago it was possible to argue that Government action to develop natural resources would have all kinds of dire consequences for the regions involved, that private enterprise would be hampered and interfered with, and that the social and political development of the community would be retarded. Today, the living light of TVA reveals the transparency of such arguments.

Just over 5 years ago, it was being seriously argued that the curve of our economic growth had leveled off, that our economy had reached its maturity and would never recover the vitality of its earlier years. Today, we look back upon a war-production achievement that exceeded by far even the most optimistic projections, and we recognize that there are no real restraints upon the achievement of still greater heights.

Even as recently as a year ago there were still some who argued for isolationism—for going our own way without regard to the needs of other peoples or to the values that might be obtained by enlisting their cooperation. Today, these arguments are well exploded. Atomic bombs over Japan, nonstop flights of B–29's from Tokyo to Washington, and radar contact with the moon demonstrate the essential oneness of the whole world.

Today, we have no reason to fear projects that will expand our capacity to produce, and to transport goods in trade with our world neighbors. We have only to fear that we shall set the sights too low, and thus fail to realize the potentialities of this great country of ours.

To evaluate the St. Lawrence project adequately it is necessary to consider it in the light of possible national developments in production and trade.

At the present time we are in the initial phase of the postwar recovery. We have settled the strike in steel; and the renewed flow of this basic material will allow production to go forward in all the durable goods industries whose output is so urgently needed after four long years of curtailment. We are also embarking upon a housing program that greatly exceeds any the country has ever known in the past. With these important segments surging forward to new highs, we are bound to make strong over-all advances during the next 2 years. And it must be remembered that we are beginning those advances from a level well above the highest ever reached before the war.

You may wonder that I speak so confidently of the future; but bear in mind that I am speaking thus only of the immediate future. In the period just ahead we have the basis for the kind of recovery I have been projecting. It lies in the deferred demands for durable goods and housing, to which I have already referred, and in the accumulated savings held by our people. The purchasing represented by these tremendous savings continues to be held in check by shortages of goods our consumers need and desire; and this blocking of expenditures gives rise to the inflationary pressures which constitute the most immediate threat to our economic well-being. They constitute such a threat not because we fear the recovery to which they would contribute but because inflation may undermine the recovery and bring a collapse similar to that which occurred in 1920, under similar circumstances following the last war.

Even assuming that we shall be able to avoid the dangers inherent in these inflationary pressures, there is a question of how far the recovery will go and how long it will last. By their very nature the special stimuli of accumulated savings and deferred demand are temporary forces which can be effective for only a limited period. The savings will tend to be dissipated in various ways. The deferred demands will be worked off in several years of full production. When that occurs, the force of the recovery will be gone; and unless some means of maintaining production and employment can be found, we may again find ourselves in a cumulative spiral of deflation whose destructive consequences it is impossible to appraise.

We must be prepared, therefore, to meet the forces of deflation as they develop and to undertake the necessary measures for preventing a repetition of the kind of collapse we experienced in the thirties. We are now almost unanimously determined that large-scale unemployment will never be tolerated in this country again. Though there are differences in interpretation and in the terms we use to state our basic objectives, we have reached essential agreement that there shall be employment opportunities for everyone able, willing, and seeking to work. Congress has given explicit recognition to this fact in the passage of the Employment Act of 1946. Under this act it is the continuing policy and responsibility of the Government to coordinate and utilize all its plans, functions, and programs to promote maximum employment. If we take this pledge seriously and devote our combined efforts to the task, I am sure we cannot fail.

This means not only that we must prepare the specific programs by which we shall achieve the goal but also that we must be prepared in terms of all the necessary auxiliary services which will be required to maintain the economy at that level. We cannot afford to let any specific bottlenecks interfere with the orderly development of our economic processes as the goal is approached. We must be sure that essential utilities like transportation and electric power will be adequate to meet the demand without the strains and dislocations that have been typical of our wartime operation. More specifically, both the navigation and the power aspects of the St. Lawrence project will be required for future economic growth and will in turn help to support that growth.

The Department of Commerce has had an interest in the St. Lawrence project for many years. As some of you know, the Department either made, or participated in the making of, several surveys with respect to the possibilities of the St. Lawrence development. Such surveys were made in 1927, 1934, and 1941; and I think it appropriate that the committee should take official cognizance of these surveys for the valuable information they contain. All of these surveys reached the conclusion that the St. Lawrence project was desirable in promoting the commerce of the United States.

This basic conclusion remains unaffected to the present moment. The war program demonstrated how much larger our production could be. It proved that despite the break in the depression years, the long-term trend of growth still held. For at least two-thirds of a century, we have realized an annual rate of increase that resulted in a doubling of our total output every 20 years.

It is true that in the depression of the thirties we fell far short of our normal capacity to produce; in fact, the loss of production through 12 years of unemployment was enough to pay for the St. Lawrence project hundreds of times over. In contrast, the war program brought us up to a point well above the trend. Our 1944 gross national product of nearly $200,000,000,000 represented a total output we would not have expected to realize under normal full-employment conditions until 1950.

As we near the end of the decade, it is quite possible that our gross national product will again approach this peak level; and we in the Department of Commerce have been giving more than a little thought to what this will mean for various segments of our economy. Recently our analysts have made studies of the transportation situation that would arise in 1948 under full employment conditions, with a gross national product of $190,000,000,000. These studies indicate that under the projected conditions the traffic on the country's railroads will be in the neighborhood of 640,000,000,000 revenue ton-miles. This compares with 373,000,000,000 revenue ton-miles achieved by the railroads in 1940, an increase of almost 70 percent.

We know the roads can handle this huge volume of traffic. They actually handled greater loads in 1943, 1944, and 1945. But these supreme efforts of the war years required the aid of severe Government restrictions on shippers and railroads alike, with inconveniences and delays all around. For example, delays in furnishing adequate transportation for moving grain from our farms in the latter part of 1945 contributed to the present serious world food emergency and to the necessity for imposing new priorities on the movement of grain for the meeting of essential relief requirements. Such Government intervention and the strains of wartime operation can hardly be considered appropriate to normal conditions.

The volume of traffic likely to move on the St. Lawrence waterway, though substantial, is small in comparison with these huge traffic demands on the railroads. The latest survey of the Department, prepared in 1941, approached the problem of estimating the traffic flow from the standpoint of an analysis of 17 important commodities, which might move via the waterway. The survey indicated that the traffic in these commodities, even based upon the depression levels of the thirties, would amount to 4,600,000 tons. On the basis of this partial investigation, the survey concluded that it was not unreasonable to expect that the combined foreign and domestic United States commerce using the waterway would in a few years reach a figure of 10,000,000 tons.

This conclusion is consistent with estimates of the capacity of the waterway, which is figured at about 16,000,000 tons over and above the tonnage normally passing through the present canal system of the Great Lakes. In other words, out of a total capacity of approximately 25,000,000 tons for the combining canal system as a whole, some 16,000,000 tons will be new capacity resulting from the St. Lawrence project. Of this potential 16,000,000 tons of traffic, a considerable portion will undoubtedly be taken by Canada. The 1941 survey assumed that a division of traffic which might occur was roughly 6,000,000 tons for Canada and 10,000,000 tons for the United States. This 10,000,000 tons of capacity represents a combined figure for freight moving out and in over the waterway and includes both foreign and coastwise trade.

Even if all of this traffic represented a direct diversion from the railroads, the total ton-miles lost to the roads would not exceed, at the maximum, 1 or 2 percent of the total ton-miles they might be called upon to handle. Moreover, it can be stated with assurance that not all of this traffic will consist of tonnage diverted from other forms of transportation. Some is bound to be new business that would not have moved at all in the absence of low-cost water transportation. It is clear, therefore, that traffic on the waterway is not going to cripple the railroads. A better way of looking at it is that the capacity made available by the St. Lawrence project will simply take care of a small part of the general increase in commerce and trade which we all hope will take place.

A similar conclusion with respect to the postwar position of our seaports readily follows from analyses of future trends in our foreign trade. The trade possibilities of the next few years greatly exceed the trade which this country carried on before the war. During 1940 our water-borne foreign trade amounted to about $6,500,000,000; of this total, imports were $2,500,000,000 and exports were slightly over $4,000,000,000.

With the country at a stage of full production and full employment, foreign trade could reach a total of $20,000,000,000 before 1950—or approximately three times the 1940 total—made up of almost $8,000,000,000 of imports and $12,000,000,000 of exports. In terms of tonnage, 1940 water-borne foreign trade was 111,000,000 tons. Of this total, about 90,000,000 tons were handled at seaports, with about 41,000,000 tons being imports and 49,000,000 tons exports. It is true that the price level has changed substantially since 1940. Even taking into account these changes in the price level, it appears that the tonnage volume of our postwar foreign trade may still double that which was handled in prewar years.

It should be mentioned also that full production and employment will likewise produce a very substantial increase in our water-borne coastwise and intercoastal trade. In 1940 the tonnage in this trade was 156,000,000 tons. Unlike railroad traffic, our coastwise trade was curtailed during the war period, so that the prospective increase will be entirely in new high territory. In the light of these facts, it would seem reasonable to welcome, not oppose, new facilities for handling part of the increased tonnage.

That the opening up of the St. Lawrence waterway would contribute both to the achievement of a larger volume of trade and to our ability to handle it can hardly be doubted. The waterway would carry the advantages of cheap ocean transportation into the heart of the country. These transport services will become available to an area filled with great cities and prosperous farm lands, in other words, an area with great traffic generating possibilities. This combination of the availability of cheap transportation, coupled with the existence of a very large volume of potential traffic, represents a practically infallible stimulus to trade.

All of the surveys made by the Department of Commerce have indicated that substantial savings in transportation charges would result from the operation of the waterway. The latest survey estimated that on a traffic volume of 4,600,000 tons for 17 specific commodities the freight savings would range between $14,000,000 and $17,000,000 after allowing for any additional insurance charges which might be levied. The report concluded that on the basis of a total American traffic of 10,000,000 tons the savings in freight charges might total $36,000,000—a figure several times the annual cost of maintenance and amortization of the transportation phases of the project.

This conclusion is confirmed by a general review of the comparative costs of different types of transport. Before the war, ocean freighters were able to carry cargo at a rate in the neighborhood of 1 mill per ton-mile. In connection with the traffic on the St. Lawrence waterway, however, it should be pointed out that the full costs of ocean transportation could not possibly be charged to the additional mileage operated over the seaway. Vessels reaching port in this country will have port charges and cargo charges whether they dock at Atlantic ports or Chicago. In other words, the correct appraisal of the additional water transportation costs arising out of using the seaway represents merely the voyage expenses and the proper percentage of overhead charges which result from a lengthened trip. Prewar voyage expenses were generally not in excess of one-half mill per ton-mile, and in some cases were less than this figure.

This unusual economy of water transportation cannot be approached by other means of transport. For example, the cost of 30-ton-carload railroad shipments ranged around 6 or 7 mills per ton-mile on long hauls of from 600 to 1,000 miles. Reports of the Association of American Railroads and the Interstate Commerce Commission indicate that the average railroad revenue is between 9 and 10 mills per ton-mile. Costs of movement by truck need not be considered, since these costs for carload movements over long distances are substantially greater than those of the railroads.

Translating these figures into practical terms gives the following results: The additional cost of transporting 1 ton of overseas freight from Montreal to Chicago, approximately 1,250 miles, should not, even allowing for slower movement through the waterway, exceed $1.50 a ton on the average and in all probability would be less than this. In comparison, carload costs by rail from Atlantic ports to Chicago are not less than $5 per ton and are probably $6 or $7 a ton. The rates on most traffic are substantially higher than this. Without attempting any exact appraisal of the total transportation savings which might occur, therefore, it does seem clear on the basis of relative transportation costs, that the estimate of $36,000,000 in the 1941 Commerce Report is conservative. Needless to say, transportation savings of this magnitude would certainly justify the completion of the St. Lawrence project.

The Great Lakes area, which would obtain the advantages of this low-cost means of transportation, includes almost one-third of the national population and has approximately 40 percent of the national volume of manufacturing. For certain industries, of course, the percentage is much higher; nearly three-fourths of the steel ingot capacity of the Nation is located here and approximately three-fourths of the total production of motor vehicles occurs in this area. About 40 percent of all American farm property, in terms of aggregate value, is located here; and the output of its farms includes 36 percent of the wheat and 67 percent of the corn production of the Nation. These figures are sufficient to indicate the tremendous importance of the region that would be opened up to cheap water transportation.

Let me make it amply clear, however, that we favor the waterway, not because we believe it will serve the interests of any particular region or territory to the exclusion of others, but rather because we believe that, in the long run, the benefits of improved transportation and reduced transportation charges will accrue to the entire Nation. The economic history of this country demonstrates that improvements in transportation, coupled with reductions in the costs of transportation services, have had a tremendous effect in bringing about the vast productivity which this Nation now possesses.

Over a period of time, any expansion in the trade, commerce, and production of the region bordering the Great Lakes is bound to benefit the rest of the country. Manufacturers in the Great Lakes area would purchase more raw materials from other parts of the country. Farmers and consumers in the Great Lakes region would buy more goods not only from manufacturing establishments in the immediate area, but from factories throughout the Nation. Railroads and trucking companies would haul a greater volume of traffic. In short, progress is not compartmentalized. What helps one area or region ultimately benefits all the Nation.

The greatest gains deriving from the project will in fact accrue to the area in its immediate vicinity. This area will gain for some 4 years the 20,000 direct jobs necessary to complete the on-site construction work and the additional jobs necessary for off-site work and supporting services. It will become the permanent home of many of these construction workers and of the trade and service industries auxiliary to the construction and operation of the waterway and power facilities. It will obtain cheaper access to needed supplies. It will benefit from the traffic and travel on the waterway, and from the recreational facilities which this kind of project inevitably affords. But most of all, it will benefit from the availability of cheap electric power.

The development of cheap power has always brought a correlative development of the area which enjoys its benefits. There is no reason why the experience in the upper St. Lawrence territory should be different from that which has occurred in other parts of the country. Power is the heart of American industry. The manufacturer who does not base his operations on the effective use of power cannot compete with our efficient industrial giants. The trend toward power use and the whole maze of technological developments associated with electric power has been accelerated during the war years and is clearly more important now than ever before.

At the same time, all parts of the country now face an increased need for industrial opportunities. With the return of the veterans, there is a growing need for new business establishments and a growing need for increased employment. Cheap power will ease the otherwise severe problem of accomplishing this expansion. It may spell the difference between success and failure for small business enterprises whose birth and growth are essential to the maintenance of our free-enterprise system.

The Department of Commerce has been undergoing a thorough reorganization designed to improve its services in the interest of promoting business, and particularly small business. Small business thrives in a climate of economic expansion. That is the kind of climate engendered by the availability of low-cost transportation and cheap electric power. The potential contributions of this project to our economic future are too important to overlook.

In closing, let me repeat: Our experiences through depression and war combine with our new national production goals to render insignificant the dislocations which any project of this magnitude necessarily involves. Those dislocations are seen more clearly than ever to be few, slight, and temporary. The advantages are seen more clearly than ever to be many, great, and permanent.

Creation of permanent, useful assets is an essential part of any program directed toward the assurance of our future national welfare. Projects like this one, which are in large measure at least self-liquidating, must be in the forefront of the plans and programs we shall have to consider in implementing our national employment policy. If we do not carry through such projects, there can be no assurance that we shall ever undertake less favorable programs, which could not repay their cost to the Government, either in terms of direct receipts or indirectly in terms of taxes deriving from the high levels of income to which they contribute. We cannot afford the indication which disapproval of this project would convey that there is any doubt about our living up to our pledge to provide maximum employment opportunities for all our people.

By the same token, we cannot afford any indication to other peoples of the world that we are in any way unwilling or incapable of doing our part to promote healthy world trade, meaning trade of mutual benefit among world neighbors. Events have made amply clear that economic stability and growth, accompanied by rising standards of living throughout the world, are the primary requisites for peace. Our responsibilities in the new world order reinforce our domestic interests in supporting the approval of this project.

Address by Eugene A. Rose at Testimonial Dinner to Mayor O'Dwyer, of New York

EXTENSION OF REMARKS
OF
HON. JAMES M. MEAD
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 21 (legislative day of Friday, January 18), 1946

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Eugene A. Rose at the testimonial dinner held in New York on January 17 in honor of Mayor O'Dwyer.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"No treason we bring from Erin, nor bring we shame nor guilt;
The sword we hold may be broken, but we have not dropped the hilt!"

Mr. Chairman, reverend fathers, Mayor O'Dwyer, ladies and gentlemen, to be present on this occasion is a privilege not often to be equalled. My privilege is further enhanced by the fact that I represent a group of men in Philadelphia kindred to the magnificent organization under whose aegis this testimonial is tendered. Although the ceremony of installation of your officers is incidental to the main purpose of this occasion, I feel deeply grateful for your kind invitation to be present at that function also.

Mr. Mayor, as I speak, I do so with the absolute assurance that the sentiments I humbly try to express are shared by countless thousands of your friends and well-wishers in New York City, in the Empire State, throughout the Nation, in Ireland—and indeed across the wide expanses of the earth. Particularly do I feel that I voice the sentiments of those of the Irish race everywhere—the citizens of that universal spiritual empire who would be here with us tonight, if the wish could be translated to the fact.

We feel certain that your elevation to the position of chief magistrate of the world's most important city has been more widely acclaimed than any similar event that has gone before. For what race of men has been more widely scattered than that of the Irish? What remote corner of the earth is strange to the name? In every land, from the north frigid zone to that of the south—all around the globe—the Irishman and his progeny have made their homes. An empire in the truest sense of the word, unique in its indestructibility, it is ironical that it should have been created upon the ruins of the most terrible catastrophe that ever overtook that much-persecuted race.

Just 100 years ago, during the dark and dismal days of the British-made famine of 1846–48, the foundation of that empire was largely laid. Neither pomp nor ceremony marked that terrifying event. Suffering, death, and indescribable confusion were everywhere. Although we have forgiven, we can never forget.

On a festive occasion such as we here celebrate, it is, perhaps, not appropriate to recall such a revolting period to mind, but we find it difficult to survey the present and forget the past. It is inevitable, indeed, that in this hour of triumph which we presume to share with you, we should recall the myriad obstacles, told and untold, seen and unseen, that the Irish people, by dogged tenacity and an unconquerable spirit have surmounted—and not only surmounted—but have gone on to achieve the very pinnacles in countless spheres of endeavor.

We are here reminded of a typical incident, or, rather, a series of typical incidents, in this seemingly endless struggle. During the Young Ireland disorders of 1848, nine Irish youths were apprehended, tried and convicted of treason against Her Royal Highness Queen Victoria. With judicial solemnity, the president of the court intoned the names of the young men. They were: Charles Duffy, Morris Leyne, Thomas McGhee, Thomas Meagher, Richard O'Gorman, Michael Ireland, Terence McManus, Patrick Donahue, and John Mitchell.

The usual question was then put to the doomed men: "Have you anything to say before court passes sentence?" The reply, by Meagher, who was chosen to speak for the group, gives evidence of the absolute fearlessness and the traditional sense of humor of the Irish. "My lord," he said, "this is our first offense, but not our last. If you will be easy on us this once, we promise, on our word as gentlemen, to try to do better next time. And the next time, sure we won't be fools enough to get caught."

The solemnity of the court was unruffled. An indignant judge pronounced the sentence: death by hanging. But under a storm of protests from all over the world, the Queen was forced to commute the sentence. Penal servitude for life in what was then savage Australia was their fate.

The years went by, and in 1874 a Sir Charles Duffy was elected prime minister of the Australian state of Victoria. To her amazement, the Queen learned that this was the same Charles Duffy who was transported for high treason! Her curiosity now aroused, the Queen demanded the records of the other so-called criminals. This is what she learned: Meagher was governor of the present State of Montana (which was then a territory); O'Gorman was governor-general of Newfoundland; Michael Ireland was attorney-general of Australia, having succeeded the other so-called criminal Morris Leyne to that office; McGhee was president of the council for the Dominion of Canada; Mitchell was a prominent New York politician, and father of the Mitchell who later became mayor of New York—even as you, sir. McManus and Donahue were brigadier generals in the United States Army—again, even as you, Mr. Mayor.

The scene was now far removed from that of the court trial 26 years before. The curiosity that killed the proverbial cat, unnerved the Queen. "Cursed be the law," she screamed, "that deprive me of such citizens."

We have often wondered, and tonight we wonder again: What are the thoughts of the present-day successors of Ireland's former persecutors, in these days of many triumphs for the Irish—the Irish who have long been depicted as being but half-civilized, and unable to govern themselves? But time weakens, and it will eventually silence, the voices of Ireland's calumniators.

You, Mr. Mayor, have been destined to give the lie, once again, to the defamation of an age-old people and nation. Far from the rolling hills of Mayo, Providence has entrusted the material well-being of this great city's teeming millions to your care. We who are familiar with your background, your spiritual training, and your philosophy, can assure the citizens of New York City that they may look confidently forward to the future. No foreign ideologies will be permitted to influence nor debase your administration; no bar to progress in the old-fashioned American way will be tolerated. The welfare of little old New York you will consider as you would a sacred heritage, remembering the millions of your countrymen who have toiled and sweated here throughout the centuries to make this great metropolis what it is today—a baffling maze of mammoth canyon-like arteries of trade and commerce. Denizens of the underworld and all enemies of our Christian mode of life have long learned to fear you. For them we have nothing but words of caution.

And now, in conclusion, we pray that Divine Providence, who has called you to this task, may continue to smile upon your labors. May the generations of Irishmen and Irishwomen who follow in our footsteps be blessed with the type of leadership, both in Ireland and in the lands of their exiled sons and daughters, that the citizens of New York have so wisely chosen.

While we shall watch with pardonable pride your administration of the affairs of this great city, according to the democratic precept, we shall not for a moment forget, nor shall we ever ignore, the cry of the people of your less fortunate native land for their right to the democratic ideal, which is still cruelly denied them.

But so long as Ireland can furnish the leadership and the spirit that has so often been exemplified in this and other lands, there is no reason for despair. For—

"Ireland is Ireland, through joy and through tears;
Hope never dies through the long weary years.
Each age has seen countless brave hearts pass away—
But their spirit lives on, in the men of today!"

Housing for Tomorrow

EXTENSION OF REMARKS
OF
HON. JAMES M. TUNNELL
OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, February 21 (legislative day of Friday, January 18), 1946

Mr. TUNNELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Housing for Tomorrow," by the junior Senator from New York [Mr. MEAD], published in the winter 1946 issue of Housing Progress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOUSING FOR TOMORROW

(By United States Senator JAMES M. MEAD)

From the viewpoint of the veteran, this statement, "Housing for Tomorrow," is one of the most vacant promises of modern times. Vacant and ineffectual because what the veteran wants and needs is—housing today.

Now is the time to face the issue squarely and to make a bold start toward correcting the conditions to an extent that our lack of planning today by the Federal, State, and municipal authorities will not come back to plague and haunt us in the future.

CAUSES OF SHORTAGE

Many people over this country are wondering just what has happened to cause such an acute housing shortage. Part of this shortage can of course be attributed to the cost we had to pay to fight a global war. Construction of new, permanent homes fell far short of the actual need. This was necessary because a large share of the material needed for home construction had to be diverted to war needs.

But this is not the full picture. Over a period of the last 20 years or more, there have been less new homes built than there were

new families formed. So the need has accumulated. This was particularly true with reference to the depression years.

The building industry has constructed homes at an annual rate ranging from 937,000 in 1925 down to a low of 93,000 in 1933. The average has been around 500,000 a year. Meanwhile families have increased at the rate of about 600,000 a year. Also it must be taken into consideration that many of the old homes have depreciated to an extent that approximately 12,500,000 houses of the total supply of nearly 33,000,000 units in urban centers are either in a very bad condition or are totally beyond repair.

ONE OF "BIG THREE"

The construction industry is rated as one of the three largest industries of our Nation (agriculture and manufacturing, the other two). Modernization of our home-building industry has not kept pace with the industrialization of our two other big industries. Because of this lack of progress and because there are so many interrelating conditions involved that have kept the building of a home within the confines of a custom-built item, we now have a deplorable shortage of adequate housing accommodations.

Will the home-building industry have to reorganize itself along lines of our best manufacturing methods, combining factory assembling of many parts, and better organization of land acquisition, mass puchase of materials, better financing and better over-all production of home both for sale and for rent? Many of our most forward looking builders are convinced this is the only real answer.

NEW METHODS NEEDED

But a solution to the problem will have to be found. It will not be found immediately and it will not have the cloak of magic. It will be an approach within the framework of our present economy. Some of the methods will be as radically different compared to today's methods as the manner in which automobiles are built compared with the way carriages were formerly built, or the way our farms are now cultivated as against the old hand-plow system.

VETERANS' HOUSING

Most of the concern, however, evolves around the problem of meeting the current and immediate need of housing for veterans, of getting a head start on meeting the problem as quickly as possible. As a means of relieving the acute housing needs for veterans I introduced a resolution in Congress, which provided a way for an increase in appropriations up to $191,000,000 to make our surplus war housing available for the returning soldiers. These accommodations, primarily units designed for dwelling purpose, will be moved to a locality of need and reerected to serve veterans and their families. While the 100,000 units that this fund will provide may not be anywhere near adequate, nevertheless some measure of relief will be provided for the most desperate cases, and they will afford clean, comfortable accommodations.

Meanwhile, the Federal Government has faced the situation and is going ahead, doing everything within its power to break material shortage bottlenecks. Congress is now considering long-range housing legislation, the Wagner-Ellender-Taft bill. All three Senators, ROBERT WAGNER, of New York, ALLEN J. ELLENDER, of Louisiana, and ROBERT TAFT, of Ohio, have been devoting most of their time and energy toward making this constructive piece of housing legislation as adequate and as well-balanced as possible, to assure a resumption of home building by private industry, to eradicate slum areas, and to provide decent living conditions for our low-income groups.

EXECUTIVE AID

On the executive side of our Government, President Truman has named Wilson Wyatt, former mayor of Louisville, Ky., and a very able administrator, as Housing Expediter. Mr. Wyatt will have the authority under the President's Second War Powers Act to channel the flow of materials into the housing construction field, particularly housing for veterans, and at a construction cost of $10,000 or less.

Admittedly, this year is going to be a very critical one on our home front. The brightest ray of hope in the whole desperate situation is that our country has been made conscious of and fully aware of the deplorable housing conditions. Our National, State, and local governmental officials, and the industry as a whole, will not be satisfied or content until we really provide adequate accommodations for all our people. With enlightened leadership and American ingenuity we can attain that goal.

New Deal Finally Adopts Program Advocated by Republican Congressional Food Study Committee

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks, I wish to say that the Republican Congressional Food Study Committee at the beginning of its activities maintained that the doctrine of scarcity was unwise and destructive. At the same time, the committee maintained that the needs of the country would be supplied only by a program of production and more production. The committee maintained that nobody ever got fat on a scarcity and that nobody ever went hungry on a surplus.

I repeat, the Republicans have persistently advocated production and more production. Seldom, if ever, have the higher-ups in the New Deal administration advocated production. On the contrary, so far as we know, most of them have supported the doctrine of scarcity. Many of them have done so reluctantly, but Wallace apparently still supports his program of killing little pigs. So far as I know, Mr. Bowles subscribed to this doctrine of scarcity. At any rate his policies all carry threats to the producers of the Nation as well as to the processors and distributors of food.

Mr. Bowles protests loudly that he is against inflation, yet he has never done anything to increase production. Everyone knows that production is the only complete antidote for inflation.

A few days ago, President Truman indicated that he was seeing the light, for he announced that he favored full production. I do not know whether he made this announcement with the approval of Wallace and Bowles, but chances are he made it without consulting them. If the President is sincere in his announcement, I shall be delighted. If he adopts the program advocated by the Republicans and if he carries such a program through faithfully and loyally, he will bring relief to the producers and processors of food and will do the consumers a great favor by providing them with adequate food supplies through legitimate channels. The OPA has by its tyranny threatened and abused the people shamefully. The black markets are the result of OPA's unwise theories and unreasonable administration.

I wish to comment briefly on another very interesting topic. A few days ago the Republican Congressional Food Study Committee issued a statement with reference to the planting of victory gardens for the coming season. The American people deserve great credit for their efforts through their victory gardens. I doubt whether many of them know just how important the victory gardens were in the food supply of the Nation. These gardens produced thousands of tons of food of all kinds. The statement to which I have referred showed how necessary it is going to be for the people of the Nation to plant and cultivate victory gardens this coming season. It is really more important than it was in past years. A discussion of victory gardens is of great interest to the people. The statement made by the Republican committee to which I have referred was commented upon very freely by many newspapers of the country. The following is an article which appeared on the front page of the Baltimore Sun of Sunday, February 17:

WARNING GIVEN OF SCARCITY IN CANNED GOODS—GOP STUDY GROUP HEAD TERMS CARRY-OVER STOCKS AT ALL-TIME LOW

(By William Knighton, Jr.)

WASHINGTON, February 16.—A warning that the Nation's stocks of canned foods is near an all-time low was made today by Representative JENKINS, of Ohio, chairman of the Republican Congressional Food Study Committee.

With the warning went the plea that victory gardening, which is estimated to produce 1,000,000 tons of foodstuffs a year, must be continued due to the short supply and, as Mr. JENKINS expressed it, "the desperate need of hungry people in other countries for all the food we can send them."

Quoting Department of Commerce figures, the committee chairman said that there will be only 16.7 percent of the normal carry-over supply of canned fruit at the beginning of the 1946 packing season.

49.3 PERCENT OF TOTAL

The canned vegetable figure is 49.3 percent of the 1940 total, which is considered a normal year.

From the 1945 total, the supply of vegetables will be down approximately 4 percent, and fruits will be 61.3 percent below last year.

There will be only 5 percent of the normal carry-over of canned tomatoes, the 1940 figure being 10,000,000 cases, against an estimated 500,000 cases for next year. The next lowest is lima beans, with only 9 percent of the normal carry-over on hand.

FAMILIES DEPEND HEAVILY

"The modern American family has come to depend heavily on canned fruits and vegetables for food," Mr. JENKINS pointed out. "This is also the only form in which many food products can be shipped abroad.

"In the face of the great need in other countries, we have now the comfortless knowledge that our commercial supplies of canned goods remaining at the end of the current winter season will be the lowest at any time since the Department of Commerce started keeping such figures 12 years ago.

"This means we will have to depend for canned goods next fall and winter almost entirely on the crop we expect to produce this year.

"Providence has blessed us for eight successive years with bountiful crops. Even with

these big crops, other obstacles such as shortages of labor and canning materials have made it difficult for the canners of the Nation to carry on to their utmost efficiency.

POSSIBILITY OF SHORTAGE

"There is no assurance that these conditions will improve this year. If they do not, and if we should have a poor crop, we will surely have a shortage of canned foods next winter.

"Government planners tell us there will be plenty of food next winter. But experience is a better guide than prophecy. Prudent consumers will be well advised to assure their own families of adequate fruit and vegetable supplies by producing and canning as much as they are able to at home.

"The time for planting victory gardens will soon be here. The planting season has already started in the deep South. This is the time to start preparations for making the home garden more productive than ever before."

The statement which brought forth the newspaper comment to which I have referred is as follows:

Stocks of canned fruits and vegetables are approaching an all-time low in the United States Victory gardens and home canning will therefore be more important than ever this coming spring and summer.

The quantity of food produced by victory gardens has been tremendous. It is estimated to amount to many thousands of tons a year. If that production were to stop, it would have a serious effect on commercial food supplies.

There are two reasons why it must not be abandoned this year. First, the fact that our stocks of commercially canned goods will be less than 50 percent of normal by the time this year's canning starts; second, the desperate need of hungry people in other countries for all the food we can send them.

The modern American family has come to depend heavily on canned fruits and vegetables for food. This is also the only form in which many food products can be shipped abroad.

In the face of the great need in other countries, we have now the comfortless knowledge that our commercial supplies of canned goods remaining at the end of the current winter season will be the lowest at any time since the Department of Commerce started keeping such figures 12 years ago.

According to estimates recently made by the Department of Commerce, the carry-over of commercially canned seasonal fruits and vegetables will be 16 percent smaller this year than it was in 1945, and 51 percent smaller than it was in 1940—the last year of normal supply. The carry-over is the quantity remaining in the hands of packers and distributors at the time the canning of the new crop begins.

The shortage will be most acute in canned fruits, with a carry-over 61 percent less than 1945, and 83 percent below 1940.

Canned fruit and vegetable juices will be only slightly below last year. But stocks of seasonal vegetables will be about 4 percent below last year and more than 50 percent less than a normal supply.

This means we will have to depend for canned goods next fall and winter almost entirely on the crop we expect to produce this year.

Providence has blessed us for eight successive years with bountiful crops. Even with these big crops, other obstacles such as shortages of labor and canning materials have made it difficult for the canners of the Nation to carry on to their utmost efficiency.

There is no assurance that these conditions will improve this year. If they do not, and if we should have a poor crop year, we will surely have a shortage of canned foods next winter.

Government planners tell us there will be plenty of food next winter. But experience is a better guide than prophecy. Prudent consumers will be well advised to assure their own families of adequate fruit and vegetable supplies by producing and canning as much as they are able to at home.

The time for planting victory gardens will soon be here. The planting season has already started in the deep South. This is the time to start preparations for making the home garden more productive than ever before.

The following table shows Government estimates of carry-over stocks of canned goods for this year, last year, and 1940, with percentage comparisons:

Carry-over stocks of fruit and vegetable products estimated by Department of Commerce

[Basis: Cases of 24 No. 2½ cans]

	Carry-over date	Carry-over at beginning of 1946 packs	Carry-over at beginning of 1945 packs	Carry-over at beginning of 1940 packs	Percentage of change of 1946 carry-over from years—

Sea Power and Its Meaning

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, February 8 (legislative day of Friday, January 18), 1946

Mr. WALSH. Mr. President, I ask to have inserted in the Appendix of the CONGRESSIONAL RECORD an address recently delivered by Fleet Adm. Chester W. Nimitz, United States Navy, before the National Geographic Society, in Washington. The address is a very effective summation of sea power and its meaning.

An estimate from the Government Printing Office indicates that the manuscript of Admiral Nimitz' address will exceed by two-thirds of a page the two printed pages allowed under the rule and that the cost will be $138.80.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a pleasure for me to talk to you about an area of the world which is, I know, of particular interest to the members of the National Geographic Society. It is an area with which I have been rather intimately associated for the last 4 years. So, too, were many thousands of other Americans. Whatever else war may be, from a great crusade down to Sherman's definition, it is also a great teacher of geography.

Tonight, therefore, it is not inappropriate for me to review the recent events in the Pacific Ocean areas. That term embraces a great deal of ocean. It also includes a great deal of land. The Pacific is not a lonely ocean, as is the Atlantic. It is studded with constellations of islands. As we shall see, that was an important factor in carrying the American flag across the Pacific to Tokyo.

When Japan touched off its major war plans on December 7, 1941, it set forces in motion that spread northward to the Aleutians, eastward to Hawaii, to the south and southwest throughout Malaysia. For the first 6 months of the war the United Nations had to fight a retreating battle, until the perimeter of Japanese expansion was established at the battles of the Coral Sea and Midway. Thereafter the pattern of warfare saw the Japanese effort radiating outward from the home islands, while ours was a converging fight inward upon Japan in ever-concentrating strength.

Remember, the Pacific is so large an ocean that it could engulf all the land masses of the world and still leave a lot of water. It was necessary to place segments of the great, fan-shaped battle front under different, but coordinated, commands, according to the nature of the territory to be recaptured. My command was the Pacific Ocean areas, in which naval operations had to predominate. The operations under my command, however, were always strategically, and often tactically, related to those in the adjoining Southwest Pacific theater commanded by Gen. Douglas MacArthur, the China-Burma theater, and the East Indies station of the Royal Navy.

I shall not attempt to review all these operations. They are generally familiar to you all. I shall confine myself, rather, to some details of the final course of the war in my area of command.

You will remember that early in the last quarter of 1944 the converging forces under General MacArthur's and my own command were approaching the junction point at Leyte, in the southeast Philippines. In both theaters, large concentrations of Japanese forces had been isolated and neutralized on scores of islands by what has been described as leap-frog tactics. That is a picturesque if inexact description of the strategy of engulfment, of going over and around Japanese strongholds to pinch them off and let them wither on the broken vine of communications.

In the beginning of 1945, just about a year ago, we were in a position where we could choose both the time and place of attack. Your naval forces had brought about the capture of Guam, Saipan, and Tinian in the Mariana Islands. They had also acquired bases in Ulithi and the western Carolinas which neutralized such Japanese strongholds as Truk. We could base, stage, or support forces to strike in any direction, including the Japanese homeland. American seapower had won control of the Pacific to within 500 miles of the Japanese coast and was beginning to penetrate the China Seas.

Indeed, our submarines were virtually in control of those latter waters. The shipping lanes upon which Japan depended to feed her war machine with the loot of Asia were constantly patrolled by our submarines. Japanese tankers, troop ships, and merchantmen were being decimated.

Japan, in consequence, was on short rations. Human beings can accommodate themselves to a starvation diet for a long while, but they can't put ships and guns and airplanes on short rations. Here then is a historic demonstration of sea power. Everywhere the enemy fleet dared expose itself, it met superior forces and was driven farther back with irreparable losses. Our carrier-borne aircraft, and now from captured territory the big Army bombers, were searching out the enemy's ships and raining fire on his industry. His pipe lines of raw materials going into Japan, and processed materials outward bound, were punctured and soon to be cut.

We know now, from interviews with high-ranking Japanese officers and captured documents, that Japan had lost all hope of victory by the dawn of 1945. The most they could hope for was a stalemate. They over-optimistically based that hope on the fact that they had a large reserve of aircraft and that their ground armies were largely intact, well-armed, and of high morale. The war ended with those armies still intact, stunned by the Emperor's surrender. You see, they did not comprehend sea power. They had airplanes by the thousands, but no fuel to raise them from the ground because your Navy had severed Japan's oil lines. The remaining warships had not enough fuel to make a last desperate sortie.

But in January of 1945 we did not know that the war would be over before the middle of August. Maybe we did not ourselves know how good we were. Perhaps it was only sound caution. Anyhow, the central fact of January's operations was the invasion of Luzon, major Philippine island, by the combined forces under General MacArthur. The Pacific Fleet was heavily committed either in combat or transport, or as covering forces. In the latter function the fast carrier task force of the Third Fleet not only neutralized—and kept neutralized—enemy air strength in Formosa and northern Luzon but also made a sweep of the South China Sea.

This sweep resulted in the sinking of 40 enemy ships totaling 127,000 tons and damage to 22 ships displacing 70,000 tons. One hundred and eleven enemy planes were destroyed. The Third Fleet forces then demonstrated the impunity with which American sea power could operate by transiting the narrow straits between the Philippines and Formosa to attack Formosa, Hainan Island, and Hong Kong on January 15–16. The total damage done the enemy by these Third Fleet operations was 91 ships, totaling 293,900 tons sunk, 99 ships totaling 323,100 tons damaged, and 615 aircraft destroyed.

But there was more achieved than this material damage. From this time on no area outside of the immediate Japanese homeland and northern China was safe from assault by our carrier force. Even Japan itself was to feel the weight of carrier raids during the next month. The weakness of enemy air reaction in the entire region of the China Sea demonstrated that the area was wide open for future attack. Further, these successes were achieved in almost continuous bad weather. Once more our seagoing men had shown they could remain at sea and fight under the most adverse conditions. How they were able to do this is a thrilling story in itself, and presently, I shall relate it.

These operations could not be without cost to ourselves. The U. S. S. *Ticonderoga* took heavy damage from suicide attacks southeast of Formosa, and other ships suffered minor damage.

In January land-based aircraft from the Marianas continued heavy assaults on Iwo Jima and irregular and smaller attacks on the Bonin Islands. Likewise our surface forces twice bombarded Iwo Jima and the Bonins. Submarine interdiction continued at its successful high level. Our underwater forces sank 193,300 tons and damaged 95,850 tons of enemy shipping during this month.

In the latter part of January land-based aircraft began to operate effectively in the Philippines and the forces of the Pacific Fleet were freed for use in operations which had long been delayed. Heavy strikes on the main islands of Japan had been scheduled in the latter part of 1944 but had been postponed to support the Philippines situation. These plans were now put back into a place of first priority.

From this point forward until July, the fast carrier task force and related units gave a seagoing performance which, for endurance, ability to absorb punishment without deflection from the goal, and damage done to the enemy has no parallel in naval history. These operations came in three phases:

1. Support of the invasion of Iwo Jima.
2. Support of the invasion of Okinawa.
3. Preparation for final operations against Japan.

Being the largest ocean area over which single actions have ever been fought, the scope of this battle zone is difficult to appreciate without having been in it. It is hard to explain the difficulties involved in a battle whose interdependent movements take place simultaneously hundreds of miles apart. Yet that is precisely what occurred in each of the actions in 1945.

Early in February, heavy fleet forces began to bear down upon Iwo Jima. A group of heavy warships moved toward Iwo Jima to concentrate their huge firing power on the island. From the Marianas the heavy bombers of the Army, Navy, and Marine Corps shuttled in and out on daily schedules. And somewhere off Iwo Jima, within aerial striking distance, escort carriers of the Pacific Fleet were assembling.

All this activity burst upon the Japanese on February 16. On that date the fast carrier task force of the Fifth Fleet sent its aircraft against the mainland of Japan to destroy more than 500 enemy planes in 2 days of offensive action. Simultaneously, battleships, cruisers, and lesser units of the Pacific Fleet brought Iwo Jima under a bombardment which was not to cease until there were no targets left. And naval aircraft from the escort carriers, with land-based Army, Navy, and Marine planes, raked Iwo Jima fore and aft, day after day.

On February 19 began the land action which will be remembered as long as the war is remembered. The Fourth and Fifth Marine Divisions invaded the island, to be followed by elements of the Third Marine Division. It was a battle which lasted until the latter half of March. When Iwo Jima was won it gave the United States forces in the Pacific safety from air attacks on Marianas bases, an advance base and emergency landing field for heavy bombers and fighters operating against Japan, and a base to secure the flank of our routes westward.

While this operation was proceeding, our fast carrier task forces performed the dual function of immobilizing enemy air strength and preparing the way for the attack on the Okinawa group. Planes of the force struck the Tokyo area on February 25 and ranged southward to strike Okinawa and other islands of the Ryukyus on March 1. In the meantime, the B–29's of the Twentieth Air Force were making their devastating raids on Japanese cities.

This was truly the rolling offensive which we had begun in the Gilbert Islands in November 1943. Now it was about to reach its phase of greatest effect.

On March 18 and 19 our carrier task forces struck Kyushu airfields and inland sea bases, including the large naval establishment at Kure. Its 2-day strike cost the enemy more than 550 aircraft and resulted in sufficient damage to the remnants of the Japanese Fleet to reduce the possibility of serious surface interference in the impending Okinawa operations. On March 24 the fast battleships bombarded the coastlines of the Ryukyus and 2 days later Army troops began to make the preliminary landings in Kerama Retto. And on that date the Japanese learned that forces of the British Pacific Fleet, operating with the Fifth Fleet, were in action. British planes attacked the Sakishima group in the Ryukyus.

On March 28 the old battleships, which had long served so usefully in preinvasion bombardment, appeared off the coast of Okinawa and the enemy knew that his time there had come.

On April 1 the largest amphibious operation of the Pacific war began when the Tenth Army, composed of the Twenty-fourth Army Corps (Seventh, Twenty-seventh, Seventy-seventh, and Ninety-sixth Infantry Divisions) and the Marine Third Amphibious Corps (First Marine Division, Sixth Marine Division, and elements of the Second Marine Division) struck the western beaches of Okinawa. From this day until June 21, when organized resistance was broken, all operations in the Pacific Ocean areas centered on the Okinawa operation.

The battle was costly both to ourselves and the enemy. When it was over, the Japanese had lost about 4,000 aircraft. We had lost 36 ships sunk and 368 damaged, all of the ships sunk being light units. They had lost their most powerful battleship and most of the escorting force with it had been sunk or damaged. They had lost their 32d Army and more than 100,000 men. They had lost and we had won an island base large enough

to support large forces of Army, Navy, and Marine fighters, medium bombers, and heavy bombers. An island which provided seaplane bases for our search aircraft. An island whose harbors provided a repair base for our ships, a major staging base. A base which neutralized Formosa and nearby China, and put us on the threshold of Japan's front door.

The naval power of the United States had made good its promise to drive right through the central Pacific.

When land-based air on Okinawa became sufficiently strong in late June to protect our establishments, our task forces withdrew for rest and repair. Then began the memorable operations against the main islands of Japan by the Third Fleet, culminating in our battleships, cruisers, and destroyers shelling the coastlines of Honshu at Hokkaido at will.

I am convinced that the complete impunity with which the Pacific Fleet pounded Japan at pointblank range was the decisive factor in forcing the Japanese to ask the Russians to approach us for peace proposals in July.

Meanwhile, aircraft from our new fields in the Okinawa group were daily shuttling back and forth over Kyushu and Shokoku, and B–29's of the Twentieth Air Force were fire bombing major Japanese cities.

The pace and the fury were mounting and the Government of Japan, as its official spokesmen have now admitted, were looking for a way to end the war. At this point the Potsdam ultimatum was delivered and the Japanese knew their choice.

They were debating that choice when the atomic bomb fell on Hiroshima; they were debating that choice when the Soviet Union entered the war; they were debating that choice when our ships shelled installations within less than 100 miles of Tokyo.

And the nation which had been so arrogant asked for peace. Japan accepted our surrender terms and laid down her arms on August 15.

Symbolically, the planes of our fleet were over Japan at the hour the surrender was accepted. Our carrier pilots who had looked through the air sights at targets from Tarawa to Tokyo leveled off upon orders of the Third Fleet commander and flew back to the force. It was the only time the officers and men of the Pacific Fleet and Pacific Ocean areas failed to complete an assigned mission.

The atomic bomb merely hastened a process already reaching an inevitable conclusion, but I would have you remember that even that bomb was delivered by sea power to an airplane on an island captured by sea power, which flew with fuel supplied by sea power.

So, you may ask, What is sea power? We know how it works, what it is.

The factors in successful sea power are varied and complex. They arise from the fundamentals of our national strength. They include not only the weapons themselves, the ships and guns and airplanes, but the training and the talents to employ them successfully. As I never tire of pointing out, because I realize so few understand it, sea power has its roots deep in the core of our country. They draw nourishment from the farms and ranches that feed our men. They derive from our mines, our logging camps, our mills and factories. There is scarcely a village in the geographical center of the continent which does not contribute in some way to American sea power. This resource of strength was demonstrated by the manpower and industrial power which enabled your Navy to drive the enemy back upon his own shores, to throttle him, starve him, and literally to pin him to the shelltorn soil.

The way we used that productive strength was as vital as the fact of production. President Roosevelt, the two Secretaries of War and the Navy, and the Joint Chiefs of Staff must be given prime credit for the coordination of productivity at home and its expenditure on the enemy. But in the final application of organized American power, sea and land and air power, industrial and military, it was the strategy of duplicate command and servicing at sea that concentrated the whole effort. Duplicate command and servicing at sea brought to naval warfare in effect the principles of industrial mass production, the industrial production line.

Here is how they worked. Servicing at sea meant that our warships were physically able to operate continuously away from base—continuously. From all quarters of the country the railroads brought to the docksides of California, Oregon, and Washington the products of America's farms, factories, and oil fields.

There the matériel was loaded on ships which steamed in continuous procession to the forward combat areas of the Pacific. They met our fighting ships at sea and pumped them full of fuel oil, replenished their lockers with food and ammunition. The mail was delivered at sea. Mobile repair units patched up our damaged ships at sea, or in the lagoons of captured islands. The sick and wounded were transferred at sea to home-bound ships. Thus the maximum use of every ship and airplane was employed. They could be kept going on the only spot where fighting equipment is any good—where the fighting is. Servicing at sea doubled and tripled the effectiveness of your fleet.

It was a pace, however, that only inanimate machines could endure. The hands and brains that employed the machines had to have rest—a little rest—and time to study and plan new operations. That is where the principle of duplicate commands enters.

Now, you cannot plan an operation while conducting one, any more than you can whistle while eating soda crackers. And so we had one fleet commander and his staff at sea conducting an operation while another commander and his staff were ashore planning the next battle in which the identical ships would be employed. Admiral Halsey would be fighting the ships while Admiral Spruance was at Pearl Harbor or Guam working on plans. When Halsey came back, his mission accomplished, Spruance sailed forth. You see, we reversed the old stage-coach procedure and instead of changing horses we changed drivers. It had the Japanese crazy. They thought we had two identical fleets alternating at sea. What we had were alternating commands and an unbroken line of constant supply. That, ladies and gentlemen, is sea power in the application.

Those sources of supply were not exclusively material and physical. They were also intellectual. The all-over planning for the coordination of warfare on a global scale was the responsibility of the Joint Chiefs of Staff and the Combined Chiefs of Staff, who represented in the degree of their interest the ideas of the several members of the United Nations.

The whole war had to be fought as a whole. The effect of an operation in Europe or Africa had to be weighed in terms of effect upon the forces engaged in the Pacific. The directives I received from the Joint Chiefs were necessarily and pointedly brief. In other words, the directives gave the broad description of the strategy. The refinement and details of strategy and of tactics were of local responsibility.

Here the joint staff of the Pacific Fleet and the Pacific Ocean areas began to function. The boldness and imagination shown by this staff in execution of broad directives of strategy drove the war ahead at swift pace.

Now, joint staff work means just that—the joint workings of all fighting elements. On my staff I had not only Navy men and marines, but soldiers and Army airmen. The chief of my planning section was a Navy man, with an Army deputy and a marine and an Army Air Forces representative respectively in line. Chief of my intelligence was an Army officer, with a Navy man next in command. Operations was under a Navy officer, whose deputy was an Army officer, with the marines and Army Air to assist. Logistics, which is actually the science of the procurement of supplies, was under an Army officer, with Navy and marine assistants. All communications were under a naval officer, deputized by a marine and an Army man. Army, Navy, and marines, Air Forces and Coast Guard, they all not only worked together but they ate together and slept together.

Together we went to work to translate the directives from Washington into a battle plan, preparing an estimate of all possibilities, completing virtually all the intelligence work and most of the logistics. Then the plans were turned over to the alternate commander of the Third or Fifth Fleet for completion, discussion, and execution. Their execution is a matter of record. With boldness of planning went boldness of execution. It was teamwork such as has never before existed.

The enemy had no such teamwork. Germany, without concept of sea power, let the Wehrmacht dominate. Admiral Doenitz tells us now that the German Navy had plans for supersubmarines before the war which could fight submerged for 70 days and cruise around the world, but the Army would not grant priorities for their building. We asked the Japanese why they did not use their submarines against our supply lines. Their chief of naval operations replies that the Army insisted the submarines be used to carry supplies to the Army garrisons who were being starved by our own submarine warfare against the Jap surface ships.

But on our fighting teams, General Eisenhower and General MacArthur sought the counsel and advice of naval subordinates, even as I had Army and Army Air Force men on my team. The Joint Chiefs of Staff was a team of equals, where Army, Navy, and Air Forces met, planned, discussed, weighed, and made decisions based on teamwork, free from domination of any one service. And of the teamwork that existed on the home front, I have profound admiration and gratitude.

The war ended only 5 months ago. It already seems remote to most of us. But in that short time the demobilization program has reduced our victorious fleet almost to impotency. Only the fact that nobody threatens our security today allows me to contemplate the state of our Navy with some degree of equanimity. Inspired by the record of that Navy in keeping war from America and making it possible to defeat our enemies on their own soil, I hope our present weakness is but transitory. I hope it will never again become a habit. A few days ago I described to the managing editors of the Associated Press newspapers my concept of a sturdy, independent American sea power as a guarantor of peace—not only peace for the United States but for the world. If I can sum up that speech for you in one sentence, I believe that no second Tojo or imitator of Hitler will start a new war of world conquest if he must confront an already prepared United States, and for a maritime nation there is no defense superior to an efficient combination of sea and air power.

My attempt tonight has been to give you both perspective and focus on the achievement of our victory, particularly in the Pacific. I have tried to give you a look at the progress and the effect of combat as I saw it myself. And now I invite you actually to look upon some of the scenes of the war at sea, in motion pictures. I am most grateful to the National Geographic Society for this opportunity to report to you all, "Mission accomplished."

Misleading Propaganda

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1946

Mr. HOFFMAN. Mr. Speaker, during the recent strikes and before the general public heard a great deal about a substandard wage, excessive corporation profits, the cost of living, the ability to pay, unions and corporations through page advertisements gave figures and what they called facts, but, because of conflicting statements, many of us were unable to learn the truth. As an illustration there was printed in the Washington Post of January 22, 1946, the following:

WHY BILL MASTRIANI IS ON STRIKE

"I've worked for GE in Schenectady for 23 years. Have a wife and two small kids to support. Even during the war we couldn't live decently on what GE pays because of the rise in prices. And now the company has cut us down until we can't live on what we're making. I work as an aluminum molder but the rates are so low my pay is $38.40 [1] for a full week's work. I'm on strike for a $2-a-day increase, for a living wage."

This represents Bill Mastriani's pay for 1 week's work (for services period ending December 13, 1945):

Gross earnings	$23.04
Deductions:	
Federal withholding tax	.30
Additional insurance	.27
Additional pension	.92
St. Clare Hospital	.50
Net pay	21.05

WAGES

The 200,000 men and women of the General Electric Co., Westinghouse Corp., and General Motors (electrical division) are on strike today for a living wage.

The average General Electric and Westinghouse employee is paid less than $40 a week wages (before tax and other deductions).

General Electric and Westinghouse pay their vast number of women employees wages averaging less than $26 for a full week's work.

General Motors employees—earning less than a living wage—are on strike to win their $2-a-day wage demand.

For 4 months up to the day before the strike, Westinghouse employees submitted their request for a $2-a-day wage increase. Yet Westinghouse refuses to make any wage offer whatsoever and asks, "What is there to negotiate?"

For 3 months General Electric employees submitted similar wage proposals. But it was not until they voted overwhelmingly for strike action in a Government poll that General Electric submitted its inadequate 10-percent offer, conditioned on speeding up its employees and cutting wage rates.

Despite the urgent needs of their employees and the sharp rise in the cost of living, none of these companies has bargained in good faith with its employees. Both have canceled their union contract in an attempt to destroy the union.

General Electric, Westinghouse, and General Motors—immensely wealthy corporations—can pay the $2-a-day wage increase asked by their employees.

Low wages can only lead to hard times, unemployment, and depression.

UNITED ELECTRICAL, RADIO AND MACHINE WORKERS OF AMERICA, CIO,
ALBERT J. FITZGERALD, *General President.*
JULIUS EMSPAK,
General Secretary-Treasurer.
JAMES J. MATLES,
Director of Organization.
NEW YORK, N. Y.

Then to my office under date of February 15, 1946, from General Electric came the following memorandum on the Washington Post advertisement, which reads as follows:

MEMORANDUM ON WASHINGTON POST ADVERTISEMENT

In the attached advertisement sponsored by the UERMWA, a GE worker says that he is on strike for a living wage. He says "Even during the war we couldn't live decently on what GE paid." To support his statement, a copy of his pay check for the week ending December 13, 1945, is published in the advertisement.

Here are the facts:

For the four war years he was paid the following amounts by General Electric:

1942	$3,138.76
1943	3,111.75
1944	2,833.74
1945	3,364.82

He was paid these amounts in spite of the fact that he spent several hours a week on union activities for which he was presumably paid additional amounts by the union. This time, taken from his regular working schedule because he is a union representative, amounted to 227 hours in 1945—more than 4 hours a week.

During the week for which his pay check is shown, he worked for General Electric only 24 hours out of his regular 40-hour working schedule. He worked 15.3 hours for the union.

This is what happened to the employee named in this advertisement during the reconversion period following the end of the war. His wartime job disappeared as a result of contract cancellations about November 12, 1945. As was his right under the union contract as a union representative, he declined a transfer to another department on a piece-work job for which he was experienced, which was offered him on December 20, and on which the average earnings of other experienced men exceeded $1.25 an hour. Instead he took the best job available in his old department—tool room mechanic, class B, a job for which he had little previous experience. The breaking-in rate of this job was 88 cents an hour, but he was paid the full job rate of 96 cents an hour as a result of negotiations with the union.

On January 8, 1946, 2 weeks before the union advertisement was published, he accepted an assignment in another department. This assignment is on spot welding, a piecerate job. The recent average earnings of 12 others on this work is $1.32 an hour. So, if he has the same ability, he will be earning $52.80 for a 40-hour week. With the 10 percent wage increase offered our employees, this would be increased to $58.06 a week, a rate of more than $3,000 a year, plus profit sharing, paid vacations, insurance, and other benefits, and an opportunity to further increase his earnings by overtime work.

Apparently Bill Mastriani, in the ad paid for by his union, told the truth when he wrote his pay for one week's work for General Electric was $23.04, but it is just as evident that Bill either forgot or deliberately neglected to state that during the week he worked but 24 hours for General Electric while working 13.3 hours for the union.

When I read Bill's ad, I felt mighty sympathetic and thought General Electric was most unfair to pay either so low a wage or to provide so little employment for an old employee. I don't know now whether Bill gets adequate pay for the work he does, but I do have the figures from General Electric to show that he had an opportunity for a job at $1.25 per hour and they state that if he worked 40 hours a week on the job that is open to him and if he has ability equal to the average, he would be getting $52.80 for 40 hours' work and that with the recent increase, he would be receiving $58.06 for 40 hours' work.

Whether that is enough or whether it is too little for what he does, I have no way of knowing, but I do know that it is a whole lot more than the $23.04 which his ad led me to believe was all he could make during 1 week.

I do know that his ad, when read with the explanation of General Electric, will make me look with not a little suspicion on other ads put out by the union.

[1] Combined GE-Westinghouse wartime profits alone: $424,000,000. Combined GE-Westinghouse reserves: $398,000,000.

The Loan in Congress

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial:

THE LOAN IN CONGRESS

President Truman has at last sent the Keynes-Clayton British loan agreement to Congress for action.

It is now up to Congress to decide whether the United States is to make a gift to Great Britain of $30,900,000,000.

This figure is composed as follows:

Twenty-five billion dollars of lend-lease balances is forgiven by the United States.

Three billion seven hundred fifty million dollars is to be lent to England outright.

One billion five hundred million dollars approximate interest charges paid by the United States over and above the interest charges paid by the British.

Six hundred fifty million dollars loaned to purchase American surplus war stocks now in Great Britain from the United States.

Actual cash in this loan transaction is $3,750,000,000. This amount the British do not have to spend in the United States. They can spend it anywhere they please.

Whatever Congress does about this loan fixes a pattern which must, if this country is not to show preferences, be applied to all our allies. It certainly will apply to Soviet Russia, China, France, Poland, Greece, and lots of other countries.

It is a device for siphoning off the wealth, the raw materials, the food supplies and the productive labor of the United States.

It is making America pay for the war in peace as this country had been paying for it in war.

The President's most telling argument in favor of this loan is:

"The most important of these facts is that the United Kingdom as a result of the war must continue for a long period many of its emergency wartime financial controls unless it obtains additional working capital."

But since VJ-day Great Britain has imposed even more stringent controls.

Giving Winston Churchill the Order of the Boot, the British elected a labor government, which entered upon a career of nationalization, which is a fancy word for socialism. They plan to socialize their principal industries and they plan to do it with American money.

President Truman is honest in his statement that if socialism fails in England, they can default on their interest payments to America. This is what he says:

"We have recognized that conditions may exist temporarily during such a long period of time which would make the payment of interest on such a large amount difficult if not impossible. Accordingly provision has been made for the waiver of interest by the United States Government * * * it is not to our advantage to press for payment of interest when payment is impossible and thus force default and a crushing of international economic relations."

In plain English, the United States holds the bag. If the great British experiment with socialism succeeds, 5 years after the loan is made they begin to pay interest. If their experiment in socialism fails, the United States waives the interest.

This is a monument to vulgar hypocrisy. No matter how you read the agreement, the United States is making a gift of $30,900,000,000 to our cousins across the seas. We made a similar but smaller gift after the last war.

Why not call it a gift? Why not wrap it in tinselled paper, with red and green ribbons, and label it "From Uncle Sam to John Bull, via Santa Claus."

The Ultimate Basis of World Brotherhood

EXTENSION OF REMARKS

OF

HON. CHESTER H. GROSS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a sermon by a young country preacher, the pastor of the Quickel's Lutheran Charge, the Reverend Emmanuel James Hoover, of York, Pa. His sermon, entitled "The Ultimate Basis of World Brotherhood," has been published in the February issue of Pulpit magazine, and I believe it should be more widely read. It follows:

THE ULTIMATE BASIS OF WORLD BROTHERHOOD

(By Emmanuel J. Hoover)

"Marvel not, my brethren, if the world hate you. We know that we have passed from death unto life, because we love the brethren. He that loveth not his brother abideth in death. Whosoever hateth his brother is a murderer: and ye know that no murderer hath eternal life abiding in him. Hereby perceive we the love of God, because he laid down his life for us; and we ought to lay down our lives for the brethren. But whoso hath this world's goods, and seeth his brother in need, and shutteth up his heart of compassion from him, how dwelleth the love of God in him? My little children, let us not love in word, neither in tongue, but in deed and in truth." (I John 3: 13-18.)

Were a visitor from the planet Mars to visit our earth this morning, he would inquiringly wonder what we mean by the term "brother." He would listen to our dictionary definition of the term, but he would look almost in vain to see the genuine conditions of the term at work in human living. He would find this same condition to be true in regard to many of the other noble words which we glibly take for granted, but for whose incorporation into daily living we do so little. Hence our visitor from Mars would return to his home planet more bewildered and confused than when he first set foot upon the earth.

Brotherhood is the crying need of our day; it has been the crying need of every age in mankind's progress. But the necessity for brotherhood is crying a thousand times more loudly today than in any preceding age. And it is the Christian leaven, the church, which alone can supply the tenets for the kind of brotherhood which will make for peace and order and continual alinement in the world. Conditions have so widely separated people in our day, and material progress has so closely drawn people together that we must ask the same question which Malachi asked his people 2,500 years ago: "Have we not all one father? Hath not one God created us all? Why then do we deal treacherously, every man against his brother, profaning the covenant of our fathers?"

Had our visitor from Mars visited the earth during the first century of our Christian era and had he met the writer of the First Epistle of John, he would have returned to his distant planet with a picture in his mind of at least one man who believed deeply in the urgent necessity of the practice of brotherhood. While our textual passage is directed mainly to the Christians of the first and second generations, it has a vital message for our entire world and civilization in this day of chaos and transition. This message from John gives to us the cardinal principles on which Christian and world brotherhood alone can be successfully constructed.

I

In the first place, John says that the citizens of the world must learn to live together as brethren in the practice of love. These are his words: "Marvel not, my brethren, if the world hate you. We know that we have passed from death unto life, because we love the brethren. He that loveth not his brother abideth in death." The terrible necessity of love is the foundation stone of all genuine brotherhood. Love is an old, old theme, but an ever new and necessary principle of life. Love is the marvelous factor which holds the world together in whatever semblance of brotherhood there may now exist in the world.

Throughout the New Testament the Christian is continually admonished to the practice of love in daily living. The teachings of Christ are unique in the emphasis they place on love, revealing the depths of God's love which becomes the example of man's love of man. Here the New Testament makes its strongest demands upon men: "If a man say I love God, and hateth his brother, that man is a liar." Or, again, hear that statement of the Master himself: "How canst thou say to thy brother: Brother, let me pull out the mote in thine eye, when, behold, there is a beam in thine own eye? Thou hypocrite!" Here, then, we find no evasion whatsoever of the requirement of love in the life of the Christian believer; here is presented a demand which has no loopholes, a demand which is unalterably expected of true followers of Christ, no matter in what age.

It is the Christian who alone has the great secret of life, and if our world is ever to achieve continual peace and brotherhood it must follow the Christian way of achieving this priceless possession. The individual Christian must then say to the world, as Christ says to the individual Christian: "Follow Me; follow Me in the daily practice of love for My fellowmen." The nations of the world and the rulers of the nations need to learn the urgent necessity of injecting the practice of love into mankind's dealings with one another. So long as love does not warm the hearts of the rulers of the world, so long will the world remain in the estate of death. But when once nations and the people thereof learn to love one another, then indeed will the world pass from death unto life; and the nation which refuses to love its brother nation will but continue to abide in death. And abiding in the estate of death will mean for that nation naught but sorrow and pain, struggle and conflict, and in the end hopeless annihilation.

Kagawa has called love the first law of life, and I believe that it is out of that same foun of inspiration that our epistle writer begins with love. Love must always come first, but it must be buttressed and undergirded by other fundamentals. Our world, then, in the building of brotherhood must begin with the practice of love. And in beginning there, we will be but following the example of Christ, of whom John Oxenham sings:

"In Christ there is no east or west,
In Him no south or north;
But one great fellowship of love
Throughout the whole wide earth."

II

In the second place, John says that we must learn to live together as brethren in the practice of forgiveness. These are his words: "Whoso hateth his brother [which is refusing to forgive his brother] is a murderer, and ye know that no murderer hath eternal life abiding in him." Or, again, hear that statement of the Master: "If thou bringest thy gift to the altar, and there rememberest that thy brother hath aught against thee, leave there thy gift before the altar; and go thy way. First be reconciled to thy brother, and then come and offer thy gift." Here again we see no evasion whatsoever of the New Testament teaching that Christians who would live together in brotherhood must practice forgiveness. So strong is this emphasis upon the necessity of forgiveness among men in the New Testament that it becomes the prelude to God's forgiveness. "If ye from your hearts forgive not every man his trespasses, neither will your Heavenly Father forgive you your trespasses." The practice of forgiveness is, then, the second step of the Christian in the way of living at peace with all men.

By the same principle, forgiveness becomes the second step which the nations of the world must take if they are to live at peace with each other. No time in human history has afforded more incentive for the practice of revenge than our present moment in world history; but that fact makes the necessity of our practice of forgiveness all the more urgent. This world goes forward, not on the basis of vengeance among nations, but upon the foundation of mutual helpfulness and intelligent good will and mutual helpfulness and intelligent good will always begin with genuine forgiveness. The Christian church needs to say loudly today that we can never achieve a just and lasting peace until the nations and the rulers of the world learn the Christian experience of forgiveness. And that demand is especially incumbent upon those who have won the military victory.

The story is told that during the First World War, in the ruins of a little town near the Yser River in Belgium, every night two little Belgian children crept out to say their prayers at a wayside shrine. One night as Jacques and Marcelle were out there praying the Lord's Prayer, Jacques stopped praying when they came to the fifth petition: "And forgive us our trespasses as we forgive those that trespass against us." He stopped and cried out in sobs: "I cannot forgive the Germans; I cannot forgive the Germans." But just then a tall figure stepped out from behind the ruins and kneeling down beside Jacques he said: "I will finish your prayer for you—forgive us our trespasses as we forgive those who trespass against us." Then,

rising from prayer, he disappeared into the darkness, but not before the sentry on guard nearby had recognized him as King Albert of the Belgians. Such a spirit on the part of the world's rulers would do more for brotherhood than all armies and navies.

Forgiveness requires that, insofar as possible, we dismiss from our minds and intentions the tendency of the human heart to repay evil with evil. But in this world of "likes" and "opposites" we find that it is always the "opposites" which win the victory. Darkness never drives out darkness; it takes light to do that! Ignorance never drives out ignorance; it takes intelligence and education to do that! Poverty never drives out poverty; it takes charity and social action to do that! So, with evil: evil never drives out evil; goodness alone can do that! And, you see, forgiveness always requires that we employ goodness, kindness, charity, and mutual helpfulness to destroy whatever evil there may be in the world which disrupts genuine brotherhood. And when we begin to practice forgiveness in such a genuine spirit as that, our world will heartily join with John Addington Symonds in the foretelling of a better day:

"These things shall be: a loftier race
Than e'er the world hath known, shall rise
With flame of freedom in their souls,
And light of knowledge in their eyes.

"They shall be gentle, brave and strong,
To spill no drop of blood, but dare
All that may plant man's lordship firm
On earth, and fire, and sea and air.

"Nation with nation, land with land,
Unarmed shall live as comrades free;
In every heart and brain shall throb
The pulse of one fraternity.

"New arts shall bloom of loftier mold,
And mightier music fill the skies;
And every life shall be a song,
When all the earth is paradise."

III

In the third place, John says that we must learn to live together as brethren in the practice of service to one another. These are his words: "Hereby perceive we the love of God, because He laid down His life for us, and we ought to lay down our lives for the brethren." To lay down our lives for the brethren is to render the highest possible service to our fellow men. Such service is but the outpouring of a great love. Jesus said: "Greater love hath no man than this: that a man lay down his life for his friends." And again, it was Jesus Himself who told us that He was among us as one who served. His life was service incarnate. His most beautiful parable of the Good Samaritan became the theme song of all His days, and He forever kept reminding His disciples that the man who liveth unto himself, dieth unto himself. St. Paul and the other apostles caught this spirit of Christ as they exhorted the Christians to be of service: "Bear ye one another's burdens, and so fulfill the whole will and law of Christ."

Even the most casual reading of the New Testament will not let us escape the conclusion that one of the great demands upon the Christian is to be of service in the world. Put into simple words it is this: If God has served us, should we not serve one another? And our service should not be limited, but rather boundless—even to the point of laying down of life itself. Such strong words coming from the New Testament make the necessity of serving a fundamental requirement among believers. The story of the lives of great saints has always been one of service; the greater the saint, the greater the service which he rendered. From Stephen to Father Damien on the Isle of Molaki; from St. Paul to Martin Luther and on to Kaj Munk—the story of the saints of all ages is the story of men and women who put no limitation on the service which they could render their fellow men and their God.

Thus it is that the Christian saints from generation to generation have introduced into this world what little of good will and peace there is here. They are our pioneers, telling us in the words of the Master that he who would be chief among us must be the servant of all. The rendering of service, then, is the third fundamental tenet of the Christian's philosophy of a peaceful life.

And now again, in the establishing of a peaceful world, the nations have no better blueprint to consult than the one which includes the genuine element of real service. Any other blueprint will reveal in the end that the house of peace which is built upon other specifications will but collapse for want of this spiritual buttress of service. Our world desperately needes a revival of the performance of the small acts of neighborly kindness which will issue in great deeds of international cooperation. The call for genuine Christian service is great today, and woe unto the nation or the world which does not heed that call.

This devastating war through which we have passed has made us greatly aware of the fact that our world is but a medium-sized community and neighborhood. We see more clearly than ever before that with each passing generation and its technological improvements the demands of the Christian faith become all the more imperative and fundamental. For the salvation of the world in a material sense, these Christian demands are more necessary now than ever before in the whole history of mankind. Truly Jesus is, as Dr. Horton calls Him, "Our Eternal Contemporary." O nations of the world, refuse to serve one another, and in another decade you will needs again be at one another's throats.

IV

Finally, John says that the practice of sharing is the crowning witness of the genuineness of one's love, of one's forgiveness, and of one's service. These are his words: "But whoso hath this world's goods, and seeth his brother in need, and shutteth up his heart of compassion from him, how dwelleth the love of God in him? My little children, let us not love in word, neither in tongue, but in deed and in truth." Here John is saying that "love in action, or Christian charity, is the final test of the confession of love which the believer may make." As John wrote this marvelous passage of Scripture, he may have been thinking of a beautiful story in which the Master once told of a Samaritan who on the road from Jerusalem to Jericho shares his goods with a foreigner who had been beaten and robbed and had been thrown into the gutter along the road.

Our Master's life was sharing incarnate. Jesus' heart of compassion always prompted Him to share what He had with those who in misfortune evoked the compassion. It is this heart of compassion which is the Christian church's secret as regarding its ministry of mercy, and it is a heart of compassion which makes a Christian more like his Master than any other trait. The true Christian never shuts up his heart of compassion when he sees genuine need, and it is his compassionate heart more than anything else which will bind the Christian to his fellow men and ultimately the fellow men to the Christian.

Here, again, our world could learn much wisdom from the tenets of the Christian way of life. Our world should see the urgency of compassionate hearts in the lives of rulers and nations. The widespread devastation in Europe and Japan is calling for mercy and relief; if the nations who have this world's goods shut up their hearts of compassion as they look out and see the world's need, how can the rule of God, which is the rule of peace, ever come upon the face of the earth? We hear much talk about the world's needs, but we see so very little action. John tells us that we should stop talking about it in words and get busy doing something about it in deeds.

As starvation and devastation face many of our brethren in Europe this winter, the Christian voice in speaking for peace and brotherhood says to gouging and prosperous America, "Share! Share!" And unless we hear that call and obey it we have lost the victory, even though on the surface we may have gained it.

When our world really begins to share in the best sense of the word, we will find that greed and selfishness, which find their zenith in war, will be rendered a decisive and damaging blow.

This, then, is the present-day challenge to our individual Christianity—the challenge to learn to live together as brethren in the practice of love, in the practice of forgiveness, in the practice of service to one another, and in sharing our material possessions with those who have not. But individual Christianity is not an isolated factor which exists all to itself; genuine individual Christianity in its functioning reaches out into all the world and eventually attains a world-wide influence.

Let us pray in these tragic days that that world-wide influence of our Christian living and faith may be felt among the nations of the world before it be forever too late. To that end, let us prayerfully think with the unknown poet who has given us these inspiring lines:

"One knelt within a world of care
And sin, and lifted up his prayer:
'I ask Thee, Lord, for health and power
To meet the duties of each hour;
For peace from care, for daily good,
For life prolonged and filled with good.'
But as he prayed, lo! at his side
Stood the thorn-crowned Christ, and sighed:
'O blind disciple—came I then
To bless the selfishness of men?
My gift is sacrifice; My blood
Was shed for human brotherhood—
Come, leave thy selfish hopes, and see
The birthright of humanity!
Spend and be spent, yearn, suffer, give,
And in thy brethren learn to live.'"

Veterans' Preference in Purchase of Surplus Property

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following bill:

A bill relating to veterans' preference in purchasing surplus property suitable for residential purposes

Be it enacted, etc., That as used in this act—

(a) The term "chairman" means the chairman of the board of directors of the War Assets Corporation or the officer, employee, or agency of the United States to which his functions with respect to surplus residential property are transferred.

(b) The term "residential property" means (1) any property consisting of land, together with any fixtures and improvements thereon, located within the District of Columbia, which is suitable for residential purposes, and (2) any war housing, whether located within or outside of the District of Columbia.

(c) The term "surplus residential property" means residential property which has been determined under section 11 of the Surplus Property Act of 1944, as amended, to be surplus property and is classified by the chairman as suitable for residential purposes.

(d) The term "public notice" means notice given as required by regulations prescribed under section 11 (e) of the Surplus Property Act of 1944, as amended.

(e) The term "veteran" means (1) any individual in the active military or naval service of the United States during the present war, (2) any individual who served in the active military or naval service of the United States on or after September 16, 1940, and prior to the termination of the present war, and who has been discharged or released therefrom under honorable conditions, or (3) any corporation, partnership, firm, association, or other entity either wholly composed of individuals described in clauses (1) and (2) or wholly owned or controlled by such individuals.

(f) The terms "Government agency," "owning agency," "disposal agency," "property," "State," and "war housing" have the same meaning as when used in the Surplus Property Act of 1944, as amended.

SEC. 2. Whenever any surplus residential property is to be disposed of other than to Government agencies or to States or their political subdivisions or instrumentalities as provided in sections 12 and 13 of the Surplus Property Act of 1944, as amended, veterans shall be granted a preference in the purchase of such property over nonveterans in accordance with the provisions of this act.

SEC. 3. Surplus residential property shall be subdivided into the appropriate units in which the Chairman deems it should be disposed of, giving due consideration to the character of the property and the objectives of this act to provide preferences in purchases thereof to veterans.

SEC. 4. (a) Veterans shall be given 60 days after public notice within which to signify in writing an intention to acquire any unit of surplus residential property which is offered for sale. The sales price shall be at the reasonable value in a normal market as determined by an appraisal as provided in section 5.

(b) If after signifying an intention to acquire any unit of surplus residential property a veteran declines to purchase it at the appraised value or is unable to meet the terms of the sale public notice shall be given offering the unit for sale to other veterans at the price fixed by the appraisal. Such public notice shall specify a reasonable time within which any veteran may apply for the purchase of such unit at the price so fixed.

(c) Units of surplus residential property not sold to veterans under subsection (a) or (b) may be disposed of to nonveterans, but no such unit shall be disposed of to any nonveteran upon terms more favorable than the terms under which the unit has been offered to veterans.

(d) The terms of the sale of any unit of surplus residential property to any veteran under subsection (a) or (b) shall include provisions requiring that in the case of any resale of such property during the 10-year period beginning on the date of the sale the property will first be offered for resale to veterans at not more than the reasonable value in the normal market as determined by an appraisal as provided in section 5. Except as provided in this section sales to veterans under this act shall be upon such terms as the Chairman may prescribe.

SEC. 5. Units of surplues residential property offered for sale shall be appraised by an appraiser selected by the disposal agency or other prospective seller and an appraiser selected by the prospective veteran buyer or, in case of disagreement of the two appraisers so selected, by an appraiser jointly selected by the first two appraisers. The determination of what constitutes a reasonable value in a normal market shall be based upon reasonable values during the period beginning January 1, 1937, and ending December 31, 1939.

New York Times Calls Attention to OPA's Counterfeit Remedies for Inflation

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1946

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks I am including an editorial from the New York Times of February 20, 1946, entitled "Mr. Bowles' Remedies."

In this connection, I am constrained to point out what may be the most tragic misuse of power of which the OPA is guilty.

The seemingly irresistible OPA propaganda machine could be used to inform the people of America that only a balanced Budget can truly prevent inflation. In this fashion, OPA could use its power to encourage the President and Congress to balance the Budget.

Instead, the OPA has used its propaganda to conceal the ravages of reckless spending, and to make the people believe that price control prevents inflation.

The New York Times editorial follows:

MR. BOWLES' REMEDIES

Mr. Bowles' introductory statement before the House Banking and Currency Committee began, correctly enough, by declaring that "It would be difficult to exaggerate the gravity of the inflationary crisis we face." Unfortunately, however, he did not once mention during his statement the basic cause of inflation—the increase in money and bank credit in the country since the outbreak of the war and the continued budget deficit and Government financing policies that must in the long run increase that money and bank credit further.

Mr. Bowles did mention some of the contributory causes of high commodity prices. He mentioned the shortage of goods. He correctly pointed out that: "It is, of course, expanding production which will bring us to the point where price, rent, and wage controls can be dropped." He mentioned the unprecedented recent wage increases that the administration has encouraged and approved; but to these he also gave his own approval. Why, then, does he believe that "everywhere the inflationary pressures have reached explosive proportions"? The chief trouble, in his judgment, seems to be psychological. "A speculative fever has taken hold of the country." Mr. Bowles' main concern seems to be the speculators, the profiteers, the "now I want mine" boys.

Obviously, however, these groups are only symptomatic. The speculators and profiteers are always with us. Surely there were as many people in 1932, say, as there are now who would have bought stocks or commodities if they thought they were going up, or businessmen who would have raised their prices if they thought they could get more. What we have to examine are the basic conditions which make it possible for people to sell at such high prices today. "Speculation" is the registering thermometer, accurate or inaccurate; but it is not the temperature itself.

It is because Mr. Bowles' analysis concerns itself with the symptoms of inflation and not with the basic causes that he has nothing to offer but continued drastic controls of the American economy. He asks for a renewal of all the wartime controls "without amendment." But we cannot cure inflation until we deal with its basic causes. These causes lie in governmental financial policy itself. Government wage and price control is a temporary expedient that has such serious potentialities for harm that it should be discontinued at the earliest possible moment. The real task before the administration and Congress is to put the Government's fiscal affairs in order.

The National Housing Program

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, February 21 (legislative day of Friday, January 18), 1946

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD four editorials dealing with the national housing situation, one from the New York Times of February 12, one from the Washington Post, of February 17, one from the Wall Street Journal of February 15, and one from the Baltimore Sun of February 14.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of February 12, 1946]

HOUSING PROGRAM

Wilson Wyatt, Housing Expediter, has prepared a comprehensive program designed to start construction of 700,000 low- and moderate-cost homes by the end of next year. A large proportion of these houses will be prefabricated or assembled on site from prefabricated parts and materials. To achieve this record-breaking production the program aims at a tripling of the number of workers engaged in the building industry and a large expansion in the production of materials. As an integral part of the program Mr. Wyatt proposes the payment of subsidies to obtain a larger supply of materials and to compensate for higher wages; extension of credit by insuring mortgages on low-cost homes to the extent of 90 percent of current costs rather than on long-term economic values; the fixing of prices of old houses, new houses, and housing sites; stimulation of technical research, and extension of authority for priorities and allocations until December 31, 1947.

There can be little quarrel with the desirability of the goal set in this program. There is serious question, however, whether the program can get us there. Although our present problem is too much demand for housing, a further easing of the terms on which houses can be bought, including a lowering of the interest rate, is proposed. Such a development inevitably would accentuate the present unbalance between supply and demand of housing. The same result is bound to follow if we attempt the impossible task of controlling the prices of both new and old houses.

Although the program is designed to prevent a further rise in prices, with its inflationary effects, subsidies of $600,000,000 are proposed. Such subsidies will add to the inflationary pressure already present to a serious degree in our economy. Moreover, by suggesting that "where it is absolutely

necessary, wage increases will be cared for by premium payments in order to stimulate maximum production," the gates would be opened for one of the most dubious of the current inflationary proposals. In this connection, too, it is difficult to understand why the taxpayer must be called upon to subsidize the purchasers of these new homes.

Moreover, this program, with its emphasis upon additional controls, ignores the great incentive provided by profits in overcoming serious shortages. New housing facilities are urgently required. Mr. Wyatt calls this a bold and realistic plan. It would be less bold but more realistic to give greater attention to the role that greater incentives in the form of less Government control can play in overcoming our housing shortage. A relaxation of some price ceilings might add to the individual housing bill, but the alternative of subsidies adds more to the taxpayers' bill and seems less likely to achieve results.

[From the Washington Post of February 17, 1946]

WYATT HOUSING PLAN

Wilson W. Wyatt, the administration's new housing dynamo, has been a very busy man in the last 5 weeks. In that brief period he has outlined a bold, forward-looking, and comprehensive program to meet the housing crisis. "Our sights must be raised," he says, "far above the present target of four or five hundred thousand homes in 1946." He courageously calls for 2,700,000 dwelling units to be put under construction in the next 2 years. In our opinion, this sort of dynamic leadership is necessary to pull the building industry out of its semimoribund state and prepare it for its new responsibilities.

The magnitude of the housing problem stands out with shocking clarity from Mr. Wyatt's report. More than 1,200,000 families were living "doubled up" last October. The situation is rapidly becoming worse because of the great increase in families demanding homes. Even if we can build 3,000,000 homes in 1946 and 1947 through an all-out effort, more than a million families will still have to live with relatives or friends. Here is ample indication that Mr. Wyatt's program is not too ambitious in the number of units sought.

To carry out that program will require some sweeping adjustments. The volume of building materials to be produced in 1947 will have to be increased eightfold over the output of 1945. The present labor force engaged in residential construction will have to be multiplied by three. Of course, there will also have to be an enormous increase in manpower at work in factories producing building materials. Mr. Wyatt's program calls for the revival of many closed plants that used to produce brick, lumber, plumbing fixtures, and so forth, the conversion of war plants to the manufacture of building supplies, and construction of new plants, with special allowance for more rapid-than-usual amortization for tax purposes.

It naturally follows that nonresidential building which is not absolutely necessary will have to be sharply curtailed. The Wyatt program would concentrate most of the Nation's building capacity in the production of housing units to cost not more than $6,000 and rent for not more than $50. It is this type of home that is in greatest demand by returning veterans, and, for that matter, by other families now clamoring for housing within reach of moderate incomes.

The most controversial feature of the Wyatt program is his call for $600,000,000 in subsidies to stimulate the production of building materials and hasten the development of new products. We fully recognize the necessity for stimulation of the building materials industries. That is the first essential of any realistic large-scale home-building program. We are loath, however, to see a heavy draft on the Treasury for this purpose. Payment of such subsidies during the war was justified on the ground that they made possible the production of essential materials in high-cost plants or mines without raising the general price level. We do not think the same argument can be reasonably advanced now for the stimulation of a peacetime building industry.

It is true, of course, that the building industry is suffering from a wartime hangover. But it is not a temporary spurt of construction activity that we need. Large-scale production of houses and many other types of buildings will be necessary for at least 10 years to overcome the shortages accumulated during the war. If this industry is to expand on a sound basis, it must be assured of a reasonable relationship between costs and prices during the period of continued controls, instead of being given a temporary shot in the arm.

Soon or late, moreover, we shall have to abandon the habit of trying to solve every baffling problem by resort to public funds. We cannot indefinitely head off inflation by piling the public debt higher and higher. On the contrary, the continued spending of Government funds to keep prices down spells inflation from a different source. We doubt that Congress will have any sympathy with this effort to postpone the day when price and wage adjustments in the building-materials field will have to be made to put these industries on a par with others which took over their labor in wartime. When those adjustments have been made, controls will certainly have to be maintained to avoid skyrocketing prices. Subsidies would temporarily ease the problem of maintaining controls, but they would also multiply headaches later on and probably jeopardize the long-range slum-clearance plans which necessarily involve the use of public funds.

[From the Wall Street Journal of February 15, 1946]

HOUSING

Some years ago the candidate for governor of a Midwestern State was invited to address a convention of what he understood were real-estate men. He made quite a stirring speech on the merits of each citizen owning his own home. Leaving the hall he discovered that the gathering was one of a special branch of the real-estate business—those in attendance dealt only in apartment houses and multifamily dwellings. Nevertheless, the speech was well received.

In this country anyone who advocates house ownership is on about as safe ground as one who makes a ringing commitment to the Ten Commandments. Anyone who questions the desirability of home ownership is as likely as not to be put in the class with those who would speak disparagingly of the institution of marriage. We intend to take no such risk, but we think it is permissible to say that, like marriage, home ownership ought not to be entered into lightly or hurriedly.

Anyone who has owned a house and some ground knows that along with satisfaction go considerable worry and considerable expense and that one unable to bear that expense may be forced to let his property deteriorate into a considerable financial loss. If a home owner's business makes it necessary for him to move to a new neighborhood or to another part of the country, there is another chance of loss. These are considerations which should be understood because lack of understanding may cause considerable unhappiness.

We now have a housing shortage and to the couple who have tramped from door to door for weeks on end looking for a place to live and four walls look welcome. If within the four walls are some attractive gadgets, if woodwork is freshly painted and floors freshly shellacked, the layout may be more than they can resist. Someone ought to warn them to look carefully. Of all the shoddy that a man can buy, a cheap, jerry-built house threatens the most headaches.

Current publicity from Washington stresses plans to build a large number of individual homes and to concentrate the program on homes costing $6,000. It seems to us, granting the good intentions of the sponsors of the program, that it is permissible to raise questions

There are probably many places in the United States where a small house can be soundly built to sell for $6,000. There are also many places where that cannot be done. Either many people will be disappointed at being unable to buy a house for that figure, or, if houses are built on such a basis, they will be of a character that none will want very much to live in them and will not for any considerable time. Despite the pressing need for housing, caution is in order. If it is not exercised we will within a very few years have vast communities of cheaply built houses, neglected and tumbled-down structures which no one will want and which will represent a loss to the original purchasers.

There also arises the question of whether it is wise to force concentration on small individual-home construction as Washington has done by use of its priority power. Is that the way to provide the maximum of shelter the most quickly? Most individual-home developments are undertaken for sale and not for rental purposes and there is no reason to believe a change is coming. Will not the availability of property for sale and scarcity of property for rent induce purchase by those in no real position to purchase?

Of course, if the Federal program of price fixing and other controls is to be maintained and extended to housing, all the questions raised here are beside the point. If that is done there will be very little building of any kind and very little production generally. We are assuming that such foolishness is near an end, and that production will be allowed to get under way. In such a case, it would be well if Washington would abandon all attempts to make general rules to cover a country where conditions vary widely.

Organized community effort can perhaps be helpful. But in the end the individual who must pay for a house will insist on having the place that suits him.

[From the Baltimore Sun of February 14, 1946]

A LITTLE CRITICISM MIGHT HELP THE HOUSING PLAN

As outlined by its creator, the Housing Expediter, the housing program now getting under way will require premium payments (i. e., subsidies), of $600,000,000, plus $250,000,000 for the relocation and conversion of existing housing. There is no pretense that this $850,000,000 will cover the whole cost to the taxpayers. The unknown factors are too many.

Also, there has been no effort to compute the indirect costs to the ordinary citizen in his capacity as wage earner. Yet there is sufficient evidence in hand to warrant the statement that these indirect costs will be large. In some industries they may be paralyzing.

Part of the plan now being rushed through with so much ballyhoo and so little calm examination calls for the delay or abandonment of all building construction save that of dwelling units. In the original statement of Expediter Wyatt it was said that the only manner in which sufficient manpower could be obtained for carrying out his plan was to divert it from other building projects.

In yesterday's paper the Director of Civilian Production, Mr. John D. Small, carried this thought further. He said that it might be necessary to prohibit the completion of construction projects now under way. And, he added, "anyone who now starts construction runs the risk of not being permitted to finish

the job unless he is able to prove that the project cannot be deferred. * * *"

The connotations of such a policy are almost beyond calculation. Just now, as everyone knows, many industrial concerns have either started or are about to start modernization and enlargement projects. These buildings will provide the housing for new machinery, orders for which are about to be given. The orders will not be given unless the plant accommodation can be provided.

Every factory which is refused permission to modernize or enlarge will automatically defer or cancel its orders for new machinery. Every machinery order canceled will slow down by that much the reconversion of the heavy industry equipped to produce such machinery. It will reduce the employment of the skilled and unskilled workers making that machinery. It will reduce the output of the steel mills, which supply the castings. The point need not be labored. The ramifications are endless.

The worst of it is that the Housing Expediter and his Chief, Mr. Truman, have so far given no indication that they have thought of these ramifications. They have accepted the uncritical approval of a few interested groups—the real-estate men, for instance—as indicating that they have found the panacea for our housing ills.

Mr. Roosevelt, in his callow days, put forward his National Recovery Administration as a similar cure-all. It was foisted upon the country by the same kind of hullabaloo as that we are now hearing. The few persons who insisted upon a realistic examination of its implications were denounced as marplots. The record shows that the marplots had most of the sense on their side.

Federal Aid for School Lunches

EXTENSION OF REMARKS

OF

HON. WILLIAM W. LINK

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mr. LINK. Mr. Speaker, there is before us today an opportunity to be of some real assistance to the group of young Americans that are members of our school system. When we provide aid for them we are at the same time helping their fathers and mothers. As Members of Congress it is our duty to provide for the wants of the majority of the people, and in view of this fact I want to register my full support for H. R. 3370, the bill which would provide Federal aid for school lunches.

If we need proof that the bill is desirable, we only have to look at the letters from the children themselves—letters that range from a kindergarten scrawl to a high-school composition. All voice a sincere gratefulness for the privileges that the program extends to all children of school age who are attending school. Their letters further indicate a knowledge on the part of the school children that good diet is essential to health and the development of a good mind. In addition to the messages from the children are expressions from parents, teachers, and service organizations—all of which voice a deep appreciation for the aid that has been rendered and a strong faith that the present Congress will continue the program.

The Seventh District of Illinois is composed of a cross section of the American populace. All of these people are convinced that the money appropriated for the school-lunch subsidy is for the benefit of everyone.

I have received many letters from Des Plaines, from Park Ridge, and from other sections that definitely cannot be called a poor man's district; along with these letters are hundreds of similar ones from sections where the workingman is in the vast majority. All are unanimous in their hopes for the passage of the school-lunch bill.

The operation of the school-lunch program in the past has developed in the minds of the young people attending our schools a knowledge of proper food balance and its relation to good health. Children come to relish the elements of a balanced diet not for taste alone but for the nutrition value of the food—an extremely helpful factor to the parents in the homes.

Again, gentlemen, I want to commit myself as being wholeheartedly in favor of a bill which would make possible the operation of a school-lunch program for all children of school age who are enrolled in the schools of our United States.

Henry Ford 2d Answers Mr. Bowles

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mr. BUFFETT. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following complete text of a telegram from Henry Ford 2d in Los Angeles last night to the Honorable BRENT SPENCE, chairman, House Banking and Currency Committee:

I have been informed that your committee is prepared to invite me to appear before you to comment on price controls as they affect the Ford Motor Co. I shall, of course, be happy to appear before the committee if there is really any public interest to be served. However, my opinions on this subject have already been expressed publicly in a telegram to the Director of War Mobilization and Reconversion on January 29 and again in an address in San Francisco on February 8. Copies of both of these are being mailed to you.

I am sure that everyone who has the best interests of this Nation at heart is doing what we are doing—everything we can to stop the present trend toward inflation. There are differences in opinion on how this can best be done.

Our part, as we see it, is to produce motorcars and trucks—as many as we can, as fast as we can. That has been our purpose since VJ-day. Our employees have cooperated. There have been no strikes at the Ford Motor Co. We have been forced to curtail production time and again because of strikes and shut-downs in the plants of our suppliers. Shortages of steel, caused by a dispute over both wages and prices, finally forced us to stop assembly lines completely.

Of course we know that price ceilings on most finished parts for new automobiles were removed last fall. But the statement of Mr. Bowles in this respect does not reflect all the facts. He does not make it clear that manufacturers who supply our suppliers with parts do have price ceilings. He also ignores the fact that parts for trucks and all automotive replacement parts are still subject to ceiling prices. The OPA supplementary order of August 29, 1945, to which Mr. Bowles referred, exempts passenger car original equipment from price ceilings but specifically excepts tires, batteries, radios, ferrous and nonferrous castings. The regulation also states examples under which such items as glass, electrical wire, forgings, upholstery, and similar items are not classified as parts unless at least partially fabricated.

As I said in San Francisco, a foundry which has supplied us for many years with gray iron castings told us they lost $330,000 during 1945 because the cost to them of producing the castings we needed was above the price at which they were allowed to sell to us. They stopped supply.

Another supplier had been making thousands of small but vital truck parts for us for 50 cents each. His material prices had gone up so much after VJ-day that he asked OPA for permission to charge 61 cents. OPA said "No". They were willing to go as high as 54 cents. But the supplier could not produce parts at that figure and so he stopped manufacture. After considerable delay, we finally found two new suppliers. One is now furnishing us with the necessary parts at 82 cents, and one at 84 cents each, both with OPA approval.

In making public our estimates of last summer that motorcars would cost 55 percent more to make during the first postwar year than they cost in 1941, Mr. Bowles failed to make it clear that these estimates were submitted to OPA before OPA had announced any price regulations on new cars—more than a month before OPA had given us even the basis on which price ceilings were to be calculated.

What Mr. Bowles had to say on this point and the manner in which he chose to say it left the impression that we had secretly applied for a 55-percent increase in existing price ceilings. Actually, we have applied for no price relief on any of our cars since OPA ceilings were established.

Incidentally, those estimates of last July turned out to be pretty accurate. We estimated, for example, that our most popular model, which had cost $512 to make in 1941, would cost us under postwar conditions about $935. These figures do not include cost of advertising and selling or any profit. We found in November, before we reached scheduled production, that it was costing us $963 to make this model.

Since then, we have cut that cost somewhat by increased production efficiency, but in the meantime we have added about $41,000,000 to our annual bill for wages, and have still to absorb increased costs to us and our suppliers due to the new price of steel.

Our OPA price to dealers on this model is $728.

We do not want to get into public arguments with OPA or any other Government agency at this time, especially since the President late last week announced a new national wage-price formula. However, I have stated publicly my opinion that inflation is based on scarcity and that the way to prevent inflationary prices of manufactured products is to produce goods for people to buy with the money they have to spend.

We at Ford Motor Co. are going to continue to act in that belief.

Our job at Ford Motor Co. has always been to make more and more products at lower and lower prices so that more and more people can afford them. We look forward to the time when American industry can get back to this job under the constant stimulus of free competition.

HENRY FORD 2D.

We Need Bomb Control

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1946

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of February 19, 1946:

WE NEED BOMB CONTROL

More facts will have to be made public before we can fully evaluate the charges of Russian espionage in Canada, which, it is rumored, also extended into the United States.

It has been variously reported that the spies were trying to find out how to manufacture the atomic bomb, how to make certain electronic equipment (radar or proximity fuses or both) or to learn Canadian-United States plans for repelling an Arctic invasion.

All major nations, we presume, maintain an information or spy service prying into the military secrets of their neighbors and alleged friends. When this ugly fact is made public it shocks our sensibilities and arouses our fears.

It is natural that Russia should be trying to find out how to manufacture atomic bombs, a secret that we gladly shared with the British and Canadians, but denied to the Russians while we were all fighting together.

This incident is only one of many that will exasperate international relations and strain our nerves until the United Nations finally set up controls of atomic bomb production that will make the whole world feel at least as safe as it did before the bomb was invented. Better still would be an honest limitation of all arms.

Resolution of Wilmington Grange, of New Wilmington, Pa.

EXTENSION OF REMARKS
OF
HON. LOUIS E. GRAHAM
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1946

Mr. GRAHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Wilmington Grange, No. 1477, Patrons of Husbandry, on February 14, 1946, located at New Wilmington, Pa.:

Whereas the labor organizations, after being coddled and catered to for a number of years, have become obstreperous and should be controlled. After receiving exceptionally high wages during the war are not satisfied to continue working without an increase in pay, and have brought hardship and suffering, not only upon themselves and their families by striking, but will create a condition whereby many aged people, and others who do not have any earning capacity and have been living on small fixed incomes, will not be able to exist without financial aid from some source; and

Whereas employers who provide the money to conduct their business are prevented from operating their plants in a normal business way by labor organizations; and

Whereas the farmers have been producing and selling under price ceilings which in some cases will not cover the cost of production, thus creating a food shortage which requires consumers to stand in line for essential food products which would be produced in sufficient quantities to supply the demand if it were not for Government restrictions and the scarcity and high cost of labor: Therefore be it

Resolved, That we go on record as favoring laws that will control labor organizations and make strikes, as now conducted, illegal, and give the employers an even break with labor, with the right to select their employees and discharge any who are inefficient or a menace to the successful operation of the business; be it also

Resolved, That we pledge our support to lawmakers who will support the enactment of laws to control strikes and provide other methods of settling labor disputes.

We insist on the enactment of laws that will carry a fine and imprisonment for anyone interfering with the marketing of farm produce.

We brand the strike of the Pittsburgh electrical workers as inhuman and should not be tolerated in any civilized country; be it also

Resolved, That since prices of many manufactured articles will increase on account of increased labor costs, that we as farmers insist that either price ceilings be abolished or raised to a point where the price will cover the cost of production of farm products caused by the increased cost of farm labor, all kinds of farm machinery, and other expenses.

Any controlling measures that prevent the farmers from receiving the cost of production will develop a scarcity of food and encourage a black market.

We favor holding prices down to prevent inflation, but since President Truman has favored increased costs and higher prices, we think that the farmers, after working 70 or 80 hours a week, are entitled to cost of production plus a small profit to partially pay for overtime work.

We regret that so many people have been influenced to follow communistic leaders.

We favor a 6-year, one-term office for the President of the United States.

A shortage of food may result, due to the strikes, as many farmers will be unable to secure the new machinery which they had expected to get.

The Yalta Agreement

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. RANKIN. Mr. Speaker, one of the most controversial documents ever signed between representatives of different countries was that embodying the secret agreement consummated at Yalta on February 11, 1945, between President Franklin D. Roosevelt, Joseph Stalin, and Winston Churchill.

In order that every Member of Congress and everyone else who scans this RECORD may have an opportunity to read that famous document, I am inserting it at this point as a part of my remarks, just as it appeared in the New York Times under a Washington date line of February 11, 1946—just 1 year to a day after it was signed.

The matter referred to follows:

TEXT OF YALTA ACCOED ON SOVIET WAR ON JAPAN

The leaders of the three great powers—the Soviet Union, the United States of America, and Great Britain—have agreed that in 2 or 3 months after Germany has surrendered and the war in Europe has terminated the Soviet Union shall enter into the war against Japan on the side of the Allies on condition that:

1. The status quo in Outer Mongolia (the Mongolian People's Republic) shall be preserved;

2. The former rights of Russia violated by the treacherous attack of Japan in 1904 shall be restored, viz.:

(a) The southern part of Sakhalin, as well as all the islands adjacent to it, shall be returned to the Soviet Union,

(b) The commercial port of Dairen shall be internationalized, the preeminent interests of the Soviet Union in this port being safeguarded and the lease of Port Arthur as a naval base of the U. S. S. R. restored,

(c) The Chinese Eastern Railroad and the South Manchurian Railroad, which provides an outlet to Dairen, shall be jointly operated by the establishment of a joint Soviet-Chinese company, it being understood that the preeminent interests of the Soviet Union shall be safeguarded and that China shall retain full sovereignty in Manchuria;

3. The Kurile Islands shall be handed over to the Soviet Union.

It is understood that the agreement concerning Outer Mongolia and the ports and railroads referred to above will require concurrence of Generalissimo Chiang Kai-shek. The President will take measures in order to obtain this concurrence on advice from Marshal Stalin.

The heads of the three great powers have agreed that these claims of the Soviet Union shall be unquestionably fulfilled after Japan has been defeated.

For its part the Soviet Union expresses its readiness to conclude with the National Government of China a pact of friendship and alliance between the U. S. S. R. and China in order to render assistance to China with its armed forces for the purpose of liberating China from the Japanese yoke.

J. STALIN.
FRANKLIN D. ROOSEVELT.
WINSTON S. CHURCHILL.

FEBRUARY 11, 1945.

Veterans' Benefits

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1946

Mr. SIKES. Mr. Speaker, I would like to offer an analysis of measures now in force for the benefit of veterans of World War II. I feel that such a digest of the law will be a useful and ready reference of practical assistance to the veterans. The present program is a comprehensive one, which is intended by Congress to really serve the veterans. Its cost for the ensuing 12 months is estimated at nearly $5,000,000,000.

DIGEST OF VETERANS' BENEFITS

ELIGIBILITY

A veteran must have served in the active military or naval service on or after September 16, 1940, and prior to the termination of

the present war. He must have been discharged or released under conditions other than dishonorable after active service of 90 days or more or because of an injury or disability incurred in line of duty.

MONEY

1. Mustering-out pay: Service personnel up through the rank of captain in the Army and Marine Corps and senior lieutenants in the Navy and Coast Guard are entitled to: (a) $300 mustering-out pay if they have performed active service for at least 60 days outside the United States; or (b) $200 mustering-out pay if they have performed active service for at least 60 days, no part of which was served outside of the United States; or (c) $100 for any active service less than 60 days.

2. Bonus: Public Law 268 repeals that portion of the law, which provided that any financial benefits received under the act would be deducted from any future bonus authorized.

3. Retirement pay: Service personnel on active duty for more than 30 days and disabled from disease or injury received in the line of duty are entitled to receive the same retirement pay as now provided for regular personnel of the service.

4. Pensions: Discharge or release from service under conditions other than dishonorable is a prerequisite to veterans' benefits. Any veteran having a 10-percent or more disability resulting from disease or injury incurred in or aggravated by war service will, if his application is approved, receive the following amount:

Percent of disability:	*Amount payable per month*
10	$11.50
20	23.00
30	34.50
40	46.00
50	57.50
60	69.00
70	80.50
80	92.00
90	103.50
Total disability	115.00

Eligibility for pensions for nonservice-connected disabilities requires honorable discharge and 90 days wartime service—or if period of service was less than 90 days, have been discharged for disability incurred in service in the line of duty. The disability must be permanently and totally disabling and not due to the veterans' own willful misconduct.

Any single veteran with an annual income of over $1,000, or any married veteran—or with dependent minor children—with an annual income over $2,500, is ineligible for nonservice-connected disability pensions. This pension is $50 per month and is increased to $60 upon 10 years of continuous, permanent, total disability or upon reaching the age of 65.

5. Insurance: Service personnel are eligible for the cheapest and best life insurance attainable—the National Service Life Insurance. This is term insurance for 8 years, convertible into ordinary life, twenty-payment life, or thirty-payment life policies.

Insurance that has lapsed may be reinstated by the veteran, either within 6 months after date of separation from active service, or within 3 months after date of lapse, whichever is later, by payment of only two monthly premiums without interest.

6. Readjustment allowances: Unemployed veterans who register with an office of the United States Employment Service are entitled to a readjustment allowance of $20 per week while unemployed. An eligible veteran may receive such payments up to a maximum of 1 year, depending on length of service. Self-employed veterans with net earnings of less than $100 per month may receive an allowance amounting to the difference between net earnings and $100 in any month, up to a maximum of 1 year, also depending on length of service.

7. Loans: Veterans have up to 10 years after official end of the war in which to make application for guaranteed loan at no more than 4 percent interest. These loans are automatically guaranteed if made in accordance with the provisions of the act and if the amount does not exceed the appraisal made by an appraiser of the Veterans' Administration.

Any loan on real estate may be guaranteed up to a maximum guaranty of $4,000 of the loan, with the Government guaranteeing 50 percent of the total loan up to the maximum amount. The business-loan guaranty limit remains at $2,000, or 50 percent. Real-estate loans may be amortized over a period up to 25 years, and farm realty loans up to 40 years. Maturity on non-real-estate loans may not exceed 10 years.

Proceeds of a loan may be used to purchase a lot in connection with home construction. Loans may be made for all ordinary farming purchases, and any normal business enterprise, and so that existing indebtedness in default may be refinanced in connection with all types of eligible loans.

8. Income-tax exemptions: Special provisions have been enacted by Congress for the tax benefit of veterans. These benefits include (a) $1,500 of active service pay is excluded from gross income for the taxable year 1943 and until the termination of the present war is proclaimed; (b) mustering-out pay is excluded from gross income for the taxable year of 1944 and later years.

JOBS

1. Employment placement and assistance: The United States Employment Service and the Veterans' Placement Service Board are directed to cooperate in seeing that all veterans, able and willing to work, obtain employment. This assistance includes employment counseling.

2. Employment preference: Preference in job referrals through the United States Employment Service is available to veterans under regulations adopted by the Veterans' Placement Service Board, carrying out the direction of the GI bill of rights that the veteran receive "the maximum job opportunity in the field of gainful employment."

3. Civil-service preferences: Veterans with service-connected disabilities or in receipt of pensions, disability retirement benefits, or compensation from the Federal Government, receive an additional 10 points on their civil-service examination ratings.

A five-point preference is allowed to veterans not disabled.

These preferences will place veterans' names above all other names on the civil-service list except for professional or scientific positions paying over $3,000 a year.

4. Restoration to former Federal job: A veteran who held a permanent, probational, or probational-indefinite civil-service job when called to active service with the armed forces is entitled to mandatory reemployment in his former position, or one of like seniority, status, and pay, provided he has satisfactorily completed his period of service, is still qualified to perform the duties of his position, and applies for restoration within 90 days after separation from active service or discharge from the hospital.

5. Other civil-service benefits: The civil-service rule that not more than two members of a family, living in the same house, may hold a Federal civil-service position does not apply in case of a person entitled to veteran preference.

BUSINESS AND HOME AIDS

1. Small-business aids: Assistance is provided to veterans in establishing small businesses through (a) loans not connected with the GI bill of rights for worth-while manufacturing projects; (b) assistance in obtaining surplus war materials that will be helpful to the planned business venture; and (c) supplying of technical assistance.

2. Material priorities: Priorities for materials are granted by the Civilian Production Administration and the Office of Price Administration to veterans.

3. Purchase of surplus property: Veterans can purchase surplus property to set themselves up and help to maintain themselves in business without buying through regular dealer channels or paying a profit to anyone.

4. Housing priorities: Priorities for the construction or purchase of new houses have been established for veterans in obtaining homes under $10,000.

5. Legal assistance: The American Bar Association has adopted a program of legal assistance to veterans and members of their families.

EDUCATION AND TRAINING

1. Education: Any eligible veteran may receive 1 year of education or of training plus additional education (up to a maximum of 4 years), for total length of active service. There is no age limit nor is there any need to show that a veteran's education was interrupted by war service.

The time during which a course may be initiated is within 4 years after discharge or the end of the war, whichever is later, and the time limit for completion of the course is 9 years after the end of the war.

Short intensive courses may be undertaken and the additional cost prorated against the period of eligibility to which the veteran is entitled at the rate of $500 per school year. No such short course may cost more than $500. Veterans may apply to take a correspondence course but they are entitled to no subsistence allowance. One-fourth of the elapsed time used in pursuing such a course is charged against the veteran's period of eligibility. Total amount payable for correspondence courses for any veteran is limited to $500.

Monthly subsistence allowance, while in school or training, is $65 for veterans without dependents and $90 for veterans with dependents.

2. Vocational rehabilitation of disabled veterans: The purpose of vocational rehabilitation is to restore the employability which has been lost by virtue of a handicap due to a disability incurred in or aggravated by service.

Vocational training involving more than 4 years of training may be begun by disabled veterans, subject to approval of the Veterans' Administration. The time for completing such training is 9 years after the end of the war.

Disabled veterans in vocational rehabilitation training are entitled to receive monthly subsistence allowance of $65 (without dependents) or $90 (with dependents) plus whatever pension they are entitled to by law. The minimum total amount such veteran may receive is set at $100 per month (without dependents) and $115 (with a dependent), plus $10 for the first child, $7 for each additional child, and $15 for any dependent parent. If the veteran would otherwise receive less than these minimum amounts, his allowance is raised to equal the minimum during the period of training and for 2 months thereafter.

HOSPITALIZATION AND DOMICILIARY CARE

1. Hospitalization: The Veterans' Administration provides hospitalization for any veteran of any war who was discharged under conditions other than dishonorable. Veterans with service-connected disabilities are given preference. Veterans with non-service-connected disabilities are eligible if a hospital bed is available and the veteran makes a sworn statement that he is unable to defray expenses of treatment.

The Veterans' Administration has been authorized and directed to expedite additional

hospital construction and to establish all necessary administrative offices to make veterans' benefits more readily available.

2. Artificial limbs and prosthetic appliances: Provision has been made to insure ample funds for the Veterans' Administration to purchase prosthetic appliances for veterans and instruct them in the use of such appliances, including payment of any expense involved in the veterans' traveling to and from the center where the appliance is fitted and training given in its use.

3. Guide or seeing-eye dogs: Guide or seeing-eye dogs may be provided for the aid of blind veterans who are entitled to disability compensation or pensions for a service-connected disability under laws administered by the Veterans' Administration, including payment of any expense involved in the veterans' traveling to and from the center to become adjusted to the dogs.

Blind veterans are also entitled to mechanical or electronic equipment to aid them in overcoming the handicap of blindness.

4. Domiciliary care: A veteran who is so disabled as to be unable to earn a living, and is without adequate means of support, may be admitted for home care to a facility of Veterans' Administration providing such accommodations.

Statement by Maurice R. Franks Before the Senate Committee on Education and Labor

---

EXTENSION OF REMARKS
OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, February 21 (legislative day of Friday, January 18), 1946

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement on the subject of labor relations made by Maurice R. Franks before the Senate Committee on Education and Labor on January 31 last.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

AN ADDRESS BY MAURICE R. FRANKS BEFORE THE UNITED STATES SENATE COMMITTEE

(EDITOR'S NOTE.—As the following message delivered by Mr. Franks before the United States Senate Committee on Education and Labor on January 31 incorporated much of the material he had prepared in the form of his editorial for this issue of the Railroad Workers Journal, it was decided to substitute the complete text of his address for the editorial as originally scheduled.—S. F. W.)

Mr. Chairman and members of the Senate Committee on Education and Labor, I am pleased to have been invited to appear before your committee, which I understand is charged with the task of reporting on the fact-finding bill that you have up for consideration. I also realize that if I am to be of any genuine assistance to your committee, I must of necessity deal with as many facts as humanly possible.

Speaking of facts, I believe there are one or two you should know about myself. My name is Maurice Franks. I represent the Railroad Yardmasters of North America, Inc.—one of the smallest labor organizations doing business on the American railroads today. I am their national business agent and editor of their publication, the Railroad Workers Journal.

To make this information even more matter of fact, you may be interested to know that there are in the entire United States only about 5,000 railroad yardmasters. Also that this group is represented by two separate and distinct organizations—the Railroad Yardmasters of America and the Railroad Yardmasters of North America, Inc. You will notice that the only difference in title is in our use of the words "North" and "Incorporated." On this point I do not want any misunderstanding to arise in your minds—I do not desire to leave you with any misapprehension as to who I am connected with. I do not represent the Railroad Yardmasters of America—and I doubt very much that they would subscribe in toto to what I am about to tell you. Therefore, kindly bear in mind that I am connected only with the Railroad Yardmasters of North America, Inc.

We are a completely independent labor organization, not connected with any other organization whatsoever. This is a fact, and I should like to stress the point that we are a very small organization and definitely cannot be classed as a pressure group. We are not in a position to favor or foul any politician in the United States to any appreciable extent.

Many people have asked me as to how I came by my views on industrial relations. Well, just to keep the record straight, I have been in the labor movement since the age of 19—as worker, committeeman, organizer, delegate, business agent, and editor. These capacities have naturally afforded me ample opportunity to make a first-hand study of industrial relations as applied to the American worker, his employer, and the general public. And being equipped with this first-hand knowledge, I am all the more convinced that industrial disputes can always be settled amicably if properly approached.

With strikes breaking out over the body of the Nation as measles do over the body of a child, one begins to wonder if there is "a doctor in the house." To be sure, labor has a right to strike in order to attain its just objectives that cannot be otherwise attained. On this point all argument must confine itself to the question as to precisely what constitutes just objectives. The most that I can see in some of our present-day strikes is—just foolish manipulation.

The strategy used by some labor leaders in pulling strikes leaves me, for one, somewhat dubious concerning their quality of leadership. In the first place, everything possible should have been done to reconvert industry as rapidly as possible without interruption from any direction. The wise labor leader, it seems to me, would have bided his time in the interest of over-all strategy. He would have waited until industry was well under way, until industry had started to produce, until it had committed itself to the price of commodities and the profit to be secured from the sale of these commodities. Once found in this position, no employer would have been able to camouflage the actual condition of his company, his ability to meet just demands.

True advantage to labor does not appear to be in the reckoning when we undertake a close inspection of present-day strategy. In fact, the signs and symbols we detect when we scrutinize the chart appear a bit too outlandish to jibe with the formulas which we, as good Americans, have a right to discern. Indeed, it also seems to me that there is considerable effort on the part of certain individuals to throw this country into a state of chaos, through confusing basic issues. Instead of setting up common objectives and bending every effort to achieve those objectives, these certain individuals are doing their utmost to divide the American people, by pitting one class against the other.

Yes, I believe that a lot of our industrial strife is being promoted by an unscrupulous group who would divide the American people in order to conquer them. They know that united we stand and divided we must surely fall. If, however, we Americans allow this group to conquer us, then we are not worthy of the honor to be classed as Americans. If we are to win this economic war we are going through today—and, mark you, we are going through an economic revolution—then we shall have to use as much valor and strategy and downright guts, if you please, as we had to use in winning the shooting war just finished. We shall have to weigh in the balance all that we as Americans possess under our present system against all that we might hope to possess under another system, whether it would be communism, fascism, or some other brand of un-American "ism." Evidence of what these foreign systems offer the common man is flashed to our attention every day through the newspapers, the radio, and the movies.

Although the outlook at this particular moment looks none too bright for what we, as true Americans, cannot help but regard as the classic way of life, I have every confidence that eventually the scales will fall in our favor—and for the very reason that in due time we Americans will prove ourselves to be big enough to face the facts. We know first-hand the benefits of our present democratic system and can only guess what would fall to our lot as a result of some radical change. And I have confidence that the American people are intelligent enough to know what is good for them—and that goes for all Americans—for the American workman, whether unionized or not, for the American industrialist, and for the American people as a whole.

Naturally, the recent war has paved the way for conditions of change, political as well as economic. But nothing has arisen from this war—or any other war—to block the natural course of evolution within the framework of our democratic system of government—nothing, I repeat, which would warrant fundamental changes in the general principles of the Constitution of the United States or the Bill of Rights. We will, if we are to make progress, put through certain changes in keeping with the times, changes beneficial to the Nation as a whole and which will further guarantee our natural prerogatives as Americans. We will streamline wherever necessary. But whatever we do, we will do it in the American way. The man who dares to assert, whether through blindness or diabolical intent, that the process of change, in order to be truly effective, must strike at the very foundation of our system, can be cataloged—and very rightly—as simply one who is anti-American. It is high time we recognized this fact. And it is also high time that we do something about it.

There is nothing wrong with the fundamental principles of Americanism, but there is something radically wrong with the interpretation of these principles by certain individuals who, for purposes of immediate convenience, class themselves as Americans. Some of our fundamental principles are being twisted in such a manner that many of them are no longer to be recognized as truly American. The United States of America was founded on the solid principle that a government to be successful must be one for and by the people. This principle has been distorted to mean a government for and by certain people, if you agree with these certain people.

Laws have been predicated on the principle—if you can call it principle—of making fish of one part of the citizenry and flesh of the other. Such laws, for example, as the National Labor Relations Act, which definitely sets up a condition of dividing and conquering, a condition that promotes disharmony between the citizens of these United States, a condition of distrust between employers and their employees. If you doubt this statement and have not thoroughly analyzed the National Labor Relations Act, I suggest that you do so and that you spend considerable time

on sections 7 and 8 of this act. When I made a study of this so-called Magna Charta of labor—especially sections 7 and 8—I could not escape the conclusion that America is not being run for and by the people any more. It is being run for and by the people who satisfy the whims of the dictators of labor. So long as this labor act remains as a recognized law of the land, we are bound to have labor trouble, strikes and many other evil repercussions.

The National Labor Relations Act, let me remind you, was based on the premise of bringing about a more harmonious relationship between employer and employee, by lessening the causes of labor disputes burdening and obstructing interstate and foreign commerce.

No one can deny that this premise was a noble one. But what has been the net result of this legislation based upon such a worthy sentiment? Since the passage of the labor act, more strikes have taken place than ever experienced in the history of our Nation. For example, in the year 1929—6 years prior to the enactment of this law—the total number was under 1,000. In 1935—the year the labor act was validated by the United States Supreme Court—the number of strikes rose beyond 2,000. In 1944, in spite of the Nation being at war, the number of work stoppages jumped to almost 5,000—five times as many labor disturbances as before the enactment of this law which was to have brought peace and harmony to industry. The situation today needs no statistics to indicate its crippling effect upon the flow of interstate and foreign commerce.

What our experience of the past 10 years reveals is that this law breeds industrial sickness—not industrial well-being. And that the center of infection revolves about its faulty emphasis. They can call all the labor-management conferences they like, they can have them meet every day, 52 weeks out of every year, and yet under the present set-up we will be just about where we are today—exactly nowhere in the industrial relations problem—and mainly because of this law, which plays no small part in promoting conditions of hate and mistrust between the employees and their employers. In the first place, since this law has to do with the relationship between employer and employee, it should never have been placarded as a labor act. This title in itself makes this act stand out as one that calls for partiality in its application, one which leans heavily in the direction of labor, and one which would be, and naturally is, repugnant to the employer.

Since the gentlemen of this committee are seeking information on fact-finding, may I suggest that they accept the fact that there are at least two sides to the problem of industrial relations.

In the first place, this law should have been written to mean one governing the relationship between the employer and his employee, and one with full regard for the general public. Until there is such a law—a law which covers precisely this ground—present legislation will always prove a sore eye to the abused. Therefore, we do most definitely need a change in our labor-management relations, and the first thing to change, if we are really to face the facts, is the National Labor Relations Act.

This act should be stricken from the statute books of this country, for the simple reason that it has proven itself incapable of carrying out the intent of even its own preamble. In its place should come a law capable of attaining this most worth-while objective; in short, a law which sets up a condition of responsibility and protection for all parties affected.

Many people have been prone to criticize the Department of Labor and especially the Secretary of Labor. Well, under present circumstances, it is no wonder that the head of this Department and the Department itself have been sharply criticized. Yet, when you analyze the situation, the Department of Labor and its head are in the position of doing nothing about the situation. When Miss Perkins was Secretary of Labor, she, too, was severely criticized for her inability to cope with conditions, especially those during the 1937 strike epidemic. The great cry of that day was that "This is a man's job. Oh, if only we had a man in there, everything would be hunky-dory." Well, we do have a man in there today, and evidence proves that he is as helpless as was Miss Perkins to make peace in industry. Moreover, if the present Secretary of Labor were to step out of the picture tomorrow, his successor would be in no better position than he is. And why?

Well, indeed, there is real reason for all this confusion. In my opinion, the main reason can be found in our industrial relations set-up, especially as governed by the National Labor Relations Act. It is only natural that a Secretary of Labor heading a Department originally promoted by organized labor is going to act more favorably to labor than to capital, or—if having an unbiased mind—might not act at all. While on this point, let me remind you that until labor and capital can be brought to work in complete unison toward their common objectives, unhampered by bias or indecision, we can never hope to achieve peace in industry. Therefore, to my mind, the idea of a Labor Department as one functioning exclusively in behalf of labor has become a thing of the past. In fact, this Department under its present set-up stands condemned by its own testimony of being an instrumentality unable to cop with present conditions—stands condemned before the jury of American public opinion.

In its place, I suggest, there should be established a Department of Industrial Relations, headed by a Director of Industrial Relations—by one who thoroughly understands the problems confronting industrial relations, by a person who fully realizes that neither side of industry can progress unless both sides do. The man heading this department should be one who clearly recognizes that the workers and their employers are truly partners in industry, that they are both Americans striving together in a common enterprise to produce things of value for other Americans who in turn are equally entitled to fair treatment—I mean the American public.

The Department of Industrial Relations should coordinate the functions of the Department of Labor and the Department of Commerce, so that it would always be in a position of possessing the facts covering the problems of labor and management. The Director could very easily create a board of advisers made up of both sides of industry and the public—a tripartite board, if you please. I might venture to say at this point that had such a department been functioning, with the cooperation and factual assistance of the Departments of Labor and Commerce, we wouldn't be in the midst of the fact-finding mess which confronts this Nation today, especially the type of fact finding aimed at General Motors and other companies.

There has been a lot of talk about fact-finding boards and ability to pay. Union leaders are demanding that corporations open up their books and records, bare their innermost plans and secrets, in order that the unions can capture all possible profit the corporations hope to make.

It is high time that union members themselves set up a fact-finding board of their own to find out just what some of their leaders are up to—to learn what is the underlying purpose they have in the back of their minds as they make these unreasonable, unorthodox, and, maybe, un-American demands.

What would such a fact-finding board find in the case of General Motors? I'll tell you. It would find, first of all, that union leaders have raised an awful fuss about one of the GM officials having publicly stated that the information demanded by these leaders is not even given to GM stockholders. It would find, as it got to the bottom of this, that GM has a perfect right to withhold such information from its stockholders, and that these stockholders themselves do not want it, and are not demanding it, and are almost unanimously opposed to the corporation's giving it to them or anyone.

This fact-finding board would find that Messrs. Reuther and Thomas have a complete record of General Motors' financial position—its sales; the amount written off for depreciation, amortization, etc.; the amounts it has set aside for postwar contingencies and reconversion; the amount GM has invested in other concerns and the profits received from these investments; what the company did with its income last year and every year since it has been in business; what dividends have been paid to stockholders; how much the company has in cash, Government bonds, accounts receivable, and other assets.

This fact-finding board would also find that this is all the information to which the Government, GM's stockholders, the public, and the UAW-CIO are entitled. It would learn that Reuther has stated that what his union wants is GM's predicted production schedule, its estimated sales and profit margin on its production, its anticipated cost of materials, and complete information on its relations with its suppliers, the amount of money the company proposes to spend on advertising, etc.

This fact-finding board would find that if Reuther is right in his contention that the union is entitled to the foregoing information, and the Government should back him in his claim by forcing GM to divulge it, then the Nation can get out its mourning clothes in preparation for attending the funeral of free enterprise and private ownership in America.

This fact-finding board would find that the GM official who stated that such information is not even given to the company's own stockholders need offer no apology for his statement. It would learn that it would be dangerous for the corporation to do so, for what then would prevent an official of a competing concern from purchasing just one share of GM stock, thus obtaining for his company at the cost of a few dollars what has cost GM millions of dollars for research, engineering, planning, etc.? Moreover, such inexpensive snooping could be as easily accomplished by representatives of foreign nations, no matter how belligerent they might be in their attitude, and no matter how desirous they might be of tearing down American free enterprise.

This fact-finding board would also learn that the leaders of the UAW-CIO are not exactly stupid; that they can add two and two and come up with the right answer; that they must be aware that forcing a corporation to reveal its plans and hopes in order to extort the uttermost farthing of prospective profit, will discourage the investment of capital and spell eventual ruin for American private ownership.

This fact-finding board would find that, such being the case, the real and decidedly sinister fact behind these demands of the UAW-CIO leaders involves an attempt to force industry into Government ownership and to carry this Nation into a socialistic economy. And its final finding would be that this is a price which even America, the world's wealthiest Nation, has not the ability to pay.

I firmly believe that a competent Department of Industrial Relations, functioning in line with the principles of the Constitution of the United States and the Bill of Rights, would be an effective means of avoiding unnecessary confusion and of cutting off at the source any form of assault upon our basic institutions seeking accomplishment through the device of inciting labor to a state of unnatural unrest.

Now I can already hear certain people—especially our "poli-iticians" here in Wash-

ington—those individuals improperly classed as politicians and whose eyes are always beaded on the ballot boxes and will be next November and particularly in 1948—I can hear these "poll-iticians" shrieking from "the top of the hill" that this is a starry-eyed plan of mine. I can hear them crying a poor mouth for the benefit of the voters on the argument that such a Department of Industrial Relations would be an added department of government which would only serve to cost the taxpayers more money—a fair cry if left unchallenged, particularly in these days when the taxpayer is literally tearing himself apart to meet the expenses of Government.

However, gentlemen, who is more costly to the American citizen than constant labor friction, strikes and their constant threat, a perpetually cloudy future resulting from industrial unrest? When industry is at a standstill or moving ahead in a series of jerks and jolts, the over-all effect is that of an economic depression—no matter by what name it is called, and no matter what its duration may be. The cost of depressions, long or short, local or general in effect would far outweigh the cost of an efficient governmental department. As a simple example of the tremendous burden upon the taxpayer for work stoppages, may I remind you that in the few short weeks since the recent strikes began, applications for public assistance have increased by approximately 500 percent.

Indeed, my suggestion does entail the creation of a new department of Government. However, I believe that in the long run it may be the means of getting rid of one or two other departments. Possibly it might lead to the clearing out of a great deal of Government deadwood in the snarled thickets of present-day bureaucracy. Moreover, it would set up a means of achieving full harmony within American industry—a condition which has not as yet been achieved by any existing governmental department.

The strikes which are taking their needless toll from the fruits of American enterprise today will no doubt come to a peaceful settlement. But mark you, until some permanent and constructive action is taken—until changes are made in our conception of fair play on the labor-management front—there will be recurrence after recurrence. There'll be no end to industrial strife.

In conclusion, gentlemen, may I state as a final fact that I am not too seriously worried about the fall of our American system of free enterprise. For I am convinced that we Americans are big enough, intelligent enough, and decent enough to cope with any situation arising to confront us. I believe that both labor and management—apart from certain dubious leadership—are more anxious today than ever before of getting down to the fundamental business of producing the very goods which make for a high standard of living for all parties concerned. Black as the situation appears today, I believe that all of us as Americans possess both the courage and the ingenuity to meet the challenge of the future, and that whatever changes we may decide to make will be made the American way.

And that's a fact. And I thank you.

To Loan or Not To Loan

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mr. STEFAN. Mr. Speaker, recent press and radio reports have given additional emphasis to the rumor which has persisted for some time that Leon Blum, representative of Socialist-Communist France, will be next in line at the international soup kitchen, once respectfully referred to as the United States Treasury. Monsieur Blum is right back of Socialist Britain's Lord Keynes and, no doubt, is just ahead of the Kremlin's representative—whose domestic economy requires no cash, but whose international spy rings demands considerable financing in American dollars.

One foreign loan sets a precedent for another. We cannot appease Britain and refuse Russia. I say: Let the American people loan their money to foreign governments as individuals at their individual risk. But, do not permit the American taxpayers' money, taken from the people as taxes by action of this Congress and entrusted to the United States Treasury, to be given to any foreign government or loaned to any foreign government at a rate of interest which is, in itself, a mockery of all ideals of common sense and fair dealing.

In effect, our one-time allies are asking us to exchange our birthright for a mess of pottage. We are asked to fight upstream against the age-old wisdom of Shakespeare's words: "Neither a borrower nor a lender be." Once, Winston Churchill declared that he would not be a party to the breaking up of the British Empire. I do not believe that the American people want to be parties to the movement which is definitely designed to break up and divide the only truly free nation in the world.

The issue is clear for 1946. To loan or not to loan. New Deal or Republican. The Kremlin or the Constitution. Leninism or liberty.

Freedom Comes to the Philippines

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Francis B. Sayre:

FREEDOM COMES TO THE PHILIPPINES

(By Francis B. Sayre)

(A lawyer by training, Francis B. Sayre gained his first experience in the Far East when in 1923 he served as adviser in foreign affairs to the Siamese Government. In 1925 and 1926 he negotiated in behalf of Siam new political and commercial treaties with the great powers. In 1933 he was called to Washington, where for 6 years he served as Assistant Secretary of State charged with the negotiation of the American trade agreements. The President appointed him High Commissioner to the Philippines in 1939, and he observed the islands closely and fairly during those precarious years when the Commonwealth was finding its feet. In 1942, after the departure of President Quezon, acting under instructions from President Roosevelt he escaped with his wife and young son by submarine from Corregidor when surrender was inevitable.)

I

As American troops move again into the Philippines, a new era of American activity in the Far East opens up. Far more crucial than 1898 will be the years immediately ahead. How will America build for peace in Asia?

Take a look at the map of eastern Asia. Here is China, with her 450,000,000 people bound by abject poverty, but heroic and unconquerable. After the war China will probably crowd into the space of a few years a profound agrarian, plus an industrial, plus a social revolution, as Japan and Russia did before her. Not many years hence China will be intoxicated with the ferment of modernism and resurgent with new power.

Here is Japan, with her 73,000,000 people embittered by the results of their unhappy adventure, crushed for the time being, frustrated and dangerous. Here to the south are French Indo-China, British Malaya, and the Netherlands East Indies, millions of human beings of different races and languages and cultures, looking forward with hope to some new solution under the United Nations of the difficult problem of colonial government.

Here, still farther south, are Australia and New Zealand, vigorous, growing parts of the British Commonwealth, ambitious for a powerful place in the Pacific world and determined that next time, when the yellow or brown races threaten to descend from the north, they will either be in a position to defend themselves successfully or else members of a community of states cooperating and armed to keep the peace.

In the strategic center of all this mass of surging peoples, on the very crossroads of the great paths of commerce between Asia and America and the North and South Pacific, at the inevitable junction point of air-route travel east, west, north, south, a dispersing center for pouring American ideas and American products into the Orient, stand the Philippines.

All of Asia, aspiring to freedom, has its eyes fixed on American conduct in the Philippines. There the drama is approaching climax. One misstep may cost America her chance to exert a profound influence for future peace in Asia. It is of infinite importance that the American people understand the problems of the Philippines and the intimate relationship of those problems to the future peace of Asia.

When I think of the Philippines the picture is filled with beauty. Never have I seen a fairer sight than the breath-taking view from the American High Commissioner's residence at Baguio, the summer capital in Central Luzon. High up among the drifting clouds, from a jutting spur that stands out far above great empty spaces below, we used to look across bottomless valleys to range upon range of towering mountains to the north, fading away in the high distance, constantly under the play of sunlight and shadow and changing greens and blues, never 2 days the same, hauntingly beautiful, unforgettable.

I think of little-frequented roadways in the southern Islands, winding in and out through groves of vivid green coconut palms, skirting along blue, surf-fringed bays. I think of the rice terraces at Bontoc, jeweled mountainsides of jade green color and intricate design, or of the hillsides of abaca trees at Davao, or of the great forests of giant tropical growth in the interior of Mindanao, as untouched as in the days when man first walked in the jungle.

The people who make their home in the 7,000 islands of the Philippine archipelago are a mixture of many races. Approximately 85 percent are an Indonesian-Malay blend. From the far parts of Eastern and Southeastern Asia, between the years 700 and 1450,

came traders, fishermen, refugees, marauders, missionaries, invading conquerors. We know little or nothing about how or why they came. In spite of the unifying influences of three centuries of Spanish domination and of over a generation of American rule, primitive groups still tenaciously retain their ancient ways and individual characteristics. No single language is spoken throughout the islands.

Deep in the mountain fastnesses of Luzon, far from roads or human habitations, I have chanced upon the most primitive beings I have ever met—stray Negritos, shy as wild animals, half-naked, hunting through the mountain forests with bow and arrow, sleeping on cold nights in the warm ashes of their campfires.

Revealing stories are told of them. One afternoon, soon after the outbreak of the Japanese war, a band of Negritos appeared at Fort Stotsenberg carrying two Japanese air pilots tightly bound. "Who are these men we saw descending from the sky?" was their laconic inquiry. "Japanese soldiers," explained Gen. Edward King. "Japan has declared war against the United States." Their leader stepped forward. "Then I, king of the Negritos, declare war against Japan," he exclaimed.

From these primitive Negritos, who number only a few thousands, or from the far more numerous warlike and fearless Moros of Jolo and Mindanao, or from the head-hunting tribes of Northern Luzon, who still on occasion revert to their ancient practices, it is a far cry to the dapper, white-suited students of the University of the Philippines or to the lordly sugar planters who occupy positions of commanding importance in Manila and in the provincial capitals.

Of the total population of the Philippines about 1 percent (166,000) are foreigners. About 70 percent (117,500) of these aliens are Chinese, and according to the 1939 census some 29,000 were Japanese. The Americans in the islands then totaled 8,700, and the Spaniards 4,600.

II

Most casual American visitors gain hasty impressions of the Filipinos from wealthy mestizo families who dwell in affluent Manila homes, or from politicos who adroitly manipulate national and local political machines, or from the jostling and dense throngs of polyglot city peoples who crowd Manila streets or stake their money upon exciting games of jai alai on a hot April night.

But it is not the sugar magnates or Manila-trained professionals or government officials who will determine Philippine destiny. To understand the Philippines and to get to the heart of their problems one must turn to the untutored, poverty-ridden peasants who constitute the majority of the 17,000,000 Filipinos in the islands. The peasant lives simply, close to the land, cultivating with his lumbering carabao his bit of rice or camotes or tobacco; honest, happy-go-lucky, struggling to keep free from debt but proving generally an easy prey to the landlord and the money lender.

His innate good nature shows in his smiling face; and somehow, in spite of his poverty, one feels that he has learned the high art of distilling happiness from life. His children are always at the center of his family life, and also his carabao and his fighting cock. I remember how outraged some were when, on the occasion of one of my inspection trips through northern Luzon, the local governor, unknown to me, had ordered the high road, over which I must pass, cleared of all children, chickens, and carabaos. For 2 days they had to be confined so that the High Commissioner's car could maintain its lordly course unimpeded.

Has the peasant's life been really changed by 40 years of American rule? Perhaps not so fundamentally as many Americans would like to think. But after the Americans came, at least he had uncontaminated water at the village well and was free from cholera and plague and smallpox. He could send his children to a good barrio school where they could learn to read and write English. Good roads and radios exposed him to stimulating outside influences. The ferment of coming independence is in his soul. He thinks of America as a friend who brought good gifts.

When the war broke and Japanese troops were hunting down their prey, it was to the native peasant that many a hard-pressed American or Filipino guerrilla turned for help and shelter. His loyalty through those dark days stands out, shining and unforgettable. The future of the Philippines is in his keeping.

Approximately 100,000 newly mobilized Filipino troops, many of them fresh in from the fields, some 12,000 Philippine Scouts, and some 19,000 American troops were in the islands when the Japanese attacked. On Bataan and Corregidor, Filipinos and Americans stuck it out together, with insufficient food, munitions, and medical supplies, with no airplanes left, fighting a hopeless fight, with nothing ahead but defeat or death. Just before Corregidor fell, General Wainwright, its heroic commander, wrote these words: "As I write this we are subjected to terrific air and artillery bombardment and it is unreasonable to expect that we can hold out for long. We have done our best, both here and on Bataan, and although beaten we are still unashamed."

That heroic fight was a magnificent vindication of 40 years of American tutelage in the Philippines—40 years of patient and understanding effort to train for coming independence a people who had been for centuries held down under alien rule.

III

Never before has there been anything quite like the story of Philippine-American relationships.

Mr. Taft, the first Governor General of the Philippines, inaugurated the policy of "the Philippines for Filipinos." In less than 2 years legislative power over the islands was transferred from the Military Governor to the newly created "Philippine Commission." In the following year Governor Taft appointed three Filipinos as members of this Commission. In 1907 a Philippine Assembly was inaugurated as the lower house of the legislature, with the Philippine Commission serving as the upper house.

In 1913, President Wilson, pressing forward upon the policy of educating the Filipinos in the art of self-government, appointed to the Philippine Commission a majority of Filipinos. He proceeded to Filipinize the administration of the islands as rapidly as possible. "We must hold steadily in view their ultimate independence," he declared in his annual message of December 2, 1913, "and we must move toward the time of that independence as steadily as the way can be cleared and the foundations thoughtfully and permanently laid."

Two and a half years later the passage of the Jones Act still further increased the sphere of Philippine autonomy by abolishing the Philippine Commission and creating in its place an elective Philippine Senate.

During the whole of this time America assisted the Islands with much of the best she had to give—men, ideas, sacrificial effort, money, material resources. She sent out men and women of skill and courage to teach and to serve, pioneers of western democracy. The two peoples, aided by the talents of those from other countries, buckled down to work, to make the Islands one the healthiest and happiest spots in the Pacific. They set up schools and raised the standard of literacy from 20.2 percent in 1903 to 48.8 percent in 1939. They taught English as a common language by which Filipinos of different tongues and different races could achieve national unity.

Americans inspired the building of roadways linking together distant parts of the Islands. They taught sanitation and inaugurated campaigns against disease, so that the scourges of cholera and smallpox were practically stamped out, reducing the death rate from 47.2 per thousand in 1903 to 16.87 per thousand in 1939. Americans and Filipinos together opened up mines, introduced revolutionary changes in agricultural and industrial methods, and developed new industries. The national income, measured by overseas and domestic trade values, increased fivefold. Through these common efforts Filipinos absorbed American ideas and American ways of life.

True, the Filipinos absorbed the bad as well as the good. Furthermore, much remained unachieved. In spite of many salutary and outstanding accomplishments, neither had a sizeable independent middle class been developed nor a sound and balanced economy been achieved. The bulk of the newly created income went to the government, to landlords, and to urban areas, and served but little to ameliorate living conditions among the almost feudal peasantry and tenantry. The relative numbers of these tenants were not materially reduced. Maldistribution of population, of land, and of wealth in many forms continued. The gap between the mass of the population and the small governing class broadened, and many social problems remained unsolved.

But in spite of American shortcomings and failures and of Filipino ineptitude or misunderstanding, the peoples of the Philippine Archipelago, within the span of a single generation, were transformed into a unified, progress-conscious nation, with vastly improved general standards of living, a sound public-school system, good sanitation and public health, modern roads and transport systems, and the developing ability to govern themselves. It was an outstanding achievement. The experiment proved that in the government of alien peoples a policy based upon the welfare of the governed rather than upon power politics and exploitation can be both beneficent and practical.

Exploitation is no longer a practical basis, under twentieth-century conditions, upon which to rest colonial administration. The problem of colonial government never will be solved until we realize that the supreme values to be conserved are human personalities. Because America's underlying objective in her Philippine policy was the welfare of the Filipinos, the Filipinos fought to the death against the Japanese for American ideals and the American way of life.

In 1934 Congress passed the Philippine Independence Act, giving to the Filipino people the right to adopt a constitution, to set up a largely autonomous commonwealth government for an interim 10-year period, and thereafter to enjoy complete independence. The act provides for a commonwealth president and vice president and for a legislative assembly, all freely elected by the Filipino people. Under the provisions of the act the date set for full independence is July 4, 1946.

On November 15, 1935, the new Commonwealth government was inaugurated. Manuel Quezon, one of the most colorful figures of the Far East, was elected as the first president. Always dramatic, charming beyond words to all whom he set out to win, impulsive, adroit, daring, ambitious, he had outwitted and outmaneuvered every rival and stood clearly at the forefront, the unquestioned political leader of the Philippines.

During the 6 years that followed, the Filipino people proved that they are capable of self-government. They organized a smoothly running assembly. They established commonwealth courts. They set up provincial governments. They successfully took over the public administrative services. What was lost in increased costs of government, in

lowered standards, in slackened achievements, was more than offset by newly won experience and national self-respect.

IV

After the inauguration of the Commonwealth government, through the difficult transition stage leading to independence, it became the delicate task of the United States High Commissioner, who represented the President in the Philippines, to give as much help as possible to the Filipino people—largely by personal influence and suggestion rather than by constitutional authority. The exercise, no matter how tactful, of even such residuary power as remained in American hands was frequently an irritation to Filipinos. Quite understandably they wanted to see the Philippine flag flying at the top of the masthead and not underneath the American flag.

Delicate situations constantly arose. For instance, there was the issue of education. For 40 years Americans had labored, and labored valiantly, to overcome the appalling illiteracy prevailing at the end of Spanish rule. They had built elementary government schools in every small barrio, organized high schools and universities, and lifted education above sectarian pressures and politics.

In 1940 the Philippine Assembly passed an act authorizing wide revision of the elementary school system, reducing the elementary course from 7 to 6 years. This was followed by strong agitation on the part of certain sectarian groups to reduce the high school and the college course each from 4 to 3 years. Feeling ran high. The controversy was interrupted by the outbreak of the war. At the same time President Quezon was seeking to establish Tagalog as the national language, in spite of the fact that adequate Tagalog textbooks and Tagalog literature do not exist and that Tagalog is distinctly a minority language in the Philippines. And under the commonwealth form of government these were issues exclusively for the Commonwealth to decide.

Even in financial matters American officials, in the main, had to follow a hands-off policy. By virtue of careful and efficient administration the United States had turned the government over the Filipino people in 1935 a highly solvent administration with considerable surpluses and reserves. Under the 6 years of the Commonwealth government, however, expenditures had increased at such a pace that in spite of augmented revenues there were mounting deficits which were met by the use of surpluses built up under the American administration; and for the fiscal year 1942 the assembly had voted to meet the current deficit by use of the remaining surplus from previous years and by the sale of a bond issue of $10,000,000. The continued expenditure by the Commonwealth government of the large sums turned over by the United States, collected as excise taxes on Philippine coconut oil, varying from seventeen to twenty million dollars every year, and equal to nearly 40 percent of the Commonwealth revenues from all other sources, contributed to the maintenance of prices and production costs at levels well above those of other tropical countries with which the Philippines will have to compete after attaining independence.

In short, 6 years of experience proved the Commonwealth experiment serviceable and workable as an interim arrangement for a youthful people attaining nationhood, but impracticable and unsatisfactory as a permanent form of government. It has spelled irritations and frustrations on both sides. It has meant in the last analysis division of power between two widely different peoples. Such an arrangement is unsatisfactory to both peoples and therefore lacks stability.

In the Philippines the hour has struck. Independence is the only practicable way forward. Commitments have been made and expectations have been built up on the part of both parties. There is no turning back now.

Are the Filipinos ready for independence? There is only one way in which that question can be truly answered. That is through the actual experiment. Was the United States ready for independence in 1776? There were many people at that time who would have answered "no." By actual experiment we proved that we were.

In a strongly rooted independent Philippine Nation America has a crucial stake. For over 40 years we have been at work implanting in the Filipinos our ideas of individual liberty and the democratic way of life. Their success means our success in furthering American ideas and ideals throughout the strategic east.

Last June Congress passed a joint resolution to make good the pledge of freedom. In words portentous for the future of the Filipino people, Congress authorized the President, "after proclaiming that constitutional processes and normal functions of government have been restored in the Philippine Islands, and after consultation with the President of the Philippines, to advance the date of the independence of the Philippine Islands by proclaiming their independence as a separate and self-governing nation prior to July 4, 1946."

Thus America stands committed to give to the Filipino people full independence after the Japanese aggressors are driven out and "constitutional processes and normal functions of government" have been restored to the Philippines. Standing today at the helm of the Commonwealth government in exile is Sergio Osmeña, who as Vice President succeeded President Quezon upon the latter's death on August 1, 1944. President Osmeña, of the same age as President Quezon and formerly his political rival, has for many years been a leader in Philippine public life. Dependable, of tempered and reasoned judgment, wise, respected throughout the Philippines, he promises in the difficult years ahead to prove an able leader, friendly to Americans and always ready to cooperate.

V

Perhaps the greatest difficulty confronting the new government will be how to achieve economic independence. When the Philippines became part of the American Nation in 1898, the Filipinos were given free access to the highly protected American market—one of the richest in the world. This right to send Philippine products into the United States free of duty and to sell them there for remunerative prices, while other nations had to pay high duties on similar imports into the United States, proved to be an economic gold mine for the Filipinos. For instance, because they could ship sugar duty-free to the United States, Philippine sugar producers in 1937 received about $41,000,000 more than they would have obtained if they had sold an equivalent amount of sugar at the world price.

Under such conditions it has been inevitable from the outset that the Filipino people should concentrate their productive effort upon those commodities which could be sold in the United States market at prices maintained above world levels by American legislation. Of the total value of Philippine exports, the United States accounted for 19 percent in 1900, 46 percent in 1910, 70 percent in 1920, and an average of 85 percent in the 5 years ending in 1940.

In short, although during the past 40 years we were doing everything possible to prepare the Filipinos for political independence, the effect of our economic policy was to make them even more dependent upon the United States. With four-fifths of Philippine products before the war dependent upon American markets, the United States could not suddenly shut Philippine producers out of the duty-free American markets without entailing grave injury to the entire Philippine economy.

Permanent free entry for Philippine products in the American market offers no solution. If the Filipino people are ever to have the independence which they crave, clearly their fundamental economy and means of livelihood must be free from dependence upon changeable legislative majorities in the United States Congress. Political independence without economic independence would be a mockery. Furthermore, if stable foundations are to be built for a lasting world peace, the postwar trade arrangements must be built upon equality of commercial treatment to all and not upon special trade preferences and discriminations. If the United States grants and receives exclusive preferential treatment in areas with which it has close political ties, it would be difficult for us successfully to oppose imperial and dominion preferences in the British Empire and elsewhere.

The solution has been sought in gradual and progressive increases of American duties on Philippine products. The Independence Act of 1934 provided for increasing economic limitations and restrictions upon the shipment of Philippine products to the United States during the interim 10-year period. The Joint Preparatory Committee on Philippine Affairs, which explored the problem in 1937 and 1938, recommended that the elimination of Philippine preferences should be achieved only gradually and progressively at the rate of 5 percent a year for 20 years.

The present war has profoundly changed the situation. Since 1941, Filipinos have been able to ship no sugar or other products to American markets. It is reported that sugar cultivation, except for home consumption and the manufacture of alcohol for fuel, has been practically stopped. The copra and coconut oil industry is also stagnant. Attempts to grow cotton as a commercial crop are said to have failed.

When liberation comes, presumably sugar cultivation in the Philippines will be on a home-consumption basis. If the new Philippine Government after the war is wise enough and strong enough to prevent a return to prewar sugar production figures, one of the great milestones on the way to economic independence will be passed.

The building of the new Philippine economy will call for a high order of planning and statesmanship. Largely because of American activity for the past 40 years, the Filipino's standard of living and also his living costs have risen considerably above those of his competing far eastern neighbors.

Of course, the bulk of production will continue to be for home consumption; and here other considerations will apply. But the Filipinos will need imports from abroad; and to buy these, they must produce a considerable quantity of goods for export.

If and when independence shuts the Filipinos out of the protected American markets, they will be forced to sell in world markets in competition with other areas with lower standards of living and production costs. They will have to turn away from the production of surpluses like sugar, which are salable only in the protected American market, and learn to produce goods which they can sell at a profit in world markets. To achieve this, Filipinos must improve and lower the cost of their products through increased skill and scientific knowledge, through labor-saving devices, through utilization of byproducts, through inventive ingenuity along a thousand different lines.

The solution of their economic problem will be a thorny and difficult task. It is not insoluble. American ingenuity and technical skill will be at the call of the Filipinos to help in the solution.

Last June Congress passed a joint resolution (S. J. Res. 94) creating a Filipino Rehabilitation Commission, composed of an

equal number of Americans and Filipinos, to investigate all matters affecting postwar economy, trade, finance, economic stability and rehabilitation of the Philippine Islands and to formulate recommendations based upon such investigations and for future trade relations between the United States and the independent Philippine Republic when established.

Because the present economic dependence of the Filipinos upon the United States is largely of our own making, and because it is to our own interest to build for future stability in the Pacific, the Filipino people must be given their independence under such conditions as will assure them sound economic foundations for their future. The American people will not be content with anything less.

VI

There remains the question of United States naval and air bases in the Philippines. The Independence Act of 1934 authorized the President of the United States to acquire or retain naval reservations in the Philippines, and the joint resolution of 1944 (S. J. Res. 93) authorized the President to withhold or to acquire such bases, in addition to any provided for in the Act of 1934, as he may deem necessary for the full and mutual protection of the Philippine Islands and of the United States.

It is not a question of a great power for its own interests imposing its will by might upon a small, unwilling nation. The responsible leaders of the Commonwealth government want the United States to retain bases in the Philippines. They know that an American base in the islands would have to be protected by American armed forces; and that, modern warfare being what it is, protection of the base would involve protection of the entire Philippine archipelago. From the point of view of the Philippines, the grant of a naval or air base is a cheap price with which to buy protection by the most powerful Navy in the world against foreign aggression.

The real question is whether the United States desirse to acquire such bases at such a cost. The answer depends in part on the issue of what is to be the future role of the United States in world affairs and particularly in the Pacific. Are we henceforth to draw into our own continental orbit and seek to avoid all involvements in the Far East, or are we to continue as a great Pacific power, playing an active, decisive part in the Far East? The present course of international events in reality leaves us no choice.

The world has become a unity. Twentieth-century conditions force either participation in world activities or else atrophy and extinction. The day of "magnificent isolation" is past. The United States is compelled, irrespective of its desires, to play an active part in the Pacific and in the Far East or cease to be a great power.

The peoples of the world today are interlocked economically, socialily, politically. China needs American goods. The United States in the postwar world will need Chinese markets if we are to keep our men at work. The same is true of Australia, of New Zealand, of Malaya, of the Philippines. People cannot sell without buying. Trade is a two-way process. In our twentieth-century closely integrated world, ignorance or backward conditions or disease in any one spot vitally endangers all. If we accept that view, what follows? Should the United States establish naval or air bases in the Philippines?

However, the answer transcends the Philippine problem. It relates in part to the kind of international organization for maintaining world security which will emerge from the present war.

If the postwar world is to be built again upon the outlived nineteenth-century system of competing, rival sovereignties and a continually teetering, ever-precarious balance of power, then the United States will inevitably continue to seek its own security through its own armies and navy and air power; and it it will want its own naval and air bases in those parts of the world where fighting is likely to break out. So will every other great power. If that is to be the course which we and other great powers follow in the postwar world, the retention of powerful Philippine naval and air bases will not save us. For the whole world will then be following the pathway to disaster.

If, on the other hand, the postwar world is to be built upon modern reality; if the United Nations join in setting up a world organization built upon the cooperative effort of all to advance human welfare, to elevate standards of living, and to enforce a common rule of justice and law in place of strong-armed international savagery, the Philippines cease to be an international problem. The independent Philippines then become an outpost in the Pacific for the enforcement of international order in the interest of world security.

It is against this background that the matter of naval and air bases in the Philippines must be considered. The maintenance of justice and law, whether by national or international organizations, requires armed forces. Some strong Philippine base will probably be necessary for the maintenance of order in the postwar world. The vital issue is whether henceforth bases such as these will be held by individual nations, owing responsibility to no one in order to protect and further their own selfish interests, or whether they will be held by or for the world community in order to protect and maintain an organized peace.

The days of imperialism are numbered. Stable peace cannot rest on any system of alien government based upon exploitation. This applies to every country and to every race—white, yellow, brown, or black. The only possible basis for an enduring civilization is equality of human rights, regardless of race or creed or color. The Atlantic Charter is as applicable to the Pacific as it is to the Atlantic. Humanity knows no geographical bounds.

Pacific peoples no less than Atlantic peoples have the right "to choose the form of government under which they will live." Pacific peoples no less than Atlantic peoples are entitled to "access on equal terms to the trade and to the raw materials of the world which are needed for their economic prosperity."

In the light of these fundamentals the program of the United States in the Philippines assumes fairly distinct outlines. Our first step obviously is to drive the Japanese invaders from the islands.

Second, we must thereupon establish the complete independence of the Philippine Islands as a separate and self-governing nation.

Third, the United States and the new Philippine Government must work out some practicable program for the winning of economic independence. The United States is morally bound to assist the Filipinos in finding a way to achieve independence without economic shipwreck. But continuing free entry for Philippine goods to the protected American market offers no solution.

Fourth, the Filipino people will emerge from the war economically stunned, with many of their properties in ruin. The United States will want to help them to their feet with assistance in the most constructive form possible.

Fifth, the United States and the Philippine Nation must unite in working out common security measures, if possible, with the other United Nations. Such measures will presumably include the establishment of naval and air bases in order to protect and maintain the world's peace in the Pacific.

The eyes of the world, and particularly of every people in Asia, are upon the Philippines. The measure of American influence for good in the Far East for years to come will depend largely upon the wisdom and the sincerity of American conduct in the Philippines.

In 1776, America in the western world struck out along a new pathway for democracy and human freedom. Her achievement forms one of the shining chapters in human history. In the months and the years ahead America has the chance to assist in writing a new chapter in human progress and freedom in the Far East. What is written will depend in large part upon the outcome of the Philippine adventure.

Radio Address of Hon. Lothrop Stoddard

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Lothrop Stoddard made over the radio on February 17, 1946:

During the years just prior to World War II, when the boundless ambitions and immeasurable ruthlessness of Nazi Germany were being revealed alike by its deeds and its words, a growing number of farsighted minds became convinced that the Nazi peril must, at all costs, be faced up to, met, and mastered. That conviction was perhaps best expressed in the title of a book written by a member of our foreign service who, from a wealth of personal experience in the Third Reich, coined the telling phrase: "You can't do business with Hitler."

The events of the past week have probably done more than any previous period to lead intelligent realists to form a similar conclusion regarding the Soviet Union and to say with regretful conviction: "You can't do business with Stalin," meaning, in this instance, not merely the aging Russian dictator but also the entire knot of implacable and instable zealots associated with Stalin in the Moscow Politbureau, whose inflexible aim always has been and still is to dominate and revolutionize the world, ultimately uniting it in a universal U. S. S. R.—a planet-wide Union of Soviet Socialist Republics.

To give the devil his due, the rulers of Soviet Russia cannot be charged with the sin of hypocrisy. They have never concealed their basic aims, but have announced them as frankly as Hitler did his in the pages of Mein Kampf. It is we of the democratic world who have been guilty of intellectual dishonesty and cowardice by chronically refusing to face up to either of these totalitarian menaces until it is too late to deal with it with constructive decisiveness and thereby avert a major disaster.

Regular listeners to these broadcasts will recall that, for the past 3 years I have been warning against the implications of Soviet policy and the dangers of trying to appease it. Those warnings have brought down upon me much criticism and not a little abuse. But Moscow's conduct since the close of the war, culminating in the events of the past week, are opening democratic eyes at an unprecedented rate, and it is to be hoped that the grim lesson may be learned in time to lead to remedial action before it is too late.

The catalog of Moscow's offending is a long one, but this week has witnessed three items of especially noteworthy significance. These are: (1) Stalin's broadcast on election eve; (2) textual publication of the Yalta sell-out; (3) Ottawa's disclosure of the Soviet spy ring in Canada.

Last Sunday I noted the gist of Stalin's speech which was summarized over the radio that Saturday evening, though the full text was not available until the morning papers. A complete reading merely accentuated its menacing character, which spread consternation everywhere outside Communist circles. The address constitutes an uncompromising challenge to the democratic world and its way of life which is condemned by Stalin as a breeder of economic depression, crises, and periodic wars. The logical conclusion is that the Soviet Union should bend every effort to magnify its power and perfect its superiority. No mention of UNO. No hint of genuine understanding and cooperation. Only an assertion of the immense superiority of the Soviet system, the Red Army, and the spread of the Soviet way of life which such combined innate superiority and power necessarily entail.

This imperious manifesto should strip away the last illusions of wishful thinkers and lead to an entire recasting of the attitude and policies of democratic nations toward the Soviet Union and its adherents among ourselves. First of all, it should mean the resolute end of appeasement of every kind. Moscow should be given plainly to understand that it will be held strictly to its international undertakings and that acts of unilateral aggression will be met determinedly even though a major crisis be thereby precipitated. We, on our part, should become aware that if a show-down between ourselves and Moscow must come, as now seems well nigh unavoidable, the sooner it comes the better for us.

This mood of healthy realism should be furthered by the full disclosure of the famous, or rather infamous, Yalta agreement—infamous not only for the needless bartering away of principles on our part but also for the revelation of the true character of Russia's war effort. Our "noble ally" who uttered such fine sentiments and pled so eloquently for a second front when the Nazis were pushing him hard is now seen to have been actuated throughout by purely selfish motives and had to be bribed to extend reciprocal aid to its allies, who, incidentally, seem to have been either too stupid or too craven to have realized that the bribe was needless.

Yet, having gained such vast advantages through Yalta, Moscow has proceeded to evade or nullify its obligations under that agreement, alike in Europe and in the Far East. The latest of these are visible in the pressure brought to bear on the Chungking government for fresh concessions in Manchuria and in the setting up of a Soviet-dominated regime in Inner Mongolia, the exact counterpart of the bogus regime engineered in Azerbaijan. These flagrant dishonesties should be roundly countered by our Government, which should back Chungking wholeheartedly, and should incidentally insist upon a workable formula in Korea and allow no tampering with MacArthur in Japan.

The world-wide scope of Soviet designs is just being brought home to us, perhaps more vividly than ever before, by the Canadian Government's unearthing of an elaborate espionage network in the Dominion. The existence of such a network has been suspected for some time, but its precise objectives have only recently been determined. One of these is now seen to be the theft of vital information concerning the atomic bomb, but suspicions of larger Soviet aims, entertained by the Canadian and American General Staffs, has led to the current Canadian Army expedition known as "Operation Musk-Ox," to explore and strategically open up the wilds of northern Canada, in order to guard against a potential aerial invasion of the North American Continent over the North Pole. The first detachment of this expedition left Port Churchill on Hudson Bay last Friday in a temperature of 43° below zero. Its itinerary will cover 3,100 miles. Such heroic exertions reveal the long-range verdict of military planners both here and in the Dominion regarding future contingencies with the Soviet Union.

Going back to the spy-ring disclosures, it is understood that the ramifications extend into the United States and that our vigilant FBI has made several arrests, but that pressure from our State Department hushed up the matter and prevented legal prosecutions. Another instance of the piddling policy of appeasement which seems so rampant in the Department these days.

When, oh when, will our Government begin the desperately needed education of the American people by officially announcing the realities of the world situation and honestly explaining their meaning? We have just issued a blue book, calling attention to the neo-Fascist danger arising in Argentina. How much more necessary is another blue book setting forth the doings of Moscow during recent years.

Another thing the American public should be officially told is the character and activities of the so-called American Communist Party. Every patriotic citizen should be led to realize that this organization can no longer be considered a joke or a mere nuisance; that, now that Moscow has revealed its program and policy, our local Communists can be counted on to follow a party line which renders them actual seditionists and potential traitors.

Thus far, the only high-placed official of our Government who has had the guts to speak out frankly about our Communists is the one official who knows by far the most about their nefarious plans, acts, and methods. This courageous individual is none other than J. Edgar Hoover, head of the FBI—the Federal Bureau of Investigation.

To me, it is amazing that our press services did not fully report his startling address last December before the International Association of Chiefs of Police at Miami, Fla. After recounting the FBI's extraordinarily successful campaign against Axis plotters and saboteurs during the war, Mr. Hoover continued:

"To the Fascist foe must be added another, the American Communist. These panderers of diabolic distrust already are concentrating their efforts to confuse and divide by applying the Fascist smear to progressive police departments, the FBI, and other American institutions to conceal their own sinister purposes.

"The godless, truthless way of life that American Communists would force on America can mean only tyranny and oppression if they succeed. They are against the liberty which is America—they are for the license of their own. When they raise their false cry of unity, remember there can be no unity with the enemies of our way of life who are attempting to undermine our democratic institutions. The Fascist-minded tyrant whom we conquered on the battlefields is no different from the American communistic corruptionist who now uses the tricks of a confidence man until his forces are sufficiently strong to rise with arms in revolt.

"America cannot exist half democratic and half Communist or Fascist. If we want to improve upon our American form of government, we will do it in our own way, in our own time, and with our own blueprint. Therefore it behooves us to be on guard for an enemy that brazenly and openly has advocated the corruption of America, that spends sleepless nights working one propaganda line after another, that poses behind a dozen fronts, that squirms and twists his way into those great American forces such as the church, the schools, and the ranks of labor."

Since those brave words were spoken, 2 months ago, what turmoil and confusion has spread over the American scene. Crippling strikes, bitter factionalism, mutinous discontent in our armed forces, abject appeasement in our foreign policy, and semiparalysis in our domestic politics. Is all this merely fortuitous? Or is there a hidden hand, reaching out from afar to envenom our local problems and synchronize them in a manner which, unless sternly checked and constructively dealt with, may make us helpless at the very moment when our strength and unity are most needed in the world?

My radio audience, I ask you gravely to ponder on all these things.

Brotherhood

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily New of February 19, 1946:

BROTHERHOOD

Tolerance is a virtue, but in the United States we need a much richer virtue than that. It is not enough that we should treat those of different race or different religion from ourselves with indifference or even politeness. Unfortunately even that minimum standard of decency is not achieved by some people

We need to cultivate in all our public and private relations the will to seek and know the best among our neighbors of all races, colors, and creeds; to appreciate and foster their good qualities; to learn from them as readily as to teach them; to become their friends and in truth their brothers and sisters, as befits the children of God.

This is Brotherhood Week, sponsored by the Round Table of Christians and Jews, to cultivate brotherhood among the American people. The sponsors are asking for contributions to a fund to promote brotherhood among the diverse elements of American life, to promote research by competent sociologists into the cause of the antagonisms and prejudices that divide too many, and to find ways of eliminating these evils.

This is a good cause that merits the support of good people.

This Speculative Fever

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following editorial which appeared in the Milwaukee Journal on February 19, 1946:

THIS SPECULATIVE FEVER

It was time somebody talked frankly and forcefully to Congress about the "speculative fever" which is rising in this country. Stabilization Director Chester Bowles did the job neatly in his appearance before the House Banking and Currency Committee.

"This speculative fever," said Bowles, "has developed largely because Congress has failed so far to reenact the price control law." As long as there is a possibility that the law will be allowed to die June 30, or

that it may be weakened by amendment, there will be people who will buy goods or equities beyond their needs, or keep large inventories, just to be protected "in case."

We know this is true. There is evidence that many manufacturers are putting goods in storage, hoping Congress will fail to support the price-control program. We know that many consumers, believing runaway inflation may be in the offing, are turning all their ready cash into commodities, regardless of their needs. We know that these tendencies, by increasing already existing shortages, are making the inflationary pressure greater.

We know, too, that Congress could end this sorry game by the simple act of continuing the present price control law in effect for another year. If the people were assured that controls would not be taken off, they would drop their panicky buying of goods and stocks, and manufacturers would cease storing their finished goods.

What is Congress stalling for anyway? Surely it means eventually to carry on with the protection of price controls. Why, then, does it not act now, before the speculative fever does more damage?

CIO Discloses Its Salaries, Dues, Union Rules, Rights of Members

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mrs. DOUGLAS of California. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include a report made by the CIO as to its salaries, dues, union rules, and rights of members as it appeared in the New York Times of Sunday, February 10, 1946, under the heading, "CIO Discloses Its Salaries, Dues, Union Rules, Rights of Members," together with a table by CIO showing finances and procedures of its unions.

The CIO is to be congratulated for this act of good faith. It inspires trust.

The report follows:

CIO DISCLOSES ITS SALARIES, DUES, UNION RULES, RIGHTS OF MEMBERS

(By A. H. Raskin)

WASHINGTON, February 9.—Without waiting for congressional action on proposals to force unions to disclose information on their finances and the extent to which democratic practices prevail in them, the Congress of Industrial Organizations made public today a comparative survey of the way in which its 36 affiliated unions account for their funds and run their affairs.

The survey, made by the CIO Research Department, showed that 25 of the unions paid top salaries to their officers of $6,000 a year or less. Philip Murray, who draws no compensation as president of the CIO, receives the highest salary, $20,000 a year, as president of the United Steelworkers.

Sidney Hillman, president of the Amalgamated Clothing Workers, is paid $15,000 annually, and Emil Rieve, president of the Textile Workers Union, and Samuel Wolchok, president of the United Retail, Wholesale, and Department Store Employees, receive $10,000 each. The heads of all other CIO unions receive less than $10,000 a year, according to the report.

The salaries paid to the union leaders were contrasted with those drawn by executives of the industries with which the CIO has contracts. The report listed the highest salary paid by General Motors as $459,041 in 1943 and by Bethlehem Steel as $221,645 in 1944.

The great majority of CIO members pay union initiation fees of less than $5, according to the survey. The general range is $2 to $10, with one union, the Marine Engineers Beneficial Association, requiring $50.

Twenty-seven unions levied no special assessments on their members last year, when the highest assessment reported was $2. Eight unions do not permit assessments, five vest the power to levy them in executive boards and most others in a national convention or a membership referendum.

Monthly dues were reported to be $1 to $1.50 for most workers, with about half the dues going to the international union and the rest retained by the local. The dues and initiation fees cover all collective bargaining negotiations, strike benefits (except for special assessments and fund-raising drives), publication of union journals and political activities, the CIO stated.

It declared that every CIO union "carefully accounts" to its membership for all money spent and that 32 of the 36 unions publish detailed financial reports, which are available not only to the members but also to the press and all other interested parties.

In 31 cases regular audits are made by certified public accountants. In the other unions the auditing is done by officers or committees especially elected by the membership, the CIO reported.

RIGHTS OF MEMBERSHIP

No worker is barred from any CIO union because of race, color, sex, or creed, according to the report. However, the statistical table summarizing the findings of the research department indicates that the Marine Engineers Beneficial Association leaves the question of admission without discrimination to the discretion of its locals. All other unions said that they prohibited such discrimination.

There are no "second-class members" in the CIO and every member has full and equal voting rights, the CIO said. The officers of all international unions are elected by the membership or by convention delegates selected by the membership, the report stated, and such elections are held annually or biennially in every union except by the United Retail, Wholesale and Department Store Employees, which elects its officers every 3 years.

The supreme legislative body for CIO unions is the international convention, held annually or biennially by 34 unions, the survey disclosed. The other two unions hold conventions every 3 years.

Convention sessions are generally open to the public and proceedings are published in full by 31 unions, it was stated. The remaining 5 unions publish summaries or condensations of their proceedings.

To safeguard the rights of individual members, the constitutions or bylaws of all unions provide that a member has a right to a hearing before he can be expelled, the CIO said. Thirty-three unions have the further stipulation that the member may appeal to the international convention before expulsion becomes final.

PUBLICATION OF RECORDS

No effort was made in the survey to determine the total amount in union treasuries, the number of organizers, and other officials employed, or the sums spent on organizing activities. But CIO officials said that most of this information could be obtained from the published financial statements of the unions.

In summing up its findings, the CIO said:

"This study does not prove that all CIO unions are perfect—no human institutions are. There is no way of compelling people to participate actively in their own organizations and protect their own democratic institutions. Passing laws won't help, either.

"But the survey does demonstrate that CIO unions have provided a democratic framework, a constitution which insures basic democratic rights for all members. And it is clear today that the great mass of industrial workers, through their unions, have found the means of expressing their needs and desires.

"Indeed, the speed with which the unions responded to the great unrest and economic uncertainty which workers experienced after the war ended is strong evidence of their democratic vigor."

Table of CIO showing finances and procedures of its unions

Name of union	Annual salary of highest paid officer	Initiation fee	Monthly dues	How does international report on receipts and expenditures to membership?	Are international books audited and by whom?	Is financial report published?	How often are international conventions held?	How often are officers elected?
Architects, engineers, chemists, and technicians.	$4,680	$3 to $10, usually $3.	$1 to $2.50, average is $1.35.	Quarterly report to locals.	Yes, certified public accountants.	Yes	Every 2 years	Every 2 years.
Automobile workers	9,000	$2 to $15	$1	Semiannual report to locals.	do	do	Annually	Annually.
Barbers and beauty culturists	4,680	$3 to $25	$1 to $4	Statements issued by accountant.	Yes, international auditor.	do	Every 2 years	Every 2 years.
Amalgamated clothing workers	15,000	$10 maximum	Varies, usually $1.40 to $2.[1]	At convention	Yes, convention committee and certified public accountant.	do	do	Do.
American Communications Association.	4,680	$1 to $20, depends on earnings.	$1 to $4 [2]	Published in union journal.	Yes, certified public accountant.	do	do	Do.
Electrical, radio, and machine workers.	5,200	$2 minimum, rarely more.	$1 minimum, usually $1.50.	Monthly statement to locals.	Yes, trustees and certified public accountant.	For members.	Annually	Annually.
Farm equipment and metal workers.	5,000	$2 to $15	$1 to $1.50	Quarterly by executive board.	Yes, certified public accountant.	At convention.	Every 2 years	Every 2 years.
Federal workers	5,000	$2 maximum, most pay $1.	$1.50 maximum, most pay $1.	At convention	do	Yes	Annually	Annually.

[1] Set by locals, usually varies from 25 to 50 cents per week.

[2] Dues depend on earnings.

Table of CIO showing finances and procedures of its unions—Continued

Name of union	Annual salary of highest paid officer	Initiation fee	Monthly dues	How does international report on receipts and expenditures to membership?	Are international books audited and by whom?	Is financial report published?	How often are international conventions held?	How often are officers elected?
Fishermen and allied workers	$4,160	$10 maximum	Set by locals, most 50 cents to $1.25.	Semiannual report by certified public accountant.	Yes, certified public accountant.	Yes	Annually	Annually.
Food, tobacco, and agricultural workers.	4,940	$5 in union shop, $2 elsewhere.	$1.50 minimum	Semiannual report to executive board.	Yes	do	Every 2 years.	Every 2 years.
Fur and leather workers	5,200	$1 and up, as set by locals.	$1.40 minimum [2]	International finance committee regularly audits.[3]	Yes, finance committee and certified public accountant.	do	do	Do.
Furniture workers	5,720	$2 to $15	$1 to $2	Quarterly report to locals.	Yes, certified public accountant.	do	do	Do.
Gas, coke, and chemical workers	3,600	$2 to $5, may be waived.	$1 to $1.50	At convention	do	do	do	Do.
Glass, ceramic, and silica sand workers	5,600	$2 minimum, a few locals charge more.	1 percent of earnings.	Monthly report to locals.	do	For members.	do	Do.
Inland boatmen's union of the Pacific.	(4)	$10, maximum	$1.50 to $3	Certified public accountant quarterly report to locals.	do	No	No conventions.[5]	Do.
Longshoremen and warehousemen	5,080	$1 to $10	Set by locals	Quarterly audit sent to locals.	do	Yes	Every 2 years.	Do.
Marine cooks and stewards	4,840	$32 [6]	$2	Weekly at port meetings and at general council.	do	do	do	Do.
Marine engineers beneficial association.	7,500	$50	$2	None made, but is available.	do	do	Annually	Do.
Marine and shipbuilding workers	8,000	$2 to $10, 80 percent pay $2.	$1.25	At convention	do	do	do	Annually.
National maritime union	7,800	$15 [6]	$2.50	Monthly, in union press.[7]	Books open to members.	do	Every 2 years.	Every 2 years.
Mine, mill, and smelter workers	6,000	$2 to $10, most pay $2.	$1 to $5, majority $1 to $1.50.	Monthly report to locals.	Yes; certified public accountant.	do	Annually	Do.
American newspaper guild	6,750	$1 to $10	$1 to $5	Quarterly, annually, certified public accountant report.	do	do	do	Do.
Office and professional workers	7,800	$2	$1.50 to $3.50	At executive board meetings and convention.	do	do	Every 2 years.	Do.
Oil workers	6,600	$2 to $25	$2 to $3, 95 percent pay $2.	Monthly statement to locals.	do	do	Annually	Annually.
Packinghouse workers	4,500	$2 [8]	Set by local, 95 percent pay $1.50.	Semiannual report	Yes; by auditor	do	do	Do.
Playthings jewelry, and novelty workers.	5,200	$2 to $10 90 percent locals charge $2.	½ pay $1, ½ pay $1.50.	Semiannual audit sent to locals.	Yes; by auditor and accountant.	do	Every 2 years.	Every 2 years.
Retail, wholesale, and department store employees.	10,000	$10, maximum, average is $5.	$1 to $4	Report at each executive board meeting.	Yes; auditor and certified public accountant.	do	Every 3 years.	Every 3 years.
Rubber workers	4,500	$2	$1	Quarterly audit sent to locals.	Yes; certified public accountant.	do	Annually	Annually.
Shoeworkers	5,200	$2, minimum	$1, minimum [9]	Quarterly report to locals.	do	do	Every 2 years.	Every 2 years.
State, county, and municipal workers.	5,000	$1 to $5, most pay $1.	$1 to $2, most pay $1.50.	Semiannual report to locals.	do	No	do	Do.
Steelworkers	20,000	$3	$1 to $1.50	Certified public accountant report to locals.	do	Yes	do	Do.
Stone and allied products workers	3,000	$5 minimum [11]	$1.25 [10]	Annual report to local officers.	do	For locals	Every 3 years.	Do.[12]
Textile workers' union	10,000	$1 to $10 [13]	$1 minimum, most pay $1.50.	At convention	do	Ye	Every 2 years.	Do.
Transport service employees	4,000	$5	$1.50	Quarterly report to locals.	do	do	do	Do.
Transport workers' union	5,200	$3	$1.25 to $1.75 [14]	Semiannual report to locals.	do	do	do	Do.
Woodworkers	5,200	$5 [11]	$1 minimum	Quarterly report to locals.	do	do	Annually	Do.

[2] Minimum dues actually 35 cents weekly, with 12½ cents weekly as regular per capita tax. In a few locals dues are based on a percentage of earnings.
[3] Certified public accountant submits semiannual report to executive board.
[4] No full-time international officers.
[5] Annual conference of executive council is central policy body; its recommendations are submitted to membership referendum.
[6] Helps to cover burial benefit, shipwreck benefit, hospital benefit, etc.
[7] Also semiannually and annually.
[8] A few locals add additional fees for special purposes; none charge more than $5.
[9] Minimum dues actually 25 cents weekly, with 15 cents weekly as regular per capita tax.
[10] A few locals charge $1.50 (with special permission of international).
[11] International frequently reduces charge in case of new locals.
[12] President and secretary-treasurer every 2 years, vice president and executive board every year.
[13] Majority of locals make no charge.
[14] Dues depend on earnings.

Costa Rica: A Rural Democracy

EXTENSION OF REMARKS

OF

HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, February 22 (legislative day of Friday, January 18), 1946

Mr. RADCLIFFE. Mr. President, in moving to have the article, Costa Rica: A Rural Democracy, from the Washington magazine, World Affairs, inserted in the Appendix to the CONGRESSIONAL RECORD, I wish to say a word about the constructive, wartime work of my friend, Dr. Joseph F. Thorning, educator, author, and lecturer, in winning valuable friends for the United States of America among our good neighbors in South and Central America. This article on Costa Rica, which I am submitting for the attention of the Congress, bears the impress of all the qualities of high-minded friendship which is a gift most attractive to those citizens in Latin America who contributed to the victory of the United Nations. In describing Costa Rica as a rural democracy, Dr. Thorning, one of our most accurate scholars, emphasizes the importance of enlightened principles of social justice for the masses of farmers, miners, and industrial workers in the other American Republics and Canada. At the same time, this Maryland apostle for the good-neighbor policy points out that good health among the little children throughout Latin America is a starting point for inter-American friendship. Although the problems and handicaps of climate, altitude, and food naturally impede orderly socio-economic progress, it is evident from the article of Dr. Thorning that our friends in Latin

America cannot only overcome these difficulties, but also furnish us some patterns for imitation in our own country. The article speaks for itself.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COSTA RICA: A RURAL DEMOCRACY

(By Dr. Joseph F. Thorning, of Maryland)

Costa Rica is one of the most thoroughly democratic states of the Western Hemisphere. Although its people are predominantly Spanish, often described superficially as unfitted for self-government, they have managed to create a republic notable for orderliness. Surrounded by countries where agitation, unrest, and even revolutions abound, Costa Ricans seem to have discovered the formula for quiet, unspectacular progress. Costa Rica (or Rich Coast) lives up to its name as a region rich in the best values realizable in a rural democracy.

Evolution of rural democracy in Costa Rica stems from diverse causes:

1. Relatively wide distribution of land ownership. 2. Fairly homogeneous white population. 3. Deep, practical interest in education. 4. Climate unspoiled by extremes of altitude or temperature. 5. Expanding birth rate. 6. Well-balanced economy, with imports never greatly in excess of exports.

Redistribution of land, described as "the perennial football of Latin-American politics," has constituted the basis for democracy. In 1572, while children of the original conquistadores were still in the land, the 55 Spanish families in and around Cartago, Costa Rica's pioneer community, faced an agonizingly painful dilemma: Either they would have to plow their own fields and produce their own grains, fruits, and vegetables, or they would be doomed. In other parts of Hispanic America, proud, though penniless, hidalgos and swineherds resorted to the importation of slaves and to tenant farming to escape the fancied indignity of manual labor. Vast estates in Argentina, Chile, Peru, and Guatemala, still intact, bear testimony to the tenacity of a landed aristocracy.

In Costa Rica alone was the dilemma resolved in favor of personal service. Only there did Spaniards (or Portuguese) turn their backs upon the delights of the bower-like hacienda, where lords and ladies of the manor adorned the center of a multicolored picture whose frame was compounded of the sweat, blood, and anguish of thousands of Negroes, Indians, mulattoes, quadroons, octaroons, and mestizos. They elected to do farm work themselves, perhaps not so much because of virtue or farsighted wisdom but because they saw slave merchants were uninterested in a remote market where the profits would be infinitesimal compared to fortunes to be gained in the lush fields of Cuba, Santo Domingo, and Brazil. They tilled the soil and built their homes without field hands or house boys. As a result, they formed a democracy of small farmers, each working his own acres without loss of self-respect or social prestige.

Was it fate that the subsoil of the "rich coast" contained no mineral wealth, either in "black gold" or its more ancient rival? While other pioneers dashed off in mad pursuit of silver, emeralds, platinum, or diamonds, Costa Ricans remained loyal to the land. Until the 1820's, the country, although ruffled by occasional political storms, managed to lay foundations for a sane, self-governing community in the era of independence.

Then in 1825, when Spanish domination had become history, they were the first Latin Americans to find foreign markets for coffee. A suitably prolonged dry season, mild temperatures, and porous volcanic soil made a perfect combination. But Costa Ricans were quick to take the initiative. Opportunity came because they had exploited the soil rather than their fellow men. They now had a crop to export and to tax. The coffee rush was on and, by 1829, coffee had become the chief product, a pre-eminence it retains. Costa Rican coffee not only enjoys primacy among tropical crops of the home economy; it maintains a superiority of aroma and taste everywhere. Colombians alone have a right to dispute this claim.

It may be appropriate to insert two footnotes on coffee culture in middle America. The first person to introduce the plant to this part of the world was a parish priest, Padre Félix Velarde. He brought in some seed from the Antilles, where the Arabian variety was making a good showing. In this way, Padre Félix gave Costa Rica her motto: In hos signo vinces. It was a peaceful victory, based on widely distributed land ownership and a highly specialized coffee culture.

The second item is equally interesting. Early in the last century, a widow, Ramona Jiménez de Peralta, found herself penniless, with seven young children. A charming lady of good family, she might easily have captured another man and played a brilliant role in "la gran vida de salón" (the career of a stylish society matron). Instead, Doña Ramona tamed the jungle. This meant plunging into the wilderness around Cartago, with "a compass in one hand and a machete in the other." The widow succeeded where men had failed. Thanks to her intelligence and industry, sugarcane, coffee trees, and cattle began to thrive in the clearings carved out of tropical underbrush. Her fame still clings to the land, enriching the democratic traditions.

Prior to her project, the section around Turrialba had been notorious as a wild and rugged terrain, hostile to man. Today it is rich, alluvial soil, where almost every fruit, grain, bush, and tree growable in the tropics can be cultivated. Here, in and around Turrialba, authorities of other American republics, including the United States, have established the institute which employs scientists and research workers in the cause of bigger and better harvests. Large fruit companies have a huge stake in this center.

Although banana culture, coffee, and vegetable production rank high at the Institute of Tropical Agriculture, other experiments are under way, for example, to raise a species of henequen (suggested substitute for manila hemp) that, like the far eastern product, will resist rot in salt water. Research workers at Turrialba intend to concentrate upon industrial commodities as well as foods or beverages. War in the Pacific focused interest on the institute's experimentations with rubber, drugs, tropical woods, and chemicals useful against tropical disease.

There is no race conflict in Costa Rican rural democracy. Nor is there any appreciable race consciousness. The small colored group introduced by the United Fruit Co. from Jamaica confined itself largely to the coastal banana plantations. More recently, due to a blight which destroyed many banana trees, some Negro workers have migrated to the Pacific coast or settled in remote highland areas. At the Spanish conquest not more than 8,000 Indians inhabited this region. Their descendants are now on reservations.

When banana disease limited work on the fertile Atlantic side, the colored people showed remarkable adaptability. Dropped from the pay rolls of the big American fruit corporations, the Negroes resorted to subsistence farming. Thanks to a few fruit trees, melon patches, kitchen gardens, and a flock of chickens, one-time field hands are making a good living. Impartial observers declare that colored workers are the most successful growers in middle America. Instead of wasting their substance in agitation and revolt, they have transformed disaster into opportunity for service.

The third factor is education. It has been remarked that Costa Rica has more teachers than soldiers. This is an understatement. Whereas there are thousands of educators, on the primary and secondary school levels, there are hardly 500 in the armed forces, including the military band. Costa Rica with Uruguay boasts of the least illiteracy in Latin America.

Costa Rica falls squarely in the tropics. Nevertheless, the climate is notable for moderation.

Throughout all middle America, the heat, except on the seacoasts, is tempered by altitude, and nowhere more equitably than in Costa Rica. On the Caribbean side, average elevation extends from 2,100 to 5,900 feet above sea level. On the Pacific side, the figures taper off to 1,475 to 4,900 feet. Contrasted with the 7,500 average of the Valley of Mexico, the moderate altitude of Costa Rica is much more favorable to human effort. San José, like Caracas, Venezuela, has perpetual spring. Days are warm, followed by cool breezes at night. About 75 percent of the population has strung itself out, crescent-wise, in this highland nuclear zone. It is, in truth, a tierra templada, free from debilitating extremes.

Another cause of prosperity is the birth rate. The population, although not expanding on the scale of Puerto Rico, shows a steady increase. There are no oversize cities. San José, the capital and seat of of the national university, has 65,000 inhabitants, while Cartago, the pioneer settlement, has half that. Nevertheless, the population density near those two cities, 260 per square mile, is almost unique in Latin America. While the population increases there, farmers and stock raisers push toward unexploited lands on the periphery. It is a region of expanding pioneer settlements, of people vigorously at work transforming empty country into ranches and homes.

If there were more areas like this in Ibero-America, so much land would not be bare and not so many rural communities would remain isolated. One illustration of pioneer spirit is visible at Irazú, where at an elevation of 9,800 feet cattle and potatoes furnish a livelihood. While families multiply in the hinterland, there is a constant replenishment of the fountain of life at the center. At Turrialba, site of an ancient mission with an altitude of 2,000 feet, the population grew from 1,068 in 1883 to 21,000 in 1936. Although this is spectacular, it does suggest that healthy children and prosperity go hand in hand, provided that sanitation, education, and moderate living are a national concern. Every child born in the Republic has a decent chance to grow strong, learn, and work the land.

The final factor in the orderly development is a well-balanced economy. In 1938, the Republic exported 2 percent of the coffee in Latin America; 10 percent of the bananas; and 4 percent of the cacao. Considering its size, about that of West Virginia, and its population, about 650,000—hardly that of Milwaukee, Wis.—one must agree that Costa Rica is diversifying agriculture to the limit. In 1939 coffee constituted 51 percent of all exports; bananas 21 percent; cacao 13 percent, while the lowland cattle ranchers carried on a profitable commerce with highland planters and city dwellers. In recent years, the cacao industry has taken up some slack in the banana trade. Most foreign business is with the United States, which in 1939 absorbed 45 percent of exports and supplied 58 percent of imports. Costa Ricans are our good customers as well as good neighbors. The United States market rounds out the Costa Rican national economy.

The country's Ambassador to the United States, Dr. Francisco de Paula Gutiérrez, has summed up the situation: "We citizens of Costa Rica have learned two things: 1, the efficacy of evolution by enlightened law; 2, the importance of free elections.

"The labor code was based on the preamble of part III of the Treaty of Versailles and the social doctrines of the Catholic Church as expressed in the encyclicals Rerum Novarum,

Quadragesimo Anno and Divini Redemptoris, and the Social Code of Malines. We aim to give property owners, farmers, and workingmen a square deal, according to the principles of this social teaching."

Under President Teodoro Picado, cooperation of the farmers of Costa Rica with the United Nations' war efforts was intensified. Asparagus, tomatoes, sweet peppers, bananas, and oranges were flown to the armed services in the Canal Zone in less than 3 hours.

The island of Cocos, off the Pacific coast, figures in postwar plans for naval and air defense of the hemisphere. Experts from the United States Department of Agriculture cooperate with fruit and vegetable growers, supplying choice seeds and new tools. It is hoped that greater cooperation can be developed in education.

In a recent conversation, Ambassador Gutiérrez, waxing enthusiastic about the plain virtues of his people, described the jeep incident. During the presidency of Dr. Rafael Angel Calderón Guardia, the San José public demanded a demonstration in celebration of enactment of the social-security laws. Of course, the chief magistrate was a central figure. President Calderón Guardia was escorted to a jeep that happened to be handy.

Amid shouting and good-natured laughter, the jeep rolled down the principal avenue. Suddenly, to avoid the headquarters of the Diario de Costa Rica, the newspaper organ of the rival (Democratic) party, the jeep was detoured two squares to emerge in front of the modest palace of Archbishop Victor Sanabria, famed for his advocacy of an annual family wage for workers. In response to the shouts of the crowd, Archbishop Sanabria strode out on the balcony of his residence, gave a short speech and then was accorded a place of honor in the jeep. According to Ambassador Gutiérrez, no more democratic conveyance could have been imagined. Certainly, it may be conceded that the jeep was an improvement on the Mercedes-Benz and Fiat limousines in which Europe's dictators paraded. In the hierarchy of values, the jeep begins at the bottom. It is a vehicle as much at home in country as in city. In that sense, it typifies the spirit of Costa Rica's rural democracy.

Statement on Proposed Amendments to the Marketing Agreement Act

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 22, 1946

Mr. FLANNAGAN. Mr. Speaker, on February 15, 1945, I introduced H. R. 5496, a bill to amend the provisions of the Agricultural Adjustment Act relating to marketing agreements and orders. These marketing agreement and order provisions in their present form were incorporated into the Agricultural Adjustment Act of 1933 by the amendatory act known as the Agricultural Marketing Agreement Act of 1937. Many programs under such marketing agreements and orders have been carried out under the act and such programs are now regarded as essential to maintenance of proper price levels for producers.

The bill has two major objectives. First, it clarifies and strengthens the existing law so as to provide for marketing agreements and orders that would establish and maintain minimum standards of quality and maturity and inspection requirements of agricultural commodities and their products at all times if such orderly marketing would be in the public interest. Second, it provides a method for making the act applicable to other agricultural commodities which are now excluded from the act whenever this will advance the interests of producers and whenever such action is favored by a majority of producers voting in a referendum.

Under the existing act, marketing agreements and orders may include, among other provisions, minimum quality, maturity, and inspection requirements, but these are operative only when the price of the agricultural commodity is not in excess of the parity price level during the season. In consequence such requirements have become inoperative and been suspended by the Secretary of Agriculture when prices have risen above parity. Minimum quality, maturity, and inspection requirements do not necessarily have any direct relationship to maintenance of parity prices. It is in the public interest to keep off the interstate market at all times immature or low quality fruits, vegetables, and other agricultural commodities, even though at a particular time the price of the commodity may be at or above parity. The farmer is thereby protected from unfair competition from culls and immature products, and the consumer obtains a better product. Maturity standards frequently increase the supply harvested for larger yields are obtained when the product is fully matured.

The bill does not in any way modify the existing provisions of the act providing that those order requirements directly affecting price levels as, for example, marketing and purchasing quotas, shall be operative only when prices are not in excess of the parity price level during the season.

The act now provides for the establishment by a marketing order of an agency for the administration of provisions of the order. However, these industry committees cannot carry out their functions at all times since assessments for agency expenses can be made only when prices for the commodity are not in excess of the parity price level during the season. Since the bill provides for order provisions relating to minimum standards of quality and maturity and inspection requirements that may be operative at all times, it is necessary that the agency administering the order be able to function at all times. Also, it is obvious that industry committees administering an order must operate continuously if competent employees and adequate records are to be available. In consequence, the bill provides that the assessment of agency expenses may be made throughout the period the marketing order is in effect and irrespective of whether particular provisions of the order are suspended or have become inoperative.

Under the bill assessments may be made, as heretofore, for the maintenance and functioning of such agencies. In addition, the bill provides for assessments for such purposes as the Secretary of Agriculture may, pursuant to the order, determine to be appropriate, and in such amounts as the Secretary may find reasonable and likely to be incurred by the agency during the period specified by the Secretary. The Secretary therefore retains ample authority to control agency budgets and to prevent wasteful or unnecessary expenditures. At the same time when a project arises that the Secretary determines is appropriate to the better functioning of the order, he may permit assessments and agency expenditures for the purposes of such projects.

Under the present act marketing orders can be issued only for a limited group of commodities and their products, namely, milk; fruits—excluding fruits for canning other than olives, and excluding apples other than Washington, Oregon, and Idaho apples; pecans; walnuts; tobacco; vegetables—excluding vegetables for canning other than asparagus; soybeans; hops; honey bees; and naval stores. Many aspects of the impending surplus problem could be met through marketing orders, particularly by the various types of quota provisions permitted by the present act to be incorporated in such orders. By handling surplus problems in such fashion, farmers can take on responsibility for management of their own affairs and for controlling surpluses and the necessity for subsidies, loans, and other forms of surplus relief is minimized. The flexibility of marketing orders gives considerable room for different methods in dealing with surplus problems and for adaptation of control methods to the peculiar needs of various diverse agricultural commodities and products.

As we approach a period when farm surpluses will again recur, it is vitally important to be prepared to prevent these surpluses from wrecking farm prices. The Government is already obligated to support farm prices of numerous eligible agricultural commodities at not less than 90 percent of parity prices for at least another 3 years under the Steagall Act. These commitments to farmers must be fully carried out. The enactment of this legislation will provide additional means of carrying out these price-support guaranties to farmers and in safeguarding them against ruinous price declines.

The bill, therefore, makes marketing orders available for all commodities subject to certain carefully restricted limitations. The bill does not automatically extend the act to all commodities, but authority is given the Secretary to extend it to any additional commodities or products, or to regional or market classifications thereof, on the basis of two determinations to be made by him—first, that the extension of the act to the particular commodity, product, or regional or market classification thereof, would more effectively advance the interests of producers pursuant to the declared policy, and second, that such extension is approved or favored by a majority of the producers voting in a referendum conducted by the Secretary for the purpose. Strong farmers' cooperatives are essential to the adequate working of marketing orders, and in such a referendum such cooperatives would vote in the same manner as in the other referendums now provided by the act. The action of the Secretary in extending the act to any

commodity, product, or regional or market classification thereof, would not mean that a marketing order would thereby be in effect for the commodity. It would mean only that the act was available for the control of such commodity, product, or regional or market classification thereof, through a marketing order, and that thereafter a marketing order could be formulated and made effective through the detailed procedures already specified in the act.

The special provisions relating to milk now found in the act are left unchanged.

The bill is enabling legislation only. By its provisions farmers would be enabled at all times, if they were willing to assume the responsibility, to control through the marketing-order mechanism the minimum standards of quality and maturity of their agricultural commodities sent to market. Consumers would be given this additional protection against low quality, immature, and inedible agricultural commodities. By enactment of the bill the surplus problem already faced by agriculture in the case of some commodities, and certain to mount as present expanded markets recede, could be met in substantial measure.

OPA

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 18, 1946

Mr. WOODRUFF. Mr. Speaker, if there is any doubt of the necessity of revising some of the price schedules by the OPA, a perusal of the following letter and list of food items together with prices in 1941 and 1946 will prove the case:

LANSING, MICH., *February 20, 1946.*
Hon. ROY WOODRUFF,
Congressman From Michigan,
House Office Building,
Washington, D. C.

DEAR ROY: I am enclosing some comparative figures on foodstuff which should be of interest to you.

Frankly, I don't know where we're going to land. How can hotel restaurants, or other food purveyors, make a go of it when raw food costs continue to increase but our retail prepared food prices must remain under ceiling as of April 4–10, 1943.

Very truly yours,

BRUCE.

Item	1941	1946	Increase
	Cents per pound	*Cents per pound*	*Percent*
Stewing chickens	22	39	77
Peanut butter	9½	28	194
Cabbage	4	6	50
Michigan potatoes	1.3	3.24	149
Apples	5	13½	170
Coffee	12½	19¾	59
Eggs, medium Grade B	[1] 17	[1] 35	106
Graham crackers	7½	17	126
Noodles	10	19	90
Rinso, large package	16½	25	51
Hams, string half	23	36	56
Lamb roast, shoulder	16	25	56
Beef tongue	15	35	133
Sugar	4½	5¾	23
Pure lard	7½	17½	133
Prunes	8½	18½	117

[1] Cents per dozen.

The above comparative price figures are taken from actual newspaper advertising of the foodstuffs listed in the Bay City, Mich., area.

How can hotels continue to prepare and sell food under their ceiling if commodities costs are not also controled?

Brotherhood at Home and Abroad

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1946

Mr. WOLVERTON of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address made by me on Sunday, February 17, 1946, at a regional meeting held under the auspices of the Parent-Teachers Association at the Gloucester City (N. J.) High School Auditorium:

BROTHERHOOD AT HOME AND ABROAD

In selecting brotherhood as a theme for thoughtful consideration in meetings such as this, at this time, and throughout the Nation, the parent-teacher association has directed our attention to a force that can be as dynamic for good as the atomic bomb now is for destruction.

Words cannot express the tremendous influence for good that would result if the spirit of brotherhood was given full play in our individual lives, in the life of the Nation, and, in the affairs of the world.

With its acceptance as the rule and guide of our individual, national, and international actions, there would be an elimination of greed and selfishness, intolerance, and bigotry and domination of the weak by the strong. In their place would be found equity, justice, honesty of purpose, understanding and acknowledgement of the rights of others. The sum total of these beneficent results would be peace. Peace in our individual lives, and peace in national and international affairs.

There is no greater need today in this time of unrest and uncertainty, both at home and abroad, than an acceptance and exemplification of the spirit of true brotherhood.

MEANING OF BROTHERHOOD

What do we mean by brotherhood? Whatever the answer that may be given, no matter how differently expressed or phrased, the result would always be the same, namely, doing unto others what we would that they do unto us. This is all inclusive. It is all embracing. It is right by whatever standard is applied. It includes the best in every creed. It provides a common meeting ground for all men of peace and good will.

Centuries have passed and great changes have come in all the activities of life since the Prince of Peace—the Master Teacher—Jesus Christ—gave utterance to the words—"Whatsoever ye would that men should do to you, do ye even so to them, for this is the law and the prophets." Notwithstanding the passing of time with all its changes, and the complexity of our present-day life, the force and the logic of those words, constituting the true spirit of brotherhood, remain as effectual as a means of solving our numerous and varied problems today as when spoken centuries ago to a people whose life and habits were less complex than our own. The words He uttered, these words so well named—"The Golden Rule"—remain today words of wisdom and point the way for the settlement of all human difficulties.

WOULD SOLVE PRESENT-DAY DIFFICULTIES

Think in terms of the numerous disturbances that now exist in our land, in other lands, and, between nations. What is the cause of all these disturbances? Determine for yourselves what you consider to be the cause. Having done so, then apply as a means of solution—the spirit of true brotherhood as defined in the words of the Golden Rule: "Whatsoever ye would that men should do to you, do ye even so to them." Would it not solve each difficulty if each of the contending parties applied this principle? Of course it would. The fogs and mists that now surround us would disappear as before the rays of the morning sun.

If the spirit of true brotherhood should be accepted and exemplified in the affairs of men and of nations that which now disturbs us domestically and in world affairs would disappear. It would solve our economic problems. It would create tolerance and understanding. It would protect the weak from the aggression of the strong. It would eliminate selfishness and greed that bring conflict between nations. It would make the world a better place in which to live.

This being true, then, we must acknowledge that the parent-teachers have struck the key note, the basic principle, that must underlie and inspire all efforts to promote better understanding between people and nations, when it emphasizes, today, throughout the Nation the importance of brotherhood.

BROTHERHOOD—FUNDAMENTAL NEED OF WORLD

Today the spirit of brotherhood between nations is the fundamental need of the world. The future peace, security, and welfare of the world depends upon the extent to which its principles, based upon equality of man, is recognized, and, governments are founded.

It was to accomplish this ideal of brotherhood, namely, equality of man, that America has participated in two World Wars. We have given unstintedly of our wealth, resources, the precious lives of our young manhood. The principles enunciated in the Atlantic Charter were the principles that underlie true brotherhood among nations, and make for peace and security in the world.

We did not engage in World War I and World War II to advance the prestige of any king, monarch, or dictator. We did not seek territorial or material gain. We did not seek anything that was material in character. We fought for a spiritual ideal—equality and the principles of brotherhood to be applied between nations and peoples.

Notwithstanding victory has crowned our efforts, we see throughout the world a spirit of deep unrest instead of the tranquillity that should come with peace. Fear in its most aggravated form still prevails. Why is this the case? The answer is simple. Because the large nations, the strong nations, the powerful nations, are using their strength and power to dominate smaller nations, thereby destroying the principles of equality and brotherhood for which the war was fought.

DUTY OF AMERICA

What is the duty of America under these circumstances? Our duty is plain. We have no right to equivocate, no right to appease, no right to haul down the flag that stands for liberty, justice, freedom, and democracy, based upon principles of world brotherhood and the equality of man. It is cowardly to do so. It breaks faith with those who have died, and yet I regret to say that this has been in a large measure our course of action since VJ-day.

America—and I say it with a feeling of shame—has stood by and permitted, if not actually participated in, the wrong and injustice than has been heaped upon Poland, our honored ally. Likewise, we have stood by and permitted the Balkan and the Baltic states, Palestine, Iraq, Iran, India, Indo-

china, and Korea to be deprived of that freedom of expression that was guaranteed under the Atlantic Charter. Why have we, the strongest Nation in the world, the Nation that contributed most to the winning of the war, kept quiet and permitted our allies, dependent though they have been and still are upon us, to destroy, repeal, and make ineffective the principles of equality, justice, democracy, and world brotherhood for which we fought and sacrificed?

MORAL LEADERSHIP OF AMERICA

In the First World War, America, through Woodrow Wilson, provided a spiritual leadership, based upon principles of equity and justice, that rallied the strength of the embattled nations and revitalized those who were the victims of that struggle. His Fourteen Points became the rallying cry of the oppressed and the discouraged. They saw Wilson as someone striving to achieve a peaceful world based upon the principles of equality of men and world brotherhood. However, history may record its conception of Wilsonian ideals, it must be granted that for at least a moment it seemed possible for even our allies in that struggle to rise to this American idealistic position. Unfortunately, the vision faded, and with its disappearance another world war became inevitable in the gloom of that failure.

World War II broke upon a world bankrupt in idealism and that had forgotten or discarded the principles of brotherhood. Again the cry of distress from the oppressed brought forth from America a new expression of ideals to provide future peace and security, based upon the principles of brotherhood. It came in the form of the Atlantic Charter—based upon principles of equality, freedom, and democracy. It was embodied in a resolution and adopted by all of the United Nations on January 1, 1942. It became the rallying point against oppression throughout the world. It brought hope and courage to the distressed. It provided the idealism that brought the people of America, wholeheartedly and unreservedly, into the conflict.

Today, however, even after victory has been won, we see these recognized principles of true brotherhood treated lightly, even contemptuously by nations who gave them their support and approval. This should not be. It is wrong. It violates every principle of right and justice. These basic principles must not be dismissed as mere words that were uttered to gain an end, and the end having been achieved can be discarded and forgotten. We must never forget that the principles, enunciated in the Atlantic Charter, marched with our armies. They sailed with our fleets. They flew with our eagles. And they sleep with our honored dead. It is the duty of America to relight the torch of liberty and brotherhood that those who fought and died shall not have died in vain.

Now is the time for America to reassert her claim to the moral leadership of the world. With victory gained, it is our duty to demand that the principles for which we fought shall be recognized by everyone, especially our allies. This is not a time for the rebirth of blocs, power politics, seizure of territory, establishment of regimes upon a basis of force rather than the will of the governed. We owe it to the men who have died in the name of America on the battlefields of this war to keep the faith for which they fought. To whittle it down, to dismiss it as the empty phrasing of wartime oratory or strategy is to make a mockery of all that our people regard most sacred.

The time is at hand for America to assert in strong, clear, and emphatic terms that the principles of equality, based upon brotherhood, for which we fought, must be acknowledged and given support. Failure to do so means that the ideal of brotherhood among nations—that the oppressed nations expected as a result of victory—will not materialize. We are then no better off than after World War I.

Thus far, since approval was given to the United Nations Organization, neither our State Department nor our President has seen fit to utilize the tremendous prestige and strength of the United States to mobilize world-wide sentiment in support of the principles for which we fought. From us has come nothing but pleasant platitudes, easy to speak, easy to ignore.

If we are to rebuild something of value on the ashes of the terrible war, so recently concluded, we must supplement the United Nations Organization for peace, by strong language, condemning the failure to practice the principles of equality, fair dealing, and brotherhood laid down in the Atlantic Charter, and demanding that they be given recognition in present and future actions of all governments. The time to do this is now.

This Nation is peculiarly our brother's keeper and appointed as a steward under God of the civilization of the world. God did not make the American people the mightiest human force of all times without a purpose. He did not endow us with unusual talents without intending that we should carry unusual responsibilities. The mission of America is not only to its own people but to all the peoples of the earth, before whose eyes it is the symbol of human rights and human liberty based upon the principles of equality and brotherhood, toward whom its flag flutters hopes of future happiness.

AMERICA MOST OUTSTANDING EXPONENT OF PEACE AND GOOD WILL BASED UPON BROTHERHOOD

Today as we rejoice in the position of preeminence our Nation has gained among the nations of the world, we can also take pride in the fact that America is the most outstanding exponent of peace and good will in all the world.

The most casual reading of our national history cannot help but reveal to an honest and intelligent mind that this Nation has always been an advocate of peace and good will among the nations, and has constantly sought to avoid war and its distressing consequences. By precept and example, abundant evidence of this fact has been given and so plain is our national desire in this respect that none should doubt it.

Nowhere in all the world is there a more pronounced and outstanding desire for the recognition of the principles of true brotherhood than in America. Nowhere has there been a more ready and willing response to every effort that has been made to substitute these peaceful principles as a means for the settlement of international differences rather than resort to military force. As a people we are justifiably proud of the fact that our Nation, above all others, has led in every movement to establish the principles of brotherhood by which international peace might be promoted. The peace of the world, made permanent and secure, is the sincerest desire of our people—an inspiration of the very heart and soul of America. It was for this that America shed her blood in two world wars. What finer or more sacred contribution to the cause of peace could there be?

Never in the history of the world has there been a finer example of true, genuine idealism upon the part of any nation than that shown by the United States as it sat at the peace table of Versailles. Notwithstanding the fact that our resources of men and wealth had been the determining factor that finally brought success to the Allies, yet we neither asked nor received anything in return for our sacrifices of treasure and blood. As other nations strained and contested openly and in secret, one with the other to gain advantage of territory or other worth-while considerations, America stood aloof from the struggle and refused all material gain, but, with a quiet dignity and majestic spirit, sought only to advance the principles of liberty, true democracy, and justice based upon the brotherhood of men and nations, as would most surely tend to the future peace of the world, that those who died should not have died in vain.

As America in the past has sought to foster and maintain peace and good will through recognition and exemplification of the spirit of true brotherhood, among the nations of the world, so we can with confidence look into the future with the fullest assurance, knowing full well that peace and the spirit of true brotherhood will continue to be the aspiration of the heart and soul of America. May the divine leadership that has inspired us as a Nation in the past and brought our Nation to a position of preeminence, continue to be our inspiration and strength in the days to come.

Not Southern Issue Alone

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Friday, February 22 (legislative day of Friday, January 18), 1946

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Not Southern Issue Alone," from the Arkansas Democrat of February 5, 1946.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOT SOUTHERN ISSUE ALONE

The so-called and miscalled fair employment practices bill now agitating Congress is not a southern issue, though the filibuster of the bombastic BILBO, of Mississippi, adds to the contrary belief. It is not aimed at the Negro any more than it is at any other race, though that mistake is made by honest folks who are simply misguided.

Supporters of such a bill in 20 States met defeat in 18, and of those 18 States only 2 were Southern. The two States where such a law was passed were New York and New Jersey, and Senator HAWKES of the latter has added his opposition to a Federal FEP law.

Senator WHEELER, of Montana, and Senator TAFT, of Ohio, have announced their opposition to the law.

The chief objection to the proposed law is that it could not be enforced and would be vicious legislation wherever applied. It would make the old prohibition laws seem mild in its effect upon the innocent as well as the guilty. It would create a gestapo—and how—as evidenced by these facts:

It would apply to employers of more than six workers and provide penalties up to a year's imprisonment and $5,000 fines for violators of FEPC orders. Senator RUSSELL, of Georgia, said: "This bill creates perambulatory kangaroo courts which can drag an employer to any place in the United States they wish. That is one of the threats held over the heads of American business, of the American employer, of the American farmer who employs more than six individuals, to make sure that he takes care of all aliens in his employ to the detriment of American citizens who might be seeking work."

This is not an extreme statement. "It is so stated in the bond" (the bill) and members of those legislatures who turned down the proposal recognized that fact. The FEP proposal, for all the pious professions of

its supporters, is an evil and dangerous thing, begotten of sinister politics and can only add to the racial prejudice already too rampant in the Nation today.

Government by Crony

EXTENSION OF REMARKS
OF
HON. MARION T. BENNETT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1946

Mr. BENNETT of Missouri. Mr. Speaker, under leave to extend my remarks, I include the following excerpt from Drew Pearson's column, the Washington Merry-Go-Round, for February 22, 1946. It relates to the character of major appointments being made by the President, and with particular reference to one of these appointments. Today we have government by cronies of the President and many of the cronies are in one way or another associated with the notorious Missouri Pendergast gang which plundered Missouri and Kansas City and is now operating with headquarters in the District of Columbia.

WASHINGTON MERRY-GO-ROUND
(By Drew Pearson)

Public memory is short; so perhaps it is not out of order to recall that exactly 1 year ago a man who had served 8 years in the Cabinet and 4 years as Vice President was so pilloried before the Senate that Roosevelt finally withdrew the name of Henry Wallace as head of the Reconstruction Finance Corporation.

But this week, delightful George Allen, who has back-slapped and wise-cracked with every Senator on Capitol Hill, was confirmed as Director of the RFC after very little cross-examination, almost no debate, and in the end, without even a roll-call vote.

Most remarkable thing about the George Allen vote was that Senator ALBEN BARKLEY, who knows better, championed Allen's right to continue holding jobs with private corporations while still serving in this vitally important Government post.

One corporation of which George Allen is vice president is the Home Insurance Co. It so happens that this company figures very largely in the scandalous graft which sent Harry Truman's old friend, Boss Tom Pendergast, of Kansas City, to jail.

Background of this affair is important. The fire-insurance companies operating in Missouri had been forced to impound $9,676,002 while the question of new rate increase was being threshed out in the courts.

PENDERGAST BRIBE

The company which had most at stake in this $9,000,000 kitty was the Home Insurance Co., of which George Allen is now vice president. Its share was $737,389.31. Naturally it was anxious to get this little nest egg returned to the company's treasury rather than go back to the policyholders.

So a deal was finally worked out between the companies whereby Boss Pendergast was to receive a bribe of $750,000. In return, the court suit was to be compromised, the fire insurance companies getting 80 percent of the nine million, the policyholders getting only 20 percent.

First installment of the Pendergast bribe was $100,000, and it was ponied up by 14 different companies. But, since Home Insurance had the largest amount at stake, it sent more than any other company—$15,000. Later, the fire-insurance companies kicked in a total of $330,000 to Pendergast, but before they could pay the entire $750,000, the Government probe was started and he never got the balance.

It was in 1938, during this Government probe and before Pendergast was finally convicted in 1939, that Home Insurance, in desperate need of friends, made George Allen a vice president. Allen was a former WPA administrator with no great business talents. But he had one great asset—close connections in Washington.

George, who is a very frank and likeable person, doesn't claim to know anything about insurance, but he does know plenty about getting into the Executive mansion at almost any hour of the day or night.

GEORGE ALLEN SITS PRETTY

Following this the fire-insurance companies, including Home Insurance, were indicted by the Justice Department for violating the Antitrust Act. However, the insurance lobby, including George Allen, pushed legislation through the House of Representatives exempting insurance companies from the Antitrust Act. Thanks to highly skillful lobbying, the Justice Department finally compromised the case.

Meanwhile, Home Insurance and other companies operating in Missouri did not go to jail. Tom Pendergast served his time, but not the insurance executives who shelled out $330,000 and were willing to pay up to $750,000.

Harry Truman, of course, has such a blind-spot regarding Pendergast that one of the first things he did after becoming President of the United States was to fire Maurice Milligan, the United States district attorney who convicted his old friend.

Ninety-six Senators, however, are not all supposed to have blind-spots. At least a majority are supposed to have a statesmanlike approach to appointments to high office. That is what the system of Senate confirmation is for.

However, when the current vice president of the company which paid Boss Pendergast his heaviest bribe came up for appointment to one of the most powerful economic jobs in Government, all but one Democrat—FULBRIGHT, of Arkansas—blindly followed the leader.

As a director of the RFC, George Allen is now in a position where he can promote Government loans to insurance companies or to other firms which owe money to insurance companies. It certainly pays to be a charming host at dinner.

Note: Insurance, of course, is only one of George's corporate connections, though it should be enough. Others will be discussed in future columns.

Public Will Pay the Bill

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, February 22 (legislative day of Friday, January 18), 1946

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Public Will Pay the Bill," from the Arkansas Democrat of February 17, 1946.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PUBLIC WILL PAY THE BILL

The dance is on, the dance of rising wages and prices, and the public will pay the bill. That's the meaning of the Government's announced policy for settling the steel, motor, and electrical and other strikes.

In brief, the policy is this: Wage raises up to 15 to 18 percent will be allowed, and where employers aren't earning enough to stand the cost, they will immediately be given higher prices. Formerly, employers had to wait 6 months before they could ask for this relief.

Wage increases, with some exceptions to be announced later, must be approved by Washington, just as price raises must be. The Government is thus established more firmly in the socialistic program of running the Nation's peacetime affairs.

Included with the plan is another warning about the danger of inflation, and solemn declarations that the new price line is to be held. Let us hope this can be done. The task is made so much harder by the wage and price increases which will have been, and will be, granted.

Inflation is a fire which makes a pretty sight while it's burning, but leaves a spectacle of ruin if it gets out of hand. And a fire isn't easier to control if you let it spread further. That's exactly what's happened now.

Steel prices are to be increased $5 a ton. This will add to the cost of cars, trucks, farm machinery, refrigerators, buildings—everything that contains much steel. In addition, wages will be raised to the workers producing motor vehicles, farm equipment, and various other things. It will all snowball into higher prices.

Billions of dollars will be added to the cost of daily necessities. Largely this must come out of the small to modest earnings of millions, to give higher wages to many already well-paid worker groups. According to recent figures, the steel, auto, and electrical workers averaged from $41 to $46 a week. Meat-plant workers, who presumably will get a raise, averaged nearly $46.

In contrast, surveys in a number of places have shown that from 30 to 80 percent of the jobs open to returning veterans pay from less than $24 a week to $30. Yet out of those wages these veterans must help, through paying higher prices, to boost the $41 to $46 wages of a privileged few workers.

A small aristocracy of labor in the big industrial centers is profiting at the expense of millions of returning veterans, of farmers, teachers, public employees, many professional people whose earnings are modest and other such groups throughout the land.

Raise everybody's earnings? Then you'd have a sure-enough inflation fire roaring through the Nation's economic structure. No; its better to make the best of it and use all our influence to hold the new price line. If the Nation can get full production, that will check inflation. Nothing else can check it long. Goods competing for markets is the only real assurance against runaway prices.

Reds Fail To Pull the Wool Over President Truman's Eyes

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1946

Mr. RANKIN. Mr. Speaker, the Reds and their fellow travelers have failed in their efforts to pull the wool over the eyes of President Truman with reference to the Communist spy ring throughout this country and Canada, just as they are

failing in their efforts to abolish the Committee on Un-American Activities and to get rid of J. Edgar Hoover and the FBI.

If George Washington could speak to us today, on this the two hundred and fourteenth anniversary of his birth, he undoubtedly would say again: "Put only Americans on guard."

He no doubt would warn President Truman to clean house, as the Bible says, "From the tower of the watchmen to the fenced city."

Student Exchange

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1946

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following timely and interesting editorial from the Washington Post of Tuesday, February 19, 1946, entitled "Student Exchange," which has reference to bill H. R. 4982, which has been favorably reported to the House by the Foreign Affairs Committee:

STUDENT EXCHANGE

Friendship between nations as between individuals flows from mutual understanding. It seems to us that there is a great deal of merit, therefore, in two proposals now before Congress to facilitate international exchange of students, scholars, and technicians. This sort of exchange is an invaluable supplement to the program now being undertaken by the new Office of International Information and Cultural Affairs which Secretary Byrnes has established. Americans who are afforded an opportunity to study abroad are likely to find their prejudices about foreign countries dissolved; foreigners who come to American colleges and universities will return to their homes with a fresh awareness of American values. A harvest of good will is the certain product of such a transplanting.

One of the bills for this purpose, introduced just prior to the congressional recess by Senator FULBRIGHT, follows closely a suggestion offered by the Post last September. We said, in speaking of the disposal of our war surpluses abroad, that "a constructive way of handling such transactions might be to let the funds (from sale of surpluses) be used for the establishment of foundations in buying countries dedicated to the diffusion of knowledge of the seller and purchaser countries." The Fulbright bill would designate the State Department as the disposal agency for surplus property outside continental United States and would specifically authorize it to enter into agreements with foreign governments under which local currencies received for surplus property would be used to send foreign students to American colleges abroad, to pay their transportation to the United States, or to meet the expenses of American students studying in foreign institutions.

It would be in the last category, obviously, that this arrangement would be most effective. And it might prove of tremendous value to veterans who wished to pursue studies overseas under the GI bill. The tuition and living allowances due them would be met, then, by the country in which they chose to attend school, out of its own currency, and the United States Treasury would to that extent be spared expense. We can think of no more useful form in which to receive payment for the surplus materials which we do not wish to bring home and which are needed by foreign countries lacking the dollar exchange to purchase them.

Because of a shortage of dollar exchange, many foreign countries will be unable to send students to the United States. A bill introduced by Representative BLOOM would make provision for this need. It would extend to European countries the facilities for exchanging students, scholars, and technicians with the United States which we now maintain in relation to the Latin-American Republics and China. This exchange system has proved immensely fruitful. When the United States remitted about $10,000,000 of the indemnity paid this country as a result of the Boxer Rebellion in China, the Chinese Government placed the money in a trust fund for the education of Chinese youth in American institutions in China and in the United States. The act contributed tremendously to the good relations which have existed between the two countries ever since.

We hope that Congress will give sympathetic consideration to both the Fulbright and the Bloom bills. They are companion or supplementary measures. The meeting of minds, in a literal sense, which they would help to bring about should go far toward promoting the international understanding upon which our hopes of world peace must be founded.

Lincoln Day Address of Gov. Dwight H. Green, of Illinois

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1946

Mr. REECE of Tennessee. Mr. Speaker, on Saturday, February 9, 1946, one of the Nation's outstanding citizens who has demonstrated great capacity as an administrator, Gov. Dwight H. Green, of Illinois, delivered an able and inspiring address at the Lincoln Day dinner sponsored by the Republican committee, at Chattanooga, Tenn., and, under leave to extend my remarks, I include the Governor's address:

For me this is a proud and happy occasion. As Governor of the State of Illinois, whose richest possession is the heritage of Abraham Lincoln, it frequently has been my privilege to speak at various celebrations of his anniversary. Yet to me none of them ever seemed more significant than this meeting here in Chattanooga.

That here in this city in the Tennessee Valley, through which more than four score years ago the Union and Confederate Armies surged forward and backward so many times—here where we may look up to the hills in three directions and see majestic heights, sanctified by the blood of Americans who died in three great battles in the War Between the States—that here the descendants of the men who fought on both sides of that conflict can join in honoring Lincoln is proof that his life and his work remain an outstanding service and an eternal inspiration to all America.

We of Illinois know that the greatness of Lincoln lies in the fact that he voiced the aspirations and advanced the cause of the common people everywhere. He belonged to all America. Kentucky, where he was born, my native State of Indiana, where he lived as a boy, and Illinois, all claim him. Yet he seems the heir particularly of those rugged individualist adventurers who, in their pursuit of freedom and happiness, blazed the trail of progress through the Cumberland Gap to the wilderness of Kentucky and Tennessee.

As far as I can discover from the extensive collection of Lincoln lore in our State Library at Springfield, Lincoln never got to Tennessee. Yet he always was tremendously interested in your State. His close friendship for Andrew Johnson began in Washington in 1845, when they were both Members of Congress. Although of opposite parties, they had many common interests, including their limited financial means, which threw them together in a boarding house on Capitol Hill. Johnson told Lincoln of a family of Lincolns living in Carter County, and Abe was much interested to know if they were kinsmen of his Uncle Isaac, who lived farther west in Tennessee, and the young Illinoisan often expressed a desire to go to Tennessee and visit them.

Later, when the people of east Tennessee rallied loyally to the Union cause, and Johnson became their champion with his great speech in the Senate on December 18, 1860, eastern Tennessee became especially endeared to the President. Later he sent Andrew Johnson to Nashville as military governor to start the program of peaceful and friendly reconstruction, which they both envisioned for the entire South. It is one of the tragedies of American history that that plan was never carried into full execution.

It is natural to speak of Lincoln and Johnson, but it is just as natural to associate Abraham Lincoln in the forward march of American liberty with that other Tennessee idol, Andrew Jackson. The Hermitage at Nashville became an outpost for the principles of the rights of man, taught by Jefferson at Monticello. Jackson developed a new concept of the great free nation of the future. And expressed his devotion to that nation in the famous words of his Charleston toast, "Our Federal Union—it must be preserved." It was a natural historical sequence from the Hermitage to the law office in Springfield, where Abraham Lincoln wrote of the dignity of labor and the rights of capital, and put above all else the preservation of the Union. From Jefferson to Jackson to Lincoln the American realization of mankind's universal dreams of individual liberty and progress moved steadily forward.

I am glad, too, that this meeting is under the auspices of the Republican Party of this community. As the man who launched our party on its glorious history of almost a century's service to the people of America, Lincoln is our special hero. Yet in an age when party service is too often looked upon as something less than patriotism, it is well to remember this. Just as there would be no Republican Party today without Abraham Lincoln, he never would have been elected President, and would not now belong to the ages, but for the ardor, enthusiasm, and the effective political organization of the inspired leaders of the new Republican Party of his day.

No one understood better than Lincoln that the political party was the means through which he could advance effectively his ideals of justice and equality and his zeal for honesty in government. In the Illinois Legislature and in the Congress of the United States, he was a good Whig, working with the leaders of that party; in the difficult days of the Presidency, he recognized and trusted the Republican leaders from all sections of the country.

The ideals of justice and equality and the dignity of the common man are deep rooted in the American people. They are still the goal of American life. The need for basic and forthright honesty in government was never greater than today, and if those high

principles are not reflected in the performance of our government—local, State and national—it is because men and women of good will have not recognized fully their duty and their opportunity to serve their country through their party.

So I am glad to speak here tonight as a Republican to my fellow Republicans. I know that the immediate business of the Republican executive committee of the Third Congressional District of Tennessee is to send another good Tennessee Republican to the Congress of the United States, to serve alongside those distinguished Members of the House of Representatives, the Honorable JOHN JENNINGS, JR., and the Honorable CARROLL REECE, your able national committeeman from Tennessee. Important as that effort is to you, it is far more important to the future of the United States of America.

At a time for decisions which necessarily must affect the destiny of our country and the world for generations, the New Deal leadership of this Nation is hopelessly floundering. In world councils the New Dealers lack the courage or the ability to uphold their own high-sounding declarations or the ancient fundamental American principles of security, justice, and decency. Our Nation, which has won the greatest war in all history, seems to be rapidly losing the peace.

In domestic affairs the union and unity of the American people is gravely threatened by turmoil and strife resulting from the collapse of New Deal experiments to regiment the economic life of our Nation, most of which are patterned on strange ideas and ideologies borrowed from the Old World. Our fighting sons are coming home from victory to confusion that borders on chaos.

The New Deal tinkerers, lost in their own maze of bureaucratic theories, can find no adequate solution to our pressing problems of production and reconversion and, bedeviled by 13 years' compromise with pressure groups, are helpless to meet the people's demands even for houses in which to live and tools with which to work.

America is waking slowly and soberly to the realization that the mirage we have been shown for 13 years is only barren and shifting sand. I have no doubt that the confusion of today seals the doom of the New Dealers and that 1948 will see the restoration of a national administration on sound American principles under a Republican President. Let's take the lead now. Let us elect in 1946 a Congress which will stem the tide of New Deal folly and preserve the tremendous, but by no means unlimited, resources of our Nation.

That, as I see it, is the responsibility which confronts the Republican Party today. That is why at the meeting of the Republican National Committee at Chicago 2 months ago, I pleaded for clear thinking and plain speaking on the issues which confront us. I said then, and I repeat it now, the people are tired of double talk; they are tired of a party and an administration which tries to be all things to all men. They want an American Government which will act boldly to restore production and employment at home, which will stand bravely for the advancement of American ideals of peace and justice abroad, and which will quit lying to the American people.

America's greatest need today is a restoration of straight thinking and simple honesty in our Federal Government, from the White House down to the lowest bureau in the New Deal's alphabetical conglomeration. Since the gentlemen from Missouri took over the management of the New Deal the political morals of our National Government have degenerated to the lowest ebb in our history. Despite Mr. Truman's protestations that he didn't want to be President, and the people's realization that he shouldn't have been, it is becoming more and more obvious that the administration's only fixed policy is to perpetuate itself in 1948.

That policy has dictated the aimless economics, the wishful thinking, and the impossible promises of the administration in the postwar reconversion crisis. Faced with the necessity of wooing the Political Action Committee, which had opposed Truman for Vice President before it surrendered to the big-city bosses in the Democratic National Convention, the gentlemen from Missouri decided on an expedient shift to the left. They submitted to Congress a self-styled full-employment plan which few understood; and those who could understand it knew that it never could provide full employment, but that it would fasten permanently a system of bureaucratic control on American industry and labor. Fortunately the Members of Congress, both Democrats and Republicans, saw through their scheme and refused to be stampeded into its enactment.

Still pursuing votes, they told the workers of America that they could have increases in their hourly wages while pretending to the consumers of America, including the wives of the workers, that they might expect to buy the things that labor produced without any increase in price. And when that "eat your cake and have it too" program failed of its own weight, they tried to accomplish it by compulsion.

The Truman policy has reaped its inevitable harvest of strikes and stagnation. Our country has suffered from the greatest series of strikes in our history, and bitter dissension has developed between labor and capital, and within the ranks of each. The long tie-up in the steel industry has retarded production of hundreds of sorely needed products. And the only strikes that have been settled have been those where, by free collective bargaining, it was possible to agree on a resumption of production on terms acceptable to both labor and management.

In the face of these facts, the administration has been obliged to retreat on its price policy. Yet it becomes increasingly clear that the combination of compulsory arbitration, Federal fixing of wages and Federal control of prices in cases where it paralyzes production, to all of which the Truman administration clings so desperately, is the beginning of nationalization of American labor and industry.

The chaos and confusion on the American labor front today is matched by the tragic consequences of our national policy—or lack of policy—in the Nation-wide housing shortage. Throughout America, in the great cities and in the smaller communities, millions of Americans, including hundreds of thousands of returned veterans and their families, are crying in vain for decent homes in which to live. I believe that our soldiers and sailors fought for more than the right to live in a trailer. But the bungling New Deal has failed to provide them even that. Here again, the administration has cruelly deceived the people. Last October they announced with great fanfare the lifting of all restrictions on home building, knowing full well that there were practically no available supplies of basic materials for home building and that under existing labor conditions and prices established by the OPA there was no prospect for immediate increased production of those supplies.

Not until the housing shortage became a national scandal did the Federal Government do anything about it. When the New Dealers did act, they established a new set of controls under which a veteran who wants to build a home may obtain a certificate of priority for bricks and lumber and other materials which are practically nonexistent. It was not until this week that the administration even attempted to break the bottlenecks in the production of basic building materials. It is obvious that the housing shortage will continue until crippling restrictions are lifted from American private enterprise to enable it to build the millions of permanent homes needed by our people. The administration has offered no program to accomplish that purpose.

The simple fact is that this Nation needs not new controls but a prompt ending of those which are shackling American labor, American industry, and American agriculture. It is high time for our Federal Government to admit that the war is over. The pretense and subterfuge by which the New Dealers are exercising war powers in peace must end sometime. Congress should end it now.

We should be honest with ourselves. We should be honest with the youth of our Nation—the GI's overseas and the boys at home, who are being drafted to fight a war which ended 5 months ago. If the Truman administration stands for peacetime conscription, and for peacetime regimentation of American business and labor, let them ask for it, and let Congress grant or withhold such powers. Let there be an end to the attrition of our liberties by month-to-month extensions of war legislation; else the American people, like the puppy whose tail was cut off an inch at a time, will suffer needlessly and be permanently injured.

It is high time also to call a halt on reckless Federal spending above and beyond Treasury income. Here again the New Dealers are receiving the American people. In his recent Budget message the President boasted, and I quote: "For the first time since the fiscal year of 1930 the Budget for the next fiscal year will require no increase in the national debt." That is double talk. Let's look at the facts:

On December 3, last, the national debt was approximately $278,700,000,000. The cash balance in the Treasury was $26,000,000,000, which in all honesty should be used to reduce the national debt. This left a net of two hundred and fifty-two billion, seven hundred millions in the red. The President estimates that on June 30, 1947, the national debt will be $271,000,000,000; but that the cash balance in the Treasury will be reduced to $3,200,000,000. On that date, the "net in the red" will be two hundred and sixty-seven billions, eight hundred millions, and we as a Nation shall be fifteen billions, one hundred million poorer than at the end of 1945. That indicates that between now and June 30, 1947, the New Dealers expect to spend $15,000,000,000 more than their receipts. Such juggling of fundamental facts on our national finances is, I believe, without precedent in the history of the Presidency.

In the face of these extravagant expenditures, the President admits that the American people can expect no further relief from Federal taxes at this time, although the surest way by which real wages can be increased, and prices lowered, is by reducing the size of the bite which Federal taxes take out of the wages of the worker and out of the profits of industry. Congress must stop the administration's reckless spending on a wartime basis or this Nation cannot hope for peacetime prosperity.

Furthermore, we cannot hope for lasting peace unless Congress calls a halt to the New Deal follies for, dismal as is its records on the homefront, the Truman administration's postwar record in international affairs is even more tragic. We emerged from the war victorious and the strongest nation on earth. Yet 5 months after VJ-day the Truman administration seems to be losing the peace as rapidly as our soldiers and sailors won the war. In the flush of victory, we are in full retreat from the ideals of liberty and justice which America has always championed.

A just and lasting peace must be the first goal of America. The fondest hope of every man returning from battle is that his son may never undergo the experiences which he has been fortunate enough to survive. We accept our responsibility to cooperate with other nations to prevent future wars. In that spirit we have ratified the United Nations charter and have taken our seats in the councils of that organization, but in advance of the functioning of that body, we find that two American Presidents and their

weak and vacillating State Department have subscribed to a new regime of power politics. In a futile policy of appeasement they have abandoned the pledges of the Atlantic Charter and have agreed to Russian domination of her small neighbors on the Baltic, in the Balkans, and clear around to Iran. They have agreed to a policy of starvation in Germany, which threatens the economic ruin of western Europe and which must breed in the hearts of its victims a smoldering hate against us, as well as against our allies, which may force us to maintain permanent armies of occupation.

They have permitted the British and the Dutch to reestablish their system of imperial exploitation in the Orient and to use American lend-lease weapons for the destruction of the natives, who cried in vain for freedom. They have dashed the hopes of those who thought that the American example in the Philippines was to be the rule of the future conduct of the white man in Asia. They have become at least a silent partner in the restoration of a regime in the Orient which we know in our hearts can only be maintained by force.

In short, our leaders have lacked, and still lack, the courage to fight at the council table for the principles for which our sons died in the foxholes. They have sacrificed America's tradition as the friend of the weak and oppressed to buy the good will of governments already indebted to us and sorely in need of our future friendship. They will find that they cannot buy good will with money in the world of tomorrow any more than they could in Latin America. Respect and good will must be earned by fortitude and integrity, not by compromise of principles and appeasement.

They have not even won the respect that is accorded a nation that protects its own interests. While meekly agreeing to Russian and British domination of their so-called spheres of influence, our diplomats have done nothing to obtain for us the vital sea and air bases in the Atlantic and the Pacific, which in this atomic age are absolutely prerequisite to the sound defense of continental United States. The Nation was recently shocked to learn that at Yalta our President agreed to the Russian occupation of the Kuriles, the islands from which the Japanese launched their abortive attack against Alaska. The American people were shocked, first, because their President had denied to them that there had been any agreement at Yalta other than those he specifically reported, and he had not mentioned it. They were further shocked because they realized that their Government was failing them in its basic responsibility for national defense. The Truman diplomacy, ridiculous and tragic at the same time, seems to permit Russia and Great Britain to grab whatever they want while submitting our most fundamental claims to some future session of the World Council.

Indeed, the Truman administration works in reverse. In the world-wide confusion since VJ-day one bright spot has shone out—MacArthur's administration in Japan. Truman does nothing about the confusion, but sets a new council over MacArthur. What we need is to set a new Congress over Truman.

The whole New Deal postwar program mocks the noble principles and the brave deeds of the martyred Lincoln. Inevitably at this time we think of the simple plan for the restoration of peace, which he stated in the immortal words of the last paragraph of the second inaugural. They will be quoted many times in the next few days and, if we will listen, they will point the way in the problems which confront us. Let me repeat them:

"With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, for his widow, and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

"With malice toward none." Does not that mean the vanquished peoples we have doomed to slow starvation?

"With charity for all." Does not that mean the subject peoples of Europe and Asia we have abandoned to Communist and imperialistic exploitation bordering on slavery?

"With firmness in the right as God gives us to see the right." Does not that mean all of us Americans, and particularly our national leaders, who would sacrifice our ideals on the altar of the false and insatiable god of appeasement?

"A just and lasting peace for all nations." Certainly we cannot hope to achieve that unless this Nation quickly returns to the Lincolnian standard of justice, brotherhood, and simple honesty.

That is why I say the congressional elections of 1946 are so highly important. We cannot change the incompetent executive department for another 2 years. We can—and we must—give to our people, and especially to the GI's everywhere, a sane and sound Congress which will be our first line of defense for the protection of American interests abroad, and the preservation of our American system at home, and a restoration of constitutional government in these United States.

We must send strong, independent, fearless representatives to Washington—men who will be true to the Lincoln faith. Fortunately we have such men in both the Republican and Democratic Parties. But a Republican Congress will be immune to New Deal pressure, whether it be exerted through patronage bribes or intimidations by White House radio appeals to their constituents.

A Republican victory in 1946 not only will insure such a Congress; it will tell the New Dealers that the American people are through with their policy of giving away America, of promising what they cannot perform, of fomenting division in the Nation, and of encroaching on the fundamental rights of our citizens. That verdict will be most clear, both to the New Dealers and to the Nation, if it is written in part by the votes of the sound Americans of the South, who traditionally have adhered to the party which has been betrayed by the New Deal.

The battle for freedom is never ended. The cause of freedom marches steadily forward. The principles by which Abraham Lincoln lived, and for which he died, have become the creed of the American people and the hope of the world. Our sons have carried their banner to victory in every corner of the globe. That victory will be indeed hollow unless, as a nation and as individuals, we live by his rules.

Therefore, it behooves us once more—and as never before—to be here dedicated to the free America Lincoln loved so dearly. Let us here highly resolve that this Nation shall have a new birth of freedom, and that the liberty of justice and honesty shall truly enlighten the world.

It's Not the Steel Companies That Will Pay

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Friday, February 22 (legislative day of Friday, January 18), 1946

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "It's Not the Steel Companies That Will Pay," from the Arkansas Gazette of February 12, 1946.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT'S NOT THE STEEL COMPANIES THAT WILL PAY

A CIO steel workers union leader who told strikers at Baltimore that an 18½-cent-an-hour wage increase is as good as in your pockets said anyone who thinks the steel companies can get away with any less doesn't know the united steel workers.

But it is not really the steel companies that are going to pay the 18½-cent increase. Industry at large and the public are going to pay it. An increase in the price of steel of around $5 a ton is forecast, although Price Administrator Chester Bowles had recently refused to go along with an increase of more than $2.50 a ton.

It is announced from Washington that steel fabricators, who process steel into various products, may have the right to immediate price review.

We assume that wage increases for steel workers are justified. The steel companies offered higher wages. How much the increase should be we could not, of course, attempt to say. But there should be no difficulty in realizing that when the steel companies pay the proposed higher wages the companies will in effect simply collect the increase from the steel-using industry in general, which will collect from the consumers.

What Is the Dominant Characteristic of the Truman Administration?

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 22, 1946

Mr. MICHENER. Mr. Speaker, during the last few weeks there has been much anxiety abroad in the land as to just where the President stands in reference to many of the public questions now confronting the country. Naturally the type of men whom he selects to carry out his policies is most suggestive. There has been a wealth of editorial comment and conjecture. The same has been true on the part of the columnists and radio commentators. I happened to hear the broadcast of Bill Costello the commentator, over the Columbia Broadcasting System at 6:10 p. m. on February 20. This broadcaster expresses his views and presents his analysis in plain, understandable fashion and, pursuant to the privilege granted to me, I include a copy of the transcript of that broadcast which is as follows:

For the last 10 months, official Washington has been engaged in a guessing game which is just as popular now as it was when Harry Truman first took office. The subject of this speculation is: What is the dominant characteristic of the Truman administration? Will it be New Dealish, just plain liberal, or conservative? Where is it heading?

So far, no one has come up with the answer. There are times when it seems to be all things to all people. The President, by his appointments, seems to be riding off in all directions at once. That may be one reason for the political furor over the Pauley nomination. Quite apart from the taint of oil,

Pauley's appointment has been resented in some quarters because it violates one of the patterns of Washington officialdom; it would put a party politician into the Navy Department, and there are a good many people in Government who object on principle to the presence of a party worker in either War or Navy.

Discussion of this problem brings out the fact that Mr. Truman has drawn most of his appointments from four sources—from the Democratic Party machine, from among his old friends in Congress, from a coterie of old personal friends in Missouri, and to a very minor extent from the ranks of the liberal-labor forces which allied themselves with the New Deal under President Roosevelt. Only on rare occasions has the President made excursions into the world of business and professional experts. Somehow he seems to shy away tempermentally from such minds. Those whom the President has chosen for his immediate circle of advisers are mainly the homespun type—men known more for their good nature, their easy familiarity than for their intellectual qualities.

Changes in the Truman administration have come gradually, and many observers still find the trend confusing. Mr. Truman kept some of Mr. Roosevelt's closest advisers for a time, but gradually they have drifted away. There is still no dominant characteristic in a catalog of the new people. It is a curious fact that complaints are being muttered not only among Government personnel, but in the White House itself. The President is fond of complaining he has more than his share of troubles. He made such a remark to a group of correspondents the day after he took office, and he has never left off. He complains to his friends that he cannot get good men to take high offices; he has to spend hours on the telephone persuading them to enter Government service. At the same time, men in the upper brackets of the civil service complain that there is no longer any inspiration for them in Government service. They say they can accomplish nothing when good but incompetent men are given policy-making jobs over them. And it is a fact that scores of such experts are leaving Government for private employment. The nub of their complaint seems to be that the Truman administration lacks character; it is neither fish or fowl; neither courageously liberal nor vigorously conservative. It is one thing in one department and another thing across the street. When you ask for specific details, the answers are vague and unsatisfying. It is something which is felt, but which cannot quite be explained.

Home Sold Out From Under Washington Veteran—Landlord Demands $2,500 Speculative Profit—Price Ceilings Only Way To Stop Legal Swindle

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1946

Mr. PATMAN. Mr. Speaker, for several months I have tried to keep a calm, objective attitude toward both sides of the housing problem, giving due consideration to the interests and the profit of real-estate men and builders as well as to the need of the people for homes.

Today, however, I received from a veteran a letter that would anger any man with a sense of fair play and justice for our returning servicemen. This letter is a concrete example of the type of highway robbery that is being practiced by unscrupulous speculators upon our returning servicemen, who have such difficulty finding places to stay. It is just the sort of thing that I am trying to correct in my housing bill by putting a ceiling price on existing homes.

This is a story of a veteran who rented a house before the war and kept it all through the conflict. The veteran is Mr. Joseph L. Price of Washington, D. C. In 1941 the owner of the house which the veteran had rented offered to sell him the place for $6,500. Mr. Price could not buy the home because he was drafted into the Army. He was discharged November 11, 1945, and his landlord offered to sell the house to him again—this time for $9,000. But the veteran had not yet found a job, so he was unable to finance the purchase. A few weeks later the landlord, a prominent Washington attorney, sold the house for $8,750. Veteran Price now has a job in the War Department, but his home has been sold out from under him and he cannot get another place. Why? Because the speculators have increased the prices of houses so far beyond their true value that Government appraisers cannot approve a GI loan to buy them. I think that the Congress of the United States will be derelict in its duty to the people, it will disgracefully fail its obligation to the veteran, if we allow such legalized robbery to continue. We have a simple question before us. Are we to aid and abet the swindle of these boys who fought for us for 4 long years under the most horrible conditions on the face of the earth? Are we to keep these veterans in so helpless a position that they can be plundered by a few greedy profiteers? Or will we be men enough to protect them and their families until they can make a new start in life? It is only by imposing ceiling prices on these homes and putting a halt to real estate racketeering that this can be done.

Mr. Speaker for the benefit of the Members, I want to insert in the CONGRESSIONAL RECORD this stirring letter received from Veteran Joseph L. Price of 321 Todd Place NE, Washington, D. C.:

WASHINGTON, D. C., *February 19, 1946.*
Hon. WRIGHT PATMAN,
House of Representatives.

DEAR SIR: If ever a price ceiling was needed on existing houses, it is now. I am speaking as a veteran and a victim of a speculator. My wife and I have resided at the above address for 5 years. At the time of our first occupancy of these premises it was offered for sale when the rent-control law came into effect for $6,500 by the man who owned it, a lawyer who has an office in the Munsey Building. At the time we were in no financial position to take it. I was inducted into the Army, later discharged November 11, 1945. The house was offered for sale then for $9,000. As I had not yet procured a position, I was unable to try to get a GI loan. It was finally sold to another veteran who paid $8,750 for it. I have a job now in the War Department, but my home is sold and as I can only afford a $7,000 house I sure can see where the speculator is making it almost impossible to buy a home as they put the prices so much more than the house is worth, the Government appraiser will not O. K. the GI loan.

In conclusion I would like to say that this is unfair for a man that—not only me but millions of other veterans—risked his life that his home could be secure shows his appreciation by buying and selling mine from under me. He made his pound of flesh by depriving me, one of the men who fought for his home, of mine. Where and when I will be able to get another the Lord only knows, as I went to one real-estate man who had a $6,995 bungalow advertised in the paper—when I asked him to give me a contract subject to approval of the Veterans' Administration he refused, saying it would take 2 weeks to get it appraised by them and then he knew they would turn it down as he had too much experience with veterans and he could not afford to have his property tied up for 2 weeks, for there was plenty of people who would buy it in that time. The speculators have got me up a tree.

Yours truly,

JOSEPH L. PRICE.

They Need a Spanking

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1946

Mr. HOFFMAN. Mr. Speaker, two would-be czars—little J. Caesar Petrillo, who would force us to pay the fiddler even though he never draws a bow; and big, bluffing Chet Bowles—need what "horse and buggy" fathers applied to make good men out of bad little boys: a barrel-stave spanking in the woodshed, unless, perchance, J. Caesar and Chet have gotten away with so much that a spanking will not cure them and they should be sent to a reform school, there to learn, J. Caesar, that there is a limit to people's patience, and Chet that, after all, he is just a hired man, the people's servant, not their boss, that even he cannot prevent the operation of the law of supply and demand.

Overlong, J. Caesar has been compelling those furnishing music at public gatherings, those broadcasting musical programs, to pay his union for music never furnished, for musicians who never worked. A public gathering, wanting to use its own musicians, is forced to pay Petrillo for an equal number of musicians who never appear nor play a note. Groups desiring to stage a show to raise money for charitable purposes, civic bodies wanting to celebrate the return of local veterans, asking for the services of the Army or Navy bands, were forced first to get J. Caesar's permission. Think that one over. The Army, the Navy, and the marines can lick the fighting men of the world, but are not permitted to whip Petrillo. They can't beat a drum nor toot a note at a civilian function when J. Caesar turns thumbs down. The House just gave J. Caesar his long overdue spanking.

BOWLES AND HIGH PRICES

Chet Bowles has outgrown his breeches. He is a hired man, paid by the taxpayer's money, who has lost his sense of proportion. His head is swelled and his conceit and arrogance are insufferable. He has gotten away with so many abitrary and ruinous rules, regulations, and directives that he seems to think he is infallible. If ever a Govern-

ment official used more of the people's money to spread propaganda to keep himself in a Federal job than has Chet, it is not of record.

An excess of money on hand, a scarcity of goods available, cause inflation. Instead of five billion, we now have $28,000,000,000 in circulation. Instead of an abundance of needed merchandise, there is a scarcity. Yet Chet, heading the organization designed to prevent inflation, increase production, like a kid chasing a butterfly with a net, goes blithely on his way, fixing prices so low that the profit margin is, in many instances, wiped out. Hence the scarcity; hence high prices, in spite of OPA.

Chet can fix prices, but he cannot make shirts. Now and then he deals one from the bottom. Fixing the price on some articles, calling the consumer's attention to that price, he chortles to the consumer, "Look how I hold the price down." But dealing from the bottom of the deck, he asks Congress for a billion five hundred million dollars of the consumer's tax money, to be paid to the producer by way of a subsidy. The consumer, buying his pound of butter, pays across the counter, but he digs again for the subsidy to be paid to the producer for the same butter.

People began to catch on, and this week big, blut., good-natured Chet—seeing his propaganda knocked into a cocked hat, aware that the people, wanting low prices, were not getting them, would rather pay more and get something than to go without—lost his temper. He jumped on the NAM, because it told the people that if OPA would let up, though there might be temporary inflation, production would shortly catch up with demand and goods would be available at a reasonable price within a reasonable time. Chet has been telling the folks just what to write their Congressmen. NAM asked the people to think it over and then to tell their Representatives what they thought about price control. That made Chet really mad, and he gave NAM heck. The reason—he didn't want the people to do any thinking. I might add, he just wanted to do the thinking for them.

Then Bowles jumped on Henry Ford II, head of the company which is willing to lose $33,000,000 during the coming year in order to stay in business, give its employees jobs and the public automobiles. The National Small Business Men's Association, having ventured to propose strike legislation, will be the next whipping boy.

Chet admits inflation is here. He admits we are going to have more of it. He admits that price control is an evil. He says there must be an end to it; but not just now, says he. He wants to prolong the agony, at least until election day, perhaps so that he and his outfit may be assured of continued existence. Some of us are willing to face inflation now, have the men back at work, production in full swing.

Both J. Caesar Petrillo, who would not even permit the school children at Interlochen to study music and put on their concerts without paying tribute to him, and Chester Bowles, who can fix prices but who cannot make shirts, socks, nor automobiles, should be given a long overdue lesson in public behavior.

Address of Hon. Charles W. Taussig

EXTENSION OF REMARKS

OF

HON. JESÚS T. PIÑERO

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 22, 1946

Mr. PIÑERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following address delivered by the Honorable Charles W. Taussig, chairman, United States Section of the Caribbean Commission, at the opening yesterday of the Second West Indian Conference being held at Charlotte Amalie, St. Thomas, V. I., United States of America:

Your Excellency, fellow commissioners, delegates to the West Indian Conference, ladies and gentlemen, you have just heard a significant message from President Truman. It is fitting to recall that another great leader played an important part in the creation of this Commission and this Conference. Franklin Delano Roosevelt knew and loved the Caribbean. He knew your problems and believed in the future of the West Indies. The spirit of his leadership will be a constant inspiration to us in the work that lies ahead.

History tells us that the past always impinges on the present. Nothing we here undertake, no matter how sincere our motives nor how wise our decisions, can abruptly be disassociated from that which has gone before. We are confronted with this fact at every turn in the road that leads to social and economic betterment for the people of the Caribbean. Always the old plantation system with its unsavory byproducts casts a grotesque pattern across our path. As we move forward these shadows become less distinct, their evils less menacing, and our progress more rapid.

Part of the West Indian Conference will be devoted to a review of the progress we have made—and it is considerable; another part will consider the basic problems of West Indian economy and society, and a third will concern itself with specific recommendations for projects promptly to be undertaken.

We will come to these discussions with a new sense of maturity because of our experience in the Caribbean during the past 4 years and because of a new approach to world unity through the United Nations Organization. The United States and Great Britain have welcomed two new associates into this regional fellowship. With France and the Netherlands as full-fledged members of the Caribbean Commission and with 15 Caribbean territories represented in the Conference, new horizons of organization and opportunity will open up to us. We will have to devise effective machinery for the expanded organization. We will have to put into practice in peacetime the aims and ideals which could not be realized in time of war. We will have to show the world that in this relatively small Caribbean cosmos great nations and small territories can plan their regional life in friendly cooperation. If we are successful, the troubled world will gain new hope from our achievement. The details of these plans and the failures and accomplishments of the past will be discussed at length by the delegates to this Conference in the next 3 weeks. It is not my purpose here to review those plans or to anticipate those discussions. My few words to you now will deal with another subject, one not presently on our agenda, a problem less concerned with countering the evils of the past than with successfully overcoming a menace of the future.

As we gather here today we are confronted with a new problem, one that is so fantastic, so apparently unreal, that we barely recognize it as the immediate and urgent concern of this Conference. I refer, of course, to the atomic bomb, the weapon that offers the world the alternatives of durable peace or extinction. Through the centuries man has striven for peace. All of his efforts have resulted in failure. Now we are confronted with the awful implications of this new knowledge. We must make another effort to obtain a lasting peace, a cooperative effort of a magnitude beyond anything that has gone before. Failure this time means obliteration. But if we succeed we have the assurance of scientists that atomic energy can be made to yield unprecedented benefits to mankind. This new effort toward peace will compel many social, political, and economic adjustments. The part that the Caribbean must play is not only of importance to the area itself, but to the world at large. For at this point in history when distance and mere armed might do not assure safety, the problems of each part of the world are vital to all others. Even before the atomic bomb came into being it was recognized that there cannot be peace while the maladjustments of one part or another of this steadily shrinking world go uncorrected.

The Caribbean Commission and the West Indian Conference have been doing their part to focus attention upon and help solve the difficulties that beset this region. We have met with some measure of success. The task still ahead is tremendous. We must continue to think these problems through. We must continue to have conferences to discuss, to argue, to disagree—and ultimately to agree—upon solutions. But we must not overlook the fact that in our desire to be logical and thorough the great menace confronting us today demands speed and more speed in achieving our objectives.

What are these objectives? We have repeated them over and over again—social, economic, and political progress. These objectives are not mere abstract ideals when translated into better fed, better clothed, and better educated human beings. But these practical reforms can become merely palliatives unless built on the foundation of essential human rights. Nowhere on this agenda and at no time in our previous conferences do we find any specific mention of human rights. The race we are running against atomic energy cannot be won alone by economists, scientists, or politicians. We, the people, must define—and precisely—the goal of human aspirations that we seek. There is a unifying purpose in the world today which, if properly expressed, can serve as a guide for those whom we choose as our leaders. This purpose is to be found in the fundamental and simple desires of the common man. I do not exaggerate when I say that these desires are simple. They become complex only when we awkwardly translate them into complicated political and economic formulas.

All mankind, and the people of the Caribbean area in particular, requires two well-defined charters which shall be basic for all that we strive to attain. One is a bill of human rights, a simple statement of what an individual may require of his fellow men to live his life in security and happiness. The other is a bill of human obligations, a statement of the sacrifices that must be made by an individual to assure these basic rights to his neighbor.

There is a growing conviction supported by many scientists and technicians that the only real defense against the misuse of atomic energy is to be found in the spiritual awakening of mankind. Our hope for security lies not in the field of science, but in the realm of morals.

I believe that the people of the Caribbean might well take a leading part in formulating these charters. For here live together representatives of most of the peoples of the world—Africans, Europeans, Americans (North and South), East Indians, Chinese, and many others. Some of the great religions of the world are represented here—Hindu, Mohammedan, Christian, Confucianist, and Jewish. No charter of human rights, nor its corollary, a charter of human obligations, can have world acceptance unless they are derived from the wisdom, the philosophy, the ethics, and the religious aspirations of all the peoples of the world. The time has come, I think, for this Conference to give its attention to this fundamental problem. Perhaps you of the Caribbean, out of the experience of your long and often sorrowful history, can, with the aid of God, bring to yourselves and to the world a working philosophy that will aid mankind in its quest for freedom, dignity, and security.

Chicago Taxicab Monopoly

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1946

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the Chicago Tribune of February 21, 1946, and the Washington Post of February 22, 1946:

[From the Chicago Daily Tribune of February 21, 1946]

END THE CAB MONOPOLY

The veterans who are driving to Washington to seek Federal aid against the Chicago taxicab monopoly may not do much to improve cab service in this city immediately. In fact, they may diminish it, since it seems that a number of their cabs may never get back to town.

But there may be grounds on which the antitrust division of the Justice Department can intervene in the Chicago mess and relieve its citizens of the monopoly agreement, entered into freely, if not for free, by their own aldermen. The management of the Yellow and Checker companies may deny until they are blue in the face that they are under any obligation to purchase their cabs where they do, but the fact remains that they get them from only one source.

That source is a company higher in the holding company hierarchy that controls Yellow, and with which Checker has connections. The suspicion that the two operating companies are being run principally to provide sales outlets for Checker Cab Manufacturing Co. will at least bear investigation. Some courts would undoubtedly hold that such an arrangement was restrictive of interstate commerce.

It's not a good thing for the people of a city to be running to Federal authority for redress against the mistakes, honest or otherwise, of their own elected officials. Sometimes, however, there is no other recourse. This may be such an instance.

A gentleman wrote us after we had commented on the taxicab situation the other day, commending what we said in general, but rebuking us for our naivete in suggesting that the members of the city council are going to do anything to protect their constituents against the present inadequate service. His point was that the aldermen, having been bought by the taxicab monopoly, were going to stay bought.

We don't know whether the aldermen were bought. We do know that they had better not act as if they had been bought, if they want to keep out of hot water from now on.

[From the Washington Post of February 22, 1946]

LOBBY ON WHEELS

The taxi-driving war veterans who have streamed into Washington from Chicago are exercising the elementary constitutional right of petition. That they are exercising it with utmost orderliness and restraint is altogether to their credit. It seems to us, similarly, that the helpfulness of the Army in affording the men shelter and the interest of the Justice Department in promising an investigation of their complaint are also highly creditable. Mass protests brought to the Nation's Capital have been known in the past to evoke hysteria. This particular protest has been conducted and received in the best American tradition.

The veterans have two complaints. One is that the city of Chicago grants licenses for only 3,000 taxis; the veterans would like to see incorporated in the GI bill an amendment giving former servicemen special licenses to participate in any business limited by city ordinances. Despite our sympathy for their situation, we do not see how such a request could be granted without wholly nullifying the restrictions which some municipalities have seen fit to impose upon certain pursuits. Chicago is within its rights in limiting the number of its licensed cabs; that limitation would be meaningless if veterans could ignore it by dint of a Federal license.

The second complaint seems much more substantial and thoroughly warrants the full investigation which Wendell Berge, Chief of the Justice Department's Antitrust Division, has promised to accord it. The veterans contend that one or two large cab companies hold virtually all the 3,000 licenses issued in Chicago. If true, this would appear to have the aspects of a monopoly. Whether it comes within the prohibitions of the antitrust laws, we do not know. It may be that the protesting veterans will have to drive their cabs back to Chicago and present their protest at the city hall. We cannot help hoping, however, that some of them will stay here and enlarge the inadequate supply of taxis in this community.

The Republican Party at the Crossroads

EXTENSION OF REMARKS
OF
HON. CHARLES M. LaFOLLETTE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 22, 1946

Mr. LaFOLLETTE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am including the Lincoln Day address which I made at Evansville, Ind., on February 12, 1946:

Mr. Chairman and fellow Republicans of the Eighth District of Indiana, we meet tonight on the one hundred and thirty-fifth anniversary of the birth of Abraham Lincoln, the greatest man American has produced to date. We meet to honor him as members of the Republican Party. It is proper that we should honor him, for while he was not one of the founders of the party in the technical sense, nevertheless he, more clearly than anyone else, by his words, declared the principles and purposes for which that party was founded and by his actions expressed them. Since Lincoln the party has had other men who, in varying degrees, have understood those principles and likewise in varying degrees have attempted, by their actions to bring them into being, but none of these others reached his eminence. And this is understandable, for he was of the people, he had a kinship with all people; therefore, having faith in himself, he had faith in the people, and out of that faith grew his conviction that "government of the people, by the people, and for the people" should become a reality.

We people of the Eighth District of Indiana have a particular interest in celebrating the birth of this man and we are entitled to be proud of the fact that his formative years, from 7 to 21, were lived in Spencer County in this district—for experiences has taught us that much of the greatness which men display in later life can be traced to the foundation of integrity, character, kindness, and human understanding which they acquire in their formative years. Those things are acquired from association; therefore, it is logical for us to assume that the humble people with whom Lincoln associated in this Eighth District of Indiana themselves were possessed, to a high degree, of the qualities of this man which have caused the world to honor and revere him.

But if this is true, a proper regard for our obligations requires of us a higher standard of conduct than that required of those Republicans who live in other parts of the world which, in the past, was not so closely related to the life of this man.

There are two kinds of ancestor worship, one of them dishonorable, the other honorable.

The first kind is demonstrated by those weak or base people of the present who try to excuse themselves and find salve for their consciences by continually talking about what a rich or great man "grandpappy" was. Such people have no influence upon the present and because they have either failed to understand the qualities of greatness of their ancestors or lacked the present character to live up to those standards, they succeed only in desecrating the memory of their ancestors and in obtaining for their time either the amused disdain or the loathing dislike of their contemporaries.

But there is an honorable kind of ancestor worship. The people who practice it, studiously study the history of the thoughts and accomplishments of their ancestors, and finding, there, things which are good and clean and pure and honorable, and understanding the things that they find, set for themselves the duty and obligation in their generation to conduct themselves in their day meticulously in accord with the standards of greatness which have preceded them. Such people, because they understand the grandeur of the past, find it with them always in the present and strive humbly in their daily lives to obtain the approval of that ever-present shade. Such people find no need to bolster their standing in the present by glibly calling up the grandeur of the past, for the world, which knows the grandeur of the past recognizes, in them, in some degree, a reincarnation of that grandeur, and the world gives to them its approval and they, in turn, give honor to their ancestry.

Political parties being composed of men are like men and judged in the world by the same standards by which the world judges men. Therefore, wherever Republicans are meeting tonight, the world will know whether in those meetings the people gathered there have, by their acts, honored or desecrated the memory of Abraham Lincoln.

Since the world will know whether we act honorably here, it might be well for us to

investigate the words and acts of Abraham Lincoln in order that we may have a standard by which to judge for ourselves the judgment which the world will place upon our conduct.

The biographers of Lincoln uniformly attest to his love of the Declaration of Independence. It was his handbook. He understood that the Declaration of Independence declared the spirit and the purposes which this Nation was called into being to accomplish. He also knew that the Constitution was merely the tool which the people could use to carry out that spirit and purpose. So if we would be filled with the spirit that filled Lincoln, it is proper that we read the pertinent parts of the Declaration which he loved so much.

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty and the pursuit of happiness. That to secure these rights, Governments are instituted among men, deriving their just powers from the consent of the governed.—That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness."

Every thought that the adult Lincoln had and every speech that he made gives clear evidence that the grandeur of those thoughts had so completely absorbed his soul, that the mind—the mirror of the soul—gave forth the truths therein set out on every occasion.

Lincoln also was one of those rare men whose acts conformed to their spoken words. Therefore, when we read the words of Lincoln, we find a true measurement of the acts of Lincoln, and it is the acts of Lincoln which we would emulate today, if we would truly honor him today.

In the spring of 1860, Lincoln was a known candidate for the Republican nomination for President at the convention to be held in the middle of May in Chicago. On February 27, fully conscious of this fact, he delivered his great speech at the Cooper Institute in New York. From there, equally conscious of his candidacy and of the effect which every word he said would have upon his candidacy, he started for Exeter to visit his son. On the way, he spoke at Hartford, Conn., on March 3, and at New Haven, Conn., on March 6—less than 2 months before the convention was to assemble.

It is necessary that we understand this background so that we may understand the significance of the New Haven speech. He made the New Haven speech in strong Democratic territory and in an area where industry was more highly concentrated at that time than anywhere else in the country, and consequently in an area where there were more manufacturers and industrialists than in any part of the country. At that same time, there was a strike of shoe workers in New England. Douglas had been there before him and, like the divisionists of the present day, had made a subtle appeal to the avarice of the owners, the misery of the strikers, and the confusion in the minds of the middle class by attempting to lay all the blame for the strike upon the threatened loss of the southern markets which would follow the secession of the South if the Republican Party continued to press the moral issue of slavery and its party pledge to abolish further extension of that evil into the territories. Like the southern Democrats today and the Republicans, who prostitute the memory of Lincoln by lying down in the same bed with them, Douglas was an appeasor, and a finagler, and a cheap politician attempting to obtain votes by appealing to the avarice, the fear, and the confusion which I have mentioned.

Not so Lincoln. He met the issue of slavery head-on; he met the issue of strikes head-on; and, if you read with understanding what he said, he did more than that, he met the problems of his day—which are the same problems of our day—the problems of racial prejudices and discriminations, the problems of full employment, and the problems of fair play for the oppressed of his day.

If we would honor Lincoln, we must act today as he did then. You can't dodge and follow Lincoln any more than you can oppress and follow him.

Now let us see what Lincoln said.

The Democrats of that day had developed and used the following argument:

"When the struggle is between the white man and the Negro, I am for the white man; when it is between the Negro and the crocodile, I am for the Negro."

Lincoln had a burning disdain for that argument, and at New Haven, here is the way he treated it:

"There is a falsehood wrapped up in that statement * * * (it) assumes that there is a struggle in which either the white man must enslave the Negro or the Negro must enslave the white. There is no struggle; it is an ingenious falsehood to degrade and brutalize the Negro. * * * It is like two wrecked seamen on a narrow plank where each must push the other off or drown himself; I would push the Negro off, or a white man either; but it is not necessary—the plank is large enough for both. This good earth is plenty broad enough for white men and Negro both, and there is no need of either pushing the other off."

At another part of that speech, he said:

"I desire that if you get too thick here (in New England) * * * you may have a chance to strike and go somewhere else, where you may not be degraded nor have your family corrupted by forced rivalry with slaves."

The lesson which Lincoln was teaching is simple to understand and its application to the problems of today is clear if we remember that the problems of man have been the same since the beginning of time, but the means which must be attempted for their solution vary with the times in which and the conditions under which men live.

In denying that there was a struggle for survival between the white man and the black; in declaring that there was room enough on this good earth for both, Abraham Lincoln was declaring that the basic problems of man are economic and that if man will but recognize the fact and work together that there are ample good things on the surface of this earth for all.

Thus he stated the problem. He also stated the means which were then presently available to solve it; namely, the opening up of the Government-owned land in the Territories of the United States in the West, if and when the people of New England should become so crowded there that there was not enough for all or enough wealth could not be produced for all. But he wanted this territory to be free—free for all men, black or white—but more than that, he did not want the standard of living of freemen, either black or white, to be lowered by the debasing, degrading institution of slavery.

Free land for freemen was the readiest, simplest solution to the problem of economic sufficiency for all in Lincoln's time. Today the solution is a determination upon the part of Government not to give free land—for it has no more—but to give and afford opportunities for full employment to all of its people who can be gainfully employed. The obligation is to conduct the economy of the country so that the greatest amount of wealth can be produced and employment offered by private employers. But for this to be possible, we cannot forget, after the experiences of the twenties and thirties, that the masses of the people must have buying power in order to keep this capitalistic economy and the machinery of it going. And, if at times it seems apparent that the production of goods of that kind will not furnish sufficient buying power to enable the people to consume consumer goods, then there must be a coordinated system of public works. The local communities which have the funds which they have raised by taxation should expend them for that purpose, particularly for matters of local concern, but the coordination and the timing of the shift from the production of other kinds of goods is an obligation of the Federal Government, just as in Lincoln's time, the making available of the free public lands for the people to emigrate to was an obligation of the Federal Government to relieve economic stress.

This was Republican philosophy. Douglas and the Democrats didn't want full employment, didn't want free labor, and they didn't want freemen. Likewise today, those of us who advocate full employment, full production, a scale of wages in the masses of the public which will make this possible and, when necessary, the expenditure of funds for public works under a federally coordinated plan, are following true Republican tradition; and those people who may be elected as Republicans who get in bed with southern Democrats who fight a bill for full employment, are following true Democratic traditions, the traditions of "division and ruin," the tradition of oppression of the masses, which was the tradition of the Democratic Party when the Republican Party came into existence. And I say to you, that Republicans of that kind ought to get out of the Republican Party and get into the Democratic Party so that there can be a marriage between the two so as to end this present illicit intercourse.

Now let's see what else Lincoln said at New Haven. Abraham Lincoln believed that a man was a man because of what was inside of him and not because of the color of his skin. As we have seen, he denounced an argument which was advanced by the Democrats for the purpose of "brutalizing the Negro." He also said this:

"We wish to allow the humblest man an equal chance to get rich with everybody else. * * * I want every man to have a chance—and I believe a black man is entitled to it * * * when he may look forward and hope to be a hired laborer this year and the next, work for himself afterward, and finally to hire men to work for him."

Surely those words of Lincoln need no explanation for any man to understand them. Lincoln knew and believed with all his soul that thing which is true; namely, that man is a spiritual being; that he is what lies inside of him, not what you see on the surface. Therefore, the color of a man's skin doesn't affect the quality of a man. He knew that there could not be a fatherhood of God without a brotherhood of man; and when Lincoln knew this, most black-skinned people, because they had been brutalized and denied the education and denied the treatment normally accorded to human beings—not because of any difference in them—were almost totally lacking in all of the social graces or those habits of conduct which were found in the white man of his day. We in the North, at least, have spent millions of dollars in the years since Lincoln's death in providing education for this man of black skin, from which it follows that the outward difference in knowledge and character and understanding and social graces of the black man of today is infinitesimally higher than it was when Lincoln knew him and loved him and fought for him and, in effect, died for him. How can we, as Republicans today, in the face of Lincoln's statement that he wanted to see the black man have a chance to work as a hired man, and the next day to work for himself, and the next day to hire other men to work for him—and Lincoln

didn't say "black man," he said, "men"—dare to be here to honor Lincoln unless we wholeheartedly support, without equivocation, legislation necessary to bring about fair employment practices all over the United States. Legislation made necessary because the Republicans, after the death of Lincoln, failed to afford to men of black skin, in this so-called land of the free and of equal citizens, an equal economic opportunity with all other men.

The Democrats in Douglas' time thought otherwise. The Democrats of the South, who are the real Democrats today, think otherwise. How can any group of Republicans meet anywhere in this land and honor Lincoln with sincerity in their hearts unless they can point to a record of deeds and accomplishments calculated to carry out the doctrine of full economic opportunity which Lincoln announced at New Haven, in hostile Democratic territory and at a time when he was facing a Republican convention, just 2 months away, in which his nomination for the Presidency was at stake.

In this New Haven speech Lincoln, 2 months before the Chicago convention, walked into the most highly industrialized part of America of his day and talked about strikes. Lincoln talked about strikes at New Haven, but before we read what he said about strikes at New Haven lets see what he said on the subject of capital and labor 6 months earlier, on September 30, 1859, in Milwaukee, Wis., at a time when he also knew he was being talked of as a potential nominee of the Republican Party for President. There Lincoln was discussing the "mud sill" theory of labor which had been advanced by the Democrats in the South. My God, how I wish some of our Republicans had let the Democrats keep their economic theories instead of attempting to infect our Republican Party with them. This "mud sill" theory, like all Democratic theories on the question of man and labor, was very degrading to the laborer. Having analyzed that theory, Lincoln said this:

"But another class of reasoners hold the opinion * * * that there is no such thing as a freeman being fatally fixed for life in the condition of a hired laborer. * * * They hold that labor is prior to and independent of capital; that, in fact, capital is the fruit of labor, and could never have existed if labor had not first existed; that labor can exist without capital, but that capital could never have existed without labor. Hence they hold that labor is the superior—greatly superior—of capital."

If Lincoln were alive today, he would have the Un-American Committee investigating that one. And he'd also have a lot of so-called Republicans who, knowing nothing about the traditions of their party, consequently having nothing to forget, denouncing him as an unsafe radical. But that is not strange for it was written long before Lincoln, "He came unto His own and His own received Him not."

In order that we may have additional light upon Lincoln's ideas on capitalism and the relation of labor and capital under that system, let us now read what he said at New Haven:

"Now about that shoe strike. Now I don't know all about the matter. * * * At the outset, I am glad to see a system of labor prevails in New England under which laborers can strike. * * * I take that it is best for all to leave each man free to acquire property as fast as he can. Some will get wealthy. I don't believe in a law to prevent a man from getting rich. It would do more harm than good. So while we do not propose any war upon capital, we do wish to allow the humblest man an equal chance to get rich with everybody else."

Lincoln thought so incisely and expressed his thoughts so concisely that almost everything he said was pertinent. This makes it very difficult to pick out particular sentences from his speeches on any subject as being the most revealing, because all of it was revealing. Nevertheless, I shall risk doing this and call your attention to the last sentence of the New Haven speech:

"So while we do not propose any war upon capital, we do wish to allow the humblest man an equal chance to get rich with everybody else."

Only the fool, or what is in fact the equivalent of a fool—a man with intelligence who has closed his mind—will assert that today the humblest man has a chance to get rich equal to that of the infinitely small percentage of our citizens who dominate the productive capital of our country and the financial resources of our country or with those even more powerful people, the group who manage these resources for the people who own them.

I believe that the bulk of the American people think as I think and feel as I feel and that we all feel as Lincoln felt; namely, that a capitalistic system which has been permitted to operate under a system of laws which has permitted relatively few people in our country to continue to acquire, through their capital investments, an increasingly disproportionate share of the wealth which has been produced, has not left the bulk of our people with an equal chance to participate, as vital, living human beings, in our capitalistic economy.

We must understand the basic truth stated in the Declaration of Independence—Governments are instituted among men, deriving their just powers from the consent of the governed—if we are to understand its application to our present economic problems.

What was really being said, was this, that people, whether in governments or in the ordinary affairs of life, if they are worthy of living in a democratic society, want to feel that they are really a part of the thing that they are doing and that in some way they participate in the decisions which affect their lives. Under a system where mass-production industries get larger and larger and consequently, fewer and fewer in number, and where much the same thing takes place in the banking and financial structure of the country, it follows that a smaller and smaller number of people control these things, and as that condition grows, it naturally removes from the masses of the people a sense of participation in the creative character of the work which they are doing. I am not sure that this is always conscious in the minds of the workers of America, but people are often moved subconsciously as results of emotions they feel, which emotions in turn are created by the surroundings in which they live. Therefore, it is my very firm opinion that one of the basic reasons for the unrest in America is the increasing hopelessness of the average citizen that in our capitalistic system as it presently exists, the condition which Lincoln felt was a condition precedent to its existence; namely, one in which the humblest man had an equal chance to get rich with everybody else, does not presently exist; and the average man sees no hope of the present trend being stopped and this condition being brought about. Out of this unrest and hopelessness of the average man, and this feeling that he has no real participation in the thing that he is doing, arises the industrial strife in America.

You can't cure these things by repressive labor legislation. You only intensify the feeling of oppression and frustration and hopelessness in the mind and heart of the industrial worker; and those who advocate repressive labor legislation don't understand the basic principles of the Republican Party and have no understanding of the philosophy of Abraham Lincoln. And it makes no difference whether they call themselves Republicans and make big campaign contributions. If Lincoln was the great Republican, then these men are not.

Of course, no one but the rankest left wing ideologist would say that labor is free of fault; of course, in specific instances, the position of labor unions has not been sound. I have always said this; but I cannot, and will not, in the present condition of our economy and when the errors which I have discussed are so manifest, strain at the gnat of labor wrongs and swallow the camel of these greater maladjustments in our industrial set-up. I won't do this to gain one vote, because I can't do it and feel that I am serving my country or actually doing something to preserve the capitalistic system.

The real tragedy is that so many small business people and white-collar workers and small tradesmen and farmers, sensing this unrest in the masses of the people, but not understanding that it is due to the accumulation of wealth and power in the hands of the few which causes the unrest, turn upon the workers who evidence the unrest and ignore their real enemy and the real threat to the survival of the capitalistic system; namely, those people who will not let go their hold and grasp upon the control of the industrial life of the United States.

In Lincoln's time it was different—the slave-owning population of the South which, through the ownership of slaves, owned the real property of the South and dominated its life, were as small in proportion as the group which dominates the industrial and financial life of America today. They were Democrats and they were joined by a great percentage of the industrialists of the North who not only wanted to trade with these men, but who understood that as long as slave labor prevailed in the South, it, of itself, would depreciate the value of services of the men in the North, to the advantage of the northern industrialists. But, in Lincoln's time, the small business people and retailers of the North, the farmers of the North and the vast bulk of the workers of the North understood this problem and knew who their real enemies were and how to strike at them.

It was this understanding of our ancestors which caused the creation of the Republican Party. Lincoln clearly saw it; he was pursuing a policy which was the salvation of capitalism, even thought the slave-owning property owners of the South and the industrial property owners of the North did not see it and denounced him, just as today they denounce any man who sees this thing and wants to follow in the footsteps of Lincoln and help to create a Republican Party true to the traditions of Lincoln; not only to advance the welfare of the factory-working masses, but to preserve this system of private ownership of property to be used in the production of wealth. The tragic difference between Lincoln's time and the present is that today, for some unknown reason, too many of the farmers of the country, the little businessmen of the country, the retailers of the country, and the little bankers of the country fail to see the problem with the same degree of clarity with which their ancestors saw it when Lincoln offered one of the basic solutions of it—the elimination of the property right in human beings and thereby the elimination of the competition of slave labor with the free workers in the northern economy.

Today something must be done to preserve the basic ideas of hope-restoring fluid, capitalism in America, not the perverted, distorted condition of capitalism which presently exists. This is our real problem, but oddly enough some people, who profess to be capitalists, don't even understand that. They think that the capitalistic system comes first and the Government comes second. The philosophy of American life and the purposes for which this Government was created, Lincoln knew and all true Republicans today know, was set out in the Declaration of Independence. The method of carrying that philosophy out was created by

the Constitution of the United States; but the philosophy was to create life, liberty, safety, and the pursuit of happiness of the people. There was nothing said in the Declaration of Independence about saving the capitalistic system. The American people accepted and still accept today the theory that this system would best promote life, liberty, safety, and the pursuit of happiness. But there is not a line in the Declaration of Independence, nor a word in the Constitution of the United States, which requires the American people to retain the capitalistic system in order to obtain life, liberty, safety, and the pursuit of happiness.

In other words, the thing which was claimed as the right of the people in the Declaration of Independence and the thing for which the Government of the United States was set up was the right of the people to life, liberty, and the pursuit of happiness. That was guaranteed, not capitalism, as the way of obtaining it. So that if you understand this Government as Abraham Lincoln understood and as he expressed it and as he fought for it and as, indeed, he died for it, you will understand that it is not the Government of the United States which is on trial today; it is the capitalistic system which is on trial today. Therefore, the burden is upon those who cry out the loudest to do something to save it. With the exception of a few misguided people in the middle class—those who cry out the loudest are also those who benefit the most so they have not only the power but the duty to save it.

Lincoln stated the basic condition under which capitalism can be saved and flourish when he said:

"We do wish to allow the humblest man a chance to get rich with everybody else."

Now, of course, there is the obligation of Government to adopt those measures which are best calculated to preserve and make effective the economic system under which the people live. Consequently, this is an obligation of each person whom you send to the Congress of the United States, using the term in its constitutional sense of both Houses of the Congress. But this fact does not destroy the logic of the argument which I have made, namely, that those who benefit most from a system and therefore have the greatest stake in seeing it retained owe an obligation to come forward and to suggest to the Government from time to time a policy which will permit the broadest possible ownership of the greatest number of people of the means of production under our capitalistic system. Have they done that? They have not. It imposes an obligation upon them to learn at least one lesson from the twenties and not to forget it, and that is that when the people are not paid enough to buy the producer cannot manufacture, the automobile dealer cannot sell, the grocery keeper can only extend credit because his customers have no cash, the farmer can't haul his produce to market because the cost of transportation is almost greater than the price prevailing in the market place.

Those who would preserve the system should also understand that it is real wages which the worker must have, so that they are destroying their system if they demand that prices in large mass-production industries be immediately increased to an extent which absorbs all wage increase. Of course, this demand for price increase is a clever device of big business and big capital designed to influence the small businessman, the white-collar worker, the professional man, and the farmer into thinking that it was the workers' wage which increased the cost to him. The manufacturer then not only has his disproportionate share of profit, but he has created a new enemy for the man who works in his factory, and, oddly enough, some middle-class people who ought to know better fall for this.

You hear a lot of cries about the risk which the owner of the plant takes if he is asked to increase wages and hold his profit per unit down, while he is asked to take the sure-thing gamble that in the present market, with the present pent-up demand for goods, he will produce so many units and sell them that he will have the same gross profit in the end. Under present conditions there is little, if any, risk which any large manufacturer takes on his ability to sell an increased volume of his product. But, if he insists on too high a profit by unit, he creates the same snowballing effect of giving too much wealth back to the owner of the tools so that the people who work can't buy, which is destructive of the system of capitalism. When this condition exists, the worker takes the risk; he takes the risk to the health and education of his family because his restricted income cannot adequately feed, clothe, house, and educate them. Under this condition, the farmer and the retailer and the little tradesman take the risk because if the worker can't buy, eventually they will go out of business.

But the owners of the steel industry, the owners of General Motors, the owners of the electric-equipment industry won't take a risk under those conditions and I'll prove it. When the last depression was over, it was the farmer who was hurt, the little-business man who was wiped out, the professional man whose income was reduced, the small stockholder with a few shares in steel and General Motors and the electric industry and all the rest of big business who was hurt; but the real owners, the people who had secured and stuck away and saved the disproportionate profits that they had taken, still owned the plants and started them up again when the depression was over.

These things are so simple that it is incredible to me that I should get letters from little-business men, from tradesmen, and from farmers crying crocodile tears over the risk which the du Ponts and the Raskobs and the others like them are being asked to take if they keep the price of their products per unit down within reason so that people can buy them. Those people rode through the last depression and came out completely whole by adopting exactly the same policy of small production at high prices and low wages. But if we have another, then all of us who want to see a system of free labor, who want to see freedom, who want to preserve an intelligent, fair form of capitalism will be swept aside because capitalism in this country—which is about the last place on earth where it has a chance to exist as a dynamic, living, reformed thing in which people have a real chance to participate in it—will disappear. And it won't be the follower of the philosophy of Abraham Lincoln who brought this about; it will be the people who are standing within the Republican Party and blindly following present-day so-called Republican policies, which were southern Democratic in the time of Douglas, and which still are southern Democratic, who will not only destroy the Republican Party, but they will also bring down the wreck of capitalism on the heads of all of the rest of us who are advocating Lincoln's Republicanism in an attempt to save both.

I refuse to dishonor the memory of Lincoln here tonight by advocating any such policy, just as I have refused to dishonor the memory of Lincoln and the traditions of Lincoln republicanism since I have been privileged to represent the people of the Eighth District of Indiana as a member of Lincoln's party in the Congress of the United States.

The issue is clear; we must broaden the base of ownership by proper taxing methods, particularly revised corporation taxing methods, or any other device which will do it; we must give a real incentive to small people to start new businesses and the workers who will run the risk to work in those new businesses with tax-credit inducements proportionate to the risk that they take and the amount of new capital in the sense of new ownership involved; we must maintain the buying power in the hands of the masses of the people. These are just some of the things which must be done if we are going to create a capitalism which Lincoln would recognize, one in which the worker comes first, for Lincoln said, "the worker is superior to capital, and creates it"; one in which the humblest man shall have an equal opportunity to acquire property and to feel a sense of participation—real participation—in the decisions which affect his economic life and the job which he finds himself performing. Such a policy is Lincolnian; such a policy can well create a capitalism which will create the goals to which the people aspired in the Declaration of Independence; and, if it does, it may well attract the attention of the peoples of the world and serve as their salvation, as well as ours.

It is easy to desert Lincoln today; it is easy to fail to fight against a system in which economics enslave most of our people, black and white, as fully as the institution of slavery enslaved the black man when Lincoln voted against it. So the issue is plain—either we Republicans honor Lincoln by following him and thereby save our party, our country, and our world, or we follow Stephen A. Douglas and his poll-tax Democratic successors today and destroy them. I choose Lincoln.

Let us close as Lincoln did as he ended his Cooper Institute address:

"Neither let us be slandered from our duty by false accusations against us, nor frightened from it by menaces of destruction to the Government, nor of dungeons to ourselves. Let us have faith that right makes might and in that faith let us, to the end, dare to do our duty as we understand it."

UNRRA

EXTENSION OF REMARKS
OF
HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, February 22, 1946

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on UNRRA and the United Nations by Gould Lincoln which appeared in the Washington Evening Star of Thursday, February 14, 1946:

THE POLITICAL MILL

(By Gould Lincoln)

With a full realization that relief and rehabilitation of millions of people in Europe, Africa, and the Far East is essential if the world as a whole is to progress toward peace and a measure of prosperity, the United Nations, at its assembly meeting in London, voted unanimously to back wholeheartedly the work of UNRRA and appointed a committee to encourage contributions and to keep in constant touch with the work of the relief organization.

Under the present set-up—the Council of the UNRRA—the understanding is that the work of the relief organization is to be completed in Europe by December 31, 1946, and in the Far East of March 1947. It was clearly indicated that the members of the United Nations were hopeful that UNRRA will be

able to do its job within those limits, but it was equally understood that conditions might arise which would leave trouble spots still to be aided.

The thought back of the resolution adopted by the United Nations Assembly was that the UNO should stand ready to take over—possibly with part of the UNRRA organization at its disposal—and to proceed with the essential work.

The UNO Committee, which has been appointed to deal with UNRRA and its problems, consists of the following member nations: Canada, China, France, Russia, Britain, and the United States (all the members of the Central Committee of UNRRA), and the Dominican Republic, Greece, New Zealand, Norway, and Poland—11 all told. This committee is directed specifically to do two things. First, it is to urge all states signatory to the UNRRA agreement which have not made or arranged to make further contributions to UNRRA, as recommended last August, to make them with the least possible delay. Second, to urge those members of the United Nations which are not signatory to the UNRRA agreement to join that organization and make their contribution to this great humanitarian task. There are seven such nations. In addition, the secretary-general of UNO, Trygve Lie, is directed to make arrangements with the director-general of UNRRA, Herbert Lehman, to have the relief organization provide the UNO with full reports on the work of UNRRA in the countries that are being assisted.

The purpose of the resolution adopted by the Assembly was twofold—to place the authority and prestige of the United Nations back of the relief and rehabilitation work, and to bring the moral pressure of the UNO to bear on the nations to live up to all their obligations under the UNRRA agreement.

The stark fact that millions of people are in danger of starvation was brought strongly to the attention of the Assembly by Representative SOL BLOOM, chairman of the House Foreign Affairs Committee and an American delegate to the Assembly, and by P. J. Noel-Baker, British Minister of State, in their presentation of the case for the UNRRA. The original proposal that the United Nations do something about the UNRRA was advanced, indeed, by Britain, but it was a substitute resolution, prepared by Mr. BLOOM which was finally adopted.

Under the original proposal, any peace-loving nation, i. e., any nation that was not an aggressor in the last war, whether it remained neutral or not, could have been invited to join up with the UNRRA and contribute, like Switzerland, Sweden, Portugal, and Spain. Some of the nations, indeed, wished these nations to be invited. But the thought occurred to some that if the Franco government of Spain jumped into the middle of UNRRA, an embarrassing situation might easily be created—and to some extent it would appear that UNO was giving its blessing to that government.

Every nation taking part in the debate of the UNRRA resolution paid tribute to the generosity of the United States—which has and is providing the lion's share of the entire contribution to the relief organization—and at the same time took occasion to praise Mr. BLOOM, who sponsored UNRRA in the House of Representatives.

Noel-Baker's tribute was clear and to the point. "Without the United States there would have been no UNRRA," he said. "I say with no less assurance that without UNRRA there would have been an unimaginable catastrophe in Europe this winter."

Mr. BLOOM's appeal was to act promptly "because there is starvation facing those poor unfortunate people throughout the world. Time, he said, was of the essence. And nation after nation responded to his appeal by pledging their support.

Washington and the Constitution

EXTENSION OF REMARKS

OF

HON. WILLIAM W. BLACKNEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 22, 1946

Mr. BLACKNEY. Mr. Speaker, on this the birthday of our first President, George Washington, it is natural that we should devote some time to the consideration of the influence which America's greatest hero, soldier, and statesman has had upon our great Republic.

To me the most outstanding work that Washington accomplished was his invaluable aid in the formation of the American Constitution which, although only 159 years old, is still the oldest, active, political document existing in the world today. Since 1787, when our Constitution was adopted, civilization has been a world of tumbling thrones, prostrated dynasties, overturned constitutions—of new empires, new republics, new and constantly varying conceptions of states—yet in this epoch of upheaval, during the last 159 years, one political entity, and one alone, has remained intact: that is the Constitution of the United States of America.

Our Constitution is not self-perpetuated. If it is to survive, it will be because it has public support—active support; not passive.

The Constitution of the United States is the final refuge of every right that is enjoyed by any American citizen. So long as it is observed, these rights will be secure. Whenever it falls into disrespect or disrepute, orderly organized government, as we have known it for 159 years, will be at an end.

Calvin Coolidge said:

> The Constitution represents a government of law. There is only one other form of authority and that is a government of force. Americans must make their choice between these two. One signifies justice and liberty; the other, tyranny and oppression. To live under the American Constitution is the greatest political privilege that was ever accorded to the human race.

Washington was the President of the Constitutional Assembly which met in Philadelphia in 1787 and which produced the American Constitution. Therefore, Washington can rightly be called the Father of his Country and the founder of its Constitution. I know no better way of commemorating the memory of Washington on this, his birthday, than by calling your attention specifically to the spirit and terms of our Constitution.

To do this, may I turn back the pages of history 159 years to the Constitutional Convention? The time was May 25, 1787, the place the State House at Philadelphia, then a little town of not more than 30,000 people. The Convention met in a hall 50 feet square, whose walls were already eloquent with sacred memories. There the Second Continental Congress had met and there the Declaration of Independence had been signed.

Seventy-two leading men of the Colonies had been originally chosen from the several States as delegates to this Convention. All of the States were represented except Rhode Island, which would have nothing to do with the Constitutional Convention. The greatest actual attendance of delegates from the 12 Colonies was 55, and at the end of the Convention only 39 remained to finish a work which was to make them immortal.

This notable group of men contained merchants, financiers, farmers, doctors, educators, soldiers, and lawyers. Washington was unanimously chosen as president of the assembly and for 4 months, behind closed doors, the attending delegates devoted their thoughts to their country.

It was a young man's convention, the average age being only 40. Franklin was 81; Washington, 55; Madison, 36; Randolph, 34; Hamilton, 30; Charles C. Pinckney, 29; and Dayton, of New Jersey, 27, the youngest man in the Convention.

Out of those 55 men, 39 had been Members of either the First or Second Continental Congress; out of those 55 men, 8 had helped to build the constitutions of their own States; out of those 55 men, 24 of them were college graduates; out of those 55 men, 31 of them were lawyers.

Many great and momentous problems came before the Constitutional Convention and at times the leaders were in despair as to the results, but, after 4 months, on the 15th day of September 1787, the great American Constitution was perfected.

The Convention had been in session for 81 continuous days, probably consuming over 400 hours of actual debate. The original Constitution as completed consisted only of 4,000 words, 89 sentences, and 140 distinct provisions, and even including the 21 amendments the Constitution, after 159 years of development, does not exceed 7,000 words; 65 powers are given to the Federal Government by this great document and 79 are withheld, of which 13 are denied both to the Government and to the constituent States.

Many tributes have been made with reference to the American Constitution. James Bryce, the great English statesman and author of the American Commonwealth, says:

> The American Constitution is the greatest political document ever penned by man.

And Calvin Coolidge in his foreword to Beck's American Constitution says:

> The Constitution of the United States is the final refuge of every right that is enjoyed by any American citizen.

Every American citizen today should study his Constitution. That great body of laws can be read in only 30 minutes of time, and yet it contains every right that we have, direct and indirect.

There are several basic principles underlying our Constitution:

First. It establishes a representative form of government.

Second. It establishes a dual form of government, each citizen living under two forms of government, the national and the State.

Third. It guarantees to its citizens individual liberty, freedom of speech, liberty of the press, right to own property, and the right to worship God according to the dictates of our conscience.

Fourth. It establishes an independent judiciary and created the great Supreme Court, which has well been called the safety valve of the American Constitution, and is pronounced by critics as the greatest intellectual forum in the world.

Fifth. It prevents the concentration of power in the hands of one man or a group of men by checks and balances, creating the three departments of government—the legislative, the judicial, and the executive—each department independent and yet cooperating with each other to the working of a harmonious government. This provision of our Constitution has been the safeguard of the Nation in the days gone, and the perpetuity of our institutions in the future depends upon the independence of these three functions of government.

Sixth. And, finally, it places in the hands of the President and the Senate joint power in determining the foreign affairs of our Nation.

It is especially important in these days of unrest to become students of our great fundamental law. It has been our guiding genius for a century and a half, from the time when our country consisted of 3,000,000 people along the Atlantic seaboard to today with its 135,000,000 people. In a topsy-turvy world in which sins are being committed in the name of democracy, we must distinguish between real democracy and the sham and pretense which seeks to masquerade under democracy's cloak. We must remember that no government can be automatic; that it depends upon the intelligence, the integrity, and the loyalty of her citizens.

Washington made himself immortal as the founder of our Constitution. It is our duty to so administer that Constitution as to guarantee to our citizens those full rights and privileges which are inherently American and which have made America great.

Resolutions of Council of the Polish Societies and Clubs in the State of Delaware

EXTENSION OF REMARKS
OF
HON. PHILIP A. TRAYNOR
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES

Friday, February 22, 1946

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution, passed unanimously at a memorial meeting in honor of Thaddeus Kosciusko, on his two hundredth birthday anniversary, George Washington, and Abraham Lincoln, sponsored by the Council of the Polish Societies and Clubs in the State of Delaware, on Sunday afternoon, February 17, 1946, at Modjeska Hall, Wilmington, Del.:

We, Americans of Polish origin, assembled at the Modjeska Hall, at Wilmington, Del., on Sunday afternoon, February 17, 1946, to honor Thaddeus Kosciusko, on his two-hundredth birthday anniversary, and George Washington for their sacrifices made in winning the freedom and independence which we enjoy this day in these whole United States of America, and Abraham Lincoln for perpetuating this freedom and independence in upholding the union of the whole Nation.

Further, we, as Americans of Polish origin, standing by the American principles that were created at the birth of our Republic, the United States of America, and stoutly upheld to the time of the Tehran Conference, are greatly concerned of the present trend of our American foreign policy.

Whereas the United States has abetted the cause of tyranny in Poland and in many other areas throughout the world, forsaking the cardinal beliefs of Thaddeus Kosciusko, George Washington, and Abraham Lincoln, with breaking the promises of the Atlantic Charter, dismemberment of Poland, failure to carry out guaranties of free election in Poland and other countries in Europe; and

Whereas Poland was sacrificed in an attempt to appease Stalin. Under various pretexts, she was stripped of eastern Poland. Underground leaders who fought nazism were betrayed into coming out into the open and were arrested and imprisoned. Poland was given over to be ruled by men trained in Moscow, delegates of the Soviet Union; and

Whereas today Poland is occupied by Russian armies. The bloodthirsty NKVD, the Russian secret police, with its communistic government, with an alien President, are terrorizing the country behind the same iron curtain of blockade which separates the Soviet Union from the civilized world. Poland is being bludgeoned into a state of receptivity of Soviet statehood; and

Whereas since with the consent of the United States, under its diplomatic pressure and support, fateful decisions regarding Poland, an old, friendly nation and gallant ally have been made behind closed doors at mysterious conferences. The revelation of the political murders that have been committed in Poland in recent weeks should not only shock American public opinion but should arouse stern representations from our Government. Yet nothing is being done about it. A mere disapproval by our Secretary Byrnes is not enough; and

Whereas liberty is slowly bleeding to death in prostrate Poland. Countless thousands of patriotic Poles are being rounded up or are being executed or deported to a fate worse than death. This reign of terror explains why Poles and Jews, by the thousands, are fleeing from Communist-dominated Poland into American and British zones of Germany, deliberately avoiding entry into Russia or Russian-occupied Germany; and

Whereas the accusation, made by the Moscow-sponsored Polish Ambassador in Washington, that General Anders is responsible for the political murders in Poland, is not only ridiculous but malicious. General Anders is in Italy whereas the Russian-installed puppet regime and the Russian Army are in full control in Poland; and

Whereas since the Government of the United States helped to impose upon Poland a Communist government which ignores the will of the people, is it not a moral obligation to take resolute steps to correct this blunder? Even the courts reverse miscarriages of justice; and

Whereas our Government is morally obligated to see at least the promise of free and honest elections is kept now and not when all the democratic elements in Poland have been liquidated. It is our considered judgment that these elections should be held under joint control of the Allies. Polish armed forces in exile and all displaced Poles in Allied occupational zones, fearful of returning to Russian Poland, should be allowed to vote absentia. Guaranties should be given that there will be no reprisals against opposition candidates, otherwise, the Communist slate will be alone in the field; and

Whereas without freedom of speech, freedom of assembly, and freedom of the press and radio and without Allied supervision, an election in Poland would no more represent the will of the people than those simulated plebiscites in Baltic countries were true expressions of public opinion; and

Whereas not only is the plight of Poland partly of our making but the lot of this unhappy land is of vital importance to our American way of life. If Russia's will is to prevail there and elsewhere, who is in a position to state America's turn will not come eventually? We are a part of the family of nations and we must share its perils as well as its responsibilities. In the light of Europe's tragic experience, we must be prepared to assume that when the time is ripe, Soviet Russia will not hesitate to violate our neutrality; and

Whereas justice and morality are sacrificed on the altar of modern statecraft-expediency. Will it work? Will peace be obtained as a result of this cynical disregard of elementary justice? Behind the propaganda barrage of twisted definitions—will the sacrifice of Poland's independence satisfy the extending Red menace? One can find the answer by studying the failure of the appeasement of Hitler.

Therefore the United States must not become a partner in any wrongdoing. On the contrary, it should use all peaceful means at its disposal to help allied Poland and all the other nations bordering upon Russia to regain the freedom they enjoyed prior to 1939.

Therefore we, here assembled, demand from our Government that it stop further appeasement of Soviet Russia, which will only lead to another global war. We urge our Government to insist upon the quick withdrawal of Russian troops and secret police from Poland. We demand from our Government a strong international policy that refuses to make compromises with evil. We demand from our Government to keep its promise to Poland that a free election will be held; to demand from the provisional government in Warsaw that such election in Poland be held immediately, if not, its conditional recognition should be recalled.

The final victory in the second World War will not be attained until and unless the ideals for which our sons fought and died, prevail.

The United States has the economic, political, and moral power to change the course of events. There is still time to save the peace.

America, where is thy brother? What have you done to Poland? What are you going to do?

JOSEPH DABROWSKI,
Chairman.

Planning for Competition

EXTENSION OF REMARKS
OF
HON. FRANK FELLOWS
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Friday, February 22, 1946

Mr. FELLOWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by President Charles F. Phillips of Bates College, Maine, at the annual luncheon

meeting of Associated Industries of Maine at Augusta, Maine, December 14, 1945:

PLANNING FOR COMPETITION

I

The economic system of the English-speaking world is well on its way toward completing a cycle begun in the sixteenth century. This cycle has taken us from a regulated economy, to one based on little regulation but much competition, and is now taking us back to a regulated system.

I know that there are many people who do not wish to see us complete this cycle—people who do not want a further centralization of economic authority in this country. A few years ago they were vocal in stating their opposition to the trend. But more recently, the trend has been so strong towards a planned economy that they are becoming hesitant in stating their views. In part, their hesitation grows out of the obvious danger of running against the tide. They recognize that Benjamin Franklin was in a very wise mood when he said, "He who spits in the wind, spits in his own face." Yet, if ever there were a time for the danger signals to be raised, this is it.

II

It seems to me that there are four major dangers in the move back toward regulation which those who oppose it should be shouting to the house tops.

First, they should help all of us to realize that it is impossible to have Government guaranties of loans and prices, Government subsidies, and other so-called aids to business, without Government participation in the enterprise to which the guaranties or the subsidies are granted. The Government cannot be expected to guarantee the loans of bankers without taking an intimate interest in the way banks are operated. Neither can the Government be expected to support agricultural prices without assuming some responsibility for the output of various crops and even for the management of individual farms. Put in blunt language, the gradual increase in many of the so-called aids to business leads inevitably to Government participation in business.

Second, those who oppose the trend toward regulation should be making all of us aware that a planned economy cannot be operated on a democratic basis. It is perfectly obvious that a planned economy cannot be run through a democratic assembly such as exists in the House or in the Senate. Consequently, much authority has to be delegated to a group of experts. Thomas Jefferson once wrote about, "timid men who prefer the calm of despotism to the boisterous sea of liberty."[1] I think that anyone who believes that a planned economy can be operated on a democratic basis is merely preferring "the calm of despotism.'

Third, they should help us realize that a planned economy and individual freedom are incompatible. Clearly, the institution of private property with the right of the individual to do with his property in large measure as he sees fit, is essential to individual freedom. In fact, private property is an important guaranty of freedom. While it is not essential that a planned economy should destroy private property, as soon as one can be told what to do with his property, we have in effect destroyed private property as we know it. Suppose you perfect some invention in a regime where private property has, in effect, disappeared. If the planning group is unwilling to develop it, you have no other place to which you may turn. In contrast, where property is divided among individuals, a worth-while invention can always find someone to develop it, even if the inventor himself does not have the means.

[1] Letters of Thomas Jefferson, p. 537.

Fourth and last, they should help us understand that the increasing complexities of modern life intensify the problems which would be faced by a planning group. Of course, I realize that there are those who believe that it is these increased complexities of modern life which call for centralized regulation of business activities. I doubt if this reasoning, however, makes any more sense than the argument that since large cities have more fires than small ones, and since they also have larger fire departments than small ones, the larger fire departments must be responsible for the greater number of fires. Certainly, the job of planning in a complex industrial nation such as we have today, with its complexities of products, its division of labor, its specialization, its complexity of monetary system and tax program make central planning much more difficult than if we were a smaller nation devoted to agricultural products.

As some indication of the difficulties of detailed regulation under our present complex economic society, let your mind roam a moment over the vast amount of paper work which was necessary on the part of industry during the period of wartime control. Some of you may remember the story of the boat builder who was called before the War Production Board to explain his amazing production record. "Would you mind explaining how you chart production progress at your shipyard?" asked a WPB official. "Oh, we have that worked out to an exact science," said the boat builder. "Every day we weigh the boat and then we weigh the paper work you require. When the boat weighs as much as the paper we know that it is completed."

So because government aid to business usually leads to government participation in business, because a planned economy cannot be operated on a democratic basis, because it minimizes individual freedom, and because of the increased complexities of modern life, a considerable number of people refuse to join the group who are willing to accept a planned economy. I find myself one of those not willing to go along with such a noble experiment.

Yet this leaves me facing a dilemma. I can see, and see clearly, these dangers and difficulties if we follow the road which leads to a planned economy. But I can likewise see many undesirable aspects of our prewar competitive economy. Certainly all of us shudder at the thought of another period of great unemployment such as we had in the early thirties. Likewise, we shudder at periods of widespread business and banking failures. Is there no way out of this dilemma?

III

While there is no perfect way out of this dilemma, I do think there is a partial way out. This is a way which combines much of Adam Smith's reliance on individual initiative and some of the planned economy. It is, in brief, that we plan; but that we plan for competition and not for a planned economy.

What is the distinction between planning for competition, and planning for a planned economy? Basically, it is this: That all our planning be based on the premise of retaining a competitive system to the fullest possible extent. We should face each problem by asking ourselves, how can we solve this problem and still make it possible for firms to operate with a minimum of outside regulation? How can we encourage individual initiative to handle this problem? How can we make it more possible for groups of individuals to aid themselves, rather than depending upon the Government? In brief, how can we make a competitive economy work better; and not, how can we plan to replace a competitive system by a Government system? Let me give a few specific examples to make myself clear.

Our corporation tax structure has gradually developed to the point at which it discourages both individuals and firms from undertaking plans for expansion. To illustrate, an investor having an annual income of $15,000 invests it in a new enterprise capitalized at $4,000,000. Even if the new corporation shows earnings of 6 percent before taxes, and even if all earnings are paid as dividends, after both corporation and individual income taxes are paid, the investor receives a net return of 1.8 percent. If his annual income were $51,000, his return would shrink to eight-tenths of 1 percent.[2] In the face of such returns, why take a gamble on a new business? Even Government bonds pay more—without the necessity of hard work. With such a tax program, how can we expect private business to produce a period of full employment? Yet if it does not give a job to everyone, or nearly everyone, people will begin to say, "The competitive system has failed and must be replaced." But it is not the competitive system which has failed; rather, we have failed the competitive economy in that we have developed a tax structure under which a competitive economy simply cannot function.

If I make myself clear, you will see that I do not favor the doing away with planning. We need planning. But we need planning which works toward a functioning competitive economy. In other words, we need to look at our ta program from the point of view of how it can be used to contribute to the success of a competitive economy. We need to plan for competition, not against it.

Or take another situation—the so-called small-business problem. Certainly many small-business men have experienced difficulty in meeting the competition of large firms. All kinds of solutions have been suggested as aids to small-business men. Practically all of them, however, usually involve placing a limitation upon the efficiency of the large company or outright Government aid to small business. For example, chain-store taxes and price floors have been suggested as the answer to the price competition which the chain store brings to the small retailer. Obviously the purpose of these suggestions is to reduce the ability of the chain to sell at the low prices made possible by its inherent efficiency. Moreover, most of the Government aids suggested for small business come down to outright subsidies.

From my point of view, we need neither these taxes on efficiency nor these Government subsidies to save small business. Rather, we need to plan ways in which small business may increase its efficiency to the level of the large company, instead of bringing the efficiency of the large company down to that of the small. Group buying activities and joint advertising which can be carried out by the small firms themselves afford examples of what I mean. These are steps to make competition work better rather than to limit it and they do not involve the use of direct Government aid or influence.

IV

I am sure that at this point a sidenote is necessary or my argument will be misinterpreted. Someone will say that my phrase "planning for competition" means the removal of all governmental controls in the economic field. This is simply not true. For example, competition preserver the freedom of the individual since it keeps economic decisions in the hands of the many. Contrariwise, individual freedom is lost when all decisions in a given area fall into the hands of the monopolists, regardless of whether it is a private or a Government monopoly. Consequently, it should be a responsibility of the Government to see that monopolies do not develop. To this end

[2] "Capital Not on Strike; It's Locked Out," Saturday Evening Post, September 1, 1945.

Government regulations such as antimonopoly laws are necessary. Such type of Government regulation, I think, is of a desirable type since it looks toward the preservation of competition. We should look upon such regulations in terms Daddy used in defining a girdle for Baby Snooks, that is, as "a device to keep an unfortunate situation from spreading."

Likewise, regulations establishing minimum safety requirements and maximum hour rules can still fit within an over-all program of planning for competition. Such regulations merely establish the plane of competition and as such may be desirable.

In other words, I am not suggesting that we adopt a do-nothing attitude. Quite the contrary, I am suggesting that we adopt a positive do-something approach, but that we do it within the framework of a competitive economy—which is the only kind of an economy under which freemen can exist.

V

If there is to be planning—planning for competition rather than against it—who will do the planning?

Henry A. Wallace, our Secretary of Commerce, in a magazine article of last spring makes it clear that he wants the Government to do most of the planning.[3] Without doubt, government must do the planning in some areas. This is particularly true in the areas of taxation policy, tariff policy, and monetary and fiscal policy. But to a much greater extent than is true currently, business should do more of its own broad planning. Through their associations, bankers should work out their own solution to the problem of loans to small business. If the Department of Commerce begins to plan for business as the Department of Agriculture has for the farmer—and this is what Secretary Wallace wants to do—we may expect the same results, that is, small business will begin to compete with the farmer as Washington's best lobbyist. To avoid this, small-business men should form their own research centers by cooperative action. If small business or if the farmer needs a better marketing organization to compete with big business, those in the field involved should get together and set it up. In other words, the basic initiative should come from businessmen themselves.

VI

We should not expect utopia from any program, regardless of whether it is one based on planning for competition or planning against competition. In other words, even with careful planning for competition, we must still expect some seasonal and cyclical unemployment. We must still expect some bank and business failures. As Voltaire wrote years ago, "History is full of the sound of wooden shoes going upstairs and the patter of silken slippers coming down."

But these so-called evils of competition are a small price to pay for individual freedom which no other economic system can provide. We should never lose sight of this fact. We should remind ourselves of it every time we hear someone talking about what is wrong with the world. Like the sailor who walked into the recruiting office and said: "Gimme that ol' sales talk again, I'm getting kinda discouraged," we too need to listen again to the sales talk of competition.

VII

I know that no matter what is said, many will continue to urge us toward a planned economy. To these people the lessons of history are of no value. They have to learn the hard way—like the sailor who enlisted in the Navy because he liked the nice clean ships. He had not been in the Navy long, however, before he wrote home, "Now I know who keeps them that way."

[3] Reader's Digest, May 1945.

These people forget that the competitive system has provided the mass of the people with an abundance and a variety of forms of consumption never before equaled in the history of mankind. * * * And it has accomplished all this while on the whole gradually reducing the hours of labor.[4]

Most important of all, these people also forget that the competitive system is the only way to preserve individual freedom. In the last few years thousands of our sons and daughters have died to give us another chance to make a competitive system work and thereby preserve our freedom. Although spoken in another connection, I think the words of Anthony Eden at the San Francisco Conference should serve as a rallying cry: "We * * * have * * * work to do if we are not to fail these men."

"Let us do it with courage, modesty, and dispatch."

"Let us do it now."[5]

This Is Washington's Birthday—What of England Now and United States?

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mr. WHITE. Mr. Speaker, believe it or not, the United Nations have won a world war that paves the way for the establishment of the economic government of the world. An insight to British Empire conditions and an analysis of the Bretton Woods international monetary program is clearly presented in a book which I commend to the attention of all the Members of the House—condensed from a book by William F. Hauhart, Ph. D.:

In the heyday of their prosperity the English had developed a conception of life which was attractive and which afforded many of them comfort and leisure. A type of English gentleman arose who did not deign to participate with possible competitors of other countries in the struggle for existence. He was inclined to look upon himself as favored by providence and to believe that his commercial empire was destined to go on forever. When difficulties arose, commissions of experts were appointed who almost uniformly rendered excellent reports. But not much was done about them, because of the general feeling: "Come what may, we will muddle through."

Agriculture had been allowed to lag during the years of commercial supremacy. These imports could be bought only with manufactured exports, or with income from investments, banking, and shipping service. Most of the food and raw materials had to be paid for by exports, or with income from investments, banking, and shipping service. Most of the food and raw materials had to be paid for by exports of goods. But a dangerous competition had arisen. This was not always due to lower wages, but it was in part at least caused by more modern techniques and a new spirit of emulation and progress. The methods of manufacturing textiles, steel, and the mining of coal had needed modernization in England for some time. In the United States and some of the continental countries, improvement of industry was under way, while the English in many instances still relied on their former superiority.

Her visible imports have always exceeded her visible exports. She is, therefore, said to have an unfavorable trade balance—so far as these two items are concerned. But that does not tell the whole story. She also received revenue from invisible items such as dividends and interest from foreign long-time investments. From her banking services for foreign peoples she received what is sometimes called short interest. This means that her banks made short-time loans in other countries or financed, through bills of exchange (usually bankers' acceptances) the foreign trade shipments of other nationals. She also owned a huge fleet of merchant ships which carried goods for other countries when not engaged in English commerce itself. This service netted her a goodly amount of invisible revenue. Then, too, she did a considerable amount of reexport business in the goods produced by other countries. This is commonly known as entrepot trade which brought her good commissions in prosperous times.

According to the present estimates available, England had before the First World War foreign investments totaling approximately $20,000,000,000. As pointed out before, the services of this capital was for her an invisible export. The dividends and the interest which she received could be used for the payment of imports of foods and raw materials and during the most prosperous years, a part of the dividends and interest could be reinvested in foreign countries to maintain or increase the capital investment.

It is generally assumed that England came out of the First World War with about $15,000,000,000 of foreign investments. Naturally, she had consumed part of her foreign loans and securities by exchanging them for the sinews of war which were purchased in foreign countries. To the extent that England would not pay her obligations to the United States after the First World War, she naturally conserved her foreign investments.

England fared somewhat better in recent years with her iron and steel industry. In the beginning, she had a practical monopoly in steel, one reason being that her iron ores were free of phosphorus. Up to 1880 there was no method known for converting effectively into steel the phosphoric ore deposits of Lorraine on the continent. On this account little had been done to modernize this industry in England until after the World War. The competition of foreign countries made it necessary to rationalize the steel industry to some extent. After the Import Duties Act was passed in 1932, the English Government could use pressure on the steel industry to force it to modernize its production processes. The import duties could be regulated accordingly. Adequate protection was given as long as modernization was proceeding apace. Nevertheless, strong competition from other countries caused England to lose much of her former advantage in the export of steel. When metallurgical science had advanced far enough so that the phosphoric iron ores of the continent could be used to advantage, Englind lost her position of primacy in the steel industry of Europe.

Shipbuilding has played a greater role in Great Britain than in any other country. In the nineties, four-fifths of all the ships built in the world were laid down in British shipyards, while in 1937 only one-third of the tonnage launched in the world was built in British shipyards. The industry hit its lowest point during the depression of the thirties. As foreign trade fell off in the world at large, the demand for the construction of new ships naturally receded, too. Continental competition had to be reckoned with also. English shipbuilders were beyond a doubt at one time the most skillful in the world. That gave them a monopoly in this field. Only time will tell whether even this

[5] Time, May 7, 1945, p. 26.

superiority of skill in shipbuilding can restore this industry to its former supremacy in view of the general falling off of international trade in the world.

The textile industry was once brilliantly successful in England. This was true chiefly of the cotton branch. Four-fifths of all Great Britain's textile workers were employed in the cotton industry a hundred year ago. The rise of this British industry was phenomenal and the enormous profits, which were gained from the export of cotton textiles, laid the basis in those early years for the tremendous capital investments in foreign countries which England so successfully developed. In 1913 three-fourths of this enormous production of cotton textiles was exported. In this industry England enjoyed the greatest start over other industrial countries and it became the historic predecessor of all modern mass-production industries. But today the export of cotton goods from Great Britain is only one-third of the volume of prewar exports.

The woolen-goods industry has been somewhat more stable. It developed steadily up to the outbreak of the World War. By that time British woolens had become famous the world over. Since the World War exports of woolens have declined, but after the depression they recovered somewhat and by 1937 foreign sales had reached about three-fourths of their prewar volume.

The mercantile marine of England has been a fruitful source of revenue in her foreign trade balance. These freighters carried not only the commerce of their own country, but did business all over the world for other nations. At one time practically all foreign shipments of American goods were carried in English bottoms. In the year 1913 this shipping service brought upward of £90,000,000 into English coffers. In more recent years, this income has fallen off severely. The tramp trade deteriorated so much during the world depression that the English Government had to come to its rescue with a subsidy in 1934. It is generally known that passenger liners have been subsidized by the English Government for years, and it is now assumed that the subsidizing of freighters will have to go beyond the tramp shipping service in the near future.

It has been previously shown that 1913 was the most favorable year for England's foreign trade balance. The war which followed disrupted the markets of the world and the peace settlement aggravated this situation. Nationalism, which was to be mitigated by the war, became much worse. Since freedom of trade was severely restricted, the division of labor or specialization could be of little assistance in economic production. Moreover, the war consumed capital on a gigantic scale and broke up the flow of international financing. The gold standard had previously been functioning successfully under the leadership of England. Capital and credit at that time could move from country to country with ease and safety. The war brought disorder to standards of value, to foreign exchanges, and domestic currencies. In the United States, severe monetary difficulties came later, but in Europe, the war left monetary chaos in its train. In England the war was followed by a period of relative economic stagnation, and on the Continent economic disorder reigned supreme.

In the spring of 1925 England and the British dominions, except Canada, returned to the gold standard. In the retrospect, it is generally agreed that in this shift the pound was valued too high. But England wished to reestablish the pound, of which she was naturally very proud, to its former value in relation to the dollar. In this process there was effected a relative overvaluation of sterling and a relative undervaluation of the monetary units of other important countries. The result was that a species of deflation was forced upon English producers at home and her exporters were at a disadvantage in foreign markets. In the former case, through overvaluation of the pound, nominal wages were lowered and this contributed to the dissatisfaction of labor. The concept of real wages or money in its relation to purchasing power is hard for the public to understand, and a nominal decrease in wages may cause labor difficulties, even though real wages are not reduced. With exports the overvaluation of the pound raised the cost to the buyers of English goods in foreign markets and in this way hampered exports.

In November 1929 Parliament appointed a committee known as the Macmillan committee "to inquire into banking and finance and credit. How these agencies can promote the development of trade, commerce, and the employment of labor." The committe presented its report in June 1931, "that the difficulties with which the English were faced were to a large extent peculiar to their country and were not common to the world at large. Up to 1929 we suffered from trade depression in many of our great industries accompanied by a more or less steady figure of 1,000,000 unemployed at a time when some other countries were enjoying a considerable degree of prosperity."

Several months after the Macmillan report was presented the right to draw gold from the Bank of England was suspended. This happened on September 29, 1931. The withdrawal of the bulk of the short-time funds that had been deposited in London brought on the crisis. Britain thereupon adopted a system of managed currency and in this way relieved the pressure from the overvaluation of the pound. This automatically favored exports by reducing their costs in foreign markets.

For the time being—the early thirties—England's foreign trade was better off than that of the United States which was still on the gold standard.

The new tariff system of England had by that time gone into effect. The two main parts of it were the Import Duties Act of 1931 and the empire preference agreements made at the Ottawa conference in 1932. The devaluation of the pound plus the new system of protection by customs duties had a stimulating influence on the economy of England. The London economist seems mostly to deplore the fact that this action of England in surrounding herself with customs duties does away with practically all hope of modifying the trade barrier systems of the entire world.

The extent to which England has shifted her position from free trade to protectionism is not appreciated in the United States. When later the United States entered into the Anglo-American trade agreement, we were not dealing with a free trade nation, but with a protected nation and that was not generally understood here. Mr. George N. Peek, comparing the English situation with our own, said that in the year 1932, all American imports paid an average duty of 17.9 percent; while during the same period of time, the duties collected by Great Britain, spread over all her imports, amounted to 17.4 percent. Peek remarks that British lecturers frequently denounce American tariff institutions and advocate a species of free trade for the United States, while ignoring their own protective duties. Internationalists, so-called, in the United States seem rarely to think of the British tariff, but point out that the American tariff is objectionable to world peace and order. If we consider the whole series of bilateralist agreements which were made by England during the 1930's, she was merely rendering lip service when she gave formal consent to the Angle-American trade agreement.

If we add to this the fact that England is considering a bilateralist program—supplemented by the cartel system—for the postwar period, we would do well to be on the alert.

LEND-LEASE FOREVER

It is reported that the agreement for continued lend-lease is to be sold to Congress on the basis that it is cheaper to set the English up in business again so that they can get back to earning their own way than it would be to have them end the war in an impoverished condition. In considering this point it should not be forgotten, however, that they did not earn their way between the two wars.

During the past few years various Empire units have sent materials to the mother country for which they have not received anything in return. Apparently, however, they expect to collect on these contributions at a later period. Canada sent England a billion dollar's worth of goods during 1942. This seems to have been credited in the form of an interest-free loan from Canada to England. During 1943 Canada again contributed $1,000,000,000 worth of goods, this time to the United Nations. It is not clear whether the latter was also a loan or a lend-lease gift.

For the larger part of their contributions, the various units of the Empire seem to have been credited in the form of London bank balances. But these balances may not be drawn on until they are released, probably at the end of the war. They are commonly rereferred to as blocked balances. The London Economist gives the following data on these balances in its issue of August 7, 1943:

	Thousands of pounds	Date
India	500,000	July 16, 1943.
Eire	121,458	March 1943.
Canada	157,300	August 1943.
Egypt	71,200	December 1942.
Malaya	58,000	July 1943.
Australia	64,000	May 31, 1943.
New Zealand	34,000	February 1943.
Argentina	17,500	December 1942.

These bank balances in London have been growing rapidly. As early as March 1944 the National City Bank Letter reported £700,000,000 as India's deposits in London. Sir John Anderson, Chancelor of the Exchequer, in his recent budget speech, said that England by the end of the last fiscal year had incurred undischarged short-time overseas liabilities amounting to $8,000,000,000, and the figure was rapidly increasing. He warned that England will emerge from this war for the first time in modern history as no longer a creditor country.

Moreover, India also provided the English Army with local currency to pay troops and furnish local help whenever needed. This first caused a repatriation of the Canadian and Indian securities which had been held in England. In other words, Canada and India brought back their securities from England by furnishing her goods and services.

When the values involved in the securities had been consumed, Canada and India received deposit credit in London banks for the additional goods and services which they had furnished, and what they will supply in the future will be credited in the same way. If all these goods and services could have been furnished to England in the form of lend-lease with no thought of repayment, these large London bank balances would not now be hanging like the sword of Damocles over the English economy.

The case of India is unique in this respect. During the latter part of June 1944 a dispatch came from New Delhi entitled "Swollen India Credit May End Up in a Boomerang." It was explained that this credit represents part of the expenses incurred by England in the Far East. "British forces using India as an operational base have needed vast amounts of food, clothing, and fighting material, which of which was supplied by India."

The debt which India previously owed England, mostly in the form of bonds for building railways and public works, has been

wiped out. The values involved have been consumed by England in India and the securities have, therefore, been repatriated by India. Now, the I O U's are accumulating in London as bank balances and by the end $4,000,000,000. How the English are going to settle this debt is the theme of discussion in India. Payment can be made only in goods. Some suggest that no payment will be made at all, and that the most India can expect will be good wishes.

So much for the news dispatch from India. At the end of the war the debt will be approximately the same in amount as the one which England owed to the United States after the First World War. In case that England does default on this India debt, as she did on her obligations to the United States, who will then have to impersonate Uncle Shylock in India?

This situation has naturally troubled financiers and economists in England greatly. In this country, too, much thought has been given to the financial and economic plight of our ally. But it remained for the English economist, Lord John Maynard Keynes, to come up with a plan which he believes would not only stabilize the postwar currencies of the world but would also enable nations—even the impecunious ones—to begin to import goods when the war is over on the same scale to which they had become accustomed in prewar times. This plan was calculated also to lift England by a sort of magic carpet out of the dilemma of these blocked London bank balances.

The one by Lord Keynes above referred to, known as an International Clearing Union, which was published on April 8, 1943. The other was by Dr. White, of the United States Treasury Department, called the International Stabilization Fund of the United and Associated Nations. The two plans were issued at about the same time. It is generally believed that both plans are British, and while one of them was made in the United States, it apparently received its inspiration also from Lord Keynes.

The mere fact that it was proposed in its present form, throws a flood of light on the present economic and financial position of England. In making his proposal, Lord Keynes had clearly in mind the relatively strong position of the United States at the end of this war as well as the financial dilemma of his own country.

Let us turn now to the British plan of Lord Keynes which is called an International Clearing Union. No capital will be required to start the ball rolling. Each member nation is to be given what might be called a line of credit in the form of an overdraft privilege. The amount of the credit or quota of each participating nation will be fixed by the amount of its foreign trade. Seventy-five percent of its total average of exports and imports during the 3 years preceding the war has been suggested. The size of the quota will also determine the share in the management of the fund that will be held by each member nation.

The fund will do business only with the central banks or treasuries of member states. These institutions are to keep accounts with the International Clearing Union with which they would be entitled to settle exchange balances for their citizens equality of debits and credits.

The fund proposed to enable the member nations to begin trading at once after the war by providing a pool which is based on the probable future exports and imports of these nations. Following the idea of debits and credits, the export surpluses of the member countries will be considered favorable (credit) balances and will be offset against the import surpluses or unfavorable (debit) balances of other nations. We may assume that the United States with its large exports would furnish the credit for the nations wtih an import surplus. This would include most of the other member states who will nearly all be hungry for imports. The United States will be the only large exporting country after the war, and we will be expected to offset with our credits the import surpluses of the other nations. There are probably only a few other nations such as Sweden, Switzerland, and perhaps one or two South American countries that would under present conditions have credit (export) balances in the pool of the clearing union. All of the other nations, including England, would have debit (import) balances. It will later be emphasized that the proposed plan is in reality a credit granting institution and only in a minor sense may it be referred to as a clearing union.

Lord Keynes says that his clearing union is nothing but the application of banking to the international scene. In evaluating this statement we should bear in mind that the export or credit surpluses with which he proposed to finance the import surpluses, can never under any conditions be withdrawn by the creditor nation. In ordinary banking the depositor (creditor) may withdraw from the banking pool. In this clearing union it is agreed merely to transfer the deposit from one account to another and never to pay it out in cash.

In the international clearing union the strong currencies of the world are to uphold the weaker currencies. The one currency which may still be called strong is the dollar. Can it carry this proposed load? The chances are that if this plan is put into effect, it will weaken the dollar and all the currencies involved in the union will fall to a lower level. In judging this, we should bear in mind that we have put a considerable strain upon the dollar at home during the past decade, by our devaluation in 1933 and by about 12 consecutive years of unbalanced budgets.

Returning to the purported similarity of the clearing union with a system of banks, the nations with an excess of imports which would continually grow larger might find themselves in difficulty by and by. The Keynes plan controls this largely in quantitative fashion. The member nation's quota rather than its qualitative credit standing seems to be the guide. A member nation may not increase its debit balance by more than one-fourth of its quota within a year without permission. If the debit balance has exceeded a quarter of its quota for 2 years, it may reduce the value of its currency by 5 percent. The object naturally is to give it a slight advantage in exports since increased exports would tend to decrease its debit balance. If there should be a further increase of the debit balance, the governing board is empowered to demand deposits of collateral consisting of gold, currency, or government bonds.

The nations with an excess of exports would naturally develop a credit balance. The proposal states that these credit balances would be looked upon with just as critical an eye as the debit balances. The United States would be the main culprit here and we are suspected to begin with on account of our system of tariffs which prevents imports and makes it difficult for other nations to pay us for our exports. A member state whose credit balance has exceeded half of its quota for at least a year will be asked by the Board for information on its status. Reduction of tariffs, international development loans, and finally appreciation of the Nation's currency will be suggested by the governing board. Lord Keynes even suggests the possibility of eventual cancellation, or investment by compulsion in foreign countries, of excess-credit balances. In case of cancellation, the creditor nation would naturally receive nothing for its export balance.

We should perhaps recall again that the fund proposed by Lord Keynes starts with nothing. It is assumed that no capital contribution will be needed if the various nations can be sold on the plan of a multilateral relationship to the clearing union. Some nations will have credit (export) balances and others will have debit (import) balances. It stands to reason that during the immediate postwar period most of the participants would be in one position or the other continuously for a considerable period of time. If we assume, for example, a biangular relationship between England and the United States for purpose of illustration, we would be furnishing the credit to finance her imports which will be bound to be very large for years to come. It is equally true that our export credits would be comparatively high. As a matter of fact, we would be in the same position we were in immediately after the First World War. At that time we had to take considerable losses, since our loans to European countries were frequently made without discretion and care. But we, at that time, could take our losses and quit, since we had not bound ourselves to participate permanently as we would now do in the proposed clearing union. According to the original Keynes' plan, it would not be possible for the United States or any other creditor nation to give up its membership in the union. A creditor nation that wished to retire could not take its investment out of the fund.

MAIN OBJECTIVE

One of the objects of the Keynes plan was to take care immediately of the blocked balances which are lodged in the London banks. These are demand deposits which are subject to call at the end of hostilities. These blocked balances are growing rapidly and it would have been a great relief to England to be able to sink them into the fund of the clearing union. This would have been a sleight-of-hand performance par excellence by Lord Keynes. I doubt whether he himself thought such a plan feasible. But his lordship was not satisfied until he had tested out the credulity of the American people. Others have given him the answer by this time.

Lord Keynes hoped that the clearing union might become the instrument and support of international policies in addition to those which it is the primary purpose to promote. The union might become the pivot of the future economic government of the world. He also added significantly: "The union would provide an excellent machinery for enforcing a financial blockage."

The Right to Strike—Debate Between Hon. Alexander Wiley, of Wisconsin, and Herbert S. Thatcher

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, February 26 (legislative day of Friday, January 18), 1946

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a debate participated in by Herbert S. Thatcher, associate counsel, American Federation of Labor, and myself on the subject Should Congress Restrict the Right to Strike?

There being no objection, the debate was ordered to be printed in the RECORD, as follows:

WAKE UP, AMERICA!

SHOULD CONGRESS RESTRICT THE RIGHT TO STRIKE?

(As debated by Hon. ALEXANDER WILEY, United States Senator from Wisconsin; member, Senate Committee on the Judiciary, and Herbert S. Thatcher, associate counsel, American Federation of Labor)

Senator WILEY opens: "Certainly; yes, Congress must protect the public welfare. The public always gets it in the neck when ruinous strikes occur. The public—labor, management, farmer, all of us—are hungry for goods, for production. Shall we instead allow strikes to grow to the point where a general strike occurs and the Nation is economically paralyzed? That must not happen. In this complex, atomic age, full and uninterrupted production all along the line must be maintained. Therefore, in order to protect the public interest, Congress should: (1) ban strikes in Nation-wide industries and public utilities such as transportation, communications, and so forth; in these instances provide for compulsory arbitration as a last resort and as a substitute for strikes; (2) prohibit jurisdictional strikes between unions; (3) make unions striking in violation of contracts liable for damages just as corporations are liable; (4) change the law so the right to strike does not mean the right to intimidate and coerce others to stop work; (5) provide for cooling-off periods so as to calm tempers and enable reason and judgment to enter into the picture. I submit these five suggestions in order to help save our blessed land from more ruinous strikes. These five suggestions are for the benefit of all of us and are not designed to be either for or against any one segment of our population, but rather to be simply pro-American."

Mr. Thatcher challenges: "The present wave of strikes would be largely avoidable if industry had agreed even to voluntary arbitration. Until all possibilities of voluntary arbitration or fact-finding by public boards are exhausted, there is certainly no call for compulsory arbitration which, as before explained, means Government control of profits and prices, wages and working conditions. Since their representative for bargaining purposes is as vitally important to workers as their representative in Congress, how can we outlaw jurisdictional strikes any more than other strikes? As to a cooling-off period, honestly conducted collective bargaining is a sufficient substitute, particularly since compulsory delay usually works for management and against labor."

Senator WILEY replies: "Ours is a Government of laws, not of men. When labor and management cannot get together and the public interest is violated, Government must legally step in in order to prevent strikes and insure justice for the public. In Sweden (which has a very high standard of living) there are special tribunals attached to the courts. These tribunals get the facts in labor disputes, hand down decisions which are respected by labor and management and thus prevent strikes. Why cannot we here replace destructive wildcat strikes, jurisdictional strikes, etc., with peaceful machinery that is fair and equitable for all?"

Mr. Thatcher opens: "First, it must be recognized the right to strike is the workingman's only means of protection against employer abuse or exploitation—his most effective means of achieving economic betterment and security. Deprivation of that right requires workers to rely upon their employer's beneficence or altruism for a living wage. Do the economic facts justify such reliance? I think not. The history of labor's struggles in this country and throughout the world indicates conclusively working conditions have been improved only where labor has been free to strike. Diminution of that right results only in lower living standards. Further, if labor is deprived of only practical means of enforcing its demands, how is a controversy to be settled? Obviously and necessarily, by some governmental action. Then Government and not the parties directly concerned will determine wages and working conditions; Government will necessarily assume most management and labor prerogatives. If this country is prepared to accept some form of industrial socialization, strike restrictions may be in order. But if individual freedoms are to be maintained, the right to strike can no more be restricted than the rights of free speech and assembly. These rights are basic to our society and any inconvenience resulting from their exercise is the price paid for freedom. The answer is not governmental restriction; the answer is true collective bargaining conducted in utmost good faith—something which employers often lack."

Senator WILEY challenges: "As one who believes in true collective bargaining and the rights of labor, I ask these questions: (a) Does it 'economically better' the worker if a racketeering labor boss orders a needless strike and thus deprives the workman of his daily bread? (b) Does the right to strike mean the right to cripple our production and prosperity? (c) Two thousand years after the birth of the Prince of Peace must we still settle labor-management differences by this destructive method of strikes which help nobody and injure everybody? The answer obviously is: The courts must be used constructively to prevent strikes and curb racketeers be they in labor or management."

Mr. Thatcher replies: "A solution can hardly be found by invective or by a specious linking of strikes with racketeers. Production and prosperity are dependent upon free, not slave labor, upon government by consent, not government by injunction. Strikes are welcomed no more by labor than by management, but in the absence of true collective bargaining, there is no alternative consistent with the freedoms upon which this country was founded and prospered. Let management and labor sit down across the conference table as free agents and explore all the facets of each problem with a regard for the interest of each, and strikes will disappear."

Lumber Exports

REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. McCORMACK. Mr. Speaker, on February 14 a number of statements were made on the floor of the House about lumber exports. While I do not want to get into any controversy on the lumber situation, we want to get at the truth of the matter, and certain facts that have been submitted to me indicate that the situation is not as pictured in some of these statements.

In a letter to one of our colleagues, dated February 19, Arthur Paul, Assistant to the Secretary of Commerce and Director of the Office of International Trade Operations, which administers the export control law, stated:

In issuing export licenses, we are limited by the amount of lumber allocated for export by the Civilian Production Administration, and exports have no priority whatsoever, nor is there any set-aside for export; the allocation simply indicates the maximum amount that may be exported. On the other hand, the Civilian Production Administration, by priorities regulation 33, direction 1, dated January 15, 1946, has ordered an absolute set-aside at the mills of 40 percent of production, an amount determined by the Housing Administrator as fully adequate to meet the proposed national housing program. And, exports and all other purposes are taken care of only out of the balance of production after fulfillment of such objective. In other words, the housing program will not be affected by exports, and the fact that a price differential is allowed does not change the situation, since the total amount that can be exported is already limited, both by the CPA set-aside of production, and by our licensing control over exports. Moreover, it should be understood that the OPA does not allow a higher sales price to the mill for exports, but only applies a relatively small differential to sales by exporters to cover the additional costs involved in such trade.

Furthermore, the exports that are licensed are only those necessary (1) to attempt to meet minimum reconstruction requirements of friendly war-torn foreign countries, or (2) to facilitate and expand essential imports into the United States. For example, we exported, in 1945, to Mexico, about 15,000,000 board feet of hardwoods and millwork lumber which that country does not produce at all, and imported from Mexico more than 50,000,000 board feet, all in construction-type lumber; we exported to Canada about 53,000,000 board feet, and imported therefrom more than 1,000,000,000 board feet, all in construction-type lumber; to Curaçao and Venezuela, we exported lumber for use in oil refinery construction and repair work and for construction of residences for refinery workers, and we imported therefrom large quantities of oil and high octane gasoline; to Cuba, we exported lumber only for use in the sugar mills; and to Bolivia, only for the tin mines and the construction of workers' houses; to the Netherlands, we exported no housing lumber, but only that which was used for repairing the transportation system, the dikes, the wharves, and the docks; likewise, to the Union of South Africa, which is supplying to European countries large quantities of much-needed coal, we furnished no housing lumber, but only that needed in its transportation systems; to Australia and New Zealand, we sent relatively small quantities of lumber to make up for the large drain on their supplies during the war in building hospitals, barracks, as well as wharves and docks, used by our military forces, and also used, even now, to facilitate continued shipments of supplies therefrom to our occupation forces in the Pacific; exports of lumber are no longer going to India and Ceylon, and what was shipped in 1945 was only for military purposes, such as construction of barges and lighters; and what lumber went to the Transjordan area was mainly to facilitate essential oil production in Saudi Arabia.

In summary, therefore, exports have not been, and will not be, so long as we maintain control, a serious drain on our lumber supplies; our housing program is fully protected by the priorities orders of the Civilian Production Administration; as a matter of fact, we import very much more lumber, especially of home-construction types, than we export; and through export control, we are able to assist in overcoming shortages in other essential commodities by directing exports to their sources of supply abroad as aids and incentives to production.

In another letter of the same date to another colleague of ours, Mr. Paul said:

During the calendar year 1945, total exports of sawed timbers, boards, planks,

scantlings, hardwood flooring, and small-dimensioned hardwoods, were 394,331 thousand board feet. This amount represented 1.44 percent of United States production whereas for the 10-year period 1930 to 1939, inclusive, similar exports average 1,200,000 thousand board feet annually; or 6.8 percent of United States production. Moreover, during 1945, lumber imports totaled more than 1,000,000 thousand board feet, or more than than two and one-half times as much as was exported.

It is very apparent from the statements made in the past by various Members and the contents of Mr. Paul's letters that there is a wide difference of opinion. Mr. Paul's letters to our several colleagues convey definite and official information. It is apparent that the statements made by our colleagues were made without an investigation to determine the true facts. These incidents tend to indicate the importance of investigating to ascertain the facts before making statements which, even if believed, are contrary to the true situation.

The Fight on the Home Front

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mrs. DOUGLAS of California. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include a speech made by me in Detroit, Mich., on February 14, 1946, at the Michigan Citizens Committee rally to aid the General Motors strikers:

Mr. Chairman, I am proud that the Michigan Citizens Committee asked me to come here to night to take part in this great rally for the benefit of the General Motors strikers and their families.

Let's not beat around the bush with pretty words. There isn't time.

I tell you, men and women of Detroit—and well many of you know it out of your own experience—we are in a fight for our very lives as free men and a free people. This is the home-front war after the military war, just as there was a war before the military war. It is the same war, everywhere, at all times. It is part of the peoples long march toward the light.

I am proud to be here by your invitation because Detroit is a center in this home-front war—a war that is not of our making.

Detroit is tonight the center and the stronghold of the fight to defend economic democracy and win the peace—a real, worthwhile, world-wide lasting peace of full consumption, full production, and full employment. It is also the home of the Society of Sentinels, who would turn back the clock to the black days of 1932.

General Motors stands condemned by public opinion and the judgment of many Members of Congress for its defiance of the President's fact-finding board and the President's own recommendations.

For those of us who have studied the General Motors case, this much seems plain:

After failing to lure the General Motors workers into a conspiracy against returning veterans and themselves by lengthening of the normal work week and into a conspiracy against consumers and themselves by raising prices the management provoked and prolonged the strike by refusing to bargain collectively in good faith as the law requires, by refusing conciliation and arbitration.

This is a cold war, an economic test of strength, a war of grocery bills and doctor bills. It is no phoney war; it is real and, as Walter Reuther has said, it is being fought for keeps. Its outcome means security, opportunity, and peace—or insecurity, suppression, and war for my children and yours.

In this strike and in this Nation, we shall win—we the people—who see that in this world of modern technology, of atomic energy, and of ever-increasing abundance—we must have economic democracy if we are to keep political democracy.

Why will we win?

Because the General Motors workers are on the picket lines in 80 towns in 20 States, still determined, after 12 weeks, to win a down payment on the war aims for which the military war was fought and won—a chance to begin "to live 50 percent better than we have ever lived before."

TAKES COURAGE AND SACRIFICE

It was easy to write those words. It takes courage and sacrifice and organization, understanding and cooperation to make them come true. It has already taken more than a hundred million dollars in lost wages, in privation in 200,000 homes.

We will win because right is on our side and because the might of an informed and aroused public opinion is on our side—the side of the General Motors strikers.

We will not win the whole objective all at once. It will take more time, better understanding, and stronger organization to win the full 30-percent increase in wage rates, and go on to the higher and higher incomes which the workers of this Nation must have if they are to buy back, year in and year out, the full production that the farms, mines, mills, and factories are waiting to produce.

The struggle will be harder and take longer because so many men of little faith, mostly in management, a few in labor, and many in Congress are afraid of full production, afraid of plenty, afraid of the abundance that we can produce.

As a practical matter, organized labor and organizations of progressive farm people must take the lead.

High officials in Government, Members of the House of Representatives and the Senate, economists and far-sighted industrialists, and businessmen may take and put into analysis and bills, the aspirations, the convictions and the common-sense demands of farmers and wage earners that we as people should be able to buy back what we produce. They may document them with statistics proving that this way, and this way only, lie escape and salvation—escape from the ever more murderous boom-and-bust business cycle, salvation in well-distributed purchasing power through high and rising incomes paid to fully employed people.

JOB FALLS ON LABOR

But, finally, in our society, with its free collective bargaining (economic democracy), and its right to vote (political democracy), it falls upon labor to put the fine words into effect.

That is what happened in the General Motors case. The UAW-CIO took Judge Vinson and President Truman and Secretary of Commerce Wallace and Reconversion Director Snyder and OPA Administrator Bowles at their words—very fine words, too.

They took the words of distinguished Members of the House and Senate to the effect that if we are to avoid 19,000,000 unemployed after the war, we must produce and consume 50 percent more than prewar.

They took these words into the conference room and General Motors management laughed and read magazines.

TOOK THEM TO PICKET LINES

They took these words, and the facts, and their own need, to the picket lines.

They took these words and the supporting figures before the President's fact-finding board—and General Motors management walked out, refusing to discuss the words or the facts.

The fact-finding board, accepting GM management's second guess that 1946 production would not exceed 1941 production, took the words and the facts to the President and recommended that General Motors pay 17½ percent more now, without increasing prices. The President endorsed the recommendation. He said it was reasonable. General Motors said "No."

The workers took the words and the facts and the findings and the recommendations back to the picket lines.

But, by now, these fine words, these facts, the principle of increasing wages without increasing prices, had become engraved on the public mind.

I predict that they will never be erased. In the whole field of collective bargaining, in the whole scope of our economy, something has been added that will never be taken away.

For the first time millions of workers and the general public believe—and know why they believe—that it is both possible and vitally necessary that wages—real wages in terms of ability to buy more and more—shall rise from year to year to keep pace with a steadily increasing efficiency in production.

OPPORTUNITY MUST BE REAL

It is neither necessary nor desirable for the worker to remain stalled at the same step in the dreary treadmill, compelled to walk faster, work harder, in order to stay where he is. There is a chance to get ahead, to get ahead together. It is vital to our national welfare that that chance be made real, that it be enjoyed. Only as it is enjoyed can our prosperity continue and increase from year to year.

In the eyes of enemies of economic and real political democracy the crime of the General Motors workers is not so much that they have believed and acted on this principle of maintaining purchasing power to keep pace with production. It is more that by their clear-headedness, their courage and determination, and the brilliant and devoted leadership of their vice president, Walter Reuther, they have, in the short space of 3 months, given the American people a lesson in the arithmetic of abundance.

From now on the facts about wages, costs, prices, profits, and increasing volume of production are bound to be part of collective bargaining, with the public listening in, finally participating through the exercise of public opinion. By making their wage demands square with the interests of consumers and investors, and with the over-all public interest, the GM strikers have given new life and validity to free collective bargaining as a method of practicing genuine economic democracy.

NEED MORE POLITICAL STRENGTH

So far, so good. But, along with this fight on the economic front, on the picket lines, and in negotiations, we need more strength in Washington, both in Congress and in executive agencies.

We need more political strength in State capitals, in county governments, and in city halls and school boards.

To get this we need better understanding, better organization all up and down the line, right into the precincts and blocks where we live—running from the grass roots all the way to the Congress and the White House.

At the present time our strength in Congress is weak. Against a coalition of reaction, determined to turn back the clock, to repeat

all the mistakes made after World War I, we can muster only some 155 votes in the House and some 26 votes in the Senate. That is only enough to win moral victories—moral victories that are practical defeats.

Whose fault is that?

Don't say it is the fault of Congress, or of politicians, or of both major political parties. That answer isn't good enough.

And if you say politics or politicians, and act superior to all that, you are giving an alibi that is both lazy and dangerous.

It is lazy because, in a democracy, the credit or the blame for whatever is done or left undone finally rests on the people themselves—on you and me as citizens entitled to vote.

DANGEROUS BECAUSE UNDEMOCRATIC

It is dangerous because it is undemocratic. Politics are necessary in a democracy. Politicians are as good as—and no better than—the people who elect them, or fail to vote them out of office.

You have good progressive representatives in Congress, and you have reactionary representatives, too. Why? Because you haven't worked hard enough throughout the State to promote understanding of the progressive issues, and to organize support for them and for candidates who will do something about them.

That is why the Case bill passed the House; why the words "full employment" were taken out of the full-employment bill before it could be passed; why the Congress has failed to pass a health bill, a housing bill, an adequate unemployment-compensation bill, the anti-poll-tax bill, the bill for a permanent FEPC.

Quite simply, the people who want this country to go forward have got to care as much and work as hard as the powerful few, who want to stampede us all back to the bad prewar past.

HAVE TO WORK AT IT

Democracy, in both the economic and political fields, is something you have to work at, hard, and every day. If you don't, you lose the knack of it and, before you know it, you may lose even the right to practice it.

The General Motors strikers are practicing it bravely and effectively in the economic field.

Many of their friends in the political field are admiring and helping in the fight—hoping that, when this battle is won, the same energy and organization will be aimed at the practice and improvement of democracy in the political field. Both kinds are as closely connected as heads and tails on a dime. Each protects and promotes the other.

Let's face the fact squarely. If the fight of the General Motors strikers for a peace of full consumption, full production, and full employment is to be successful in the long run, success in the economic field must be matched by success in the political field.

That means a better city council, a better school board, a better legislature, a better Congress, elected and supported by better informed, better organized Americans who are not afraid of full employment, of atomic energy, of other peoples, and of the future.

I want to live in a free country and a world made free—free of want and fear and hate and war. I want my children to have that right.

WINNING GREAT BATTLE

The General Motors strikers are winning a great battle in that fight to keep this country free and make it freer—freer of economic injustice and chills and fever. They are fighting for me and mine, for all of us.

As brave, smart, well-organized and disciplined free men—I salute them. They have my thanks and my cooperation. All I ask in return is an improvement—not in pay or hours—but in working conditions in the Congress of the United States. They can start working on that as soon as this strike is won.

In the meantime, starting when this meeting ends, they and all of you, can do your bit to win the home-front war we have been talking about, by wiring or writing your Representatives, your Senators, your President, to support genuine price control and back up Chester Bowles with all the strength they have. And send copies to Mr. Bowles. He's getting plenty of pressure from the nearsighted who think a little inflation can't hurt us.

The fight for real price control is part of the General Motors workers' battle to fight off the deadly wooden nickels of inflation.

It's not easy to stand on a picket line. Strikes are no picnic. They are the last desperate expression of men and women voicing their need.

I know that.

I salute you.

The DAR and Racial Discrimination

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Station WMCA in New York and Station WWDC in Washington, D. C., on February 21, 1946:

Tonight I want to talk to you about an organization of women known as the Daughters of the American Revolution. There are more than 150,000 of these women, come together to serve their community and their country in groups called chapters. Three thousand DAR chapters are scattered across our land.

Now every Daughter of the American Revolution is distinguished by the fact that she claims one or more ancestors who fought in the Continental Army. This fact is her admittance card, so to speak, into the organization. In the veins of every Daughter of the American Revolution there must flow the blood of some hero of 1776.

Now there are not, I believe, more than a handful of Daughters of the American Revolution who believe that this blood bestows any excellence upon them, in and of itself. Like every other intelligent citizen of our country, a Daughter of the American Revolution knows that all theories of blood or race, which hold that these make one group of people naturally superior to another, are wrong, both on material or spiritual grounds. Such theories deny the equality of all God's children, and such theories cannot be scientifically proved. Hitler's persecution of the Jews was founded on a blood theory. His vaunting of the German as a superman was a race theory. We all know that imperialism thrives on theories of white supremacy. And we know, unhappily, how hard theories of supremacy based on skin color die in our own land.

Long ago Stephen O. Douglas said in a debate with Abe Lincoln, "I do not believe that the Almighty ever intended the Negro to be the equal of the white man. If He did, He has been a long time demonstrating the fact." One might as logically say, "I do not believe that the Almighty ever intended the white man to live in peace, to be happy, or to be saved. If He did, He has been a long time demonstrating the fact." The answer to both of those statements is one and the same: God did intend for man to live in peace, and for men of every color to be the equals of one another. It is we humans who have been a long time trying to demonstrate, by insensate fratricidal persecution and wholesale bloodshed, that God is wrong.

So, although, as the expression goes, the DAR is proud of her Revolutionary ancestry and blood, as she should be, for who should not reverance forefathers more for their nobility? But Daughters of the American Revolution don't think the blood which they have inherited from their ancestors makes them one jot or tittle better citizens, or greater patriots, or more worthy of honor, than any other citizen of our country. I hope I am right in saying that this is how Daughters of the American Revolution feel, and I believe I am, for you see, I am a member of the DAR, too, of the Eunice Dennie Burr Chapter, in Connecticut.

I believe that what makes our organization strong and gives it the right to be proud are not the blood lines or ancestral trees of its members, but the noble spirit and traditions that they have inherited from their ancestors.

And I want to tell you tonight, although presently we shall seem to be scolding the DAR, that it really has richly inherited that spirit, and that Daughters of the American Revolution have always been in the very forefront of patriotic women's groups in this country. I do not particularly applaud them for this, for that is precisely where you would expect to find them, isn't it? If I had all night, instead of only 10 more minutes, I could not tell you the many most excellent things that the DAR has done since its formation 56 years ago.

In the war that has just ended DAR war efforts drew high praise from Government authorities. So the criticism of a few leaders in the DAR which must be made is based on deep pride and praise for many unpublicized but patriotic efforts of the DAR rank and file.

The inheritance of blood has grown thinner and thinner as our ancestors recede into the distance. But—and here is a happy paradox—the inheritance of their spirit has waxed and deepened and become enriched by that very time which impoverishes or destroys all else.

Now what is that spirit? It is the spirit of our revolutionary forefathers' fierce and proud love of liberty under God, for everyone of his children. Our forefathers, defending with their very lives, the proposition that it is just and reasonable for every citizen to be considered equal before the law, won that liberty for themselves in 1776, for themselves and their children, and in the end, for every person born within our borders, regardless of his color, or race, or creed.

And strangely enough it was this very spirit of citizen equality and equal representation which gave a birth to the DAR itself. I wonder how many Daughters of the American Revolution know that their organization was born as a gesture against—against what? Why, against discrimination. In the light of certain unhappy events that have taken place in the Daughters of the American Revolution Constitution Hall since, this may be hard for some to believe. But it is true.

Along about 1883 the Sons of the American Revolution was formed. In 1890 they held an early convention in the city of Louisville, Ky. And what do you imagine the Sons of the Revolution did? They voted, at that meeting, to exclude Revolutionary women from their organization and their meetings, and, therefore, their halls. In short, they discriminated against Daughters of the American Revolution, simply on the basis of their sex, and on nothing else, nothing else at all.

Now American women, in that time, were considered inferior, yes mentally, as well as

physically inferior to men, and so women in that time were considered unworthy or unfit to belong to the patriotic organization that the Sons of the American Revolution had formed.

But when the Sons discriminated against the Daughters they forgot that the spirit is the inherited thing which makes the heirs strong. You can guess what those ladies did. They went out, right here in Washington, too, and formed the Daughters of the American Revolution, as a protest against such discrimination. And in the fullness of time, they got a charter from the Congress of the United States, and because what you know now, one of the most useful and splendid organizations in the United States of America. This is what our charter in article II states to be our purpose, to which we are sworn and dedicated:

"(3) To cherish, maintain, and extend the institutions of American freedom, to foster true patriotism and love of country, and to aid in securing for mankind all the blessings of liberty."

Now that we all quite clearly know how and why the DAR was formed, and also that during their years of history, they have, on the whole, lived up to the spirit, as well as the law, of their own charter, I believe we can, without being accused of destructive criticism, note that the DAR leadership has failed.

I am speaking of the two instances of the closing of the Daughters of the American Revolution Constitution Concert Hall to Marian Anderson and Hazel Scott, simply—and for no other reason—because they were colored.

Now some may think this a small matter, but I assure you, the whole fate of the DAR could be at stake in this matter.

For small incidents, little episodes, often have mighty consequences for great good or great evil. How small a thing in revolutionary times must have seemed the imposition of a stamp tax to King George III—and how disproportionate the row that it kicked up among those stubborn colonists thousands of miles away. But from a series of such small injustices, laid on by a kingly hand, America was lost to that king, and the United States born to the world.

"The mighty oak from an acorn towers;
A tiny seed can fill a field with flowers—
Or one bell alone toll out the death of kings."

Organizations, which are dedicated to the preservation of liberty and its traditions, as the DAR is, which disregard the small causes, have already begun to betray little by little, the great ones. It is the lost nail that sometimes loses the battle, the little leaks which often sink the ship, the light strokes of the axe that bring down the heaviest tree.

So let us review this incident of Constitution Hall contracts in the light of the vast and overwhelming importance of the smallest injustice. The Constitution Hall contracts were drawn up in 1932 by a Washington board of Daughters of the American Revolution, with a clause in them which reads, "for white artists only." In the course of time that clause caused to be barred from the Hall the golden-voiced Marian Anderson. That was in 1939. In the winter of 1945 the same clause barred Hazel Scott. Now the justification for this clause sometimes given by the board is that it complies with the local customs in Washington, which, as everyone knows segregates blacks from whites in schools and most public places, and this is true. But it is custom in Washington, not law.

But I fear I must tell my DAR friends that some of the good ladies in charge of this matter recently have sought, by letter, pamphlet, and public statement, to spread abroad among our members the impression that whereas they individually would very much like to do away with racial discrimination in Constitution Hall there is some law which forbids them to do so. I tell you that no Washington law exists that forbids it. I challenge any of the honorable ladies on the Washington board to produce proof that any law exists today which requires them to put that clause in their next contract.

Let me read you a letter I have received in reply to my own question concerning this subject. It is from Mr. Vernon E. West, corporation counsel of Washington, D. C. I quote:

"DEAR MRS. LUCE: This is in reply to your inquiry today. There is no law of the District of Columbia compelling the segregation of the white and colored races in public places, except in the public schools. * * *

"With respect to public halls and auditoriums, such as Constitution Hall and the theaters, the owners thereof may, if they desire, permit them to be occupied by only one race or the other, but are not required to do so."

Now, what put in that Jim Crow clause in DAR contracts with artists? Partly inertia and a slavish obedience to precedence and mores. For many who would not bow down to men are often grovelling slaves to manners. But mostly prejudice put it there—un-American prejudice. There are ladies on the DAR board who are, as they should be, proud daughters of the South, as well as of the whole Union.

Naturally their racial prejudices die hard. One understands how they feel. But they must be told that when they allow their racial prejudices to operate in DAR matters, they add to the wrong of intolerance the wrong of disloyalty to the DAR. For they have compromised the old and unsullied reputation of Daughters of the American Revolution all over the country. They have made thousands upon thousands of us who do hold no racial prejudices, a symbol of intolerance and discrimination in a field where above all no such intolerance should exist—the field or art, music, and the spirit. This is not to be borne by us. And I want to tell you that so long as there is in us, both the blood and spirit of our revolutionary ancestors, we will not take it lying down.

Mrs. Julius Young Talmadge, of Georgia, is today president general of the DAR. Now, I don't know how many more revolutionary ancestors Mrs. Talmadge can boast than you and I, and I don't care, since it is our ancestors spiritual inheritance we are concerned with, and not quarts, pints, or even drops of blood. So we are going to step right up to her, with that courage we all have—or we wouldn't be Daughters of the American Revolution, and say, "See here, Mrs. Talmadge, of Athens, Ga., you are a fine woman, and a gracious lady, but whether you will admit it or not, in your deep concern for white faces, you are paradoxically enough giving our DAR a couple of terrible black eyes by insisting on this clause in our Constitution Hall contract. It is a small thing, you say, that you are holding ground on. But that small thing may prove a large one. For you are making our organization terribly vulnerable to liberal and enlightened democratic criticism through the land. You are, above all, making us seem to be an organization which follows unhappy, un-American local customs, instead of one which steps forth to lead the Nation in liberty's name." And then I would ask, "If you were to insist on admitting colored artists to Constitution Hall, dear Mrs. Talmadge, what do you think would happen, now honestly? Do you think the few prejudiced people in this Capital would riot against you, break the windows of your house, ride you out of town on a rail? And where, do you think we loyal Daughters of the American Revolution would be—hiding under the bed? No, we would be by your side. Come, courage, Mrs. Talmadge, remember your revolutionary ancestors.

But now, my radio listeners, I want you to help me to help Mrs. Talmadge, and her friends, who may be under the impression that thousands of other Daughters of American Revolution are also either afraid to do what they think is right, or indifferent to what is right. Hundreds of Daughters of the American Revolution have already written to me. I want hundreds more to write to Mrs. Talmadge, pleading with her to have the courage to do away with the "white artist only" clause in our contract. I also hope that every DAR chapter in the USA will do what my own Eunice Dennie Burr chapter, and dozens on the eastern seaboard have done—pass resolutions to submit to the annual DAR convention in May, in Atlantic City, asking that the clause be stricken. I am confident that within 6 months we Daughters of the American Revolution can do this, and show up all our critics who say, because of our unhappy history in this little matter, that in big matters we are a bunch of old foggy, reactionary, intolerant women, interested in nothing but monuments and antiques.

Now there are certain other concrete things that Daughters of the American Revolution can do to effect this reform more readily. Any DAR who is listening to me and would like to, can write me in Washington, and I'll tell her how we can work to accomplish this little change we all so much desire.

Tomorrow is George Washington's birthday. Tonight and tomorrow are good times to remind ourselves of the character of the man who lead our War of Independence. Said Abraham Lincoln in 1842, speaking of Washington: "Washington is the mightiest name on earth—long since mightiest in the cause of civil liberty, still mightiest in moral reformation." Now there we have it from Honest Abe himself: Washington is the mightiest name on earth because he believed in civil liberties for all our citizens—and that means, today, for Marian Anderson and Hazel Scott, too. And because he believed in the moral reformation of the individual, that means he would not think highly of any DAR who in the year 1946 will continue to countenance the exclusion from Constitution Hall in our Nation's Capital, great and gifted artists for no other reason, none, none, none—than that their faces are of a darker hue. The spirit of our founder, and the Father of our Country has spoken. Let's listen to what he says, and then go and do what we have pledged ourselves to do—aid in securing for all mankind the blessings of liberty.

Let's Place Zone Office for Veterans Geographically Where Veterans Will Get the Maximum of Service and the Minimum Waste of Time by Travel and Mail, and the Minimum of Expense—Los Angeles Area Geographically, and According to Population, Center of Zone 12

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. DOYLE. Mr. Speaker, unanimous consent having been granted to me so to do, I introduce into the CONGRESSIONAL RECORD a letter, dated February 19, 1946, with the enclosed resolution to me from the honorable chairman, W. A. Smith,

of the Board of Supervisors of the County of Los Angeles, of my State of California. The text of the resolution is self-explanatory. I also include a letter by me to Gen. Omar Bradley, of the Veterans' Administration:

COUNTY OF LOS ANGELES,
BOARD OF SUPERVISORS,
Los Angeles, February 19, 1946.

Congressman CLYDE G. DOYLE,
Eighteenth District, California,
House of Representatives,
Washington, D. C.

DEAR CLYDE: Enclosed you will find a copy of a resolution adopted by the Board of Supervisors of Los Angeles County at its meeting of Wednesday, February 13, 1946.

We are informed that the figures showing applications at this time run about 2 to 1 in southern California against the number applying in the northern part of the State.

With the great expansion of facilities taking place at this time, and the expansion planned in the immediate future of the veteran facility, it seems to us that this is the logical place for the headquarters to be located.

Yours truly,
W. A. SMITH, *Chairman.*

Whereas the United States Veterans' Administration has established 13 zone offices throughout the country for the purpose of a closer personal contact with the veterans and to speed up adjudication of claims; and

Whereas zone 12 is comprised of the States of California, Arizona, and Nevada, with the designated headquarters to be established in San Francisco, Calif., with three regional offices adjacent to San Francisco, one in Reno, three adjacent to Los Angeles, and two in Arizona; and

Whereas more than 60 percent of the veteran population in this zone reside in or near Los Angeles at the present time, and based upon the comparative growth a much greater percentage will reside in the Los Angeles area in the near future, cases presently handled number more than twice as many from the southern area as from the northern area; and

Whereas Los Angeles is the geographical, transportation, and major veteran poulation center of this zone. It requires only an overnight trip from Los Angeles to reach the most remote of the regional offices while it requires a day and a night trip from San Francisco. It requires a loss of a day in the mail from San Francisco. All to the detriment of the veteran: Therefore be it

Resolved, That the Board of Supervisors of the County of Los Angeles at its meeting of February 13, 1946, does request Gen. Omar Bradley, Director of the Veterans' Administration, to establish the headquarters of zone 12 in or adjacent to Los Angeles, Calif.; and be it further

Resolved, That copies of this resolution be forwarded to the Director of the Veterans' Administration, Washington, D. C., to the Los Angeles City Council, and to the Los Angeles Chamber of Commerce.

FEBRUARY 25, 1946.

Gen. OMAR BRADLEY,
Administrator, Veterans' Administration,
Washington, D. C.

MY DEAR GENERAL BRADLEY: I have just received a copy of a resolution by the Board of Supervisors of Los Angeles County, dated February 19, 1946. It is addressed to your attention so that no doubt you have already received it as it applies to the subject matter of the purpose and efficiency of placing the veterans' office for zone 12 in or adjacent to Los Angeles, Calif.

I thought it appropriate to mail you, my honored sir, a copy of my remarks which this day appear in the CONGRESSIONAL RECORD.

Furthermore, I will thank you to fully advise me why the office is placed in San Francisco—instead of being placed at the center of the veteran population. You properly inform the Nation that you will place the veterans' hospitals where they can get expert and ample medical service. Why doesn't the same principle apply to the offices of the veteran? Why don't you place the office of zone 12 where they will have a maximum access to the office with the maximum saving of time and travel expense?

Very sincerely yours,
CLYDE DOYLE,
Member of Congress.

Mr. Speaker, it would seem, would it not, that in the interests of prompt, efficient service to the veterans, that the great metropolitan area, commonly known as the Los Angeles area be given the prompt and significant placement that its significant location deserves? It would seem, would it not, that if we are primarily interested in serving the human interests of these veterans at the earliest possible date—that we should make the office to which they have to travel the most available to them. This is not done by placing the office to which they have to travel, and which they have to communicate with, at least a day and a night consumed travel time further away from the majority of them than necessary.

Both by travel and by mail time, and because the center of the veteran population is in the Los Angeles area—and will continue to increasingly be there apparently—the headquarters of zone 12 should be in or adjacent to Los Angeles, Calif. If it should not, Mr. Speaker, why should it not be there. I have stated good and sufficient reasons why it should be there. What arguments can be presented why it should not. I know of none excepting that years ago the Federal Reserve System of the United States was set up in San Francisco as headquarters of the Federal Reserve in California. But that is no criterion on which to locate the veterans office.

A. F. L.'s Fine Labor Record

REMARKS
OF
HON. HAROLD KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. KNUTSON. Mr. Speaker, for more than a quarter of a century I have carried a card in the typographical union, which is affiliated with the American Federation of Labor. I have always taken a pardonable pride in this membership because of my feeling that I am a part of a great organization that is dedicated to promoting the welfare of the worker, and to the maintenance of law and order.

I was indeed gratified to read in the morning papers that the American Federation of Municipal Transit Workers, AFL, will not join in the strike threatened by the CIO Transit Workers Union against the city transit system which is owned by the city of New York. This recalled a recent radio broadcast by Fulton Lewis, wherein he compared the methods of the two great labor unions in attaining their ends. The broadcast follows:

It should be said in all fairness that if organized labor as a whole escapes enactment of the Case-Halleck bill, a very major share of the credit should go to the American Federation of Labor for its performance during the entire reconversion period. The thing that spawned the Case-Halleck bill was Nation-wide public resentment reflected in Congress over the national tie-ups by strikes in the automobile industry, the steel industry, and numerous other industries, practically all of which were CIO strikes. While all that was going on the American Federation of Labor on the other side of the policy fence had been quietly sawing wood in wage negotiations just like the negotiations that the CIO has been conducting, and there has been hardly a strike of any appreciable proportion, and there has been no strike of such proportions that continued any length of time. The American Federation of Labor unions have as a matter of record, negotiated and achieved wage increases for between two and a third and three million workers since VJ-day and the size of the wage increases has been, generally speaking, on a par with the increases the CIO has won the hard way, and in some cases not won at all, and production has gone along without a break in continuity—without a lot of name calling and bitterness—without men losing months of wages and families being forced into union bread and soup lines. It is something to think about and something that deserves real attention and note on the part of the average citizen because it has been a real and tremendous service to the Nation and by the very production that has resulted it has been a major contribution in the battle against inflation, while every hour of production that is lost by strikes or otherwise is a contribution to inflation itself.

OPA and Business Security

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 21, 1946

Mr. WHITE. Mr. Speaker, to judge by the criticism and complaints concerning the efforts of our Government to protect the security of business and the stability of our national economy by price controls it appears many people fail to realize the danger we face if all price controls are removed. In these critical times it is reassuring to find that this danger is recognized and that efforts of the Government to control inflation has the support of many thoughtful businessmen.

There is inserted herewith a letter from Mr. Robert E. Hosack, of Moscow, Idaho:

MOSCOW, IDAHO, *February 19, 1946.*

Hon. COMPTON I. WHITE,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR SIR: At lunch today we were discussing our current troubles and I remarked that

things had reached the stage where I was considering writing my Congressman to urge that Congress restore rationing. There was such unanimous and hearty approval that I decided I really should write you to that effect.

Every time there is a news release suggesting either a prospective price increase or a future shortage of some commodity, the commodity has promptly disappeared from the shelves of our local stores. This has happened successively in the case of shortening, butter and margarine, cheese, flour, and coffee. All but the first are practically unattainable at the present time. Nor, as you are doubtless aware, is that a complete list of the essential commodities which are so scarce as to be nearly nonexistent. Clothing is an obvious addition.

The result is that even those of us who do not want to add to the inflationary pressure by indulging in panic buying are forced to go and do likewise in self defense.

Congress is reported to be reluctant to extend the life of price control. Failure to do so would be disastrous and the reluctance shows, in my opinion, a serious error in judgment of the temper of the people. Certainly many of your constituents would prefer the stringent but relatively fair restrictions of the wartime-rationing program to the present inequitable and uncertain distribution of the necessities. I can speak with assurance when I say that I and most of my friends feel that the present situation is worse than during the tightest rationing period and is potentially far more dangerous to the welfare of the Nation.

Very sincerely yours,

ROBERT E. HOSACK.

Plan for Army Service

REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. FORAND. Mr. Speaker, I am today introducing a bill which I believe, if it is enacted into law, will be very helpful to the War Department in securing the number of volunteers it will need to maintain our Army at a strength sufficient to meet our security needs and at the same time permit expeditious release of our wartime soldiers who now seek discharge.

My bill provides for the retirement of certain commissioned officers, commissioned warrant officers, chief warrant officers, warrant officers, and enlisted men of the Army, Navy, Marine Corps, and Coast Guard, whose service, as enlisted men and as commissioned officers combined, exceeds 20 years in the Regular services.

Many of these men were in the ranks for many years and were promoted to temporary commissioned grades during the war. Most of them have already given the best years of their life to military or naval service. They are what have come to be known as the Regulars.

Most of them, if they were to return to their prewar ratings in the ranks, would find that due to the wholesale changes in the Army, Navy, Marine Corps, and Coast Guard, as the result of World War II, the positions they formerly held in those ratings no longer exist. New positions have been created and are held by younger men.

Many of the World War II men would remain in the service if they could retain their positions in the higher noncommissioned and warrant officer grades, but if the Regular servicemen are demoted from their temporary war rank, and thus create a surplus in those ratings, the younger men will leave the service rather than take demotions. In other words, there would be insufficient vacancies in the Regular Establishment to absorb all of them, and the consequences would be that the regulars, who should be retired, will hold on to the ratings, and the younger men, the most desirable group, would return to civilian life.

In fairness to the Regulars, therefore, my bill proposes that after 20 years of service—computed on the basis of service as enlisted men and as officers combined—they be permitted to leave the service on retirement pay of 2 percent of active-duty, annual pay at the time of retirement, multiplied by a number equal to the years of active service not in excess of 30 years.

So that all may know why I believe this bill should be enacted into law, I submit the following justification for it and also a table showing the amount of retirement pay provided for the various grades. To simplify the table I have used only the Army grades, but the same rate of retirement pay would apply to the equivalent grades in the other services:

JUSTIFICATION

1. Commissioned officers of the Army, Navy, Marine Corps, and Coast Guard of the United States with more than 20 years' active service who were formerly enlisted men or warrant officers should be permitted to retire because:

(a) Most of these officers have already given their best years to the War Department, including 3 or more years active commissioned service. They have earned the right to retirement.

(b) The majority of ex-enlisted men and ex-warrant officers, if demoted to their permanent grades, would find that due to wholesale changes in the Army, Navy, Marine Corps, and Coast Guard, as the result of World War II, the positions they formerly held in those grades no longer exist. The new positions created are held by qualified younger men.

(c) There are many exceptionally able young men (now with 4 or 5 years' experience in the new armed services) who would stay in voluntarily if there were sufficient vacancies in high noncommissioned and warrant officer grades to make it worth while. Reduction of officers to fill these grades would hurt the morale of not only the officers concerned but also the younger men they would displace.

(d) Reduction to their regular warrant and noncommissioned grades held prior to the war will create a large surplus in these grades which will have to be absorbed before any promotions can be made, thereby creating a morale situation which will be detrimental to the services. Furthermore, it is not unlikely that Congress, now becoming economy minded, may order reduction in surplus grades, thereby causing these former officers to lose their grades and penalizing them for excellent service performed during the war as valuable commissioned officers.

(e) While many will be offered, and will accept, Regular commissions, the majority will fail to meet the age and physical standards for a Regular commissioned officer. Most officers (former enlisted men and warrant officers) have been specialists, whereas Regular officers must have a general, over-all military or naval education. The majority of the officers offered Regular commissions will be 30 years of age or less, although a few older ex-enlisted men and ex-warrant officers (as well as some National Guard and Reserve officers) of outstanding ability may be offered Regular commissions in field grades.

(f) The majority of those who could, or would, retire under authority of this bill would be 45 to 55 years of age. In general, therefore, they would not be acceptable for Regular commissions.

(g) Many will be offered, and will accept, warrant-officer grades, but the maximum age at which original warrant officer appointment can legally be made is 45.

(h) Permitting them to retire answers the problem of what to do with the older group of ex-enlisted men and ex-warrant officers who have not enough service to retire under present provisions of law and who, because of their age, cannot compete with the thousands of available younger officers who are desirous of either obtaining commissions in the Regular armed services or staying in the services in warrant-officer grades.

(i) It would be an injustice to reduce them to noncommissioned and warrant-officer grades, thereby requiring them to serve under commissioned officers who were lieutenants and captains when they, themselves, were majors and colonels in the Army, and held similar ranks in the other services.

(j) No other provision exists for the retirement, as officers, of Reserve and National Guard officers who have served intermittently on active duty in enlisted and/or warrant and commissioned grades. In this group, 20 years' active service has usually been spread over 30 or 40 years, with the result that the average age of such officers is 50 to 60 years. There is little or no military future for most of them.

(k) Regular Army commissioned and warrant officers are now permitted to apply for retirement upon completion of 15 years active service. (Officers by authority of sec. V, act July 31, 1935, as amended by sec. III, act June 13, 1940, and warrant officers by authority of sec. V, act August 21, 1941).

(l) While recognition of the problems of the high cost of living is being given by Congress to industry, labor, and Government employees, nothing has been done to show the country's appreciation for the excellent service done by these wartime officers who are truly the backbone of any army or navy.

2. The retirement pay of "2 percent of active-duty annual pay at time of retirement, multiplied by a number equal to the years of his active service not in excess of 30 years," is advocated because:

(a) Officers entitled to retire under the provisions of this proposed bill have earned the right to sufficient retirement pay to allow them to live Even under this bill, at least 50 percent of those eligible to retire would receive only $86 to $165 per month, making it more profitable to stay in the Army and retire at the end of 30 years.

(b) Although it is not believed wartime officers should be authorized to 2½ percent retirement pay now authorized Regular commissioned officers who have had the maximum in military education, as well as having had all service and military experience in commissioned grades, the ratio of 4 to 5 (2 percent to 2½ percent) is considered just.

	20 years' service		21 years' service		22 years' service		23 years' service		24 years' service		25 years' service		26 years' service		27 years' service		28 years' service		29 years' service		30 years' service

Export of Critical Building Materials to South America

REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. SPRINGER. Mr. Speaker, recently I made some remarks upon the subject of our American-produced critical materials being disposed of to South American countries, and their huge building program developing by reason thereof. A group of people from Indiana have been touring several South American countries, and they have discovered that our lumber, plumbing materials and supplies, steel and iron, and many other scarce and critical materials have been exported to those countries and are now being used to assist in promoting the very extensive building program that is presently in progress in those countries. Of course, it is tragic, indeed, for us to know that we are unable to secure those same critical building materials in our own country, for urgent and necessary use in building, while our neighbors to the south are able to secure from our country practically all of these same materials for their building and construction in those countries.

On this same subject, Mr. Speaker, I have just received a letter from a building contractor, located in Balboa, C. Z., in which he states the following:

I read where you are protesting the furnishing of so much building material to Latin America at this time. You are right. This is a very horrible situation, and it has been going on for several years and at the time when every effort should have been concentrated on licking the enemy. The sins of commission and omission by United States Government agencies in these parts are worthy of further inspection. The writer, who has lived here for many years, assures you that there is material here of a scandalous nature, much of which is wasted, and much of which is not needed.

Mr. Speaker, the situation which now confronts the people in our own country is deplorable, because they cannot secure needed lumber or materials, either for building purposes or for repairs. Plumbing supplies are almost entirely unobtainable at the present. This very serious situation is obstructing the building of houses and homes. Many veterans want to build a home, but they are prevented from proceeding therewith because of the critical shortage of many of the essential building and plumbing materials and supplies. Many of our civilians desire to build, or remodel, or repair their homes, but they are prevented from so doing by reason of this great scarcity of the needed materials therefor. This situation appears to become more aggravated as time progresses, and the people are greatly distressed because of this situation.

Mr. Speaker, when information comes to us such as I have received, from the reports of the people from Indiana, who are touring in South American countries, and from the letter from the contractor at Balboa, C. Z., regarding the vast amount of our building materials and supplies which are now being sent to Latin-American countries by this country, while our own people in this country cannot secure the same for their own use here, it is a very confusing and ridiculous situation. Great buildings and fine homes are under construction down there, with ample materials of all kinds for their completion, while our people at home are compelled to wait until they can secure the same type and character of building materials for the construction, remodeling, or repair of their homes or business properties in this country.

Mr. Speaker, this very aggravating situation must be remedied. It is very unfair to our people, to our contractors, to our lumber companies, and to our people who handle plumbing and other building supplies to know of this situation. Our people engaged in the sale of building supplies and lumber have no stock on hands, and they cannot supply their customers with these necessities, all because our Government has permitted such supplies to be sent to Latin America in vast quantities so they may proceed with their program of building. And in many instances, as it is reported, these supplies are not needed, and they are wasted.

It is my fervent hope that this very ugly situation will be remedied at the very earliest moment.

Does Bowles Know What He Is Talking About?

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1946

Mr. HOFFMAN. Mr. Speaker, Chester Bowles is a great advertising man but if he was selling merchandise and his advertising did not come any nearer the truth than does his propaganda about how he is holding down prices, preventing inflation, he would be up for fraud.

The following is a copy of a letter and a statement received from a gentleman connected with the Olds hotels which shows that Chester Bowles has not held down prices on some necessities:

I am enclosing some comparative figures on foodstuffs which should be of interest to you.

Frankly, I don't know where we're going to land. How can hotel restaurants, or other food purveyors, make a go of it when raw food costs continue to increase but our retail prepared food prices must remain under ceiling as of April 4–10, 1943?

Item	1941	1946	Percent increase
	Cts. per lb.	*Cts. per lb.*	
Stewing chickens	22	39	77
Peanut butter	9½	28	194
Cabbage	4	6	50
Michigan potatoes	1.3	?.24	149
Apples	5	13½	170
Coffee	12½	19¾	59
Eggs, medium, grade B	[1]17	[1]35	106
Graham crackers	7½	17	126
Noodles	10	19	90
Rinso, large package	16½	25	51
Hams, string half	23	36	56
Lamb roast shoulder	16	25	56
Beef tongue	15	35	133
Sugar	4½	5½c	23
Pure lard	7½	17½	133
Prunes	8½	18½	117

[1] Cents per dozen.

The above comparative price figures are taken from actual newspaper advertising of the foodstuffs listed in the Bay City, Mich., area.

How can hotels continue to prepare and sell food under their ceiling if commodities costs are not also controlled?

It is the old, old story: Bowles wants an increase in wages; he knows materials

cost more; he intends to hold down prices. He is squeezing all the profits out of business.

Does he know of anyone who is going to do business unless there is a prospect of making a profit? Is it his purpose to socialize us, to squeeze everyone out of business?

At the beginning of the New Deal, Rex Tugwell said:

Planning will necessarily become a function of this Federal Government; either that or the planning agency will supersede the Government. * * * Business will logically be required to disappear. This is not an overstatement for the sake of emphasis—it is literally meant. * * * The future is becoming visible in Russia. Perhaps our statesmen will give way or be more or less gently removed from duty. * * * Perhaps our vested interests will submit to control without violent resistance.

Am wondering whether Bowles hopes that the transition will not be too painful—comparatively bloodless.

Just this morning we learned from the press that wages must go up, prices be held down by money obtained through taxation or the sale of bonds used to pay a subsidy. To put it another way, the price will go up, but the consumer will pay part of it across the counter and another part when he gets his tax bill.

Bowles says price control is an evil thing, but that a little of it is not too bad. He thinks the people have not the courage to take now the dose that they must take, or perhaps he thinks if he can postpone the taking of the bitter dose until after election he and his buddies can continue in power.

Palestine—Program for Action

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me before the Pittsburgh chapter of the Hadassah:

It seems to me that I have been speaking endlessly on the subject of Palestine and the problem of the suffering Jewish people now faced with exclusion from the comfort of the only remaining hope—Palestine.

I remember dimly many years ago an old song that was sung, a song that was called A Hundred Years From Now. Perhaps some of you may remember it, too. It was a delightful recital of all the good things that would happen to us—a hundred years from now. And that's what we are being fed—in the disturbing, distressing issue of Palestine today. Wait, they tell us. Be patient. We have to study the problem. It can't happen overnight. "Rome wasn't built in a day," etc., etc. In the meantime, there are wars and pogroms—there are millions dead—there are hundreds of thousands still in government camps—without hope and without dignity. And still we are waiting.

It reminds me of the bewildering incident in which Alice in Wonderland found herself while attending the Mad Hatter's tea party. She noticed that one of her favorite delicacies was missing and she inquired about the jam. The White Queen retorted, in haughty tones: "The rule is, jam tomorrow and jam yesterday, but never jam today."

Remember, Palestine is not a cause that has been relegated to inch notices in newspapers, nor confined to Tuesday noon club discussions. It has been the subject of solemn covenants and international treaties. Its pros and cons have echoed through the halls of the two most powerful democratic legislatures in the world—the Congress of the United States and the Parliament of Great Britain. Every political party in England and the United States, seeking favor with the public, has been pro-Zionist. The Labor Party in Great Britain, the Republican and Democratic Parties in the United States, made room for a Palestine plank in their election platforms. Even Churchill, when on the opposition bench, lashed out against Parliament when the white paper was being debated before passage. Leaders of historic stature—Thomas Masaryk, Lord Balfour, Lloyd George, Woodrow Wilson, Field Marshal Smuts, Lord Wedgwood, Franklin Delano Roosevelt, openly and verbally, at least, championed Zionism and a Jewish commonwealth.

On October 15, 1944, President Roosevelt gave his support to the Democratic Party plank on Palestine and said: "I know how long and ardently the Jewish people have worked and prayed for the establishment of Palestine as a free and democratic Jewish commonwealth. I am convinced that the American people will give their support to this aim and if reelected I shall help to bring about its realization."

On April 20, 1945, President Truman authorized the statement that he intends to carry out Roosevelt's policy in regard to Palestine.

There was the famous Balfour Declaration. There were 52 nations signing consent to Britain's mandate over Palestine, which called for the establishment of a Jewish national homeland in Palestine. There was the Anglo-American Treaty of 1924, reiterating the terms of the mandate. Strange, isn't it, that all these documents of state and all the party platforms and all the oratory culminated in the inexcusable, nay, despicable retreat exemplified in the Palestine white paper of 1939. Since the advent of Hitler and through 13 years of misery, persecution, homelessness, and murder, the dispossessed Jew of Europe found between himself and salvation a certificate of immigration. In the face of the Jew's overwhelming tragedy, with a smugness and callousness that was unbearable, his lord and master, the British Colonial Administration in Palestine, told him he could not make land purchases—that only 75,000 Jews would be admitted into Palestine at the end of the 5-year period which began in '39. Boatloads of escaping refugees sank off the coast of Palestine. There were no certificates, you see. Like Moses, they saw the Promised Land but could not enter. In 1946, the white paper is still in effect.

Recently it was announced that Britain, out of her boundless mercy, will allow a mere trickle of 1,500 refugees to enter Palestine each month. The guns are silent in most parts of the world, but the Jewish people still await the redemption of a pledge.

The following is a portion from the Conference Record issued by the American Jewish Conference. "It is now 10 months since VE-day. But there are still hundreds of thousands of Jews in concentration camps in Europe, behind barbed wire, wearing their prison clothing, unwilling and unable to go back to their past, knowing nothing of their future, and beginning not to care. And from outside the camps, from the villages and towns of Europe that are liberated but not yet free, there come sordid stories, reminiscent of the past—of pogroms in Cracow, of suicides in France, of discrimination within the very shadow of the Allied flags."

Now, as always, when faced with the need for a decision, the British use the dodge and the stall—another inquiry, another investigation, another appointment of another commission. And so now we have the Anglo-American Committee of Inquiry on Palestine.

There have been innumerable reports, inquiries, and commissions on the Jews and on Palestine. There was the Peel Commission. There was the commission which resulted in the abominable white paper of 1939. We have had the Harrison report, and we have had Judge Rifkind's report. There are the report and investigation of General Eisenhower, concerning the condition of the stateless Jews in Europe. There was the commission which resulted in the splitting up of Palestine, dividing it into two parts and severing Trans-Jordan from Palestine. There was a report and investigation by the Mandates Commission of the League of Nations.

I have followed the proceedings of the new Committee of Inquiry very, very carefully. There was not a single new fact disclosed not already known to both laymen and officials. All testimony was a reiteration of what has been said for the past 30 years, in one form or another. No new light has been shed on the subject. Indeed, it seemed to me that the atmosphere was hostile and guarded, on the part of the British members, who, of course, are all hand picked in accordance with British foreign policy, while the American members, while trying hard to be judicious, could hardly even be called benevolently neutral. Further than that, it appears that the Inquiry Committee has given opportunity to the villifiers of the Jews to give vent to virulent anti-Semitism. Witness, for example, the testimony given by Maj. Gen. Sir Edward Spears, former British Minister to Syria and Lebanon, before the committee now sitting in London. Quite recently he stated that the Zionist policy in Palestine "has a great many of the earmarks of nazism." That's the most pointed bit of irony I have ever encountered.

I think I know what the trouble is. I think I know what's wrong with us here in the United States—with you and with me. We're not angry enough—we never were angry enough. We need fire in our bellies.

We can't fully appreciate the significance of a degrading experience which we did not endure. We have not known the ravage and the desolation and the destruction, the waiting through one dark night only to meet another hopeless dawn. We try to visualize it—yet somehow we don't quite get the "feel" of it. We have cried out that is a shame and an outrage—and so we thought—but what could we do? We are and continue to be the victims of our own lethargy. Accept the challenge! Because the Jews are a minority group in the United States, they feared to speak up. It was easier to sit back and watch the victims of England's duplicity perish than to initiate a program of militant protest. Not that desire to protest was lacking, not that honor was lacking, but the persistent, insistent fear of a minority group that it must not be too obstreperous—was greater than the other forces combined. We must now flutter the dovecotes.

Having recognized this, we go a step further and realize that a people, who have been scattered over the face of the earth for 2,000 years, without a home and a land of their own, existing by sufferance, can never achieve the full dignity that should be its heritage, as men, and as citizens.

The Jew has been the scapegoat of the political pervert. He has had no place in international bargaining; he has had no national champion—if his own government has not recognized his rights as an individual and as a citizen—there is no one to contend for him, to fight for him. He has not enjoyed any international dignity or stature. That's what happened in Germany. That's what happened in Poland, for instance, following the First World War. A minorities guarantee clause had been written into the peace treaty at Versailles, concerned with minority populations in eastern Europe. But grievances could only be submitted through a national government. Now, if the Jew in Poland had a grievance against the Polish Government, would the Polish Government submit the complaint to the League of Nations? Would—or did—any government so do in behalf of the Jews? Certainly not. No one spoke for him. He was denied the right to speak for himself. The Jews had no national strength behind them. The minorities guarantee clause was as meaningless to the Jews, then, as the declaration of rights in the San Francisco Charter is today, as fruitless as dropping a bucket into an empty well.

I dwell on this point to show that the opening of Palestine is as personal a problem with you, though not so immediate nor so urgent, as it is with the displaced Jew of Europe. To say you are against sin does not abolish sin, and to say that each man must live on an equal plane, regardless of race, creed, or color, does not abolish persecution. For, as Tom Paine has said, "Prejudice, like a spider, makes everywhere its home and lives where there seems nothing to live on." And, further, to say that you are in favor of the establishment of a Jewish commonwealth in Palestine does not establish it. There must be a program for action now—not a hundred years from now. And that program must be yours, individually and collectively.

It is estimated that only 1,250,000 Jews are alive in Europe today, outside Russia. Translated into personal terms, it means that the Jews of the United States, almost 5,000,000, must bear the brunt of the responsibility for the redemption of these Jews in Europe. We know we are strong and able and we cannot, we dare not, evade that responsibility. It means that we must be the leaders, the moral force in shaping the destiny for all of us. It has been ably demonstrated that we can no longer rely on the political leaders of the world like Churchill and Attlee—they promise their support before elections and we are stunned thereafter by their nonperformance.

When the excuse of military expedience is removed, then the excuse of limited absorptive capacity is raised. Dr. Walter Clay Lowdermilk, the famous and expert soil conservationist, carefully surveys the terrain and assures us that Palestine can safely absorb 4,000,000 more with proper cultivation of the soil and the development of water power. The British rush into the diplomatic closet, haul out the frayed excuse of Arab rebellion, dust it off and parade it again. Right now, Britain takes the line of Arab peril. Actually, how deeply does Britain fear the Moslem-Arab peril? If she is so fearful, what is she doing to the Moslems in Java. Accredited correspondents report that she is effectively maiming them and killing them by the thousands.

England, it seems, never wearies of the game. For many, many years, she has successfully set the Hindus against the Moslems in India, she baits the Catholics against the Protestants in Ireland and she agitates the Arabs against the Jews in Palestine. John Bull, in that regard, is like a crafty lawyer who induces others to strip for a fight and then runs off with their clothes.

Even at the Intergovernmental Committee Conferences at Evian in 1938 and at Bermuda in 1942, Britain refused to permit discussion of Palestine as a Jewish haven.

We can only depend upon ourselves and upon all peoples, Jew or gentile, who hold human rights above political intrigue and honor above greed.

Certainly, a Jewish homeland does not mean that all Jews, no matter where resident, must emigrate to Palestine. That's nonsense. Did the establishment of a free Ireland, which the Americans of Irish descent supported, mean that these Irish Americans had to return to Ireland? Yet, it is just this kind of foolish talk we hear when Palestine is discussed. And I say this, without fear of contradiction, that every Jew residing in the country of his choice, whether it be the United States, Canada, England, or South Africa, will live in greater dignity and security when the Jewish state in Palestine is established.

Our studied purpose should be to continue in our fight for unlimited Jewish immigration into Palestine. The white paper does not exist for us—it is not a law. We should disregard it, as the American colonists thumbed their noses at the stamp and tea taxes in the American Revolution. Land should be purchased wherever and whenever possible for Jewish cultivation. Every effort should be made to bring the refugees across to Palestine, by every means at our command. No man shall be denied entrance to his home.

The Jews have lived through many black eras; they have survived with their culture and tradition intact. If we are fewer in numbers now, our will is that much stronger. We can show the British that we, too, will never, never give up.

The American Federation of Labor Sounds a Serious Note

REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. JENKINS. Mr. Speaker, for more than 50 years organized labor has made an intelligent and successful fight to establish the doctrine of collective bargaining. The American Federation of Labor and the United Mine Workers have been active participants in this intelligent and successful fight.

The American Federation of Labor sounds a serious note in its discussion of this matter in Labor's Monthly Survey just published. It selects for the subject of its discussion the very striking words "Collective bargaining or Government dictation?"

So that I may not lose any of the meaning or implications of this very timely statement I am inserting in the RECORD those portions of the article which deal directly with the subject.

COLLECTIVE BARGAINING OR GOVERNMENT DICTATION?

The President has retreated from his wage policy of August 18. Right after VJ-day, when he freed collective bargaining, his sole restriction was that wage increases should not break price ceilings. The federation heartily endorsed this policy and our unions won outstanding wage gains through collective bargaining. None of our gains caused any increase in prices. Even during the peak strike period—January 15 to February 15—we kept right on peacefully negotiating agreements for substantial wage increases. To date we have won wage increases averaging from 10 to 20 cents an hour and up for about 3,000,000 workers. Early in February, when a total of 1,400,000 workers were on strike, only 60,000 of these strikers were AFL members.

Unions outside the federation, however, had other methods. Simultaneous strikes in basic industries, with uncompromising demands, were designed to force Government intervention with fact-finding boards and wage formulas. To meet their demands, the President broke the steel price ceiling, then issued his drastic wage-price order of February 14 to deal with the consequences of this price break. So the Government again intervenes between workers and management, collective bargaining is again frozen, and all workers are put under rigid wage controls. All workers will be robbed of part of their wage gains, for the broken price line will bulge upward and living costs will rise. This is the end result of forcing Government to intervene.

The chart showed the two methods by which workers have raised wages. AFL wage increases were won at the conference table. The raises of 10 to 20 cents and up were all clear gain because employers and workers had considered the facts and agreed on increases which would not break price ceilings. Many of our increases were well above Government formulas set in other industries; in some cases, where employers could not pay more now, we accepted 5 cents now and 10 cents later, or left the wage clause open for further increase when production was restored. This method brought admirable results for workers, employers, and the public. Responsible experienced leaders guided our unions.

The other method shows the Government is brought between management and labor to dictate a wage formula. A substantial increase is awarded. The price ceiling is broken. Workers' living costs go up. It is estimated that the rise in living costs this year will be from 8 to 10 cents on the dollar. So workers pay back part of their wage increase. The rail gain by the Government wage formula thus far announced will be from 8 to 13 cents—or less than this if living costs rise more than 8 percent.

Most American workers are too intelligent to let themselves be fooled. They know that wage increases have to be paid for out of the earnings of the business, or else by a price increase. Tactics which force Government intervention and raise living costs bring a loss in the long run. Collective bargaining is the sure way forward. The President would have done American workers a greater service if he had stood by his August 18 wage policy. For the increase in living costs will rob every worker of part of his wage increase—and more widespread harm than this will be done. For all older workers and widows living on pensions will find the buying power of their dollars shrunk to 90 or 92 cents; everyone with war bonds or other savings will find the value of their savings cut by 8 to 10 cents on the dollar by the year end.

THE NEW GOVERNMENT WAGE CONTROLS

On February 18 Stabilization Director Bowles described the President's first wage-price policy of collective bargaining under price ceilings as "in line with our best labor-management traditions." But, he pointed out, "the wage-price policy broke down in a number of vitally important areas."

The workers of America know that the August 18 wage-price policy did not break down in AFL unions. It was an outstanding success, because AFL unions took responsibility, bargained in good faith under price ceilings, won big wage increases and held the price line. This is proof that the policy was sound and workable. However,

other unions did not want to take the responsibility that goes with freedom. They wanted Government intervention. The AFL has for years kept Communists out of policy making positions. The new wage-price policy is a backward step, a return to Government dictation of wage rates, a body blow at free collective bargaining.

DOES GOVERNMENT CONTROL BRING HIGH LIVING STANDARDS?

American workers have just had a severe lesson in the meaning of Government controls. The new wage-price order robs us of our freedom and freezes collective bargaining in much the same way as the wartime Little Steel formula. But because there are Communist agents among us who are maneuvering to bring about more and more Government control, it is important for union members to know what Government domination of industry would actually do to their living standards.

Under our American free-enterprise system workers have made amazing progress in raising their living standards in the last 30 years. The chart on page 2 tells the story for all workers in private industry, farming, and government. Even after hours of work in industry had been reduced from an average of 54½ per week in 1911 to 40 per week in 1939, the increase in workers' wages was so great that their pay for the shorter week in 1939 was 37 percent above what they received for the longer week in 1911, and their actual buying power was $450 more a year. With 14½ hours more leisure per week and $450 more to spend per year, workers had better homes, better health, more time for their families, and greater home comforts, including autos, radios, home appliances, furniture, etc. In wartime (1944) the 6 added work hours a week at overtime rates, together with wage increases, gave them almost $550 more per year to spend than in 1939, or a total gain of almost $1,000 a year, or 83 percent during the whole 33-year period since 1911.

This increase is especially striking because it represents the entire American working force, including workers in trade, farming, service, and other industries where gains have been less than in manufacturing.

Living standards do not rise by any magic formula. They can rise only when workers produce more per hour and per year of work. The upper line on the chart shows the secret of this progress. Production per worker per year in all private industry rose 43 percent from 1911 to 1939, and the war effort plus extra hours of work brought an even greater rate of increase so that by 1944 production per man-year had risen 108 percent above 1911—more than double. Since hours were shortened during these 33 years, production per man-hour rose a great deal more than this. (Figures from U. S. Commerce Department.) The workers, through their free-trade unions, saw to it that wages rose in proportion to industry's ability to pay.

The chart on page 3 contrasts the rise in living standards under a free-enterprise system in the United States with the experience under a government-controlled economy in Soviet Russia. The figures for Russia are from the authoritative and impartial study of Manya Gordon, which is based on information from official Russian sources. Figures for both countries are in real wages adjusted for living costs, to represent actual changes in living standards.

In Russia, money wages have increased since the Communists brought all industry under government control, as is so often reported. But living costs have risen so much more than wages, that the Russian's wage before the war in 1938 actually bought less than the wages of 1911. During the revolutionary changes and the famine which followed the beginning of the Communist regime in 1917 living standards were below those of 1911, but by 1927 real wages had again reached the pre-World War I level. During the period of Stalin's control, however, living standards declined drastically. From 1928 to 1937 "there was an actual decrease in real wages of something like 40 percent. Communist management * * * instead of registering 27 years of progress between 1911 and 1938 had actually deprived the Russian worker of the hard-won material gains which he had acquired" prior to World War I. In 1938 the average wage of the Russian worker was 259 rubles per month or $49, when the average monthly wage in U. S. A. was $101. David J. Dallin states that "even those few Soviet employees who earned as much as 2,000 rubles a month at the beginning of the war (World War II) lived no better than Americans earning $20 a week." This was due to the high prices fixed by the Russian Government. So it is clear that the average worker whose income was only one-eighth of this had a very low living standard indeed. During the period when American workers raised their living standards 37 percent under free enterprise and free collective bargaining, government control under communism reduced the Russian workers' living standards 40 percent.

Stalin's reduction of living standards was due in part to the drive for industrialization, to produce machinery and armaments, and in part to the fact that government control does not furnish the incentive for efficient production. At present, Russia's maintenance of a hugh army of 15,000,000 men, Stalin's emphasis on military strength in his speech of February 9, and his program to more than double prewar production of heavy industries suggests that a considerable part of Russia's capacity will be diverted to military purposes rather than to raising the living standards of the people. One may well ask: Why does USSR want to deprive her people in order to support so hugh a military force when all other nations are demobilizing and seeking to build a United Nations Organization for world peace and security?

Communism has deprived the Russian people of even such personal freedom as they had and lowered their living standards. This is the lesson of 29 years under a government-controlled economy.

WHY DOES FREE ENTERPRISE GIVE WORKERS THE HIGHEST LIVING STANDARDS?

Our American system of free enterprise means simply this: Any man can work at any job he chooses. If he has enough capital he is free to set up any business he wants. Or workers and others can get capital by joining together and set up a cooperative business. A worker is free to join a union and to bargain collectively for higher wages.

Competition between business firms in a free market tends to bring profits to efficient managers who can produce the best products at the lowest price. This chance to make a profit by doing a better job than someone else has proved to be the most powerful incentive to a good management ever discovered. Workers have a strong incentive to cooperate with management and improve production because their unions can win them a share in the increased earnings. That is why free enterprise brings the highest level of efficiency and therefore the highest living standard.

In a totalitarian state, the government dictates all policies. The government can tell an employer what to produce and a worker where he shall work. There is no chance to make a profit; the worker's union has no power to raise his wage. Security depends on keeping the favor of one's superior officer, and frequent purges are a sharp reminder that death or the concentration camp are the penalties of those who lose favor. This has been true both in Nazi Germany and Communist Russia. Utter ruthlessness on the part of the dictator government brings compliance, but it does not bring a high level of productivity. Production per man-hour in the United States of America before the war was three times that of Soviet Russia.

THE WORLD FOOD CRISIS

Ever since last summer Americans have known that a food crisis threatened Europe and Asia. As we have pointed out in previous issues, people in Europe can receive the 2,000 calories of food per day necessary to sustain life only if other countries with a food surplus send all the food they can spare and every effort is made to overcome transportation difficulties and get the food to the people who need it. Actually, sufficient effort has not been made, and today millions are starving or threatened with starvation in Europe and Asia. While Americans in the United States of America have an average diet of 3,300 calories per day, millions of people in Europe and Asia are living on daily rations of less than 1,500 or even less than 1,000 calories.

Unforeseen events have made the situation far worse even than anticipated. Europe is short 17,000,000 tons of cereal grains; this is the equivalent of grain crops normally produced in the regions of Poland, East Prussia, and Czechoslovakia, where the population has been driven out, and the grain has consequently not been harvested. According to all accounts, only 10 to 15 percent of the crops were harvested in these areas, and much of this was requisitioned by the Russian Army. Also, severe droughts in Latin America, Europe, and North Africa have cut crops in regions on which the world depends for food. Abrupt termination of lend-lease stopped the movement of foods at a time when it was vital to keep supply lines filled. Cyclones and lack of normal monsoon rains have brought widespread famine in India.

The United States has also been at fault in not planning adequately to meet the problems of feeding Europe. In 1943 to 1945 we followed a "bare shelf" policy in agricultural production, which planned no extra food reserve for postwar. This has left us with so little reserve today that we cannot meet the needs of starving people unless we cut our own use of foods and share with them. The administration is planning to eliminate the use of grain for alcohol, to give us black bread, and is urging reduction in grain fed to animals. Americans are today the best-fed people in the world. We can give more than any other nation to meet the world's need. England is cutting her meager food ration. If we ration ourselves we can have much more to send to those who are desperate.

Tribute to Dr. George Washington Carver by Hon. Joseph F. Guffey, of Pennsylvania

---

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 26 (legislative day of Friday, January 18), 1946

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a brief statement made by me at a banquet given in memory of the late Dr. George Washington Carver, in Harrisburg, Pa., on January 22, 1946.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

Mr. Chairman, Secretary Anderson, and friends, there is something particularly inspiring in the circumstance that leaders of Pennsylvania agriculture have gathered here to pay tribute to the memory of the late Dr. George Washington Carver.

I could not have asked for a happier occasion to present Secretary of Agriculture Anderson to Pennsylvania. It is his task to see American agriculture as a whole, and Pennsylvania's recognition of the part played by the great Negro research chemist emphasizes a great truth. I mean, of course, our interdependence, the long chain of cause and effect which causes the farmer of the North to be affected by the activities of the farmer in the South, while both of them are in turn affected by what the western farm does.

We know that Dr. Carver devoted his lifetime in developing an adequate and balanced nutrition level for the poor. Those of his own race were major beneficiaries, solely because so many of them were poor. But science scorns the narrow, petty limits of racial predjudice; the benefits of Dr. Carver's work extended to white as well as black, to rich as well as poor.

It is inspiring to think of the former slave, released from his own physical bondage, laboring a lifetime to release his fellow men from the bitter bondage of poverty and malnutrition. After his people were given their freedom from the master, he worked tirelessly to release them from what seemed a hopeless vassalage to the soil. We have all profited by those efforts, and will continue to profit as our agricultural-research stations continue to build upon the foundation which Dr. Carver and others like him have provided.

The five great regional research laboratories provided by the United States Government—including, I am happy to say, our own just outside of Philadelphia, which laboratory I personally advocated and helped obtain—were established by Congress at the instance of Henry Wallace, then Secretary of Agriculture, to develop and expand the work of such men as Dr. Carver. It goes forward, and with its development comes a new day for agriculture.

The old idea that the farmer was little better than a peasant, a man who earned his living by brawn but had no need of brain, which idea was only advocated by leading political figures of this State, has gone by the board in recent years. The farmer has found himself, in spite of the efforts of those who would keep him in darkness. And when I speak of darkness, I speak not only figuratively, but literally. Those who know the bitterness of the battles to extend rural electrification, and to provide other modern necessities for the farm, will know exactly what I mean.

The farmer, whether he is a Pennsylvania farmer or a Georgia farmer or a California farmer, is coming to realize more and more that he is not simply an individual tilling his own acres, but a member of a vast community of millions of farmers. He is truly a citizen of the world, for the food he grows speaks a universal language, and advances in agriculture which are made in any part of the world eventually find their way into operation on his own acres.

Because of the broad scope of the farmer's problem, we are particularly fortunate to have with us one who is obliged to face every day the larger phases of the problem, not only on the national but on the international front. Secretary Anderson has a man-sized job, particularly during this period of famine abroad and reconversion at home. He is a rare prize that we have been most fortunate to capture for this meeting, and on the broader problems which face the farmer I can assure you that he is one farmer who can not only see the trees, but the forest as well.

When we view our agricultural problems as a whole we quickly reach one definite conclusion—that there is something wrong when the American farmer has to work 16 hours a day to earn a living. A farmer should not have to work more than 8 hours a day if he is able to obtain the necessary machinery and electricity at a reasonable cost. This goes for the farmer's wife, too. As a businessman a farmer should be able to take time out during the heat of the day to study crop and market reports. I think that if we can continue to develop our agricultural science on the one hand, and on the other can end the exploitation which has restricted employment of electricity and modern machinery on the farms, we will begin to see a new era for the farmer in Pennsylvania and everywhere else. So far as I am concerned, it can't come any too soon.

The Ferguson-Freeport Case

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following resolution and statement:

Calvin F. Adams Memorial Post, 1137, of the American Legion, Department of New York, in its regular meeting assembled February 8, 1946, goes on record in strenuous protest at the brutal mistreatment, slaying, wounding, and jailing of the four Ferguson brothers (Pfc Charles and veteran Alfonzo, murdered; Seaman Joseph, U. S. Navy, wounded; civilian Richard, railroaded to jail) in Freeport, Long Island, Tuesday, February 5.

We request of the mayor and chief of police of Freeport, the district attorney for Nassau County, and of the honorable Governor Thomas E. Dewey that all necessary steps be taken by the aforementioned authorities to see to it that justice is done and retribution made.

We further pledge the fullest cooperation of the Calvin F. Adams Memorial Post, 1137, in any proper and effective action taken to punish the guilty person or persons and to secure right and justice in this case.

We further extend our sympathies to the bereaved family and hereby pledge them our every consideration and support.

We further go on record asking the county, State, and national bodies of the American Legion to concur with this resolution in spirit and in deed.

Copies of this resolution to be made available to the public officials involved, the Legion bodies concerned, and to the press.

Unanimously adopted by the Calvin F. Adams Memorial Post, 1137, American Legion, Department of New York, February 8, 1946.

THE FACTS IN THE FERGUSON BROTHERS-FREEPORT CASE AS STATED BY THE CALVIN F. ADAMS POST, THE AMERICAN LEGION

There are five Ferguson brothers. They range from 21 to 29 years of age. Edward, 29, the oldest, is a Washington truck driver and a member of the teamsters and chauffeurs, AFL. He was at work in Washington at the time of the tragedy.

Charles, a private first class in the United States Army, was living with his wife and three tiny children in the small town of Roosevelt, Long Island (near Freeport). Charles was the first brother slain. He had just reenlisted a few hours before the killings.

Alfonzo, 27, was a civilian at the time he was slain.

Richard, 25, a Third Army combat veteran of over 3 years' service, was injured in action in Europe. He was railroaded to jail.

Joseph, 21, a ship's cook, third-class, in the United States Navy, was wounded.

1. The Ferguson brothers boarded a bus for Freeport, Long Island, N. Y., at Hempstead, Long Island, shortly before 11:30 p. m. on February 4. The bus arrived in Freeport just before midnight. A white woman and her 15-year-old daughter were on this same bus and they testify that the Ferguson brothers were jovial, but were in no sense disorderly or drunk.

2. The four brothers left the bus at Freeport and immediately went into the bus terminal tearoom, where they were refused service by the management. The same mother and daughter were present also at this time and bear witness to the discrimination shown against the Fergusons.

3. Private First Class Charles vigorously protested the discrimination but all the four then left the tearoom in a peaceable manner. Then, the tearoom manager called the police.

4. The Fergusons then went to a Negro bar several blocks away in the Jim Crow district. Witnesses here will testify that the brothers did not drink anything but left this establishment promptly.

5. Returning to the bus terminal some time later, intending to catch the bus to their family home in the nearby town of Roosevelt, Long Island, they were accosted by Provisional Patrolman Romeika, of the Freeport city police.

Romeika arrested the four at the point of his gun, told them to remain there until a patrol wagon arrived and accused them of being disorderly. Pfc Charles protested. Romeika promptly kicked Charles in the groin, at the same time holding the drawn gun on the four.

6. Then Joseph, age 21, ship's cook third class, USNR, protested at this brutality. He, too, received a kick in the groin.

At this point, a fifth Negro came upon the scene and was immediately ordered by Romeika to line up with the four Fergusons. All held their hands high in the air as commanded by Romeika.

7. It must be borne in mind that the five persons were standing in a line and (facing the patrolman, reading from right to left) in the following order: Charles, the newcomer, Alfonzo, Richard, Joseph.

8. Charles continued to protest (Charles is alleged by the authorities to have been carrying a .45 pistol and is allegedly quoted as having told Romeika several times, "I've got a .45." The fact is established, however, that Charles was wearing a tight-fitting short jacket and therefore was obviously unable to have concealed a bulky weapon all this time. Furthermore, authorities found no weapons of any kind on any of the five persons.

9. Patrolman Romeika then shot Charles in the head, killing him instantly. Note again that Charles remained standing on the extreme right of this lineup up to the moment of his murder.

10. The policeman then immediately swung his gun to the extreme left of the group shooting Joseph through the shoulder, critically wounding him. Alfonzo (who had ducked behind his brother Joseph for cover) was hit in the temple, presumably by the same bullet, this critically wounding him. He (Alfonzo) died about 9 hours later.

11. The wounded Joseph, as well as Richard and the newcomer were taken to the police station, Joseph receiving no medical attention until the Navy ambulance picked him up the following morning, at which time he was taken to the Lido Beach, L. I., Navy Center and placed under arrest.

12. Richard, the combat veteran, was jailed, tried, and sentenced on the charge of disorderly conduct to the maximum of 100 days in jail—this without benefit of counsel; the judge acting as prosecutor, judge, and jury. This had all taken place by 10 a. m. of the same morning of the slayings.

13. Patrolman Romeika has not been suspended and is being upheld by the district attorney for Nassau County as well as by the city authorities of Freeport, a notorious center of Ku Klux Klan, pro-Nazi, and Jim-Crow sympathies and practices.

Jewish Relief

EXTENSION OF REMARKS
OF
HON. WALTER F. GEORGE
OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 26 (legislative day of Friday, January 18), 1946

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Bernard M. Baruch at a meeting in New York yesterday which opened the drive of the United Jewish appeal to raise $100,000,000.

I commend this address as the mature judgment of a useful citizen who has no interest in men who make failures of their own lives and who make shipwrecks of the political and economic policies of their country.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are gathered here today for a reason that stirs us to our very depths.

Of all the unhappy and unfortunate peoples in the world, the worst off is the pitiful remnant left of the Jews in Europe. They were chosen by the Nazis for extermination—not merely by death but by torments hitherto unthought of.

Added to their physical suffering is their mental anguish, for they have become the unwanted, driven from place to place, welcomed nowhere. Constant fear presses them to move on somewhere—somehow—anywhere away from the persecutions existing even now. They do not want to go back to the countries they left, because there robbery, riot, and even murder stalk the land.

That, too, is the problem of the great numbers of other displaced peoples—Catholics, Protestants, all faiths and nationalities—who fear to return to the homes they once loved, but which have become foreign to them in government, religion, and spirit.

Relieve the physical suffering of these tens of thousands of Jews and you will relieve the world of one of its most pressing problems, and humanity of a bitter self-reproach. That is your obligation and privilege. Pari passu—and equally important—is your obligation to help all other war-injured peoples who need assistance. Believers of every faith and good will were murdered, tortured, penalized by the Nazi-Fascist beast and even now, by some of the victors, who want a peace made only in the image of their own minds without thought of others.

APPEAL FOR "BELOVED AMERICA"

Before there can be any peace and happiness, even within ourselves, a place must be found for all displaced peoples of every religion and race who cry out from hunger and from despair of their future.

Public opinion cannot be bought, but it can be deserved. A people who are eyed suspiciously must live so as to be the more deserving—not by cringing, not by hand washing, not by appeasement, for these have always failed, but by keeping our heads up and our shoulders back ready to help and to lead in those causes that build mankind.

And, too, we must be in the front in protecting our beloved America against its outside enemies as well as those within. Our system is worth fighting for. It is the new Ark of the Covenant of human liberities and human dignities.

I am thankful every day that I, too, am an American. From my childhood my father, a Jewish immigrant, and my mother, whose ancestors were among the earliest settlers of this country, continually—forcefully—told me the story of America, its Constitution, its high purpose—how it was the best form of government created by the minds of men. That belief has become a part of my very being.

Many claim the Constitution should be subject to quick change to meet changing conditions. With that I do not agree. Human nature does not change much. I feel that our Constitution, with its Bill of Rights, should be a dike against transitory emotions.

The Constitution has made America what it is—it was our salvation in the past and it is our hope of the future.

"CONSTITUTION IS OUR BUTTRESS"

At times, incredible follies sweep over the world and cause chaos and untold human suffering. The Constitution is our buttress against these vast panics. It has made us great and powerful. It will make us even greater if we follow its spirit and its laws.

Let us not listen to the preachment of those who have made such a wreck of their countries and brought such miseries upon the world. We are not willing to lessen our freedoms. On the contrary, we wish to expand them and help others to profit by them. The life we Americans have been privileged to lead should make us all the more ardent to protect our institutions from attack and from seduction. Do not sell your birthright for a mess of pottage.

I am no Cassandra. I have no ill prophecy to offer. But at this point I am moved to say to you in all solemnity: Don't let us be the first to disarm. Don't let us scuttle and run—militarily, economically, or spiritually. Don't let us dodge the duty which lies upon us of helping to keep the world's peace. We must be strong.

What country but America could have made—actually did make—the contributions that won the war? What country but America dared face the greatest test—a free election during the very climax of the war?

Not Germany—not even the farce of a one-party balloting. Not Italy. Until last Sunday not for 9 years had there been one in Russia. I am taking the Russian vocabulary and not our dictionary as to the word election. Even England, that home of freedom, held none for 10 years.

But we, regularly, held our elections every 2 years, with Presidential polls in 1940, practically a war year, and again in 1944 at the very peak.

"DEEPLY GRATEFUL TO COUNTRY"

That thought makes me thrill with pride. I am proud of and deeply grateful to this country which has done so much for me. I am so eager but so unable to pay the debt except in small measure.

In speaking at another gathering, I used some phrases that have serious application at this point. I quote:

"I should like to say a few kind words about a certain relative of mine—a relative of yours—the one who made me possible—the one who made you possible—our Uncle Sam. We gaze on him with a sort of toleration and amusement, but he is a pretty sturdy soul. He is always on the side of right, sometimes a little slow getting there, but when he does arrive, he makes himself felt. He is better than we think; he is stronger than we know.

"In assessing our position, let us remember that great as our physical strengths are, they are made even greater by the fact that our spiritual armor is untarnished by self-gain; all our steps toward self-protection are steps to save the world—to bring peace to all nations of good will.

"America has never forgotten—and will never forget—the nobler things that brought her into being and that light her path, the path that was entered upon only 150 years ago, a little more than twice my own age. How young she is! It will be centuries before she will adopt a maturity of custom, the clothing of the grave, that some believe she is already fitted for.

"Our people are hard-bitten. They owe only to themselves what they have, but, somehow, they have always preserved the chivalry and idealism that others mistakenly assume is softness."

Once it was said: "To each according to his need; from each according to his ability." That became the basis of communism. I reject the formula politically, but I accept it as a guide in charity—an American guide.

STATISM VERSUS INDIVIDUALISM

If we want to retain the system of personal initiative, we must support private charity; the two go hand in hand. Abolish private charity and the state takes over, in a grim, organized, statistical way, and we shall be robbed of the joy that lies in giving and the deep satisfaction in rescuing the afflicted.

Today we face a great political and philosophical issue—statism versus individualism. But no matter how rigid organized society may become, in the last analysis each one must rely upon himself for the justification of life. Let us recall that truth, particularly now, when paternalism seems so soft and beguiling.

The process of individual effort which we call the capitalistic system may not be the ultimate but it is the best thus far devised. It has proved itself so in peace and in war. I believe in trying to better that system instead of tearing it down, or repairing that which has carried us so far instead of abandoning it and striking out afoot in new directions.

We must proclaim the lessons we have learned, that we live by the sweat of our brow, that helpfulness to others is helpfulness to ourselves, that these are measures of a social conscience, which we freely accept and enact.

But the higher social levels we seek cannot be attained without realizing that the enterprise system carries personal obligations and that one of them, charity, is greatest at this moment.

Another Jew said 1,900 years ago, the fighting St. Paul: "And now abideth faith, hope, and charity, these three; but the greatest of these is charity."

Let us go forth and follow this teaching.

My deep thanks for your attention.

Pennsylvania's Farmers

EXTENSION OF REMARKS
OF
HON. JOSEPH F. GUFFEY
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 26 (legislative day of Friday, January 18), 1946

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in

the RECORD a short editorial entitled "Pennsylvania's Farmers," published in the Evening Bulletin, of Philadelphia, Pa., on January 24, 1946.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PENNSYLVANIA'S FARMERS

Governor Martin from Harrisburg holds the mirror up to farmers to let them see what sort of people they are. In the Governor's looking glass farmers appear as rugged individualists who want neither to be bossed nor coddled. They do not want regimentation from Government, but wish to be free and independent Americans.

The Governor could just as well pay the same compliments to city populations in the State who also show no inclination to give up their rights as free-born Americans.

Such statements, however, should not be taken to mean that farmers are not in a receptive mood for any favors the Government has to pass around. It is true, as the Governor states, that Pennsylvania farmers have not benefited as much from Government subsidies as those in other sections. But our farmers have not refused to cash Government checks.

To protect farmers from the operation of the law of supply and demand Congress has guaranteed parity prices for farm products for 2 years after the end of the war. So far there have been few protests from rugged farm individualists against this suspension of an economic law.

Farmers are restive under Government regulations, as are many nonfarmers. But it is doubtful if many farmers want a return to the good old days before 1933, when they were allowed to plow themselves into bankruptcy by piling up farm surpluses.

A Petition to the General Assembly of the UNO for Amendment of the Charter

EXTENSION OF REMARKS
OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 18, 1946

Mr. VOORHIS of California. Mr. Speaker, had the atomic bomb been discovered by the Germans instead of by American and British scientists, the whole world would today be in slavery to Adolf Hitler. This would have been true even if the Germans had not discovered the atomic bomb until a few days before the final capture of Berlin. They could have turned the tide of battle completely in their favor even at that late date. The fact that the bomb was developed by Americans instead of by Germans, therefore, represents one of the greatest strokes of good fortune for humanity that the world has ever known.

On the other hand, the fact that the atomic bomb was developed at all places all mankind in the midst of a terrible and impending danger such as it has never faced before.

The atomic bomb was no accident. It was the natural result of total war. For total war means a war in which all the energy, intelligence, time, and resources of whole nations is devoted to the destruction of other human beings. In any such diabolical circumstance as this we may expect things like atomic bombs.

As matters stand at present the world is in for an armament race in the development of atomic weapons. Since everyone agrees that the only way in which an advantage can be gained in atomic war is by striking without warning and striking first, the whole advantage will lie with the aggressor in the future. Furthermore, in an atomic war all nations, excepting the most backward ones, will see their resources destroyed, their industries wiped out and half their populations killed. This will be true whether those nations win or lose the war.

Humanity therefore is face to face with a direct simple choice between life and death—between total war and total peace. Thoughtful people therefore are devoting all their energies to finding out how we can make it total peace instead of total war. And there is only one answer to that problem.

The answer is that there has to be a world authority or a world government which can control these terrible weapons of mass destruction, which can prevent any nation in the world from possessing them, and to which the nations will give the exclusive right to have such weapons and to use them for the sole purpose of keeping the peace.

From the beginning I have said that in my judgment the United States should join with any nations who are willing to create with us such an international authority, even if not all of them were ready to do so, and that we should then challenge the rest of them to either come into such a world government or else to stand before the eyes of humanity as nations unwilling to cooperate for peace and therefore nations outside the law of peace. But since the UNO is in existence and is functioning, our first attempt ought certainly to be to try to transform the United Nations Organization into an effective agency for keeping the peace—a thing which as presently constituted it cannot be.

It is for these reasons that I have recently signed a petition to the United Nations Organization urging that the Charter be amended. This petition calls for making the Assembly the real governing body, giving to the different nations representation based upon population, resources, strength, and ability to contribute to world peace and welfare. This would mean that instead of each nation having one vote in the Assembly, the representation of the nations would be on the same general basis as that given to the different States of the United States in the House of Representatives. Our petition furthermore calls for a complete abolition of the veto power on the part of any nation and for making the Security Council an executive body to carry out the directions of the Assembly, instead of an all-powerful group completely under the control of any one of the five so-called great powers.

Then our petition gives to the United Nations Assembly the power and right, first, to control all over the world and in every country of the world weapons of mass destruction; second, to prevent either the production or possession of atomic weapons by any country; and, third, to have the exclusive right to possess such weapons in order to preserve the peace. These are the main things in our petition. I signed it because I am convinced that action of this sort is the only way in which my own children and the children of the billion other families around the world can look forward to a reasonable chance to live out their lives as previous generations have had a chance to do.

To those who will object that they do not want to see the United States surrender its right to do whatever it wants to in the field of destructive armament, I would only say that as a condition of America giving up this right we would be given assurance that every other nation in the world was going to do likewise and that a world government strong enough to compel those unwilling to do so was to be created. We would be making an excellent bargain and doing the one right thing which it is possible for us to do under present circumstances, in addition.

The text of the petition and names of those who, in a brief period of 5 days, signed it follow:

A PETITION FOR AMENDMENT OF THE UNITED NATIONS CHARTER

To the Members of the General Assembly of the United Nations:

The undersigned citizens and associations of citizens of members of the United Nations hereby respectfully petition the members of the General Assembly for the adoption of amendments to the United Nations Charter whereby the United Nations will be constituted as a world federal government with limited but definite and adequate powers for the prevention of war.

We submit herewith specific proposals for amendments to accomplish this end. We do so in order to indicate specifically the minimum changes in the Charter which we believe to be necessary if the world is to free itself from the scourge of war and the constant apprehension thereof. But in so doing we emphasize the fact that the textual proposals, while the result of long consideration, are submitted tentatively and in order to promote definite discussion and action. We do not presume to submit these proposals as the only or necessarily the best means to accomplish the desired result.

The peoples of the world urgently need a limited world government. The recent appalling increase in the destructive power of modern weapons, including long-range planes and submarines, rocket-carried missiles and, above all, the atomic bomb, has made the prevention of war more than a matter of saving life and property. It has become no less a question than the survival of mankind in a civilized state. Since the problem is of world-wide scope it demands a world-wide solution. Because a world scientific revolution has occurred we must meet its implications by no less revolutionary ideas and plans in the field of world political organization. Reason and experience prove that any league of states, preserving the absolute sovereignty of such states, is plainly inadequate to prevent war. A measure of actual world government is, therefore, no longer merely a desirable goal. It has become a vital and immediate necessity.

However promising the Charter may have appeared when approved in June 1945, events occurring since then—including the application of atomic energy to weapons of war—have changed world conditions and have tremendously condensed the time within which necessary amendments must be made. In-

stead of starting all over again, we should build upon the valuable foundations already laid by proceeding through amendments which will so alter and strengthen the present Charter as to make it an instrument of limited world government. It should be and can be amended to this end.

The fundamental deficiency of the Charter now is that it is based upon, preserves and confirms unlimited national sovereignty—at least so far as the permanent members of the Security Council are concerned. The requirement of unanimity on the part of China, France, the Soviet Union, the United Kingdom, and the United States for all important decisions of the Security Council represents a retention and confirmation of such unlimited national sovereignty. This rule makes it uncertain whether that Council can function promptly in a crisis to prevent war. Reason compels the conclusion that there can be no assurance of effective action where such action can be taken only with the unanimous approval of a number of sovereign nations.

On the other hand the provision that each member in the General Assembly shall have one vote (irrespective of population, natural, industrial, and military resources or any other factor) makes it unreasonable and virtually impossible to vest important powers of decision or action in an Assembly so constituted. It is not in accord with reason or common sense to expect that great and powerful nations with populations of 100,000,000 or more will consent to be bound in important matters by the action of a body in which they have no more voice than small nations of 1,000,000 or less.

Thus, under the present Charter there exists the combination of an Assembly that cannot or will not be granted any important powers of decision—because of the rule of one vote for each country—and a Council in which prompt action cannot be relied upon because of the veto right in the permanent members. This combination has convinced thinking men and women throughout the world that the structure established by the present Charter is manifestly deficient.

The present Charter can be successfully amended. But the amendments, to accomplish the purpose, must alter certain of the first principles and main features of the structure.

GENERAL PROPOSALS

Instead of an Assembly in which the smallest and weakest country has an equal voice with the most populous or the most powerful, the Assembly, it is submitted, should be reconstituted upon the principle of weighted or balanced representation. This does not mean any impairment of the juridical equality of each member country. The smallest and weakest would remain absolutely equal with the greatest powers before the law. It does mean, however, the abolition of the present rule whereby each member nation has one vote without regard to population or any other factor. Instead of this obsolete conception, each member should be equitably represented in the Assembly in proportion not only to its population, but also in relation to such factors as resources, production, and current ability to contribute to world order and progress.

Except in a few special instances, decisions of the Assembly so reconstituted should be by majority vote, as is the case in all the principal parliamentary bodies of the world, and in the International Court of Justice—so that there will be an assurance of prompt decisions. The representatives therein should vote as individuals, according to their individual convictions, and not in blocs as representing the countries from which they come. They would thus vote, so far as human nature permits, for the general welfare of the world and not in the supposed interest of any particular country.

With a General Assembly constituted on a fair basis of balanced representation, the way would be open to increase the authority of the Assembly by vesting in it wider and more important powers. Thus the smaller countries would take part directly on a proportional basis in all decisions instead of exercising the less direct influence to which they are now limited. While, in some instances, their nominal proportionate votes would be less than under the present rule of one vote for each country, their actual positions would become more representative, dignified, and influential.

By reconstituting the Assembly upon such a balanced system of representation, with decisions in most instances by majority vote, it could and should be made the most important organ of the United Nations. It can be clothed with definite legislative powers to prevent or suppress war. These powers to legislate by binding enactment should be carefully defined and limited and yet be adequate to the purpose. All other powers should be reserved to the member countries, or to the peoples thereof, no power being delegated to the central authority beyond what is essential for the survival of humanity and civilization.

Although the power of the Assembly to bind by world law should be narrowly and carefully defined, it will be wise and consistent to retain, in addition to its restricted legislative powers, broad authority to investigate and make recommendations. This authority should extend to a wide range of subjects involving the economic and social welfare of the peoples. The powers to investigate and recommend wisely given by the present Charter appear adequate, as does the authority to appoint and supervise subsidiary agencies. All these powers should be retained. The additional powers to legislate must be sufficient to enable the prevention of war, but at present should be confined within strict limits.

It can, indeed, be forcefully argued that, if we are to have a World Federal Government at all, it should have definite powers of regulation as to such matters as international shipping, aviation, and communications; and even as to labor conditions and the promotion of agriculture, health, and education. But no matter how important the authority to enact world legislation in such fields may seem to be for the general welfare of mankind and the reduction of international friction, it is wise, we believe, to confine the legislative power at the outset to matters plainly and directly related to the prevention of war, leaving the problem of expanding the legislative powers to a time when the governments and peoples have become more accustomed to federalism on a world scale.

These principles envisage the transfer to the Assembly of the basic authority now vested in the Security Council. But the changes do not involve the abolition of that body. It should continue in existence, but it should be chosen by the Assembly, to which it should be responsive and responsible; and it should function pursuant to powers delegated by the Assembly and under voting procedures prescribed by the Assembly. Thus it would operate as an executive committee of the Assembly, rather than as an independent body with independent authority.

The petitioners also respectfully submit that consideration should be given to amending the Charter so as to strengthen the provisions for the decision by impartial tribunals of disputes between nations. Even if it is not now feasible to achieve such a procedure in the case of all disputes between nations, consideration might well be given to an amendment whereby if the General Assembly, or the Security Council acting for the Assembly, determines that a particular dispute between nations is of so serious a character as to endanger peace, the Assembly or Security Council may require submission of the dispute for decision by an impartial tribunal, either by the International Court of Justice or an arbitral tribunal, dependent upon the nature of the dispute.

We believe also that the authority of the Assembly or Security Council on its behalf to enforce compliance with the judgments or orders of the Court or of such arbitral tribunal should be clarified and strengthened.

It is essential that there shall be some final judicial authority to interpret the Charter. Accordingly, we submit that the Charter and the statute of the International Court of Justice should be so amended as to establish beyond question the authority of the Court to interpret the Charter.

The petitioners believe also that, in view of the legislative powers given by the proposed amendments, a bill of rights should be included in the Charter to protect the individual against abuse of the new powers.

Finally the petitioners submit that the procedure for amendment of the Charter should be liberalized. Recognizing that no one is wise enough to anticipate changes that time and experience may make necessary, it should not be possible for any single nation by its veto, as is now possible, to prevent the adoption of amendments agreed to by a great majority of the governments and peoples of the world.

The foregoing general proposals are in accord with the principles stated in a declaration issued October 16, 1945, by a conference of citizens of the United States held at Dublin, N. H., U. S. A.

To give effect to these principles and proposals there are herewith submitted for consideration and discussion the following proposed amendments to the Charter:

SPECIFIC PROPOSALS

I. Amendment of provisions for the General Assembly

In order to make operative the foregoing principles, it will be necessary to amend fundamentally the articles dealing with the General Assembly, firstly, in respect of its composition and voting procedures and, secondly, in respect of its powers.

In respect of the composition of the Assembly on the principle of balanced representation it will be desirable as soon as possible to adopt a formula and procedure whereby the number of representatives chosen by the member states may be periodically adjusted in view of inevitable changes in population and capacity. The formula should, we believe, take into account not only the populations of the respective members but also their natural and industrial resources, production, ability to contribute to world order and progress, and such other factors as the General Assembly may deem relevant.

In the meantime, and in order to make a start, it will be necessary to adopt a definite apportionment for the present members, pending the taking of a world census and the application of the formula determined upon.

The revision of article 9, proposed below, conforms to these ideas. Paragraph 2 of the revised article, while not suggesting a definite permanent formula, indicates its general nature with provision for initial and periodical world censuses.

Paragraph 3 contains a proposed transitional apportionment of representatives.

The suggested transitional apportionment is based on two main assumptions. The first is that the British Commonwealth and Empire as a whole, the Union of Soviet Socialist Republics as a whole, and the United States as a whole, are entitled to equal representation. They have acted as equals in World War II. Taking all factors, tangible and intangible, into account, they can be said to be equal in influence in world affairs. It is

fair and practical that, under present circumstances, there should be no discrimination between them. It is on this basis that the number allotted to each is placed at 65.

The second assumption is that each member state should have at least one representative, so that every member shall be able to make itself heard and vote directly on all questions in the Assembly. Eighteen members with relatively small populations and resources are, therefore, allotted one vote each, even though in most or all of such cases, the effect is to give more representation to those members than could be justified on a strict basis of relative power and influence in world affairs.

Within these maximum and minimum limits the suggested temporary allotment, which no. computed on a fixed formula, seeks to take into account the factors above-mentioned—population, natural and industrial resources, production, and ability to contribute to world order and progress. Under this suggested transitional allotment, the total number of representatives for the present 51 members would be 367.

It is to be hoped that all the other states of the world will be admitted as members. When the membership is universal the General Assembly would, on the assumed basis, comprise no more than about 480 representatives. Considering that they would represent 2,200,000,000 people and that the British House of Commons has 640 members, the Soviet Council of the Union 647, and the Congress of the United States 531—a membership approaching 500 is not too large for an Assembly representative of the whole world.

In suggesting the following table for the transitional apportionment of representatives we emphasize that while it has been the subject of much study and is believed to be rational, it is submitted by way of illustration only. We realize that the working out of any plan for the apportionment of Representatives is difficult. We believe, however, that the problem is capable of solution with a spirit of reasonable accommodation and understanding. We believe also that it serves a useful purpose to make a concrete suggestion for purposes of discussion.

The following textual amendments are suggested:

Composition

Change article 9 to read as follows:

"ARTICLE 9

"1. The General Assembly shall be composed of representatives chosen for terms of 4 years by the several members of the United Nations. Each member shall be free to determine for itself the manner of choice, but it is desirable that the representatives shall be elected by the peoples of the members of the United Nations through elections participated in by the voters in each member country qualified to vote for the members of the most numerous branch of the national legislature.

"2. [This paragraph should contain a formula for the apportionment of representatives to be chosen by the members. As above noted, such formula should take into account not only population but also resources, production, and ability to contribute to world order and progress. It should provide for an initial world census to obtain the data for the application of the formula and for periodical world censuses, presumably every 10 years, upon which to base periodical adjustments of the representation, in view of changing conditions.]

"3. Until an apportionment is made under paragraph 2 the number of representatives which each member shall be entitled to choose shall be as follows:

"Members of the United Nations (as of Feb. 1, 1946)

	Representatives
The Union of Soviet Socialist Republics, the Byelorussian S. S. R., and the Ukrainian S. S. R. (the apportionment to be determined by agreement among themselves)	65
The United Kingdom of Great Britain and Northern Ireland, Canada, Australia, the Union of South Africa, New Zealand, and India (the apportionment to be determined by agreement among themselves)	65
The United States of America and the Philippine Commonwealth (the apportionment to be determined by agreement among themselves)	65
China	25
France	25
The Netherlands	12
Belgium	9
Brazil	9
Poland	9
Argentina	8
Czechoslovakia	7
Mexico	7
Turkey	5
Yugoslavia	5
Denmark	4
Egypt	4
Norway	4
Chile	3
Colombia	3
Cuba	3
Greece	3
Iran (Persia)	3
Peru	2
Uruguay	2
Venezuela	2
Bolivia	1
Costa Rica	1
Dominican Republic	1
Ecuador	1
El Salvador	1
Ethiopia	1
Guatemala	1
Haiti	1
Honduras	1
Iraq	1
Lebanon	1
Liberia	1
Luxemburg	1
Nicaragua	1
Panama	1
Paraguay	1
Saudi Arabia	1
Syria	1
Total for the 51 members, as of Feb. 1, 1946	367

"4. Upon the admission of a new member the General Assembly shall fix the number of representatives which such new member shall be entitled to choose."

Voting

In view of the proposed change in the character of the General Assembly whereby it would be constituted as a representative body in which the representatives would vote as individuals and not in blocs as representing their respective national states, and in view of the further purpose that the reconstituted Assembly should be able to reach prompt decisions, important changes in article 18 are essential.

It is suggested that the article be amended to read as follows:

"ARTICLE 18

"1. Each representative in the General Assembly shall have one vote, and the representatives shall vote as individuals."

The present paragraph 2 would be omitted and paragraph 3 renumbered 2, amended to read:

"2. Unless otherwise specifically provided in this charter, decisions of the General Assembly shall be made by a majority of the representatives present and voting. A majority of the General Assembly shall constitute a quorum to do business."

Functions and Powers

Pursuant to the principle of conferring upon the General Assembly the minimum legislative powers necessary for the control of atomic energy and the prevention of war, we suggest that article 12 be amended to read as stated below. The language of paragraph 2 (a), (b), and (c) is adapted from the declaration on atomic energy of President Truman, Prime Minister Attlee, and Prime Minister Mackenzie King of November 15, 1945, and the communiqué of the Moscow Conference issued December 27, 1945. The language of paragraph 2 (f) is largely derived from article 6 of the Constitution of the International Military Tribunal, now in session at Nuremburg.

"ARTICLE 12

"1. The members of the United Nations confer on the General Assembly primary responsibility for the maintenance of international peace and security.

"2. For the discharge of these duties the following specific legislative powers are granted to the General Assembly:

"(a) To promote the free exchange of basic scientific information between all nations.

"(b) To provide for the control of atomic energy to the extent necessary to insure its use only for peaceful purposes, and to eliminate from national armaments all atomic weapons and all other weapons or means adaptable to mass destruction, and provide that the United Nations shall have exclusive rights thereto for the sole purpose of maintaining world peace and security.

"(c) To provide for such inspections as the General Assembly may deem necessary in order to protect complying States against the hazards of violations and evasions of any laws enacted under this article, and to raise by voluntary methods, maintain, support, and provide for the administration of such inspection forces as the General Assembly may deem necessary for this purpose.

"(d) To raise by voluntary recruitment, maintain, support, and provide for the organization, command, and disposition of such police and military forces as the General Assembly may deem necessary to insure the effectiveness of such inspections and compliance with and enforcement of any laws enacted under this article.

"(e) To define the conditions and establish the general rules under which the measures provided for in chapter VII may be applied to members or other states failing to comply with any laws enacted under this article.

"(f) To define the penalties for violations by persons in any member or other state of any laws enacted under this article and to define and prescribe the penalties for crimes committed by such persons against international peace and security, including the planning, preparation, initiation, or waging of any war of aggression or any war in violation of international treaties, agreements, or assurances, or participation in a common plan or conspiracy for the accomplishment of any of these purposes; to provide for the apprehension of any individuals accused of such crimes or violations; and to establish tribunals for their trial and appropriate means for the enforcement of penalties against convicted criminals or violators.

"3. All powers not delegated to the General Assembly by the foregoing provisions of this article or elsewhere in this Charter nor prohibited by the Charter to the members are reserved to the members, respectively, or to their peoples."

By paragraph 2 of article 17, authority is now conferred to apportion the expenses of

the United Nations among the members, and by necessary implication to levy assessments for such expenses. But since the enlarged powers of the United Nations would inevitably involve far greater expenses than under the powers given by the present Charter, there might well be some qualification of the broad authority now given by paragraph 2 of article 17.

It is suggested that paragraph 2 be amended to read as follows:

"ARTICLE 17

"2. The expenses of the United Nations shall be borne by the members as apportioned by the General Assembly, but no member shall be required, without its consent, to provide a greater proportion of such expenses that the number of representatives chosen by it shall bear to the total number of representatives in the General Assembly."

II. Amendment of provisions for the Security Council

In consequence of the enlarged scope of the reconstituted General Assembly under the foregoing proposed amendments and its primary responsibility for the maintenance of international peace and security, it is desirable that the Security Council shall be chosen by the General Assembly and function virtually as its executive committee in the field of security. To this end, the following changes in chapter V are suggested:

Composition

Change article 23 to read as follows:

"ARTICLE 23

"1. The Security Council shall consist of 11 members, no 2 of whom may be nationals of the same state. They shall be elected by the General Assembly from among the representatives chosen to the General Assembly. Each of the five members having at the time of the election the largest number of representatives in the General Assembly shall at all times have one member of the Security Council elected by the General Assembly from the representatives chosen by those five members respectively. The six additional members shall be elected from among the representatives chosen by other members, due regard being specially paid, in the first instance, to the contribution of members to the maintenance of international peace and security and to the other purposes of the United Nations, and also to equitable geographical distribution.

"2. The members of the Security Council shall be elected for a term of 2 years. In the first election, however, five shall be chosen for a term of 1 year."

Functions and Powers

Change article 24 to read as follows:

"ARTICLE 24

"1. The Security Council shall execute the laws adopted by the General Assembly and shall perform such other functions as are specified elsewhere in the present Charter, or as may be delegated to it by the General Assembly.

"2. The Security Council shall submit annual and, when necessary, special reports to the General Assembly for its consideration. The Security Council in the performance of any of its functions shall at all times be subject to the general direction and control of the General Assembly."

Voting

Change Article 27 to read as follows:

"ARTICLE 27

"1. Each member of the Security Council shall have one vote.

"2. Decisions of the Security Council on procedural matters shall be made by an affirmative vote of six members.

"3. Decisions of the Security Council on all other matters shall be made by an affirmative vote of six members including the concurring votes of at least three of the five members elected from among the representatives chosen by each of the five members having the largest number of representatives in the General Assembly."

III. Amendment to confer judicial authority to interpret the Charter

Under the present Charter, the authority of the International Court of Justice to interpret the Charter is not clear. It is essential, however, that there shall be an authoritative and impartial method of interpreting a constitutional document of this character and of removing from time to time any doubt as to its scope and meaning. The same is true of any laws enacted under the Charter. This is properly a judicial function and the International Court of Justice is the natural and appropriate organ to fulfill it.

It is therefore suggested that article 96, paragraph 1, be amended to read as follows:

"ARTICLE 96

"1. The International Court of Justice shall have power, at the request of any member or of the General Assembly, the Security Council, the Economic and Social Council, or the Trusteeship Council, to make a binding interpretation of any of the provisions of this Charter or of any law enacted by the General Assembly under this Charter. It shall have power, at the request of the General Assembly or the Security Council, to give an advisory opinion on any other legal question."

IV. Amendment of provisions concerning amendment of the Charter

The present provisions (arts. 108 and 109) make the process of amending the Charter too uncertain and too rigid. This is especially so because of the requirement that no amendment whatever can come into force unless approved by all the permanent members of the Security Council. These articles should be liberalized and made more flexible. To accomplish this, the following changes are suggested:

Change article 108 to read as follows:

"ARTICLE 108

"Amendments to the present Charter shall come into force for all members of the United Nations when they have been adopted by vote of two-thirds of the representatives in the General Assembly present and voting and ratified in accordance with their respective constitutional processes by a majority of the members of the United Nations, which majority shall include members which have chosen not less than two-thirds of the representatives in the General Assembly."

Change article 109 to read as follows:

"ARTICLE 109

"1. A general conference of the members of the United Nations for the purpose of reviewing the present Charter may be held at a date and place to be fixed by a two-thirds vote of the representatives in the General Assembly present and voting. The number of delegates in such general conference which each member of the United Nations shall be entitled to choose shall be equal to the number of representatives chosen by it in the General Assembly at the time of such general conference.

"2 Any alteration of the present Charter recommended by a two-thirds vote of the delegates present and voting in any such general conference shall take effect when ratified in accordance with their respective constitutional processes by a majority of the members of the United Nations, which majority shall include members which have chosen not less than two-thirds of the representatives in the General Assembly.

"3. At the tenth annual session of the General Assembly following the coming into force of the present Charter, and at every tenth session thereafter, there shall be placed on the agenda of the General Assembly the proposal to call a general conference for the purpose of reviewing the Charter, and the conference shall be held if so decided by a majority vote of the representatives in the General Assembly present and voting."

V. Other suggestions: (A) Decision of international disputes; (B) A bill of rights; (C) Consequential changes

(a) Decision of international disputes: Under the present Charter and Statute of the International Court of Justice, the machinery for the decision of controversies between states is highly incomplete. The International Court has at present no compulsory jurisdiction, except to the extent that states may agree to submit to it any controversies under the optional jurisdiction clause or by a special treaty.

It is true that the most comprehensive provision for the decision of international disputes cannot be a complete answer to the problem of preventing war. This is so because some wars do not arise from anything that can be called a controversy or dispute at all. Nevertheless, there have been and presumably will be many causes of trouble between nations that are capable of decision by impartial tribunals and which, if not determined by authoritative decision, may be the causes of war. Accordingly, the extension of the rule of law in respect of international disputes is of vast importance, even though this cannot alone prevent all wars.

In these circumstances, we believe that consideration should be promptly given to the strengthening of the machinery for the decision of disputes between nations. While we do not now suggest a specific amendment to this end, we believe that consideration should be given to amendments of the Charter and of the Statute of the International Court of Justice whereby the General Assembly, or the Security Council acting for the Assembly, should have definite authority to require submission of any controversy between states either to the World Court or to an arbitral tribunal if, in their judgment, the dispute is of so serious a character as to endanger peace.

We believe also that the General Assembly, or Security Council on its behalf, should have unequivocal authority to enforce compliance with the judgments or orders of the Court or such arbitral tribunal, and that Article 94 of the Charter should be amended to make this authority more clear and definite.

(b) A bill of rights: The adoption of amendments like those above suggested would confer certain powers on the United Nations whereby it would exercise a direct authority upon individuals. This authority would exist, it is true, within a very limited field. There would, for example, be no power to tax the individual but only power to levy assessments against the member countries. There would also be no power to conscript the individual for the inspection, police, and military forces of the United Nations, since the authority to raise such forces could only be exercised by voluntary methods.

There would, however, be power in the General Assembly to pass all laws necessary to insure the use of atomic energy for peaceful purposes only and to eliminate atomic and other major weapons from national armaments; to provide for such inspections as are deemed necessary to these ends; to raise and maintain inspection, police, and military forces; and to apprehend, try, and punish individual violators of the kind of laws specifically authorized.

While these powers are believed to be the minimum powers necessary to maintain peace, they are nevertheless substantial and

raise the question of constitutional safeguards against their possible misuse. Such safeguards should certainly include guarantees for fair trial of persons accused of violating any laws passed by the General Assembly. It might also be advisable to prohibit the use of the granted powers in any such manner as to infringe upon the fundamental rights now possessed by citizens of member states, such as freedom of religion, of speech, of the press, assembly, and petition. Under this head, it is true that there is nothing in the proposed powers to justify any perversion of those powers in these directions. However, carefully expressed guarantees against any possible misuse of the delegated powers might give assurance which would strengthen confidence in the United Nations.

A bill of rights of this character would be directed solely to the exercise of the delegated powers of the United Nations. The matter of "promoting respect for, and observance of, human rights and fundamental freedoms for all," presumably through recommending guarantees of such rights by the member countries themselves, is a separate question which is the responsibility of the Economic and Social Council under article 62, paragraph 2.

(c) Consequential changes. If the above main amendments are adopted in substance, a number of consequential changes will be necessary in order to make the Charter consistent and harmonious.

For example, the term "Organization" in the Charter should be eliminated. The effect of the above main amendments would be to constitute a world federal government with limited but definite legislative powers in the General Assembly, with a Security Council responsible to the Assembly and acting as an executive body in the field of security and with a world judiciary with authority to interpret the Charter and to interpret and apply the laws enacted by the General Assembly. The designation "Organization" would, therefore, no longer be appropriate, so that in all cases where the term "Organization" occurs in the Charter, the term "United Nations" should be substituted.

VI

If and when amendments are adopted substantially in accord with those above suggested, a minimum of centralized control would be provided and a maximum of self-government would be reserved to the separate states. The delegated powers for unity of action would be restricted to those things strictly necessary to the survival of civilization, the development of further powers being left to future evolution and the growth of confidence among the nations, through the successful operation of the limited powers first exercised.

Nevertheless, the delegation of these limited powers would involve a definite modification of the sovereignty of the member states, and this delegation would confer upon the United Nations authority which can only be correctly described as authority to govern within a strictly defined sphere. There would exist, therefore, a true world federal government, even though the powers delegated to it would be far more restricted than those commonly assigned to the federal government in national states of a federal character.

Of equal importance with the delegation of the minimum powers essential to survival are the provisions making reasonably certain the effective exercise of these powers. For it would be of no use to grant powers much more extensive than herein proposed if, as under the present Charter, the machinery for their exercise is such as to make it uncertain whether any decisions can be arrived at, no matter how urgent the need.

We believe that through the provision for balanced representation in the General Assembly, coupled with the provision for decisions by majority vote and for voting by the representatives as individuals, the indispensable requirement for world machinery capable of functioning promptly and reliably, has been met.

Under the proposed (f) of article 12, empowering the Assembly to enact laws to make wars of aggression criminal and to punish individual violators after trial in courts of the United Nations, a tremendous step would be taken. We would have come much nearer to "a world law, with a world judiciary to interpret it" and "with a world police to enforce it."[1]

We believe that only when amendments are adopted which go at least as far as those herein proposed, will the world have a reasonably reliable system for the maintenance of world order and for the promotion of justice among all peoples.

We believe that there is no time to lose in considering amendments of the character proposed. Accordingly, we respectfully petition the members of the General Assembly to take these proposals under advisement at the first opportunity.

Child-Care Centers

REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

CALIFORNIA LEGISLATOR NOTIFIES REPRESENTATIVE DOYLE CALIFORNIA APPROPRIATES FOR CHILD-CARE NURSERIES

Mr. DOYLE. Mr. Speaker, in connection with child-care centers, several months ago it developed that my native State of California had one-fourth of the children who were in child-care centers throughout the entire Nation. California and all States needed time to legislate and provide funds. As I regard our children as our greatest natural wealth, I naturally offered a bill, which happened to be the only bill filed in the Congress, and then I appeared in behalf of a congressional group before the Com-

mittee on Appropriations asking for $5,400,000 of the rescission moneys to avoid delay. I asked and received the utmost cooperation of President Truman—and by the way, I want to thank him for his sympathetic and prompt action taken. Also the cooperation of the Committee on Appropriations, and its distinguished chairman. The sum of $5,400,000 was allowed out of rescission moneys. I now am advised by Gardiner Johnson, member of the State Assembly of my native State of California, that the State of California has done that which it indicated to me it wanted opportunity to do. I believed it would and acted accordingly. It is now taking care of its own children in these necessary nurseries and has appropriated by legislation $3,500,000. I know the House will be glad to know this. I thank all Members for their cooperation in the matter.

As the letter from Assemblyman Johnson gives the number of the California bills and the purport thereof, I include same for your information, in case any of your States make inquiry of you.

The letter referred to is as follows:

ASSEMBLY, CALIFORNIA LEGISLATURE,
February 23, 1946.

Hon. CLYDE DOYLE,
Old House Office Building,
Washington, D. C.

DEAR CONGRESSMAN DOYLE: Enclosed herewith I am sending to you copies of the three measures relating to child-care centers that were enacted by the California Legislature at its special session that adjourned last Tuesday evening.

The two bills were signed by Governor Warren on Wednesday morning, February 20, and became effective immediately.

Assembly bill 7 provides for the continuance of child-care centers in California until 90 days after the final adjournment of the next regular session of the legislature.

Senate bill 45 appropriates the sum of $3,500,000 from the general fund of the State of California to support child-care centers until March 30, 1947.

Assembly Concurrent Resolution No. 3 creates a joint legislative committee to survey the need for child-care centers, nursery schools, kindergartens, and other forms of early training of children, and to report back to the next regular session of the legislature within 10 days after it convenes. The sum of $25,000 is appropriated for the purpose of conducting the survey.

These three measures constituted the full program of the assembly interim committee on public education, of which I had the honor to be chairman, and concerning the work of which I spoke to you in Washington last October.

Knowing of your interest in this subject I thought you would be anxious to have this material available in your files. If you need further information, please do not hesitate to call upon me. The joint legislative committee has already been appointed and I am to continue on as chairman of it.

There are many thousands of people in California who should be exceedingly grateful to you for the fine service that you rendered in securing adequate Federal funds to carry on the work of these centers until such time as we were able to conceive and enact into law the program embodied in these bills. But for your action the entire program would have closed down before the State of California was able to act. You should be very gratified to know that your energy and persistent efforts made it possible to carry on this needed service.

Looking forward to seeing you again, I am, with warmest best regards,

Sincerely yours,

GARDINER JOHNSON.

The School-Lunch Program

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 26 (legislative day of Friday, January 18), 1946

Mr. CAPPER. Mr. President, the Washington Post printed a fine editorial on February 23 commenting favorably on the school-lunch program now before the Senate. I ask unanimous consent to have the editorial printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SCHOOL LUNCHES

The federally-supported school-lunch program, instituted a decade ago as a means of marketing farm surpluses, deserves continuation today as a means of improving the health of the school children who have been its beneficiaries. We hope that the Senate will promptly follow the action of the House on Thursday in giving the program a proper statutory basis. Farm surpluses are not, at the present time, a problem, of course, although there are still and probably always will be local surpluses of many kinds of food. But the health of the Nation's school children continues to constitute a very real problem. Henry Wallace's observation the other day that Iowa hogs and heifers are better fed than one-third of Washington's youngsters was no doubt a somewhat irritating extravagance. But it was certainly not without substance; the Iowa hogs and heifers get a more nutritious and scientifically balanced diet than many of the children in low-income homes here and elsewhere.

The national consequenses of malnutrition at school age were made tragically evident during the war. General Hershey has testified that 70 percent of the boys who had poor nutrition 10 or 12 years ago were rejected by Selective Service. The peacetime cost in illness, indigence, and inability to work is incalculable. As Representative ADOLPH SABATH put it, "our children are our greatest national resource, and anything we do to make them stronger and healthier will help our Nation in the future." It seems to us a pitifully penny-wise sort of economy to argue, as some did in the House on Tuesday, that the Government cannot afford a $50,000,000 annual investment assuring such valuable dividends.

Some of the other objections raised against the school-lunch bill seemed to verge on the preposterous. Representative TABER said it "is designed to wreck the public school system of America." Representative WADSWORTH saw it as "statism." Representative BUCK declared that "it begins teaching children at the tender age of 5 that they may eat at the bounty of the Federal Government." The program has been operating for 10 years; the bill passed by the House would give it permanent legislative status, with proper disbursement of the funds through State educational systems. The public school system has thus far survived it and will, we feel confident, continue to do so. And the morale of our 5-year-olds will no doubt withstand a free lunch as well as it withstands a free education. The program does nothing more subversive than to give a glass of milk, or in some cases a good hot meal, to children whose families cannot afford to give them proper nutrition. We shall all be able to eat more comfortably if we know this program is being carried on.

Suggestion That Apostle Islands Be Made Seat of United Nations

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, February 26 (legislative day of Friday, January 18), 1946

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Washburn Times, of Washburn, Wis., entitled "Why Not the Apostle Islands?"

the Appendix of the RECORD an article was ordered to be printed in the RECORD, as follows:

WHY NOT THE APOSTLE ISLANDS?—AN OPEN LETTER TO THE UNITED NATIONS ORGANIZATION

To the Special Committee of the UNO Interim Council Appointed to Select a Permanent Capital for the United Nations:

HONORED SIRS: We see by the papers that you have been having some difficulty in selecting a permanent home for the United Nations Organization. The residents of the North Stamford-Greenwich area you chose apparently decline the honor, not wishing to have their estates transformed into so unimportant a thing as a world capital. We offer a solution to your difficulties by seriously and respectfully proposing a much more appropriate site for the UNO home—a site that is eminently suitable as to historic background, location, climate, area, scenery, and other natural advantages; namely, the Apostle Islands off the northern tip of the State of Wisconsin in Lake Superior. It's a perfect site for your purpose, and it won't cost you much, if anything. And economy is a factor not to be ignored even by the UNO.

With a history going back to the very dawn of time, the Apostle Islands offer an appropriate location for an organization that seeks to bring the dawn of a new era in the unhappy annals of mankind. The red sandstone of the Apostle Islands is considered by many geologists to be the oldest land on earth. It will be good for the ego of the UNO delegates to gaze on those beautiful red shorelines and meditate on the fact that they are the eroded lava of the greatest volcano the world knew, lava that grew cold millions of years ago. Such a thought is enough to reduce the atom bomb to its proper small place in the panorama of earthly time and should be conducive to a recognition of the insignificance of men and their petty affairs and the folly of human conflict.

The human history of the Apostle Islands goes back over four centuries, when the Ojibways established their capital. Later other North American Indians of many tribes congregated on these shores and dwelt side by side in amity and concord, offering an inspiring historic example to their less peaceful white brethren.

Among the first white men to come to the islands were Jesuit missionaries, who gave them their name. These missionaries brought to the Indians the gospel of Christ, the precepts of which must be the foundation of any enduring peace wrought by the United Nations. What could be a more appropriate name for the capital of the peace-dedicated UNO than the name of the men who spread the message of the Prince of Peace?

The present residents of the area adjacent to the Apostle Islands offer a sterling example of friendship and cooperation between men of many origins. Here in peace dwell Americans whose fathers were Indians, French, English, Yankees, Norwegians, Swedes, Poles, Finns, Czechs, Hollanders, and a dozen other nationalities. Here is a healthy atmosphere of democracy and mutual understanding in which the democratic ideals of the United Nations can thrive and grow.

Turning to more practical aspects of the subject, the Apostle Islands offer a suitable geographical location for a world capital. In an age of air travel they stand at the crossroads of the world. Their isolation by land from great cities offers an advantage rather than otherwise. And that isolation by land is offset by their accessibility by air. The proximity of a great city like New York would do more harm than good to men and women dedicated to the preservation of peace and the moral uplift of humanity.

In climate and scenery the Apostle Islands are second to no other area as a suitable site for a world capital. The blue expanses of the world's greatest fresh-water sea reduce men and their troubles to their proper place in the eternal scheme of things. The verdant foliage of the islands offers an inspiring symbol of the freshness and vitality of nature. Lake Superior's breezes wash away the allergies of the flesh and may be helpful in dispelling the racial and national allergies of the spirit that must vanish before we reach true peace. And the trout—ah, there's something to talk about. When delegates quarrel we'll settle things by putting them together in a little boat with an outboard motor and let them troll for trout. No international quarrel will ever survive the mutual adventure of catching some of the world-famed Lake Superior trout. Mountains of discord will become molehills when delegates face each other across plates filled with succulent broiled trout steaks.

We see by the papers that you are prepared to pay $100,000,000 for the 42 square miles in the North Stamford-Greenwich area. You can have all the land you want in the Apostle Islands for a fraction of that and you can spend the difference on something more practical. Some of that coin could be used to pretty good advantage in promoting understanding between the nations of the world, the cause to which you are dedicated.

Presque Isle, 10,000 acres in extent and second largest of the archipelago, is owned by the University of Wisconsin and there isn't much doubt that it could be had for nothing for use as a UNO capital. On the other 22 islands of the group there are hundreds of acres owned by the Federal Government that would be available for nothing and thousands of acres owned by individuals that could be bought at a nominal price. If you want still more land or need a mainland base, the whole end of the Bayfield Peninsula is available.

Well, there's the story and we challenge you to find anything seriously wrong with it. America was picked as the location for the UNO capital presumably because it is a melting pot of all nations and already a world state in many respects. You can look the Nation over and you won't find a more typically American area than this one. You surely won't find it in Westchester County, N. Y. We don't have much money or much metropolitan sophistication around here and our pleasures are simple, but we know and practice friendship and harmony, we hate intolerance and discrimination, and we aren't bored with life or hopeless about the future. Perhaps the UNO delegates could even learn a few things from our way of life. We're willing.

Respectfully,

THE WASHBURN TIMES.

Los Angeles County Needs More Than Three Millions for Flood-Control Projects To Carry Out Federal Program

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. McDONOUGH. Under leave to extend my remarks in the RECORD, I include a letter from the Los Angeles County flood control engineer, H. E. Hedger, to the Honorable William A. Smith, chairman of the Los Angeles County Board of Supervisors, which shows the detrimental effect of the inadequate appropriation of only $3,000,000 for flood-control projects in Los Angeles County, the amount recommended by the Appropriations Committee and passed by the House recently.

I trust the members of the Appropriations Committee will take note of Mr. Hedger's letter, which indicates the necessity for reconsideration of this important appropriation.

The letter follows:

LOS ANGELES COUNTY
FLOOD CONTROL DISTRICT,
February 13, 1946.

Mr. W. A. SMITH,
Supervisor, First District,
Hall of Records, Los Angeles, Calif.

DEAR MR. SMITH: This office has recently been advised that the 1947 appropriations bill recommended by the Appropriations Committee of the House of Representatives carries but one construction item of $3,000,000 for flood-control works in Los Angeles County, this sum being allocated to improvement of the Los Angeles River from Niagara Street to a point near Lankershim Boulevard in San Fernando Valley. The size of the recommended appropriation is so small in comparison with the immediate needs of Los Angeles County that it constitutes a serious setback both to the present demand for flood protection to life and property under existing conditions and also to the demand that will arise from future development of the county.

As you know, Congress in 1941 approved a comprehensive plan of flood-control works in this county estimated to cost $186,000,000, of which the Federal Government would provide $163,500,000. Congress has also authorized submission of appropriation requests of a maximum of $50,000,000 to meet Federal obligations under this program. At the time these authorizations were granted it was anticipated that annual appropriations of $15,000,000 or more would be approved by Congress so that construction of the entire program could be completed within a reasonable period of years.

If the current recommendation for a $3,000,000 appropriation is indicative of Congress' attitude toward future appropriations, it is obvious that a period of over 50 years will be required to complete the entire program instead of the 10 or 12 years heretofore anticipated. To make this situation worse, future development of the county will create new flood problems during this extended period.

In order to clearly define the inadequacy of the $3,000,000 appropriation now proposed by Congress, there follows a list of several of the flood-control projects already approved by it for which there is an immediate and urgent need:

San Gabriel River, canyon mouth to Santa Fe flood-control basin	$1,300,000
San Gabriel River, Whittier Narrows flood-control basin	12,500,000
Los Angeles River, Niagara St. to Lankershim Blvd	2,000,000
Los Angeles River, Lankershim Blvd. to Tujunga Wash	2,600,000
Tujunga Wash, Los Angeles River to Hansen Dam	7,500,000
San Antonio flood-control basin and San Antonio Wash to south city limits of Pomona	6,500,000
Los Angeles River, Tujunga Wash to Sepulveda Dam	1,200,000
Lopez flood-control basin and Pacoima diversion channel, from Lopez Basin to Tujunga Wash	7,550,000
Eaton Wash, from Eaton Wash Debris Basin to Rio Hondo	2,750,000
Rubio diversion channel, from Rubio Wash to Eaton Wash	950,000
Compton Creek, vicinity 122d St. to Main St	1,500,000
Sawtelle-Westwood (lower unit)	2,600,000
Centinella Creek, from above Jefferson Blvd. to Ballona Creek	950,000
	49,900,000

All of these projects meet the economic justification required by Federal flood-control laws, and are needed to protect the lives of thousands of people and property valued in hundreds of millions of dollars from future devastating floods.

Since construction of this volume of work would normally require 2 or 3 years to accomplish, an annual appropriation of from $15,000,000 to $25,000,000 would be needed for its consummation. Annual appropriations of less than this order will result in pyramiding of the present hazards to life and property in this county.

It is recommended that all of the congressional representatives of this area be advised of this situation and be urged to make every effort to obtain additional congressional appropriations for Federal flood-control work in this county more commensurate with its needs.

Yours very truly,

H. E. HEDGER,
Chief Engineer.

New Housing Czar

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ROWAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. ROWAN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the January 28, 1946, issue of the Evening Star, Washington, D. C.:

NEW HOUSING CZAR

The increasing gravity of the Nation-wide housing shortage fully warrants the Executive order investing Housing Expediter Wilson W. Wyatt with far-reaching authority to act in this crisis. Reports from many parts of the country tell the same distressing story of shockingly overcrowded apartments and houses, of returning veterans standing in line for hours at housing centers and real estate offices, of conditions growing worse instead of better, despite the end of the war.

Here in the Nation's Capital one has but to pay a visit to the District War Housing Center to get an idea of the problem with which local and Federal officials are faced. In the past 30 days more than 6,500 families and individuals have applied there for rooms, apartments, or houses. Two-thirds of the applicants were veterans of the armed services in desperate need of shelter for themselves and families. Only one-fourth of those who apply succeed in getting their wants supplied.

Under the new Executive order, Mr. Wyatt, former mayor of Louisville, Ky., will have emergency over-all power to seek out and redistribute surplus war housing facilities at abandoned military installations, to expedite production of building materials, and channel them into home-building fields and to recommend measures designed to prevent further inflation of home prices. Upon being appointed National Housing Expediter, Mr. Wyatt was directed by the President to try and eliminate bottlenecks wherever he found them "at whatever level of industry or of government—local, State, or National." This is a large order, requiring the exercise of considerable power, especially in the coordination of the many agencies of Government dealing with housing and related problems. There can be no doubt of Mr. Wyatt's supreme authority, for he not only becomes head of the National Housing Agency on February 1, but takes over from Reconversion Director Snyder all the housing activities of the reconversion office. As Federal housing czar, Mr. Wyatt will have the responsibility of directing the Government's emergency attack on the housing shortage. But he cannot do the job alone. He must have the wholehearted cooperation not only of private industry but of State and municipal officials. In the long run, it is only in the field of private enterprise and community action that remedial measures of a permanent nature can be expected.

Get the GI's Out of India

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. CELLER. Mr. Speaker, American soldiers should forthwith be transported home from all parts of the British Empire. They are becoming involved in the independence struggles of colonial peoples against the British.

The excuse that they are needed to guard American surplus property is just eyewash.

They are being embroiled by the British. The natives, for example, as in India, fail to distinguish between British and American uniforms. Tuesday past 18 American officers and enlisted men were seriously hurt by flying missiles. The United States military police used tear gas to protect themselves. These events are forebodings.

The riots in Calcutta are spreading rapidly. The difficulties are being aggravated by famine. The Province of Madras with 50,000,000 people is facing starvation due to crop failures. Most serious repercussions are expected.

The natives look upon the GI as a possible military aid to the British against them. Famine threatens all of India. Our troops should be enabled to clear out. The hungry Indians will wreak vengeance upon British and American alike. They will regard the American doughboy as alien as the British Tommy.

Every ship and plane should be made available. Some 50,000 are in serious peril.

Of course, the British want them there to pull their chestnuts out of the fire.

California Legislature Endorses Minimum Wage Bill

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a joint resolution passed by the California State Legislature this month.

The resolution recognizes the necessity of an increase of the minimum wage in order to maintain a minimum standard of living and to increase the purchasing power of the Nation.

Following is the text of the resolution:

Joint resolution relative to memorializing Congress to provide for an increase in the national minimum wage structure

Whereas legislation is pending before the United States Congress to increase the minimum wage, prescribed under the Fair Labor Standards Act of 1938; and

Whereas since 1938 the purchasing power of the dollar has declined sharply along with an increase in prices and cost of living, all of which has resulted in an actual decrease in the amount of real wages represented by the minimum wage of the Fair Labor Standards Act; and

Whereas the need of protecting the national purchasing power and maintaining a minimum standard of living necessary for the health, efficiency and well being of wage earners may be at least partially achieved by increasing the present minimum wage; and

Whereas in view of the demonstrated capacity of our country to produce far beyond prewar levels and the need of attaining an economy of full production and abundance, the raising of the minimum standards is a reasonable beginning to this ultimate goal: Now, therefore, be it

Resolved by the Assembly and the Senate of the State of California (jointly), That the Congress of the United States is respectfully memorialized to enact legislation at the earliest possible date to provide for an increase in the national minimum wage structure; and be it further

Resolved, That the chief clerk of the assembly is directed to transmit copies of this resolution to the President of the United States, the President pro tempore of the Senate of the United States, the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States.

The American Medical Association Health Program and Prepayment Sickness Insurance Plans

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. PLUMLEY. Mr. Speaker, under unanimous consent granted, I am extending my remarks and including an editorial from the Journal of the American Medical Association relating to the national health program of the American Medical Association, covering its health program and sickness insurance plans:

THE AMERICAN MEDICAL ASSOCIATION HEALTH PROGRAM AND PREPAYMENT SICKNESS INSURANCE PLANS

At the annual session of the American Medical Association in Chicago in December the house of delegates adopted a resolution instructing "the board of trustees and the council on medical service and public relations to proceed as promptly as possible with the development of a specific national health program, with emphasis on the Nation-wide organization of locally administered prepayment medical plans sponsored by medical societies."

At a series of meetings held in Chicago beginning February 13 the board of trustees and the council on medical service completed considerations which made possible a long step toward protecting the American people against the costs of sickness.

The fundamental step in the development of this plan was the establishment of standards of acceptance for medical care plans which have the approval of the council on medical service of the American Medical Association. Any plan which meets the standards of the council will be entitled to display the seal of acceptance of the American Medical Association on its policies and on all of its announcements and promotional material. In order to qualify for acceptance, the prepayment plan must have the approval of the State or county medical society in the area in which it operates. The medical profession in the area must assume responsibility for the medical services included in the benefits. Plans must provide free choice of a qualified doctor of medicine and maintain the personal, confidential relationship between patient and physician. The plans must be organized and operated to provide the greatest possible benefits in medical care to the subscriber.

Medical care plans may be in terms of either cash indemnity or service units, with the understanding that benefits paid in cash are to be used to assist in paying the costs incurred for medical service. The standards also include provisions relative to the actuarial data that are required, systems of accounting, supervision by appropriate State authorities, and periodic checking and reporting of the progress of the plan to the council.

Coincidentally with the announcement of these standards of acceptance there was organized, as a voluntary federation, an organization known as Associated Medical Care Plans, Inc. This independent association will include as members all plans that meet the minimum standard of the council on medical service of the American Medical Association. The Associated Medical Care

Plans will undertake to establish coordination and reciprocity among all of these plans to permit transference of subscribers from one plan to another and use of the benefits in any State in which a subscriber happens to be located. Under this method great industrial organizations with plants in various portions of the United States will be able to secure coverage for all their employees. Moreover, it will be possible for the Veterans' Administration, welfare and industrial groups, and Government agencies to provide coverage for the people in any given area through a system of national enrollment. In addition the Associated Medical Care Plans, Inc., will undertake research and the compilation of statistics on medical care, provide consultation and information services based on the records of existing plans, and engage in a great campaign of public education as to the medical service plan movement under the auspices of State and county medical societies.

The board of trustees of the American Medical Association also announced establishment of a division of prepayment medical-care plans with a director and a staff who will administer the activities related to the promotion and development of medical-care plans in all the States.

In announcing these proposals for a Nation-wide provision of sickness insurance on a mutual nonprofit basis, the board also presented a complete health program with 10 points, which include the development of services in the field of preventive medicine, maternal and child health, voluntary prepayment plans for protection against the costs of sickness, compensation for loss of wages due to illness, the care of the veteran and the development of a high standard of housing, nutrition, clothing, and recreation.

The American Medical Association last June through its board of trustees and council on medical service announced a 14-point program to improve the health and medical-care situation in the United States. In October 1945 the interpretation of these 14 points and methods of implementation were adopted by the council on medical service. In December 1945 the house of delegates approved the whole program, suggested its rearrangement, and directed the board of trustees to keep the program constantly up to date so that it will stay at least even with and, if possible, a step ahead of the needs of the public.

With this in mind the board of trustees has adopted a restatement of the 14-point program, which clarifies still further the position of the American Medical Association on some of these points and brings into the program more definitely maternal and child welfare, medical research, the medical care of the veteran and the part to be played by the voluntary health agencies.

This restatement follows:

"NATIONAL HEALTH PROGRAM OF THE AMERICAN MEDICAL ASSOCIATION

"1. The American Medical Association urges a minimum standard of nutrition, housing, clothing, and recreation as fundamental to good health and as an objective to be achieved in any suitable health program. The responsibility for attainment of this standard should be placed as far as possible on the individual, but the application of community effort, compatible with the maintenance of free enterprise, should be encouraged with governmental aid where needed.

"2. The provision of preventive medical services through professionally competent health departments with sufficient staff and equipment to meet community needs is recognized as essential in a health program. The principle of Federal aid through provision of funds or personnel is recognized with the understanding that local areas shall control their own agencies as has been established in the field of education. Health departments should not assume the care of the sick as a function, since administration of medical care under such auspices tends to a deterioration in the quality of the service rendered. Medical care to those unable to provide for themselves is best administered by local and private agencies with the aid of public funds when needed. This program for national health should include the administration of medical care, including hospitalization to all those needing it but unable to pay, such medical care to be provided preferably by a physician of the patient's choice with funds provided by local agencies with the assistance of Federal funds when necessary.

"3. The procedures established by modern medicine for advice to the prospective mother and for adequate care in childbirth should be made available to all at a price that they can afford to pay. When local funds are lacking for the care of those unable to pay, Federal aid should be supplied with the funds administered through local or State agencies.

"4. The child should have throughout infancy proper attention, including scientific nutrition, immunization against preventable disease, and other services included in infant welfare. Such services are best supplied by personal contact between the mother and the individual physician but may be provided through child care and infant welfare stations administered under local auspices with support by tax funds whenever the need can be shown.

"5. The provision of health and diagnostic centers and hospitals necessary to community needs is an essential of good medical care. Such facilities are preferably supplied by local agencies, including the community, church, and trade agencies which have been responsible for the fine development of facilities for medical care in most American communities up to this time. Where such facilities are unavailable and cannot be supplied through local or State agencies, the Federal Government may aid, preferably under a plan which requires that the need be shown and that the community prove its ability to maintain such institutions once they are established (Hill-Burton bill).

"6. A program for medical care within the American system of individual initiative and freedom of enterprise includes the establishment of voluntary nonprofit prepayment plans for the costs of hospitalization (such as the Blue Cross plans) and voluntary nonprofit prepayment plans for medical care (such as those developed by many State and county medical societies). The principles of such insurance contracts should be acceptable to the council on medical service of the American Medical Association and to the authoritative bodies of State medical associations. The evolution of voluntary prepayment insurance against the costs of sickness admits also the utilization of private sickness insurance plans which comply with State regulatory statutes and meet the standards of the council on medical service of the American Medical Association.

"7. A program for national health should include the administration of medical care, including hospitalization, to all veterans, such medical care to be provided preferably by a physician of the veteran's choice, with payment by the Veterans' Administration through a plan mutually agreed on between the State medical association and the Veterans' Administration.

"8. Research for the advancement of medical science is fundamental in any national health program. The inclusion of medical research in a national science foundation, such as proposed in pending Federal legislation, is endorsed.

"9. The services rendered by volunteer philanthropic health agencies such as the American Cancer Society, the National Tuberculosis Association, the National Foundation for Infantile Paralysis, Inc., and by philanthropic agencies, such as the Commonwealth Fund and the Rockefeller Foundation and similar bodies, have been of vast benefit to the American people and are a natural outgrowth of the system of free enterprise and democracy that prevail in the United States. Their participation in a national health program should be encouraged, and the growth of such agencies when properly administered should be commended.

"10. Fundamental to the promotion of the public health and alleviation of illness are widespread education in the field of health and the widest possible dissemination of information regarding the prevention of disease and its treatment by authoritative agencies. Health education should be considered a necessary function of all departments of public health, medical associations, and school authorities."

During the coming weeks the Council on Medical Service will announce the activities that will be followed toward promoting the prepayment medical-care plan and also the standards of acceptance that have been developed for such plans. The division of prepayment medical-care plans in the headquarters office will soon be active in aiding the development of plans in areas which do not now have them and in coordinating existing plans.

The policies of the association as expressed in the national health program may well suggest to legislators in the Senate and in the House the point of view of the medical profession as to the part that the Federal Government can play in extending necessary medical services to those who do not now have them.

The St. Lawrence Seaway and Power Project

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement which I made before a subcommittee of the Senate Committee on Foreign Relations last Friday, February 22, 1946, in which I stressed again the need for the St. Lawrence seaway and power project. Senator HATCH presided at the hearing, the proceedings of which follow:

Senator HATCH. Congressman RABAUT, it is a pleasure to have you with us this afternoon. For the purpose of the record, will you state your full name and the district which you represent?

Representative RABAUT. Senator HATCH, my name is LOUIS C. RABAUT. I am a Member of Congress from Grosse Pointe, Mich. My district includes a good part of Detroit.

I am very happy to come here today to lend my voice to this most worthy proposition. I am happy to see here Senator HATCH, our colleague, who came to Detroit and did much to convince the citizens of our area of the worthiness of the St. Lawrence seaway and power project.

Senator HATCH. I may say, Congressman RABAUT, as you know, that with all the business around the Capitol here, the other members of the subcommittee are not here because they are all engaged in other committee work this afternoon. It is just impossible to be in two places at the same time.

Representative RABAUT. I am very happy to talk with the cream of the crop.

Senator HATCH. Oh! We thank you, sir. We understand how your represent your district in Congress.

Representative RABAUT. I, too, am chairman of a Subcommittee on Appropriations, and sometimes I sit alone. But for that reason the witnesses receive no less accord. But I shall get into my statement.

THE TASK AHEAD—UTILIZATION OF RESOURCES FOR THE COMMON GOOD

Today, as in other momentous periods in American history, our Nation is faced with a new challenge to make a democracy work through the voluntary cooperation of its citizens. In the war that has just ended, we were able to mobilize our resources of labor, capital, and management through the limitless initiative of our people. The task that we face in the postwar world calls for the mobilization of our resources in men, machines, and money to achieve, for the happiness of our people in peacetime, production, and employment as great as that achieved for the destructive purposes of war. The achievement of this peacetime objective will be an even harder task, for it must and should be accomplished through voluntary democratic processes rather than through wartime measures of compulsion.

The elements of prosperity after the war consist of full production, full employment, the fullest development of our natural resources, and unhindered exchange of goods and services between nations. The main effort must be made by private individuals and firms to create wealth through the common effort of workers, capital, and management. It should be a basic objective of our Government to create the environment in which our private citizens can exercise their initiative to the fullest for the accomplishment of this result.

There are many undertakings which will contribute to the creation of jobs and opportunities which our people must undertake through their Government, by democratic means. An outstanding example of such an undertaking—one which will create new opportunities for manufacturing and trade—is the Great Lakes-St. Lawrence seaway and power project. Legislation concerning this project is now before the Congress.

The joint resolution, which was introduced in both Houses of the Congress on October 2 and is known as the Barkley-Sabath bill, provides for approval of an agreement entered into between the United States and Canada on March 19, 1941, to develop jointly the navigation and power resources of the Great Lakes-St. Lawrence Basin.

The fact that international boundary waters are involved, properly brings this development within the scope of the Federal Government. It is not a violation of the principle of private enterprise to insist that the Federal Government undertake this project for the benefit of the people.

THE ST. LAWRENCE PROJECT—A CHALLENGE TO OUR NATIONAL GENIUS

Let me briefly state what this project is, what it will accomplish for our people, and what efforts have been made and are being made to bring about its approval and construction.

We who have lived on the shores of the Great Lakes and its connecting waters have enjoyed the benefits of cheap water transportation over a distance of 1,200 miles from Duluth, Minn., to Ogdensburg, N. Y. It is correct to state that the agricultural and industrial enterprises of the mid-continent of America owe their existence to a large extent to cheap water transportation on these land-locked seas. We have been handicapped, however, by not having direct access to world markets in low-cost, deep-draft, ocean-going vessels. There is a stretch of 113 miles between Ogdensburg, N. Y., and Montreal, Canada, on the St. Lawrence River, where a series of rapids prevents large cargo vessels from entering the Great Lakes. One of the major purposes of the St. Lawrence project is to build dams and canals along this stretch of the St. Lawrence, with the locks necessary to permit ocean-going vessels to travel from Great Lakes ports, such as Buffalo, Cleveland, Toledo, Detroit, Chicago, Milwaukee, and Duluth to foreign ports. It is the aim, also, to enable deep-draft ships to travel between these inland cities and Boston, New York, and other coastal cities in the United States.

These locks and canals will be located at the International Rapids section of northern New York, at the Soulanges Rapids in the Province of Quebec, and at points near the site of the Beauharnois power station and the city of Montreal at the LaChine Rapids.

The Niagara River and Niagara Falls between Lake Erie and Lake Ontario are already bypassed by the Welland Canal, which was completed in 1932 at the expense of the Canadian Government. This canal, as well as the MacArthur lock at the Sault Ste. Marie, have the same dimensions as the proposed St. Lawrence locks and canals. They will form a part of the completed seaway.

In addition to bringing ocean-going vessels into the Great Lakes, the St. Lawrence project, as provided by the agreement of March 19, 1941, between the United States and Canada, contemplates the construction of a power dam at the International Rapids, near Massena, N. Y. This generating plant will have a total capacity of 2,200,000 horsepower, with an annual average output of 13,000,000,000 kilowatt hours. This amount of electricity, which will be obtained from one dam, is greater than the total amount of electricity produced in 1941 by all of the TVA dams together, and is three times as great as the celebrated Dnieper power project in Russia.

This power will be divided equally between the United States and Canada, with appropriate adjustments of costs between the two countries. Provision is made in the pending Barkley-Sabath bill to have public administration of this power by the State of New York, with the condition that the interests of other neighboring States will be protected. Thus, the people of Vermont, New Hampshire, Massachusetts, and Connecticut, as well as the 13,000,000 people in New York State, can benefit through low-cost power supplied from the St. Lawrence River.

In the Middle West, our interest, of course, is essentially in the seaway. I mention the power project because it has a direct bearing upon the seaway, insofar as the users of power will assume and pay for a substantial portion of the cost of the project. To the extent that the power will be a self-liquidating part of the project, this contribution will reduce the total cost of the seaway.

As an engineering enterprise, this project is even more challenging than Grand Coulee on the Columbia River. As an economic undertaking, it is as promising of great benefits as TVA and the Panama Canal combined.

IT IS READY—LET'S TURN A SPADE AND BUILD IT

The St. Lawrence project has been repeatedly surveyed and studied from the point of view of both engineering and economic feasibility ever since 1895. The right to utilize the waters of the St. Lawrence River has been a public issue ever since 1896, when private groups became interested in developing power. Public interest in its development has been constant since the administration of Woodrow Wilson in the First World War.

Not only is the project deemed feasible from an engineering point of view by eminent international engineers, but the blueprints for its construction have already been prepared. Today the St. Lawrence project stands as one of the few projects in the Nation ready to be put into construction as soon as the United States Congress and the Canadian Parliament approve it. This is an important consideration, because the St. Lawrence project can be ready to provide useful and productive jobs for many of our boys as they return from overseas.

FROM BLUEPRINT TO BULLDOZERS

Over a period of five decades, numerous studies and reports have been presented by the International Joint Commission and especially appointed Canadian-American joint boards of engineers. The most extensive and definite studies were those of 1920, 1926, and 1941.

The economic phases of the St. Lawrence project have also been thoroughly canvassed by the International Joint Commission in 1920, by the Department of Commerce under Herbert Hoover in 1926, by the Interdepartmental Board of 1934, and the most definitive study of all, by the Department of Commerce under Jesse Jones in 1941. These studies conclusively prove that the navigation, as well as the power phase of the St. Lawrence project, will be of great national benefit.

On the diplomatic front the first official steps, looking toward initiation of action by Canada and the United States for the construction of a deep waterway were undertaken 30 years ago. Interrupted by the First World War, it was not until 1919 that the International Joint Commission, established under the boundary waters treaty of 1909, started extensive inquiry throughout the country. The Commission reported favorably on the project in 1921.

In the administrations of President Coolidge and President Hoover, the issue was kept alive, and finally President Hoover succeeded in concluding a treaty with the Canadian Government. This treaty was submitted to the Senate in November 1932. The Senate Foreign Relations Committee held extensive hearings from November 1932 to February 1933. An overwhelming majority of the committee recommended the approval of the treaty.

Through various parliamentary tactics the opposition succeeded in delaying a vote on the project for over a year, until March 1934, when a majority of the Senators voted for ratification, but the treaty did not receive the necessary two-thirds vote.

The opposition then, as now, came from the port cities of the Atlantic and Gulf coasts and from the eastern railroads and utilities, using, of course, their affiliations in other parts of the country. It was a tragedy that the project was not constructed during the depression decade of 1930 so that it would have been ready when the national emergency arose in 1940.

It was not until March 1941 that a new agreement was signed, at a time when the country was already upon the threshold of war. By that time it had already become obvious that all the arguments against the project in 1933 and 1934 had proved groundless, that we were faced with a transportation shortage and deficiency of power to meet the demands of war. In the course of the extensive hearings held by the House Committee on Rivers and Harbors during the summer of 1941, even the opposition admitted that the project would have been of substantial advantage to the defense program if it had been authorized in 1934 and constructed in the intervening period.

Practically the whole Cabinet and most of the principal officials of defense agencies appeared before the House Committee on Rivers and Harbors urging immediate construction of the St. Lawrence project as a national measure of first importance. Among those who endorsed the project were Secretary of

War Henry Stimson, Secretary of Navy Frank Knox, War Production Director William Knudsen, Deputy Chief of United States Engineers Maj. Gen. Thomas M. Robins, and Secretary of Commerce Jesse Jones.

Two weeks later this country was plunged into war. It was not possible, therefore, to undertake this great project. Fortunately, President Roosevelt had the foresight to authorize the United States Corps of Engineers to prepare the engineering designs. The blueprints are ready. The country is now waiting for Congress to act. Let us give the Army engineers the green light so that they can convert the blueprints into cement and mortar. Let us get out of the way of our men and machines so that the returning veterans and war workers and the surplus steam shovels and bulldozers can get to work on the greatest construction job in the world.

THE BARKLEY-SABATH RESOLUTION POINTS THE WAY

Joint resolutions have been introduced by Majority Leader BARKLEY in the Senate and by Judge SABATH and my colleague Congressman DINGELL in the House. These measures have bipartisan support and represent the effort of this Government to fulfill the obligations entered into by signing the Canadian-American Great Lakes-St. Lawrence Basin agreement of March 19, 1941.

President Truman in his message to the Congress on October 3 urged speedy enactment of this legislation so that work may start at the earliest possible time. He pointed out that the development of similar water resources had shortened the war by many months—even years, and saved countless American lives. The atomic bomb itself which did so much to end the war with Japan was made possible to a large extent by utilization of a large amount of electricity from the Tennessee and Columbia Rivers. He said also:

"The St. Lawrence seaway will make it possible to utilize our war-expanded factories and shipping facilities in the development of international economic cooperation and enlarging world commerce. New and increasing opportunities for production and employment by private enterprise can be expected from this cheap water transportation."

The power resources of the St. Lawrence River will be available for distribution within a radius of 300 miles. This will include most of New York State and New England. President Truman said: "By development of our natural water-power resources, we can look forward with certainty to greater use of electricity in the home, in the factory, and on the farm. * * * This will mean more jobs, more income, and a higher standard of living."

When President Roosevelt said these things the opposition immediately jumped up and said this is "Roosevelt's pet project" and shouted just another boondoggle, or another TVA. This was the theme song for 10 years whenever the subject was brought up in spite of the fact that President Coolidge as early as 1923 considered this project and I quote: "A capital investment which will be reproductive, as evinced by the marked increase in revenue from the Panama Canal. Upon these projects depends much future industrial and agricultural progress."

And when Herbert Hoover signed the Canadian-American Treaty of 1932, he said:

"The signing of the Great Lakes-St. Lawrence Waterway Treaty marks another step forward in this, the greatest internal improvement yet undertaken on the North American Continent."

Then he continued:

"Its completion will have a profoundly favorable effect upon the development of agriculture and industry throughout the Midwest. The large byproduct of power will benefit the Northeast. * * * The project is of first importance to the whole continent."

AN ALL-AMERICAN JOB

This is not a New Deal, nor a Democratic, nor a Republican project. It is an American job; the greatest constructive project of the continent. The United States and Canada should be proud to undertake it. It is a project that belongs to the whole of North America. And President Truman in strongly endorsing the subject is not speaking for any one section of the country, for Missouri, Michigan, Massachusetts, New York, or any other single part. He is speaking for the whole of the United States of America when he says:

"One of the great constructive projects of the North American Continent, in fact, one of the great projects of the world, which was delayed by the exigencies of war, is the St. Lawrence seaway and power project.

"For 50 years the United States and Canada under both Republican and Democratic administrations, under Liberal and Conservative governments, have envisioned the development of the project together, as a joint enterprise.

"Every engineering investigation during the past 50 years, every economic study in the past 25 years, has found the project feasible and economically desirable. The case has been proved; the plans are ready."

THIS IS WHAT WE GET

Let me summarize briefly the things that this great project will do for our country:

1. Through the supply of cheap electricity, it will help the development of new industries in New York and New England States, thereby providing employment, purchasing power, and a higher standard of living to almost a quarter of the population of the United States, which gives the best market for the products of the rest of the country.

2. It will provide low-cost, deep-water transportation from the farms and factories of the Middle West to the markets of the world.

3. It will bring the States bordering Lake Huron, Lake Erie, and Lake Ontario nearer to Europe by water in comparison with present routes via the north Atlantic ports.

4. It will bring cheap water transportation to and from the Great Lakes cities and the Atlantic, Gulf, and Pacific coasts.

5. It will reduce other land transportation costs competitively, thereby increasing total traffic for both rail and water carriers.

6. As a result of greater industrial activity and greater transportation service, it will increase the market for coal.

7. It will protect the steel industry in the Great Lakes area against the possibility of obsolescence due to exhaustion of iron ore reserves in the Lake Superior region.

8. It will generally tend to check monopoly and to induce lower prices of products produced and consumed in the Middle West as well as on the Atlantic coast with the result that the public will be able to buy more and industries will expand production and will have more jobs to give.

No other country in the world would hesitate to develop such a great resource. Soon we shall have to decide in the Congress the amount of financial aid we must give to other countries and the sums will be large. A substantial part of those sums will be spent abroad in the development of just such projects as the St. Lawrence. On the rivers of Europe and Asia, on the Danube, the Volga, the Yangtze, and many other streams of the world, American money and technology will be used to develop waterways and power. And we must admit it is the best kind of use to which they can put their available manpower and the resources they borrow from us, for the improvement of the standard of living of those people is our best chance of peace in the future.

But we would be willfully deficient in foresight if we gave our resources to the development of rivers in other countries, while we declined to take advantage of our great opportunities on this continent. The chance of survival in a world ill at ease is through the development of our natural resources, out manpower, and our technology to the utmost.

LET US ALL PULL FOR THE U. S. A.

In the many years that I have been in Congress, I have supported projects far away from my home State. I have voted for TVA, I have voted for the Columbia River development, I have voted for improvements in California, Texas, Alabama, Georgia, New York, Michigan—all over the country, because I felt that this is all my country, just as it is yours, and any improvement in any part of it is a national asset which we should all cherish without sectionalism.

I appeal to my colleagues in Congress to support this great undertaking which has been proposed by both Democratic and Republican administrations for over 20 years. When the St. Lawrence seaway is completed and in use, we shall be proud that we had a part in creating one of the greatest projects built by mankind.

Senator HATCH. You know, during the years of my life spent in the practice of law, in the trial of cases I always liked to conclude a case, especially if the jury was going out over the week end, with one strong witness. I think you were well chosen by the proponents of this resolution to close their case this afternoon.

General Anders Gives Lie to Soviet Accusations

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article printed in the New York Times on February 18, 1946. It is an interview with Gen. Wladyslaw Anders, the heroic leader of the Second Polish Corps, which covered itself with glory during the Italian campaign and won the praise of all the free world when it stormed the slopes of Monte Cassino. General Anders and his soldiers—our undaunted allies—were recently chosen by Soviet Russia and its Polish quislings, such as the notorious Oscar Lange, the so-called Ambassador of Poland in this country, for a target of vicious attacks.

Here is the answer of a brave soldier—not a quisling, like the so-called Ambassador Lange:

GENERAL ANDERS SCORNS RUSSIAN CHARGE THAT POLES IN ITALY MENACE PEACE—PUTS NUMBER OF TROOPS AT 107,000, SAYS THEY GET ALONG WELL WITH ITALIANS AND NOTES THAT THEY FOUGHT FOR FREEDOM

ROME, February 17.—Gen. Wladyslaw Anders, commanding the Polish forces here, ridiculed Russia's charges that his army was a menace to world peace, and he declared in an interview here today that Poland was helpless in the Russian grip. His people are ready to return to Poland, he said, "when Poland is free and ruled by Poles." But not before.

Opposing the idea that the Allies might ship them to Poland willy-nilly, to be dealt

with as the Warsaw Government saw fit, General Anders said:

"We want to be free in Poland just as Americans are in America and the English in England."

Scoffing at the Russian accusation in the United Nation Security Council that Polish troops here are "a possible future threat to peace" and are "aggressive and ostensibly threatening," he asked:

"I wonder who is preparing for war? The 107,000 Poles of the Second Corps or the millions of Russians? Is it one Polish corps of eight brigades, scattered from Udine to Gallipoli (in the extreme south of Italy), that is a danger to the world or is preparing for war?"

CITES WORK OF TROOPS

General Anders said many of his troops were required to serve only on alternate days and that 10,000 of them had been detached for study in civilian schools.

"How could maneuvers be carried out with troops on such short notice?" he asked. He said the troops were occupied chiefly with guarding stores and maintaining bases.

There are 1,000,000 Russians in Poland either in Polish uniform, in ostensibly Polish units or dressed as civilians, General Anders said, all there on the pretext that they are necessary to help the Government keep order.

Asked about the accusation that he organized or directed a terrorist organization against the Warsaw Government, General Anders said, "That is idiotic."

Speaking excellent French, General Anders expressed himself quitely and calmly but with force and with evident deep feeling.

"Does any real Pole want any more Polish blood to flow?" He asked. "We have been accused by the Warsaw Government of dropping weapons and ammunition from the air to terrorists in Poland. If anybody did that it would not be us because even if you suppose we wished to do it we have no aircraft. The charge is ridiculous."

When it was suggested that some compromise must be found to allow their return home, General Anders said:

"Compromise depends on politicians. I am a soldier, but I know the answer must be found in Moscow, not Warsaw. Three-fourths of those directing Poland now are Russian citizens, not Poles.

"We do not want to stay somewhere else. We want to return to Poland—when Poland is free and ruled by Poles. We ask only, as I said, to be free in Poland as Americans are in America."

RELATIONS WITH ITALIANS

General Anders said that in addition to his forces totaling 107,000 there were probably ten or fifteen thousand civilian Poles scattered through Italy and the Middle East who were unwilling to return under present conditions. Of foreign reports mentioned here that Poles were causing trouble in Italy with the Italians, particularly Italian Communists, he said relations were excellent and that any occasional quarrels were individual disputes. He accused some of the Communists of trying to provoke trouble, but he said the best proof of the general attitude was that in Ancona, where he has his headquarters, the local government was headed by a Communist but it had made him honorary citizen.

The same is true in Bologna, where the mayor and deputy mayor are also Communists, he continued. The Fifth Polish Division at Forli has just received a "flag of honor" from the Communist mayor there, he added.

"My men have strict orders not to mix in politics and offenders are severely punished," said the general. "They are free to read any propaganda they wish from the Warsaw Government, and every man is completely free to leave if he wishes."

He said a total of 15,000 of his troops had returned to Poland but that many had made their way back to Italy after seeing the situation in Poland, although the return was extremely difficult.

General Anders declared that there was a false impression abroad that his people represented the middle class or wealthy land owners.

Child Care

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mrs. DOUGLAS of California. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include an editorial from the Washington Post, dated February 20, 1946, on child care, as follows:

CHILD CARE

The closing of child-care centers in the District will work a severe hardship—and a wholly senseless one—upon the mothers and the children who have made use of them during the war. The centers are now financed under a Federal Works Agency fund which will expire at the end of this month. A mother's committee on child care has petitioned the District Commissioners to seek a deficiency appropriation with which to keep the centers in operation for the balance of this fiscal year, that is, until June 30. And they have presented a constructive, practical proposal for the payment of operation costs by those who can afford to do so—public funds to be supplied only to enable the attendance of children whose mothers cannot pay. But the Commissioners have rejected this proposal out of hand, without affording the mothers even a public hearing. They have rejected it, moreover, for as silly a set of reasons as has ever been put on record by a public body.

The Commissioners are reported to have objected to the proposal on the ground that it would amount to a State subsidy to mothers to leave their children for the day and go to work. The Nazi view that women should be confined to Kirche, Kinder, Kueche seems to have found exponents over here. Commissioner Guy Mason, with what seems to us shocking obtuseness if not callousness, told reporters that any mothers who, by working, would be the sole support of their children, could stay home and apply for the program of aid to dependent children—which would allow an average monthly grant of $65.67. That these centers have social utility in themselves and afford advantages to the children as well as to their mothers does not seem even to have entered the consideration of the Commissioners.

The children themselves are greatly benefited by the experience of association with other children and by the constructive guidance of teachers skilled in child care. The time spent in these centers no more deprives them of the advantages of home life than the time spent by older children in the public schools. We believe, indeed, that the child-care program should eventually be made a regular part of the public-school system on a voluntary basis. We should have healthier and better-developed children as a result. But in any case the limited child-care program now in operation should be continued as a matter of urgent need. The mothers desiring it deserve at the very least an open hearing on the part of the Commissioners. It is apparent that the Commissioners have a good deal to learn.

A Little Fellow Writes to His President

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. RABAUT. Mr. Speaker, Mr. Tremon D. McDermott, a small businessman in Detroit, has written an open letter to the President. I feel that Mr. McDermott is representative of thousands of others who, although inarticulate, are seeking leadership in these critical days and are turning to our President.

In a Democratic administration they see the hope for a stable economy where in even the little fellow can live in peace and prosper in accordance with his own efforts.

Under leave to extend my remarks in the RECORD, I am including this letter, which speaks for itself. It first appeared in the Detroit Democratic News under date of February 22, 1946:

Hon. HARRY S. TRUMAN,
President of the United States,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: I am just a little fellow who can be just as fair as Benjamin F. Fair-less, president of the United States Steel Corporation, who wrote you a letter and published it as a full page advertisement in the Detroit newspapers recently during the early days of the big strike.

I am just a little fellow, a small businessman like you were in Kansas City before destiny picked you to save America in the greatest labor crisis of all time.

You, Mr. President, know what it means even to go broke in a little business; you know the heartaches and the headaches of all the other little fellows in our country.

As a little fellow, I buy and sell automobiles, used cars and new ones when I can get them. I live in Highland Park, a small community in the big city of Detroit, where people pray, take a shot now and then, and play poker; you know what I mean. We are doing more praying now than asking for college degrees.

I am a little fellow too in politics. I hold a job as a deputy court commissioner—just a little job. In court I am a nonpartisan, on the car lot I am a Democrat. I am chairman of the New Democracy Committee, successor of the New Deal, declared dead by our late President Roosevelt in one of his campaign speeches. We want to build the kind of a new democracy our boys fought for over there.

I, Mr. President, am still a little fellow; you, called by providence, have become a big fellow. But you, Mr. President, are still a little fellow at heart. You are still another one of all of us. We trust you. We are men and women of faith, great faith in God and country.

The hot heads of big business and the hot pants of union labor, now in a finish life-and-death fight, turn to us little fellows for sympathy and support. We little fellows are afraid of both the reactionaries and the radicals in both groups.

But, Mr. President, we are not afraid of you. You are one of our school of thought, humanity first, profits second. Why do you not turn to us in this hour of peril.

You have asked the American people to unite for prosperity. We need a little clarification. Let us be a little more specific on

who shall unite and for whose prosperity. Kerosene and water do not mix. Neither do big shots and little shots.

Why not appeal direct to us little fellows to unite for the good of all?

The small steel maker, the small producer of food products, the small manufacturer, the small businessman, the independent-thinking little fellows of America believe in the good-neighl or policy of cooperation and our country's peaceful way of life.

We little fellows here in Detroit, sitting on the hottest seats in the world today, both Democrats and Republicans, appeal to you, Mr. President, to become the Commander in Chief of the little fellows of the Nation. May we suggest Mr. President, that you pass on the details of the mobilization to the Patman committee of the House of Representatives, the only friend, we believe, we have left in Congress.

Giants, battling in the forest of doubt, reverting to cave-man tactics will never drop the clubs, either for God or country. We little fellows, by united effort, can talk in the language of the savages, overwhelm them both and tie them to the nearest tree.

Who won the war? The GI Joes. Who can win the peace? The Joe Doakes.

Respectfully yours,

TREMON D. MCDERMOTT.

Senator Mead Opposes St. Lawrence Project

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following which is an address by Senator JAMES M. MEAD, of New York, delivered before the Labor and Industry Committee of New York State, covering the opposition to the St. Lawrence project, which meeting was held at New York City on February 25, 1946. In his address the distinguished junior Senator from New York clearly and forcefully sets forth the bases of his objections to the proposed St. Lawrence project. The address is as follows:

Mr. Chairman and friends, in the past you have heard from speakers who have represented the views of labor, those who have spoken for the shipping, or the railroad interests, and from the point of view of the manufacturer. I desire to speak to you today from the viewpoint of the legislator who looks to the hearings, to the debates, and to the record for the facts and for the justification of the proposals before him for determination. The record, to him, is like the testimony or the evidence before the judge or the jury. The legislator cannot be expected to be intimately acquainted, from the point of view of experience, with the problems that affect each industry of the community he serves. But he can and must familiarize himself with the information that is presented to the legislative body to which he belongs.

In the matter of the St. Lawrence seaway, the record is voluminous, of long standing and it has been presented to the National Legislature on several occasions. On July 18, 1932, the Governments of the United States and Canada signed at Washington, the Great Lakes-St. Lawrence Waterway Treaty, providing for the construction of a 27-foot waterway. This treaty was referred to the Senate Foreign Relations Committee and extensive hearings were held during 1933. After these hearings the treaty was reported favorably and considered on the floor of the Senate for a considerable period of time when it was finally voted upon. The treaty was rejected by the Senate in March of 1934 by a vote of 46 to 42, and therefore not approved by the Senate because it lacked the necessary two-thirds vote.

Next, an agreement was entered into between the United States and Canada dated March 19, 1941. This agreement provided for the conclusion of the seaway and power project. Because it was submitted in the form of an agreement instead of a treaty, the matter was referred to the Senate Commerce Committee in the Senate, but no action was taken by that committee on the agreement.

On September 28, 1943 Senator AIKEN introduced in the Senate (S. 1385), a bill to approve the agreement which was entered into on March 19, 1941. This bill was referred to the Commerce Committee of the Senate, and the committee held extensive hearings. The hearings were confined primarily to the constitutional issue of whether the agreement should be submitted to the Senate for its advice and consent to ratification as in the case of a treaty. Although no formal report was made by the committee, the committee was of the opinion that the matter properly constituted a treaty instead of an argument and that therefore it should be considered by the Senate Foreign Relations Committee instead of the Commerce Committee. However, an effort was made to bring about the approval of the 1941 agreement through an amendment from the floor of the Senate on a pending rivers and harbors bill. This amendment was defeated on December 12, 1944 by a vote of 56 to 25 and thus the agreement was rejected.

Now a further effort is being made to secure the approval of the 1941 agreement by the introduction of Senate Joint Resolution 104, provision being made in this resolution for excepting from the approval of Congress certain articles of the 1941 agreement, and this resolution has been referred to the Senate Foreign Relations Committee where hearings are now under way.

Last week the proponents of Senate Joint Resolution 104 were heard by the Senate Foreign Relations Committee while the opponents are being heard this week.

While there are two strongly supported sides to this vital and important question contained in the record, there is considerable evidence presented by reputable witnesses and from reliable sources indicating that the seaway will adversely affect the railroads, the canal systems, especially the rail and waterways of our State the great ports of Buffalo and Albany as well as the greatest of all ports, that of greater New York. There is evidence in the record that it will likewise leave a blight upon the communities of the southern Tier, those along our barge canal system and also those communities whose futures depend upon the big centers of population that will be adversely affected by this legislation.

There is evidence in the record from the spokesmen of the shipping lines on our Great Lakes to the effect that their industry will be crippled by the cheap competition of alien tramp steamers which will compete with them for available traffic. Not only will the fleets that ply the Great Lakes and those that navigate our barge canal system suffer from this competition, but the seamen who man these ships and whose wage standards and working conditions are in keeping with American standards and practices, will find themselves sharing their seasonal employment with the underpaid and overworked seamen employed on foreign flag ships. There are to be found in the record also, statements made by representatives of the power authority of our State. There are likewise to be found, resolutions adopted by our legislative body memorializing the Congress on this subject.

Many spokesmen have been heard who presented their views as to the position taken by our State on this vital question. It is my opinion that a fair and reasonable review of the entire record as it pertains to the policy which our State has adopted, will make it abundantly clear that the State, over the years, has favored the power project, while opposing the seaway.

Naturally, there are to be found men in public office who favor the seaway, as well as those who are pronounced in their opposition to it. But the State policy I have in mind is that which has received the approval of our legislative body when called upon to speak for the people, when resolutions concerning the seaway were before them for action. In the debates upon this question before the Senate of the United States in 1934, the question of separating the power from the seaway was raised and it is my opinion that if the separation had been agreed upon at that time it would, in the end, have unquestionably received the Senate approval.

In the hearings and debates on the legislation creating the power authority in our State, the question of power development was the one question that was emphasized. Because the record with reference to power development is clear, and because I have made my position known time and again in support of power development, I shall discuss with you that portion of the measure which involves the question of transportation.

Under present circumstances we have a surplus of transportation in our State. Our systems of transportation, highways, airways, waterways, and railways, for the most part, radiate from the great port of New York to the principal cities and shipping points of our State and neighboring States. During the war when the air lines, barge canal lines, and highway transportation systems were unable because of material, equipment, and manpower shortages, to make their fullest contribution to the carrying of our heavy wartime traffic, the great burden of the task was placed upon our railroads. You are all familiar with the situation. The Federal Government requisitioned the airships. Maritime workers, along with their ships and barges, were taken from the lakes and canals to duty elsewhere. Shortages of gasoline, tires, or automotive parts all had their effect upon wartime traffic problems. However, and with all the changes and restrictions and shortages, our transportation systems, mainly the railroads, carried the unusually heavy load of traffic throughout the days of the war.

At times they piled up so much traffic along our ocean ports that cargo ships were unable to carry the goods away, with the result that new storage depots and holding points had to be established to store freight while it was held up awaiting shipping facilities. If our canal system had the ships and the manpower it could have carried 50 percent more traffic than it did. If our highway systems had the material, the equipment, and the manpower they too would have taken some of the traffic carried by the rail lines. If we had the air lines and the plants to produce more airships the railroads' task would have been lightened considerably.

Today conditions are vastly different. The remarkable advances made in science and in engineering will make it possible for each system of transportation to carry an ever-increasing volume of freight and passenger

traffic. The railroads, with modern lightweight equipment, with Diesel-electric or steam turbines or electric locomotives, can haul from 20 to 30 percent more traffic than was the case before the war. Our air lines are expanding rapidly throughout the State and throughout the globe. New lines and additional schedules are being added at brief intervals to the existing system. Experts have predicted that there will be 500,000 planes of all types in the air within the next 10 years. The Federal Government constructed thousands of airports during the war and they have already authorized the expenditure of billions of dollars on new airports, to be constructed as rapidly as conditions permit.

The volume of freight, of express, of mail, and of passengers that will travel by air will increase amazingly and continuously with each succeeding month. For the most part, these lines, whether they be intrastate, interstate, or international, radiate out of the great international metropolis of the world, the city of New York. The highway system, with magnificent throughways as well as four and even six-lane freight and passenger highways, will become a reality in the very near future.

New, modern, palatial passenger buses are being manufactured. Strong, powerful, lightweight trucks are on the assembly lines and here again the Federal and the State governments have appropriated billions of dollars for the construction of highways throughout the country. Our highways will compete with every other system in these postwar days for their full share of the load.

New York, of all the States, preserved its waterways. In fact, we even expanded and enlarged our canal system until today, and again radiating out of New York we have a barge-canal system connecting New York with Oswego on Lake Ontario and with Buffalo on Lake Erie. In addition, we have a canal system between Albany and Montreal. From New York to Albany the system is a seaway capable of accommodating ocean-going vessels.

The advances in the development of ships of all types urgently required for military purposes is one of the most constructive chapters of the Nation's war-production effort. Here, great progress is evident. Amphibious boats, landing craft, and small sea-going cargo ships are to revolutionize shipping on our inland rivers and canals. Ships to carry cargo from Great Lake cities to the Atlantic seaboard ports, to Gulf ports, and even to foreign ports are a reality now. These ships will very readily navigate the waters of the Great Lakes, the barge canal, and the Hudson River. Experts tell us that the LST-type of landing craft will take on and deliver cargo, including truck trailers, with or without the convenience of docks and port facilities. This type of ship will reactivate our canal system and increase its carrying capacity tremendously. Amphibious craft, we are told, will save time and costs where bridges and ferrys and long-distance runs are required under present-day conditions.

Proposals have already been made by an Albany transportation company for the purchase of surplus ships of these types. The Ford Motor Corp. is already equipped with cargo carriers capable of navigating the Lakes, the canals, and the Atlantic seaboard. Engineers employed in the designing of small ships tell us that we are on the threshold of the greatest advance in this field of transportation.

With all these improvements in rail, air, land, and water transportation, we will double our maximum transportation carrying capacity within the next few years. With the coming of this intensified competition, with bigger power units, and lighter though stronger equipment, transportation costs will come down and all the traffic from the Great Lakes area will be carried to the sea, most of it to the Port of New York, more speedily, more economically, than ever before. Traffic will be carried over our State systems without that seasonal interruption that will close the St. Lawrence solidly for 5 months in every year. When winter comes and we lay up part of our inland fleet and use the rest perhaps in the Hudson, in the Sound, and in the coastwise trade, our rail, air, and highway systems, if financially sound and equipped with modern equipment, will carry the winter's traffic from the West into the great Port of New York without difficulty.

There are therefore two thoughts that I would like to leave with you. One is the question of the character and the nature of the competition, the seaway will give to these existing systems of our State that now carry the traffic. The other is this—is it necessary for us, under present-day conditions, to bring in that outside competition or would it be better for us to give full play and encouragement to the vast expansion and improvement in the systems that now serve our community and our State. If encouraged they will spend millions on new equipment. If not, they will find themselves where they were before the war.

Congress has already authorized the expenditure of billions of our taxpayers' dollars for improvements in our airways, our highways, and our waterways—all of which will not only add immensely to our traffic-carrying capacity, but will likewise present a problem in competition for our own railroads to meet.

During the war, great reliance was placed upon the railroads of the country. They carried to the ports of embarkation our fighting men, their equipment, and their matériel. Without the railroads, we are told by our military leaders, we could not have won the war. The strain under which the railroads labored left their equipment and the roadbeds in need of repairs. They must rebuild their plant at great expense to them. While doing so they must continue to pay huge sums in taxes to our State, our cities, and to every tiny hamlet through which they run.

With the realization of our absolute dependence upon our railroads in time of national emergency, we must maintain them, either through profitable operations or by means of Government subsidy. If the cream of the summer's traffic is taken from them and routed through the St. Lawrence, they will be left with the less profitable traffic of the winter season when the St. Lawrence is frozen over. If the tramp steamers of other nations are to bring into our Great Lakes ports British and Russian coal as ballast, then no longer will the railroads haul the profitable train loads of coal from our mines to our Great Lakes ports. If the seaway carries the remarkable tonnage its advocates prophecy for it, then the railroads along with the waterways and the highways of our State will suffer from this new competition. If the high standards that characterize employment on our systems were not at stake, the competition would not prove as threatening as it does. The compensating prophesies of the enthusiastic advocates of the seaway, which include the building of a great industrial empire along the banks of the St. Lawrence, might be considered, if it were not for the fact that the project will be closed down for 5 months of the year, that we already have a surplus of shipping, and that science and engineering are about to give us new materials and new equipment that will modify the practices of the past. There may come a time in the future when engineering experts will be able to justify the seaway, but at this critical juncture of our history, in these hopeful days of reconstruction, with new methods, new plans, new systems to promote and to apply, I cannot give my support to the seaway proposal in the pending measure.

H. R. 5559

EXTENSION OF REMARKS
OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my radio broadcast put on the air over radio station WMAM, Marinette, Wis., February 24, 1946; WSOO, Sault Ste. Marie, Mich., February 26, 1946; and to be broadcast over WDBC, Escanaba, Mich., February 27, 1946:

Last Friday, on Washington's Birthday, I introduced the following bill, H. R. 5559, and on which I have been assured by several members of the Military Affairs Committee, to which it was referred, I may hope to get some early action. I want to read it to you at this time:

"*Be it enacted, etc.*, That the people of the United States of America recognize that the officers and enlisted men of the armed forces of the United States, who were serving in the Philippine Islands, Wake, Guam, Java, and other western Pacific and Asiatic Ocean areas on December 7, 1941, were called upon to make sacrifices above and beyond the ordinary call of duty, without hope of relief or succor, in order to gain time during which the United States could prepare to meet the attack of its enemies.

"SEC. 2. The President is authorized and directed to cause to be designed and struck an appropriate medal with suitable emblems and devices for presentation to each officer and enlisted man within the category described in section (1) of this act.

"SEC. 3. That each officer and enlisted man within the category described in section (1) of this act and who later was taken prisoner by the enemy shall be entitled, upon discharge from the armed forces, relief from active duty, or retirement according to law to receive a pension for life equal to 25 percent of the total pay and allowances, including extra pay for various types of extra hazardous duty heretofore authorized by law, received by such person at the time of discharge, relief from active duty, or retirement: *Provided*, That this section shall not be construed to reduce any pension, retirement pay, or disability benefit otherwise payable under any law: *And provided further*, That the pension provided herein shall be in addition to any pension, retirement pay, or disability benefit which such person may receive under the provisions of any other law.

"SEC. 4. There is hereby authorized to be appropriated from any money in the Treasury not otherwise appropriated such sums as may be necessary to carry out the provisions of this act."

I think it is an excellent bill and one that should have been thought of long ago. Of course, a number of bills have been heretofore introduced to grant raises in pay and raises in rank to all of those who were the heroes of Bataan, Corregidor, Wake, Guam, and other places in the Pacific, but, so far as I have been able to determine, this is the first bill that will provide permanent lifetime pensions for those who suffered so grossly at the hands of the Japanese in their inhuman prison camps and who underwent such ordeals as the famous death march on Bataan. I was surprised to learn that no special decoration nor insignia nor service ribbon had been prescribed for those heroes of the Pacific and certainly no pension had been awarded to them. The fact of the matter is that while many of those heroes have moderately well recovered, nevertheless some

of them are so permanently injured physically that they will be unlikely in the future to be able to do a real day's work in competition with those who did not undergo their suffering, and I feel that all of us as taxpayers owe them a debt of gratitude and therefore a commensurable lifetime pension. In my opinion, the pension should be higher than I have specified, but we must regard practical politics as it is and the fact that our Treasury is already some $300,000,000,000 in debt, which debt can only be retired by all of us, including those heroes of Bataan themselves.

I am hopeful of getting favorable action by the House Military Affairs Committee on this proposal of mine and assure you that I shall likewise do everything I can to prosecute it through to successful passage in the House and in the Senate because I sincerely believe that our heroes of the Pacific, stranded as they were due to a policy adopted in the White House that our emergency aid should go to the European front, rather than to the Pacific, realized in advance that their task was hopeless and that they were expendable.

Recently I received a letter from a very close friend of mine, one of our ministers back in the district, who believes that we are headed for militarism in this country. I firmly believe that we are not and I also firmly believe that the American people will never stand for a militaristic government in this country. As I told you last week, on my trip recently through Colorado—where I visited the Army Ordnance Depot near Pueblo, Colo., it was refreshing indeed to see that we are keeping our powder dry and we are ready for any eventuality. I feel, however, that the international situation at present does not necessarily call for a continuation of the Selective Service Act nor will the Congress be likely to pass any compulsory military training bill. I believe that it is, however, within the power of the Congress and with the full approval of the American people, to make permanent—or even temporary—service in the standing Army and in the standing Navy of this postwar world advantageous enough to bring about enough enlistments to make the other compulsory service unnecessary.

When one talks about a desire to impose militarism on this country, I think he is not possessed of facts. I have talked to far too many high officers to believe that they have any desire or any aim to impose such militarism on this Nation. As a matter of fact, most of those to whom I have talked are themselves very anxious to get out of uniform and return to private life. As I have said repeatedly on these broadcasts, with the postwar expanded Army which is necessary there are far from enough so-called professional soldiers of officer's rank in any category to fill the demand. Therefore, it is very likely that any of these professional officers will not suffer an appreciable loss of rank or loss of pay. Therefore, there is no reason whatsoever why they should be trying to increase the peacetime size of our armed forces. They, themselves, are taken care of in advance anyway. Furthermore, the vast majority of those officers with whom I have talked would prefer to handle voluntarily enlisted men rather than those who have been conscripted through the Selective Service Act—or even to train those who might be drafted for a so-called compulsory military training program which, let us not forget, specifically provides that those boys are to be in training only and are not in any sense of the word considered to be active members of the armed forces of this Nation. In other words, those particular boys are in most instances being dragged from their homes, firesides, and schoolrooms and their education and home life is being interrupted and, therefore, they are not inclined to voluntarily accept the training, discipline, and routine of Army life. Therefore, their officers, themselves, realizing this, are not as keen to impress the same amount of discipline, the same amount of routine and training as they would on the part of those who have voluntarily selected the armed forces as their life and who naturally expect to be subjected to real Army and Navy life without question.

There is another phase of this military picture that I want to discuss with you today before I close. As far back as the middle of 1944 and on several occasions since then over these broadcasts and in my weekly news letters I have warned returning servicemen to be very careful to see to it that their discharge papers were accurately in order before they sign on the dotted line. We all know that when the men were being discharged after World War I there were a tremendous amount of inaccuracies in their service records and then as the years rolled by and these men sought to receive benefits under the Veterans' Administration they were constantly faced with these inaccurate records and had to establish service-connected disability before they could be hospitalized by the Veterans' Administration—and they had to establish various other things before they could receive just compensation from the Government.

My secretary for veteran affairs, former Staff Sergeant Alvin Christopherson, who spends all of his time in my office working on veterans' problems, tells me that the same thing is happening again after this war. We, of course, knew that was going to happen because naturally the boys wanted to get home and their parents wanted them home and, in fact, there was a tremendous national hysteria created by the desire to demobilize and in my opinion we did so at too fast a rate. It is my firm opinion that the Army and Navy did their best to speed demobilization in every way. It also is my firm belief that they tried their best to rapidly and yet, at the same time, sufficiently train the personnel in charge with the demobilization routine to accurately fill out the necessary discharge papers. However, the fact remains, as I have repeatedly stressed heretofore, that it was up to the veteran himself to carefully read over his discharge papers and his service record and before signing same and marching on down the line, making sure that they were accurate. Well, the fact of the matter remains, as I said a few moments ago, that was not done and now our office is literally swamped with what we realize is but the very first wave of an ensuing deluge to get these papers corrected in order that the veterans may receive their full benefits in years to come. Mr. Christopherson tells me, for instance, that just the other day we received a letter from one of our veterans requesting that I have his discharge certificate corrected to show that he was single instead of married. The lad never had been married and yet he had signed his discharge paper to the effect that he was married. Other requests come in to ask us to have their papers corrected to show the correct enlistment and discharge dates. Then others want us to show that their correct campaign record be set forth. In other words, corrections of all sorts are requested—all of which proves that the veterans are altogether in too much of a hurry to get released and they are too ready to sign on the dotted line without taking the trouble to look over their records and make sure that they are in order. Or maybe they take it for granted I can clear the discharge waters for them.

So, again I sound this warning—even at this late date—please, you parents—and please you servicemen who are now home on your terminal leave and who may be listening to this broadcast—before you sign on the dotted line be sure your papers are in order. Do not think we are dodging responsibility down here. I desire to serve you in every way possible. That is what we are here for—but remember it is you who is going to get the benefits from having your papers filled out correctly. It is you who will be looking to the Veterans' Administration later for possible aid.

What I am most concerned about is that I cannot help but feel that many of our war veterans have not filed a claim for injuries received or diseases contracted in service—which must be done at the time of separation or within a year after discharge at the latest because in later years should there be a recurrence of such disease or an aggravation of an old injury then, believe me, it will be difficult for you and for us to prove service connection and, therefore, eligibility for veterans' benefits. I appreciate that sick-call slips were often lost in combat zones and we must remember that witnesses and attending nurses and doctors will be almost impossible to locate in later years and so it is up to you veterans—you who have already received your discharge papers—to remember this advice. Check over your papers right now and I repeat—if you do have injuries and diseases contracted in the service, please file your claim now. If we can be of any help to you down here, let us know but do it now because it must be done, according to law, within a year after your discharge.

Now, one final word. Discharge papers and service records may eventually become lost. I presume most of our veterans do not have safety-deposit boxes but you may have something back home in the form of a family safe or even in the form of the old coffee pot sitting on top of the fireplace in which you might file your personal papers for safekeeping. I suggest, however, that you have your discharge papers and your service record recorded by your county clerk. Then, if you should ever need a copy it can be obtained promptly. Remember that when you veterans send your papers to us down here to Washington to have them corrected we should of necessity—and do—return them to you by registered mail with a return receipt requested and, incidentally, that costs me out of my own pocket—and is not provided for by Government expense—24 cents for each of such requests. I am not complaining about the bill but I am again pleading with you—please make sure that your records are in order before you sign that discharge certificate.

Only the Ignorant Nourish Their Prejudices

EXTENSION OF REMARKS
OF
HON. WILLIAM A. ROWAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. ROWAN. Mr. Speaker, so much has been said about intolerance and prejudice that I think many of us will appreciate reading an editorial from the Chicago Sunday Times, issue of February 24, 1946, in which the statement that is the caption to this article is included.

The Times editorial is entitled "Brotherhood Week All Year Round," and the concluding paragraph states: "Perhaps when all of us realize that only the ignorant nourish their prejudices it will become unpopular to whisper unkind things behind our brother's back."

BROTHERHOOD WEEK ALL YEAR ROUND

The observance of Brotherhood Week during the past 7 days has served to throw the spotlight of national attention on the battle against ignorance and prejudice. The ending of Brotherhood Week should not become the

signal for putting our heads back into the sands of indifference. Every week should be Brotherhood Week. That's the idea, brother.

Nazi Germany showed all the world where race prejudice and hate leads a nation when they are allowed to spread like diseases, unchecked, until they become national policy. Hitler was a warning against the Bilbos and the Rankins over here.

There is a difference between political discrimination and social snobbery, of which all of us are guilty to some extent. An overwhelming mass psychosis which condones political and economic intolerance threatens the very pillars of a democratic government. Just how much of our population suffers from this disease of intolerance?

A poll conducted by Elmo Roper and reported in the New York Herald Tribune throws considerable light on this question. Roper, a conscientious poll taker, found out there is no net increase in the number of people who declare a prejudice against Jews, but only an increase in the openness with which the prejudice is admitted. About 9 percent of the population is anti-Semetic—the same as in 1943.

This figure does not give the full picture however. It does not show the degrees of anti-Semitism or the fact that great numbers of anti-Semites are found in industrial areas. Curiously, anti-Semitism is found least in rural areas and small towns, where other prejudices usually abound.

PREJUDICE CENTERS IN BIG CITIES

The greatest numbers admitting to some prejudice (36.2 percent) are found in the great cities. It is more prevalent among the rich and middle class than among the poor, although the well-educated rich seem to be uninfected. One-fourth of those between 21 to 34 showed some tinge of prejudice, 40 percent of those from 35 to 49, and 34 percent of those over 50, owned up to some degree of anti-Semitism.

It is encouraging, therefore, to find a smaller percentage among the young, which might indicate that the comparatively new secular education in brotherhood is catching on. This should give encouragement to those who conducted Brotherhood Week, and who sometimes feel that their hard work and time are of little avail against the tidal wave of prejudice which always seems about to engulf us.

The poll revealed an interesting, and perhaps not surprising, sidelight. Persons with strong anti-Jewish sentiments usually also are prejudiced against the British and the Russians. "In fact," says Roper, "there are indications in the study that people who permit themselves to single out any one group against which to be particularly antagonistic are inclined to extend their antagonism to other groups."

Since all of us have prejudices in one form or another against everyone else, all of us suffer from prejudice.

This point is utilized in a guide to race relations for police officers, recently issued by the department of justice of the State of California. The guide ought to be "must reading" for policemen everywhere, especially young men just starting on their careers.

MYTHS AND FOLKLORE

Drawn up in collaboration with the American Council on Race Relations, the guide declares: "In order to achieve professional standards for police work with minority groups, science and fact must replace the mixture of prejudice, myth, and folklore which, in all too many police departments, are used as guides in relations with minority groups."

The new police officer is told that just as he must learn the techniques of making an arrest or detecting a crime, so he has to learn to be aware of his human prejudices and to curb their expression. An impartial professional attitude does not come naturally. It has to be acquired and cultivated.

Gunnar Myrdal, the Swedish economist who studied American race problems, has pointed out that too little interest is given by police to social and educational viewpoints. As a result, policemen in America are not liked and trusted as much as they ought to be.

Policemen are well aware that many people believe policemen as a group are stupid, brutal, and crooked. This is a harmful attitude. It hinders the honest policeman in performing his duty.

Yet the prejudice against Jews, Negroes, Catholics, Mexicans, blondes, redheads, or brunettes is just as unwarranted and ignorant. The intelligent person thinks in terms of individuals, the ignorant person thinks of groups.

Perhaps when all of us realize that only the ignorant nourish their prejudices, it will become unpopular to whisper unkind things behind our brother's back.

Communists Work While America Sleeps

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. SHAFER. Mr. Speaker, according to the Daily Worker's monitoring of Mr. Stalin's recent speech, he said:

Thus, as a result of the first crisis in the development of the capitalist world economy, rose the First World War. The Second World War arose as the result of the second crisis.

In other words, in the opinion of the No. 1 man of Soviet Russia and the International Comintern, both World Wars were the fault of the capitalist leaders, which are the United States and Great Britain.

In the same speech Premier Stalin credits the Red Army with winning World War II and declared that Russian security calls for the Red Army being maintained at peak strength, saying that it can be done by boosting Russian heavy industry production to heretofore unequaled levels.

For Russia, Stalin says, "Build heavy industry, build the Red army—for any eventuality."

For the United States the American Communist Party seeks:

First. Demobilization of American military strength on land, sea, and air.

Second. The weakest possible postwar military strength, on land, sea, or air.

Third. Internationalization of our atomic energy secrets.

Fourth. Slow-down of our heavy industry reconversion and build-up by perpetual strikes in steel, motors, rails, and other heavy industry sources.

In other words, Stalin said, build up the Red army and Russia's all-important heavy industry for war support of the Red army, while the American Communists seek to reduce the United States to a third-class military power and so cripple heavy industry that American heavy industry cannot meet necessary strategic military needs. Our military leaders, of land, sea, and air forces have warned of the dangers of this too-rapid demobilization before a permanent postwar policy has been set up, but little attention has been paid to them. They have been smeared by the mouthpieces of communism, from MacArthur, Eisenhower, Marshall through Patton, Bradley, Hodges, and the other wartime commanders. The decisions of our military commanders were the decisions which won the war—but the Communist credo that no nation—other than Russia—can be allowed to have national heroes has been demonstrated by the leftist efforts to smear all our commanders.

It is time to look, perhaps, into the sources of some of our labor unrest. The CIO—labor sponsor of the Political Action Committee and the National Citizens Political Action Committee—is linked with the recently formed World Federation of Trade Unions. The link is openly admitted by the fact that Sidney Hillman is vice chairman of WFTU. This WFTU sought to be the sole spokesman for labor in the UNO. Communist Russia and leftist France fought to have this brought about. Senator CONNALLY, backed by British, Chinese, and other UNO representatives, fought this down, obtaining equal representation for the American Federation of Labor with the WFTU in any labor advisorship to the UNO.

The leadership of the CIO—Hillman, Curran, Bridges, Carey, on down through the lists—show references in official Government records to affiliations with Communist front organizations.

The CIO-PAC and NCPAC back the deficit spending, leftist program from top to bottom. They lead us into strikes, because only when the financial backlog of workers is wasted, does the discontent follow which leads to the barricades and the revolution that all Marxian ideologies call for.

Communist philosophies all call for overthrow of the government by force and violence. The general strike is their most powerful weapon. Look at the flexing of muscles by the Communist-inspired groups all over the world. Active, shooting revolts in Greece, Indonesia, Egypt, and so forth.

In our own country, Quill, in New York, threatens a general strike to tie up transportation. The telephone strike threatens national communications. The threatened strike in the railroad brotherhoods threatens national transportation, as the Quill threat hits local New York. Lancaster, Pa., has seen a tie-up of transportation on a local scale.

The tugboat strike in New York tied up the Nation's greatest city to a point where all local activities were affected.

The Russian spy activities and more important yet the apologies for such activities by Ambassador Davies and others are examples of how far we have difted. The repeated blocking of efforts to investigate the infiltration of Communist minded men into our State Department—the secret agreements which gave Russia the Kuriles and no one yet knows what else, without approval of our Senate, as required by law, is a further proof of Communist and fellow-traveller power within our Nation.

Russia's indignation that Canada dared to expose the spy plots within Canadian borders is in line with the Davies encouragement of their methods. Only last week the Washington Post released the activities of our FBI in exposing espionage, sabotage, and other foreign activities within our borders, but it did not tell how many of those arrests were of Communist agents. Why not? Why not a detailed reporting of these things?

We have a House Committee on Un-American Activities. It was at one time an active, effect-producing committee. During the war, while Russia was an ally, it was required to soft-pedal Communist activities. The American Legion, once a leader in fighting against Un-American activities, relaxed during the war so as not to affect allied interests. And during the war the Communists, capitalizing on our unwillingness to tell the full truth about American Communism, infiltrated, dug in, moved high into places of bottleneck importance in our Government. Now the war is over. Why should we not be honest with the American people? Why should we not check our Government personnel, name by name, department by department, agency by agency?

We have 3,155,192 employees on pay rolls of the agencies of the executive department as of December 31, 1945, according to the Joint Economy Committee. Senator Byrd, chairman of the committee has repeatedly protested that in peace we need no more than one-third of these.

Why not start now to find out how many of these 3,000,000 are or have been members of Communist or Communist front organizations?

Why not examine the activities of those found to be members of such organization against a background of the sedition laws, against a yardstick of their patriotism and belief in the Constitution of the United States? Why not relieve the bulk of the American taxpayers of the burden of supporting on public pay rolls those individuals found to be working primarily for an overthrow of our system of free enterprise?

Why not weigh, in the scales of the welfare of the 140,000,000 population of the United States, the welfare of the organized, yet unproportionately vociferous minorities who seek to plunge us over the cliffs of unknown foreign activities?

American workers, in the last 33 years, from 1911 through 1944, have increased 83 percent according to the January issue of Labor's Monthly Survey, a publication of the American Federation of Labor. The dollar-increase average is from $1,730 per year in 1911 to $2,189 per year in 1944. This same publication shows that while American labor's real wages went up 37 percent from 1911 to 1939, real labor wages in Soviet Russia dropped 40 percent in the period from 1929, when the Soviet Government figures were available, to 1939, when the last available figures were permitted to reach the public. American labor as a whole should consider those figures.

Congress faces an election this year. Why not go to the people on this issue: Do we want to continue the American system of free enterprise, or do we want to abandon it? Those Members who come back to Congress after the November election will then have a clear mandate from the people to govern their future course of action. I, for one, am willing to go to my constituents on that issue alone.

The Children's Crusade

REMARKS
OF
HON. EMILY TAFT DOUGLAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mrs. DOUGLAS of Illinois. Mr. Speaker, the most pitiful of all war victims are the displaced children. To aid this group some American youngsters have launched a rather wonderful project called the Children's Crusade.

In the displaced persons camps of Germany there are some 95,000 boys and girls under 14, whose nationalities include Czech, Hungarian, Latvian, Lithuanian, Polish, Rumanian, Russian, and Yugoslav. A large proportion of these are orphaned and carry seered into their memories the sight of the torture and murder of their parents. Hundreds have endured the bestialities of the horror camps. Others were torn from their homes, branded with a number, and delivered as farm or household help to some Nazi. All of these are underweight and a majority suffer from rickets, tuberculosis, or other diseases which stem from malnutrition. Thousands of these children possess no shoes or warm clothes and so are kept indoors all winter, although their shelters are also cold. Few of these children can recall any of the joy or care which should be the birthright of all little ones.

UNRRA is doing what it can for these tragic waifs, but supplies are spread too thin. It has been a blessing when other countries have held out a hand to these displaced children. Although exhausted by 6 years of war and living on meager rations, England is sharing what it has with a thousand Jewish youngsters to whom it has been playing host since fall. Sweden and Switzerland have also welcomed some thousands of the boys and girls in greatest need. In America we have left it to the children to take the first step in kindliness.

It began very simply last summer at a camp conducted by a Chicagoan, Miss Mabel Katherine Pearse. One night around the campfire she read a letter to the children from her sister, child welfare specialist with UNRRA, which described the background of her charges. The American children at once decided to do something. They did. They raised $200 for Christmas gifts, warm clothes, and special treats in food, which after a great struggle with a special permit, were sent abroad with personal greeting cards. On Christmas eve they built a bridge of friendship in a beautiful ceremony. Of all the Christmas ceremonies around the world, none could have expressed more poignantly the spirit of Christ. Far across the seas and across differences of race, language, and religion the children joined together in singing carols.

In recent weeks this movement has grown. Every time the story is told the project snowballs larger and a flood of gifts pour in—money, clothes, food, sweets, and toys. For a while lack of postal service was an obstacle. The chaos which results from the bombing of cities and mass migration of peoples makes it still impossible to locate individuals and guarantee general delivery in Germany. But there is not the same confusion in regard to the displaced peoples. UNRRA has registered each, so that reaching these people is possible and, in simple justice, they should be the first to receive supplementary packages from America.

The organization aims at becoming a steadily functioning one, channeling through an ever-widening stream of gifts and good will. On July 25 American children, this time in various parts of the country, will celebrate a midsummer Christmas party to raise money for the real Christmas to follow overseas on December 25. The bridge of friendship, this year a wider and stronger one, will for the second time be cemented by the mutual singing of carols on Christmas eve.

Here is a project to touch the heart of our country. It is one which the children of America should be helped to continue, for its material good and also for the bond of friendship between nations. American children have already found the project the most challenging one which they have ever known. So let us help the children's crusade through Miss Mabel Katherine Pearse, 4700 Kenwood Avenue, Chicago 15, Ill.

What Is Really Going on in Poland?

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to draw attention of the Members to a statement, issued in London by the leaders of the four democratic political parties of Poland. They carry on in London and there speak on behalf of the enslaved people of Poland who are unable to tell us the truth about conditions prevailing in their country in direct result of the betrayal performed at Yalta.

The most respected leaders of Poland's democratic parties give us the truth about Poland under Soviet occupation. Here it is:

COUNCIL OF POLISH
POLITICAL PARTIES,
London, January 25, 1946.

SIR: The preamble of the Charter of the United Nations states that a new international organization has been established "to save succeeding generations from the scourge

of war." The United Nations had determined "to reaffirm their faith in * * * the dignity and worth of the human person, in the equal rights * * * of nations large and small and to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained."

But, notwithstanding these solemn declarations, and in violation of all principles on which the postwar order and the peaceful relations between nations were to be built, the Polish nation—after the victory over the common enemy—is again enslaved.

In Poland lawlessness rules supreme. Human dignity is trampled upon. There is no true freedom of religion, of conscience, or of opinion. There is no independent judicature. There is no freedom of speech, of the press, of association, or of meetings. There is no security for the individual. The whole of Poland suffers under the totalitarian yoke which has been imposed upon the Polish nation by foreign intervention, and this regime does not totter only because the country is occupied by a foreign army and is ruled by a ruthless police regime

The worthiest sons of Poland—the men who had built the underground Polish state and had fought the Germans for five long years in the ranks of the Polish Home Army—and every class of her population: Peasants, workers, the middle class, and the intellectuals, the very core of Polish democracy—are subjected to systematic persecution. The education of the younger generation, based on models which are alien to Polish traditions and her national spirit, aims clearly at remolding our youth into soulless robots of the present regime.

Economically Poland is subjected to a system of ruthless exploitation in the interests of the war potential of an alien power. Her people live in wretched poverty which is in striking and irritating contrast with the comparatively high standards of life allotted to those who agree to serve as the tools of the present regime. The inclusion of Poland into the orbit of the USSR has made her a mere province in the vast area of Soviet closed economy and severed all her links with the free markets of the world. A similar fate has been meted out to many other countries of Central Europe.

Fear and hatred have become the guiding principles of the present system of government in Poland. The men who are in control of our destinies keep themselves in power by means of a rule of terror, which takes the form of mass arrests, confinement of thousands of people in prisons and concentration camps, executions and mysterious disappearance of many men and women who are inconvenient to the regime.

The provisional government imposed on Poland has renounced—against the clear will of the Polish Nation—almost one-half of her national territory, with 11,000,000 of population, and it has agreed to recognize her eastern frontier as final at a time when the postwar territorial settlement in Europe is not determined yet.

Thus, on the morrow of common victory, Poland, the stanchest and most faithful ally, has been given a very raw deal, actually much worse than that which has been given to defeated enemy powers. As a result of the war Poland has lost not only half of her prewar territory which for centuries had formed a part of her national home—she has also lost her very independence. This, in spite of the immense and well-known sacrifices which she has borne in the common struggle and the fate meted out to her is the crowning proof that all the ideals for which the war was fought have been betrayed and brushed aside.

Poland fought at first alone her battle for her independence and very existence and later by the side of her allies. She never wavered, irrespective of whether her allies were in a position to come to her assistance or not. When the whole of Poland was occupied by the enemy forces the Polish soldiers fought on in France and Norway. After the collapse of France, when Britain was left alone to resist German might, the Polish armed forces made their way to the British Isles, to continue the battle by the side of the only free country which was still at war against Germany. This was at a time when some powers who later found themselves in the camp of the United Nations were still neutral, while others were even giving every aid and assistance to the German aggressors.

At that time, too, the Polish Home Army, the largest underground force in the world, acting under the direction and guidance of the Polish Government in London, was continuing its sacrificial struggle in Poland itself, and immobilized large enemy forces there, fighting the aggressor simultaneously with the Polish armed forces in Africa, Italy, and Western Europe.

To enslave Poland or to concur in her enslavement is obviously a gross violation of all the principles of international morality and law, and of all the solemn declarations and treaties in force. The enslavement of Poland and of the whole of central-eastern Europe creates a vast center of unrest and discontent which ultimately threatens the peace of the world. It would be an ill omen for the start of the United Nations if conditions in direct contradiction to their pledged principles were permitted to be perpetuated.

An iron curtain now severs Poland from the world. It separates East and West, and bars the free exchange of news, cultural values, and material goods.

The undersigned duly authorized representatives of the chief Polish political parties, acting as spokesmen for the people of Poland, who in the present conditions are not free to speak for themselves, are thus forced to lodge a direct appeal to the United Nations. These are the main points:

1. The so-called Provisional Government of National Unity in Warsaw and its delegation to the United Nations General Assembly do not represent Poland at all.

2. Poland will never renounce her will to independence, political, spiritual, and economic, and her people will never relent in their efforts to recover their full independence and to decide their own fate.

3. No lasting peace will be secured unless moral principles, the respect for the dignity of the individual and of the nation, justice, and freedom are duly safeguarded and applied in practice, not merely in solemn declarations. The principles of democracy should be enforced both in the internal life of the various countries and in international relations.

No new world order can be built on the old foundations of violence, brute force, and enslavement. No lasting peace can be built on the shifting basis of great powers politics.

Poland, which today is enslaved and occupied by foreign forces, demands the restoration of her independence, in the name of the very principles on which the United Nations are built. Poland believes that the United Nations will not find it possible to pass over in silence her loss of independence and the enslavement of the country which was first to resist German aggression in the defense of her own freedom and of the liberty of the world.

We have the honor to be, sir,

Your obedient servants,

TADEUSZ TOMASZEWSKI,
For the Polish Socialist Party Committee abroad.

Dr. STANISLAW OLSZEWSKI,
For the Democratic Party Committee abroad.

HUGON HANKE,
For the Christian Labor Party Committee abroad.

JERZY KUNCEWICZ,
For the Peasant Party "Freedom."

Dr. TADEUSZ BIELECKI,
For the National Democratic Party.

Unwarranted Attacks Upon Government Officials

REMARKS
OF
HON. E. E. COX
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. COX. Mr. Speaker, on February 12 the gentleman from Michigan [Mr. HOOK] placed a statement in the CONGRESSIONAL RECORD at a cost of $121, with the consent of the House, constituting what was nothing more or less than an attack upon the Committee on Military Affairs and its general counsel, H. Ralph Burton. The gentleman from Michigan failed to inform the House, however, that his statement was in its entirety taken from the book recently published by Henry Hoke, a writer who devotes his efforts to the publication of unwarranted attacks upon Government officials, and particularly Members of Congress. Hoke's books and articles are, for the most part, innuendos and allegations lacking in truth and unsupported by factual evidence. Following publication of such statements, papers which follow the Communist line take up the trail and engage in publicity as lacking in truth as the books and other sources upon which they are founded. The original falsehood becomes repeated a thousandfold, until it passes with the public for assured and accepted truth. For this reason such innuendos against an able and faithful public servant should not go unchallenged.

Let me tell you how the distorted information in Mr. HOOK's statement and the book by Henry Hoke, from which it was taken word for word, was obtained. About 2 years ago a certain man was recommended by a member of the staff of a local newspaper to the Committee on Military Affairs, and after checking the references which were submitted he was employed as an investigator. Shortly thereafter an investigation was begun into the activities of a Col. Theodore Wyman, of the Army, at one time district engineer for the district of Hawaii, and one Hans Wilhelm Rohl, a German alien, who in December of 1940 was awarded contracts for defense projects in Hawaii. I shall not go into the details of that investigation, but it will be found interesting to anyone who will read the report of the House Military Affairs Committee, No. 1638, Seventy-eighth Congress. Eventually this newly engaged investigator was sent to Los Angeles, Calif., with instructions to follow up certain angles of the investigation there. Soon after his arrival Government officials and friends of the committee reported that his activities in Los Angeles were not in the interest of the committee and should be looked into at once. This was done, and he was recalled and dropped from the committee rolls. From that time on this man has pursued a course antagonistic not only to the committee but to the Congress itself. Recently it has been discovered that he has been employed by Henry Hoke to gather any information

that by vicious twisting and innuendo can be used to vilify not only the Committee on Military Affairs but the Committee on Un-American Activities and Members of Congress. His particular animus is to hit back at H. Ralph Burton, who dismissed him.

This book recently published by Henry Hoke and the statement which appeared in the RECORD on February 12 follow the pattern that has been evidenced in so many Communist publications, and for the purpose of the RECORD I shall refer to some of these briefly.

Hoke states in his book, and this is included in the statement which appeared in the RECORD, that H. Ralph Burton was at one time counsel for Father Coughlin. Of this there is no doubt, as for several years, specifically from about 1932 to 1936, Burton was engaged in his legal capacity by Father Coughlin, and for this he offers apologies to no one.

It is stated that at one time he was counsel for the National Society, Daughters of the American Revolution. This is true. Some years ago an attack was made upon this society, proven to be instigated by Communists, and Burton was employed as counsel to defeat this attempt upon the existence of the society, and this he succeeded in doing. For this he apologizes to no one.

It is stated that he was counsel for the American Coalition of Patriotic Societies, than which there is no finer organization in this country. I have here a list of the patriotic organizations composing the American Coalition of Patriotic Societies, among which are Dames of the Loyal Legion of the United States; Descendants of the Signers of the Declaration of Independence; General Pershing chapter, American War Mothers; Ladies of the Grand Army of the Republic; National Camp, Patriotic Order Sons of America; National Society, Daughters of the Revolution; National Society, Daughters of the Union, 1861–65; United Daughters of the Confederacy, New York chapter; and United States Naval Reserve Officers Association, too well known to the Members of the House to warrant further comment. It is true that Burton represented these patriotic societies, and for doing so he need apologize to no one.

Hoke further states in his book that Hans Wilhelm Rohl, the alien contractor who failed to finish his contract on time for the defense of Pearl Harbor, set forth in an affidavit that he had been approached by a witness who had previously appeared before the Military Affairs Committee with a proposition to arrange for stopping the investigation for a certain sum of money, but beyond his unsupported statement he offers no proof. A reading of the report of the House Military Affairs Committee definitely clinches the fact that if such a proposition were made it ended where it began.

He states that Burton is anti-Semitic and anti-Negro, but he offers no proof of this, and that it is not true can be shown if any committee or Member of the House is sufficiently interested to inquire.

I have now come to what is the most inexcusable, the most vicious and lowest type of attack. Not content with endless attacks upon Burton over a period of years, clearly for the purpose of eliminating him from investigations which he has conducted over a period of 9 years for the House and Senate, the Communist group now attacks his son. The latter is a lawyer by profession and enjoys a reputation which is beyond question. He gave up a lucrative practice to enter the Coast Guard in this war, declining to ask for a commission and remaining in the Coast Guard until separated for physical reasons.

I shall not go on further in characterizing these attacks, but I do wish to call attention emphatically to the fact that although Burton has conducted investigations for the House and Senate for nearly 9 years, there has never been filed with any committee which he has served so much as a scintilla of evidence against him. All that has appeared against him in Communistic publications has never been supported by an iota of factual evidence. Now, as to Burton himself.

A man's background is always important. H. Ralph Burton's ancestors along more than one line have been on these shores since the early 1600's. One line settled in Virginia and Maryland. Another ancestor came over with William Penn to found Pennsylvania, his grandson being Caesar Rodney, who signed the Declaration of Independence as a representative from Delaware. Two of his family have served in this House. Truly this is an American background.

H. Ralph Burton was born in Washington, lived here all his life, attended the public schools, Friends School, Columbian, now George Washington, University, and took his degree in law from Georgetown University. He is a member of the bars of the Supreme Court of the United States, the United States Circuit Court of Appeals for the District of Columbia, the United States District Court for the District of Columbia, and a member of the Bar Association of the District of Columbia. In his earlier law practice he was associated with the Honorable John G. Carlisle, formerly Secretary of the Treasury, Speaker of the House of Representatives, and Senator from Kentucky.

Early in 1938 he became an investigator for the Senate Campaign Expenditures Committee, of which the Honorable Morris Sheppard was chairman. He covered the States of North Dakota, Kentucky, and Arkansas.

Burton was thereafter named as an investigator for the Works Progress Administration Subcommittee of the Committee on Appropriations of the House of Representatives, of which the Honorable Clifton A. Woodrum was chairman, and for over a year beginning in 1939 had charge of investigations in the State and city of New York, which were separate administrative units. These investigations covered every phase of the Works Progress Administration activity and included contract relation, construction of airports, school buildings, highways, sewerage systems, accounting, union interrelations and jurisdictions, unemployment, relief, legality of project operation, financing, sabotage, workers' alliance, and Federal project No. 1—Theater, art, music, writers, and historical records survey.

It was in connection with the arts project of the Works Progress Administration that Burton first incurred the hatred of communistic elements. Six weeks after his arrival in New York he had discovered sufficient evidence to cause the Appropriations Committee to deny the use of funds for the continuation of the theater project throughout the United States, resulting in the elimination of thousands of Communists or fellow travelers from the Federal pay roll and the saving of over $15,000,000 a year.

He continued on this investigation for over a year, resulting in extensive corrective results, among which was the requirement that employees of the WPA should work 130 hours a month for their monthly pay instead of being permitted to draw union wages and work only 30 to 40 hours in a month for the maximum monthly wages.

He located Communists working on vital statistics, such as plans and specifications for electric and water conduits in and around New York and had them removed.

So violent became the antagonism on the part of Communists and fellow travelers in New York in 1939 that they staged a demonstration at Columbus Circle which required over 300 police officers to control. Not satisfied with that, they formed a picket line of over 200 around the New Yorker Hotel, where Burton resided. None of these things was allowed to interrupt the investigation which was carried through, covering a period of over a year and involving the checking of over $200,000,000 expended by WPA in New York. To anyone interested sufficiently to do so, it is suggested that the complete record of the investigation can be found in the published hearings and reports of the Appropriations Committee covering that period.

In 1940 Senator Gillette gave Burton assignments in connection with the activities of the Campaign Expenditures Committee for 1940, these having included the States of Maryland, West Virginia, Wisconsin, Maine, New Jersey, particularly relating to Hudson County, and special assignments of a national character in New York.

During the last 5 years, H. Ralph Burton has been general counsel for the Military Affairs Committee, and director of the investigations of the war effort. Many things have been accomplished by the committee. Thousands of lives have been saved by the improvement in the fueling system of airplanes resulting from the investigations and recommendations of the committee. Corners in skilled labor which resulted in exorbitant costs to the Government through having to pay excessive profits to racketeering companies controlling the skilled labor market were eliminated at a saving of hundreds of millions of dollars to the Government.

The House Military Affairs Committee Report No. 839, 79th Congress, contains the most complete account of the plans of the Communists to sabotage the United States Army that has been prepared and this was done under his direc-

tion. Not an item therein has ever been challenged.

The House Military Affairs Committee Report No. 1638, 78th Congress, containing the story of the activities of Col. Theodore Wyman and Hans Wilhelm Rohl concerning contracts for defense projects of Hawaii discloses almost unbelievable facts very largely affecting the attack on Pearl Harbor, and has never been challenged. These are only a few examples of what has been accomplished as the result of the investigations of the Military Affairs Committee which are elaborately explained in their two general reports. A recent investigation, beneficial to the soldier, is that relating to blue discharges in the Army which is resulting in the elimination of injustices from this source in the House Military Affairs Committee Report No. 1510.

I submit to Members of the House that a faithful servant of Congress, whose work has benefited the American people, should not be defamed on the floor and in the RECORD of this House by unsupported and groundless assertions, inspired by personal malice and the hostility of subversive and disloyal elements of the population, without a voice being raised in his behalf.

Housing Bill Amendments

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. MONRONEY. Mr. Speaker, under leave to extend my own remarks in the RECORD, I would like to call the attention of the House to two amendments which will be presented by me to the Patman housing bill when it is read for amendments Wednesday.

The first amendment is in the nature of a clarifying amendment, bringing the title, authority, and duties of the chief of the new housing program into line with his existing authority under Executive order. Its adoption will clarify his duties and bring his authority into line with that already provided for under the Executive order issued by virtue of the Second War Powers Act. Because of the uncertainty of the extension of the Second War Powers Act it will be necessary to include this into the Housing Act presented at this time if power is to be given to provide priorities for the veterans' housing program.

The second amendment is the production incentive subsidy authorization, which limits the amount of subsidies to be used in expediting the production of scarce materials by the Housing Expediter to the sum of $600,000,000. It is argued that the Housing Expediter now has authority to use subsidies under the Price Control Act. This amendment would specifically permit and at the same time limit them as to amounts in order to stimulate the production of enough materials to carry on the housing program.

The amendments follow:

AMENDMENT PROVIDING HOUSING EXPEDITER

(a) There is hereby created an office to be known as Housing Expediter; and the President is authorized to designate an existing official of the Government to serve as Housing Expediter, or to appoint the Housing Expediter either within any existing agency or as independent officer of the Government. In the event of a designation of an existing official, he is hereby authorized and permitted to continue in his present post while serving as Housing Expediter, except that he shall receive no additional compensation by reason of his designation hereunder. If, however, such Housing Expediter is appointed, his appointment shall, if within an existing agency of the Government, be subject to the laws and regulations governing the appointment of officers within such agency and he shall receive compensation in compliance with such laws and regulations; if the Housing Expediter is appointed as an independent officer of the Government, then such appointment shall be made by and with the advice and consent of the Senate of the United States and he shall receive compensation at the rate of $12,000 per annum.

(b) The Housing Expediter, in addition to such other functions and powers as may be delegated to him by the President, is authorized to—

(1) formulate such plans and programs as are necessary to provide for an increased supply of housing accommodations of all kinds and, in particular, of homes available for sale or rental at moderate prices to veterans of World War II and their immediate families:

(2) issue such orders, regulations, or directives to other executive agencies as may be necessary to provide for the exercise of their powers in a manner required by or consistent with the execution of the aforesaid plans and programs, and to coordinate the activities of such agencies directed to the execution of such plans and programs. Each executive agency shall carry out without delay the orders, regulations, or directives of the Housing Expediter, and shall, to the extent necessary, modify its operations and procedures from time to time to conform to the directions of the Housing Expediter;

(3) recommend to the President the enactment of such legislation as may be necessary to provide the authority to carry out such plans and programs as are not authorized under existing law;

(4) consult and cooperate with other agencies of the Federal Government, State and local governments, industries, labor, and other groups, both national and local, with respect to the problems created by the Housing emergency and the steps which can be taken to remedy it.

(c) The executive agencies of the Government shall exercise their emergency powers and other powers for the purpose of aiding in the solution of the problems created by the existing housing emergency, the alleviation of which is vital to an orderly transition from war to peace.

(d) (1) All functions, powers, authority, or duties vested in the Office of War Mobilization and Reconversion or the Director thereof by the War Mobilization and Reconversion Act of 1944 which are or may be necessary or suitable to enable the Housing Expediter to carry out the provisions of this title and such plans and programs as such Housing Expediter may develop for the alleviation of the housing emergency, are hereby transferred to the Housing Expediter. The powers so transferred shall include the power to issue orders, regulations, or directives to other executive agencies with respect to the exercise by such agencies of their respective powers and authority.

(2) The powers so transferred shall continue during the period in which this Act is in effect, notwithstanding any other provision terminating such powers contained in the said War Mobilization and Reconversion Act of 1944.

AMENDMENT PROVIDING PREMIUM PAYMENTS

(a) Whenever the Director determines that it is necessary or desirable to employ premium payments for the purpose of increasing the supply of conventional and new types of building materials, such premium payments shall be made by the Reconstruction Finance Corporation with respect to such materials, at such times, in such amounts, and on such terms and conditions as may be determined by the Director: *Provided*, That such payments shall be limited to an amount not to exceed $600,000,000. The Director, in determining upon the particular uses of premium payments as authorized in this section, shall take into consideration, among other things, the extent to which other means of increasing materials would not be as effective in adequately increasing the supply of such materials or would be likly to result in increased sales or rental prices of the finished housing accommodations constructed with the use of such materials.

(b) The last paragraph of section 2 (e) of the Emergency Price Control Act of 1942, as amended, shall not, during the life of this title, apply to premium payments by the Reconstruction Finance Corporation under this section: *Provided*, That nothing herein shall be construed to affect the provisions of Public Law 88 of the Seventy-ninth Congress.

Defeatist Thinking

EXTENSION OF REMARKS
OF
HON. CHARLES R. SAVAGE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. SAVAGE. Mr. Speaker, recently I have been very much concerned over the growing tide of pessimism regarding the chances for a permanent peace. It seems to me this trend of thinking is very dangerous because it implies we are not interested enough in maintaining a permanent peace to work at it. If we are going to be forever plagued with suspicions of other nations because their form of government is different than our own, can we blame those nations from having suspicions of their own? It is not a question of whether or not we can keep a permanent peace—we must keep that peace because it is becoming more and more apparent that our civilization cannot survive an atomic war.

I am including with this speech an editorial from the February 20 issue of the Longview Daily News, Longview, Wash., which I think clearly points out the dangers of this type of defeatist thinking:

WHY DO SO MANY SAY THAT WAR WITH RUSSIA IS INEVITABLE?

Five out of six American women, reports the Woman's Home Companion, believe we are on the road to another war. Most of these, an opinion poll of the magazine shows, believe that war will come in 10 to 15 years and will be with Russia.

Is this surprising information? Not at all. On all sides we hear this kind of talk. "War is inevitable." "We'll have to fight Russia." "Stalin blames capitalism for everything and he won't be satisfied until capitalism is wiped out."

These and other similar statements are common in ordinary conversation. It is no wonder that an opinion poll would reveal that five out of six American women believe another war is in the immediate offing.

We would like to have asked those same women what they thought of their own chances of surviving another war. Their sons and husbands of course could be expected to have only the slimmest of chances to survive atomic warfare, but what about the people at home—the civilians—would they live through a war in which one bomb or radio controlled rocket could wipe out the population of an entire city?

People who talk so easily about another war don't think in terms of the total destruction that would result. They are thinking in terms of old-fashioned warfare—of wars fought with smokeless powder and TNT. Those explosives are more obsolete now than the black powder used in Civil War cannon. Atomic energy is today's weapon.

Why do so many consider war with Russia inevitable?

Because they don't trust Russia. They are afraid of her, of her form of government, of her bigness and her potential power. They are afraid of a revolutionary people who overthrew an oppressive form of government in modern times and set up something they consider better.

Do Russians feel the same way about us? Do they think that war with the United States is inevitable? Perhaps they do. After all the people of the United States don't trust Russia, do they? That being the case what's to keep the United States from suddenly loosing its new atomic weapon against the Soviet and removing a potential menace? The United States is the most powerful country in the world. It is opposed to communism and so are most of its Allies. Is not Russia all alone in a world hostile to socialist Russia?

We don't trust them. They don't trust us. How, indeed, can peace come out of that?

But we know that the United States, its people and its goverment, want peace. We know that it isn't true when Stalin or anyone else accuses the capitalist world of encircling him. We joined the United Nations to seek peace.

Why did Russia join the United Nations? If she hadn't it would be a different story. After the last war the United States refused to join the League of Nations. Other nations mistrusted us, and little wonder. What nation is to be trusted that refuses to cooperate in efforts for world peace?

But Russia did join the United Nations. Her representatives signed the Charter. Is that not some evidence that the Soviet Government wants peace? Certainly we know the Russian people, or any other people with only a rudimentary knowledge of the destructive power of atomic energy, have sufficient desire to live to want to avoid war. And governments, but peoples, cause wars.

Just because Stalin expresses the same mistrust in capitalism that we have in socialism is not sufficient reason to go about proclaiming that war with Russia is inevitable. The two countries are different in many respects—their government, their history, their economic way of life. But the Russians are human beings living in a rich, big country, just as we do. Why cannot we assume that the world is big enough for us both?

Are hate and greed and envy so firmly ingrained in the characters of these millions that a war of annihilation is sure to come? That is something for women and men and for children going to school to ask themselves. And if they can see a spark of hope for peace, to determine what they, as individuals, can do to fan that spark into life and dispel the fatalistic pessimism heard all too often these days.

The British Loan

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1946

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Detroit Times:

THE BRITISH LOAN

The Banking and Currency Committee of the United States Senate now has under formal consideration a proposal to make what purports to be a loan of about four and one-half billion dollars to Great Britain, according to the terms of an agreement negotiated by representatives of the two Governments several months ago.

The public hearings to be conducted by the committee on this matter are expected to last several weeks, during which time the arguments for and against the loan will supposedly be fully and fairly heard.

However, it has been the past experience of the American people in such matters that "public hearings" so conducted do not always reflect the real opinions of the people.

In this instance, it is of the utmost importance that the hearings be truly public, and that the real opinions of the people be consulted.

It would be a wonderful thing, in fact, if there could be a national vote or referendum on the question, for then the members of the committee and of the Senate and the Congress as a whole would know whether a majority of the people are for the loan or against it.

But since there have been no arrangements for such a vote by the people and none are likely to be made, the people are going to have to find their own means of making their wishes known—or else let the issue go by default.

Senator KENNETH S. WHERRY of Nebraska has a pertinent suggestion to make in this respect.

The Members of Congress, he says, would respect a national expression of public opinion on the British loan.

Let the people, therefore, make a national expression of their opinions, he urges.

"The reaction both Senators and Representatives get from their constituents will probably decide whether or not the loan is granted," says Senator WHERRY.

"We know that pressure will be put on from the organized groups controlled by the administration.

"We know, too, how to recognize such 'propaganda mail' and to evaluate it.

"What will count will be the letters, telegrams, and personal visits from people known to us as representing their own thinking and that of their neighbors."

Of course Senator WHERRY is right.

The administration will wield all of its tremendous power to influence approval of the loan.

The internationalists and the interventionists, the one-worlders and the collaborators with various Socialist and Communist regimes will support it.

Surely the American people, who are most concerned in the matter because it is their money that is being loaned away, their taxes and wages and savings, should not stay mute.

The American people know their country is already $300,000,000,000 in debt.

* * * * *

They know there is not the remotest prospect that Britain will ever repay more than a fraction of the loan, if any at all.

They know that the total of our outstanding loans and gifts to Britain, including the unpaid First World War debt and the canceled lend-lease outlays, will be the fantastic and wholly unpayable sum of $36,000,000,000 if this new loan is granted.

Let the American people tell Congress what they think about this colossal and frightening commitment of their resources.

Let them write to Congress and wire their Representatives in Congress and go in person to Washington in as great a volume as possible and make their will known to the Congress.

If the United States are truly a democracy let them function as such and let the will of the people truly prevail.

"Where Are We Going To Get the Money?"

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. MASON. Mr. Speaker, Congressman RICH, of Pennsylvania, has persisted in asking on the floor of the House almost daily during the past 12 years, "Where are we going to get the money?" The following spending proposals now before Congress, over and above the necessary regular governmental expenditures, were indirectly approved by President Truman in his September message to Congress:

	Per year
Federal aid for education	$500,000,000
Vocational education aid	100,000,000
Free food stamp plan	500,000,000
Rural electrification program	500,000,000
Federal aid to hospitals	110,000,000
Federal health program	600,000,000
School lunch program	100,000,000
Sewage treatment program	100,000,000
Federal housing program	80,000,000
Increased Federal salaries	500,000,000

Bills providing for lump-sum appropriations, either now before the Congress or about to be introduced, are as follows:

Veteran bonus legislation	$13,000,000,000
Additional UNRRA contribution	1,350,000,000
Commodity Credit Corporation	500,000,000
Loans to foreign countries	15,000,000,000
Federal aid for highways	3,000,000,000
New river valley authorities	5,000,000,000
Federal aid for airport construction	1,000,000,000

These proposals total $3,090,000,000 per year over and above the regular Budget expenditures, and the lump-sums total $38,850,000,000. Truly, where are we going to get the money?

CAN WE AFFORD IT?

Mr. Speaker, how many of us realize that there are 80,000,000 Americans who own Government bonds? Every bank and insurance company in America has half of its assets invested in Government bonds. These investments must be safeguarded at all costs if we would avoid chaos and worse. Is not it about time for the American people to sit down calmly and figure out for themselves just

how much we can afford to spend on projects that are not absolutely necessary? If they will do this it would relieve the tremendous pressure on Congress to make appropriations for projects that can be postponed until we are in better shape to undertake them. If this wild spending orgy continues we will bring on an inflation that will wipe out all wealth save real estate and other tangible property. This would hit rich, middle class, and poor alike.

WAKE UP, AMERICA!

Mr. Speaker, this writer is disturbed, confused, bewildered. The outlook for the future is anything but encouraging. Taking stock of the present situation, we find:

First. A national debt of $275,000,000,000.

Second. An outbreak of strikes slowing down reconversion.

Third. The administration insisting upon deficit spending.

Fourth. Our diplomatic relations with the rest of the world are at the breaking point.

Fifth. Uncle Sam still acting as Santa Claus to the rest of the world.

Sixth. Government officials afraid or unwilling to meet issues squarely.

Seventh. The average citizen willing to let columnists, radio commentators, and second-class writers do his thinking for him.

Unless America wakes up quickly to the situation that confronts her, it will be too late.

The following editorial taken from the De Kalb Chronicle, De Kalb, Ill., Thursday, February 21, 1946, shows how our Federal taxes have skyrocketed over the past three decades. It is a fitting close to my words of warning, therefore I include the same as a part of my remarks:

HOW TAXES HAVE RISEN IN PAST FORTY YEARS

From Roosevelt to Roosevelt the American citizen's bill for Federal, State, and local taxes has skyrocketed from a total of $1,387,000,000 in 1902 to $52,195,000,000 in 1944. And apparently the end is not yet.

These figures are not propaganda-based statistics cooked up by somebody who doesn't like the Democrats or the New Deal. They are from an article in the 1946 edition of the Encyclopedia Britannica and are written by Government sources.

This rise through two wars and seven Presidential careers means that we components of what the intelligentsia call "the masses" are paying our governmental bodies more than 37 times as much taxes today as they did at the beginning of the century when Teddy Roosevelt was President.

During that time the State and local government tax bill went up from $861,000,000 to $10,067,000,000, almost a 12-fold increase the figures show. Federal taxes went from $526,000,000 in 1902 to $42,128,000,000 in 1944. That means the Federal Government spent just about 80 times more in Franklin's reign than in the times of Theodore.

As late as 1941 State and local taxes combined exceeded those of the Federal Government but the demands of the global war quickly wiped out that ratio. In that year the State tax total was $4,499,000,000 slightly less than the $4,608,000,000 raised by the lower governmental bodies. In that year the Federal set-up collected $7,818,000,000 or about 46 percent of the total 1941 tax bill which was $16,923,000,000. During the war State and local taxes went up about 22 percent while the Federal Government's collections were multiplied almost eight times.

At the present time the fiscal position of the State and local bodies is fairly good. Millions of indebtedness have been reduced or erased and many of the States have massed huge cash balances as a cushion for expected postwar public works spendings. The position of the Federal Government is not so good our debt being considerably in excess of our total physicial and financial assets. We have never balanced our Budget since 2 years before Roosevelt II took over.

Henry Ford 2d Answers Chester Bowles

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks a telegram sent by Henry Ford 2d to Stabilization Director Chester Bowles following the latter's apparent ill-advised charges against the Ford Motor Co. during his appearance before the House Banking and Currency Committee this week. Mr. Ford's telegram is a complete answer to Mr. Bowles and should be on record. The telegram, dated February 21, 1946, follows:

Mr. CHESTER BOWLES,
Office of Price Administration,
Washington, D. C.:

Your public statement of today leaves me no other course but to make public certain facts which you either do not know or refuse to reveal.

Our application to OPA on last July 20 was made while we were still at war with Japan. Since fighting had stopped in Europe, the War Production Board decided that limited production of automobiles was in the public interest. A total of 39,910 was fixed by WPB as the maximum number of passenger cars the Ford Motor Co. could produce during the last 6 months of 1945.

Obviously you cannot make 39,910 cars in 6 months in a plant designed to produce more than 100,000 every month without greatly increasing production cost per unit. Low cost depends on volume production as everyone knows. So when the United States Government—not the Ford Motor Co.—fixed production volume, it thus determined cost and selling price.

Let me give a specific example. We decided that 32,750 of the 39,910 automobiles permitted should be Fords. The rest were to be Mercurys and Lincolns. The limitation on quantity fixed our estimated cost on the most popular Ford model at $991.57. The f. o. b. sales price, which included a 5-percent profit and the usual dealer commission thus became $1,388.20. This turned out to be 55 percent more than our last peacetime selling price of $895.

We immediately filed application on prices for these low-volume, high-cost, wartime cars under OPA's wartime general maximum price regulation.

This action had nothing whatever to do with peacetime price ceilings. It was not until early in September, after the end of the Japanese war, that OPA first issued any regulations having to do with peacetime price ceilings on automobiles.

These facts illustrate the point I have been trying to make in my public statements—that high costs and high prices of automobiles are caused by low-volume production.

Our one aim since VJ-day has been to get into maximum production as quickly as possible. We have spared no costs. We have paid higher prices for materials, we have used propane gas when we could not get coal, and we agreed to add $41,000,000 to our annual bill for labor.

But our assembly lines have run by fits and starts because we could not get parts and materials. Actually, we were able during 1945 to produce only 34,439 Ford cars. Our costs per units on this production have been almost exactly what we estimated for that small volume.

Have no fear that the Ford Motor Co. will charge the American people one penny more than it has to for cars. If we did competition would take care of such a situation very quickly.

For your information, Mr. Bowles, to meet competition we are now selling one of our truck models at $100 below OPA ceilings.

We would like to sell all Ford cars below OPA price ceilings, not above. But low costs and low prices depend on large-scale production. That, in turn, depends upon an uninterrupted flow of parts and materials to our assembly lines. When you say that only from 10 to 25 percent of our parts are under OPA price control you miss the point. Shortage on only a few parts can stop the whole assembly line. This, in fact, is what has happened time and again since VJ-day.

May I add that I question the propriety of a Government official's calling "outrageous", actions taken in strict accordance with wartime Government regulations.

HENRY FORD 2d.

Sales of Surplus Government Property

EXTENSION OF REMARKS

OF

HON. SHERMAN ADAMS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. ADAMS. Mr. Speaker, in view of reports which have been made concerning the activities of commission men and special agents in securing surplus merchandise in behalf of clients, it is reassuring to know that the Government surplus sales agencies are making a sincere effort to prevent Government property falling into the hands of illegitimate operators. The record of transactions in surplus goods is commented upon in an article in the Daily Metal Reporter of February 14, 1946, which, under leave granted me, is included herewith:

RUMORS OF INFLUENCE IN GOVERNMENT SURPLUS SALES CONTRARY TO FACT — TRANSACTIONS SHOW ENVIABLE RECORD

On the fringe of every industry there are the hit-and-run type of businessmen who are out to make a killing by fair means or foul, usually the latter. It is extremely unfortunate but not surprising that this sharpshooting type should have been attracted to the disposal of war surplus property. Such will-o'-the-wisp businessmen, here today and gone tomorrow, thrived at the end of the First World War by buying and selling Government surplus merchandise or by using their influence to obtain contracts by devious means for others. Their operations led to congressional investigations and unearthed a stench which to this very day has not been completely eradicated.

Those who are now in charge of the Government's policy of disposing of billions of dollars' worth of surplus war materials, conscious of their responsibility and desirous

of doing a good job for the Government and for industry, have done everything in their power to prevent any undesirable elements from gaining even a toe-hold in the disposal program. The agencies handling the surplus property disposal program have been criticized for the slow disposal rate but never has their integrity been challenged.

There are thousands of merchants who scrutinize carefully every Government transaction involving surplus war materials. If there had been any shenanigans, any favoritism, any wire pulling, or outright fraud, these misdoings would long ago have been called to the attention of the vigilant congressional committees that have been keeping a sharp eye on the war surplus property disposal program. The record of the SPA policyframers and of those who are responsible for executing these policies has been excellent from the point of view of integrity. The thousands of complaints and criticisms that have been received from disgruntled bidders, have failed to bring to light actual irregularities in any of the large number of transactions made by the surplus disposal agencies.

In spite of this, there are rumors of favoritism and of insiders pulling strings in Government disposal agencies. Most of these rumors originate with unsuccessful bidders who seem to assume that the reason they failed to get an award is because the successful bidder must have had some "in." Unfortunately these rumors take on importance by the fact that every now and then some self-appointed agents call upon the unsuccessful bidders and frequently succeed in convincing them that they have an "in" with the local disposal agency and can turn their previous failures into future success at Government sales. Any number of such self-styled agents are alleged to have been peddling their services on a 5-percent commission basis and have come to be known as the 5-percenters.

If by chance the businessman who was gullible enough to utilize the services of such questionable agents, succeeds in getting an award, he will probably attribute his success to the agent and the agent may be expected to assume responsibility and credit for the award. Thus the businessman who has been played for the sucker, becomes more convinced than ever that pull is needed to get awards and he will shout his convictions from the housetops. That is how rumors start and that is how the 5-percenters feed on them to their advantage.

The surprising thing is that so many seemingly honest businessmen should fall for such a racket and accept rumors as facts. It would seem to us that if honest businessmen are approached by "agents" who claim to have influence with Government agencies, that it would be their duty as citizens and as members of an industry to report such individuals to the proper Government authorities. Such leeches should not be permitted to prey on the industry. We go a step further and suggest that the Government look into the operations of these so-called agents and break up their racket if it exists.

The disposal of surplus war materials will continue for many years to come. It is of the utmost importance for the economy of the Nation that these surplus war materials be liquidated efficiently and honestly. Individuals who boldly assert or merely imply that by the use of unethical methods they can do things which the honest businessmen cannot are a menace to any business. If their operations should remain unchecked, they could easily undermine the public's confidence in the Surplus Property Administration and cast suspicion on the thousands of first-rate, honest, sincere, and efficient executives who are trying to help the Government do a good job in disposing of billions of dollars' worth of surplus merchandise of every description.

As we see it, businessmen should be careful to discriminate between fact and fiction and not believe the fantastic tales of "influence" and "graft" unless proof is offered to substantiate the gossip. Secondly, businessmen owe it to themselves, their business associate, and to the country to report any individual or group of individuals who profess to have back-stair entrance to Government departments, and, finally, the Government itself should run down those who are trying to create a racket among those who desire to purchase war surplus materials.

Harold L. Ickes, Crusader and Conservationist

EXTENSION OF REMARKS
OF
HON. J. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. JOHNSON of California. Mr. Speaker, for over 25 years before he came to Washington as Secretary of the Interior, Harold L. Ickes fought graft and corruption in Chicago, almost singlehanded. No one ever fought a more relentless nor more discouraging fight against sordid interests trying to undermine the morals of the people and the Government as well.

When he entered the Cabinet, as the suggestion of Senator Hiram Johnson of California, it was not generally known what his views on conservation were. His performance in that regard has received the support and the applause of the most ardent conservationists. No one, perhaps, except one who has served as Secretary of the Interior can really understand the pressure that can be placed upon a man in that position by persons, groups, and "interests" whose desires and interest may be contrary to real conservation.

It is essential to the cause of conservation that the appointee to the office of Secretary of the Interior be thoroughly in sympathy with the broad purposes of conservation. Our natural resources and the public domain must be developed and managed for the benefit of the whole people. Mr. Ickes set a good example in that regard.

Under permission granted me to insert these brief remarks, I also include an editorial from the Sacramento (Calif.) Bee:

ICKES' SUCCESSOR MUST BE FIRST A CONSERVATIONIST

Gov. Vail Pittman of Nevada has launched a movement to have President Truman name a Westerner as successor to Harold L. Ickes as Secretary of the Interior.

That is a splendid suggestion and it is gratifying that all of the men apparently receiving top White House consideration for the post are men from the West.

After all the great bulk of matters administered through the Interior Department affect the western areas and it is only logical that a Westerner acquainted with the problems of the West should be given the post.

However, that is not necessarily the first qualification.

The first measure of the man to be given the secretaryship is that he be 100 percent in sympathy with the preservation of the resources of the Nation for the benefit and enjoyment of the greatest number of people.

Ickes was from Chicago, but it can be said the West never had a stancher friend in the Interior Department post than he.

Under the Department of the Interior are the numerous great water and power projects of the West—the Central Valleys project, Boulder Dam, Grand Coulee, and others.

Ickes fought with all his zeal for the advancement of these projects and to insure that the benefits accrued to the people and did not fall into the hands of corporate interests for private exploitation.

For this he was pilloried and castigated, but he carried on. And the present advanced status of many of these projects is a tribute to the former Secretary's valiant battle for the people.

It is hoped that when President Truman appoints Ickes' successor he will choose a man who has the interests of the West at heart as much as Ickes and is imbued with like zeal and courage.

The Housing Shortage

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I enclose a copy of a letter Governor Vivian, of Colorado, wrote to Wilson W. Wyatt, Housing Expediter, Office of War Mobilization and Reconversion, Washington, D. C.:

GOVERNOR'S OFFICE,
Denver, Colo., February 20, 1946.

WILSON W. WYATT,
Office of War Mobilization and Reconversion, Washington, D. C.

DEAR MR. WYATT: Thank you for your letter of February 7 enclosing copy of your report to the President on veterans' emergency housing. You asked for comments and suggestions as to the feasibility of your program. I am happy to comply.

I submit you are attacking this problem from the wrong premise. You seem to anticipate greatly increased Federal control in carrying out your concept of more houses at the earliest possible date. I note you advocate subsidy payments for increased production.

The one and only way to bring about greatly increased production, unless all the books on economics and sociology are wrong, is to allow the ancient and basic law of supply and demand to operate now. If this were done, there would be a short period of increased prices but only until healthy competition got into full play. Whatever inflation might be the result of discarding the multifarious Government directives, rules, and regulations, would soon be dissipated. Business would soon find a common level upon which to operate and prices would readily conform to the demand and the supply of materials and finished houses. This has been the history of the growth of our country and it will always be that way. You cannot successfully control our economy by beaucratic directives. That is fundamental.

You admit that "private enterprise must assume the leading role in this task * * * and that the building industry and financial institutions must be relied upon as the mainstay of the production program."

That is likewise basic and fundamental.

However, if you are going to allow private industry to do an all-out job, you must first

cast aside the many strangling hindrances which have so long throttled industry and business and give these agencies a green light. If you do this, they will get the job done far faster than if you continue to retard their progress with stifling rules and regulations of wartime origin which simply will not operate successfully in the reconversion period.

You say also that "All existing plants must be brought to capacity operation as speedily as possible."

Yes, if you will say to management: "All wartime controls are off: you are privileged to operate and manage your business as you did before the advent of the New Deal."

Only in this way can you expect full production. There is no incentive for business and industry to progress when management has so little to say about the operation of its own business. Price control retards the creation of supply to satisfy the demand.

You advocate the use of "Government credit where private capital is not available."

With our banks, trust companies, building and loan associations, and other financial institutions bulging with money, there will be no need for Government credit providing you remove all controls. Private financing is "rearing to go" if it is permitted to do so in its own way which is its right under the American way of life as we once knew it when the Constitution and Bill of Rights were the guiding instruments of business. So long as the relief requested is denied, just that much longer is business as usual delayed.

Again, you are contemplating more instead of less governmental red tape and control when you advocate providing "funds for premium (subsidy) peyments to secure increases in production of building materials."

You suggest $600,000,000 for this purpose. Nothing could be advocated which would involve a greater waste of public funds. There is absolutely no necessity for this enormous appropriation, provided you will allow business and industry to operate as usual. They will furnish sufficient funds to accomplish the immediate purpose of more and more houses.

Nor will you need to "protect the veteran against excessive prices if he buys a home now."

The healthy competition set out aforesaid will take care of that. It always has and it always will. You can't change our fundamental economy by directives and regulations. It never has been a success and it never will be. To continue to do so means just one thing: delaying the day when we shall return to normalcy in business.

You have hit upon another basic principle of our form of government when you say: "No program of this magnitude can be directed from Washington alone. We are going to need advice and active participation of courageous community leaders in cities and towns throughout the country."

You will have all that and much more if you nullify the Government controls aforesaid. And if you should do this, you need not worry but what American industry, finance, and business would take off their coats, roll up their sleeves, and get us back very shortly to the American way of life as we used to know it. All that our people are craving for is the opportunity.

Reliable reports furnished this office reveal that there are between 1,500 and 1,800 houses under construction in Denver and environs which cannot be completed because Government restrictions prohibit the allocation of the materials necessary for finishing them.

The only solution of insufficient houses is more houses. That is just common horse sense. These cannot be provided unless the contractors are able to purchase the wherewithal to complete those now being built and to begin the erection of other units which cannot, under existing regulations, be started.

I urgently request, therefore, that the Office of War Mobilization and Reconversion and such other agencies as may have control of the situation, immediately make available the necessary materials so that this housing may be expeditiously completed. There just isn't any other answer to the problem. Unless the Government allows this to be done, it is not playing fair with the people who are entitled to live in the homes they are making every effort to complete. This is their constitutional right which has been denied them far too long.

I very much hope you will accede to this request forthwith.

Faithfully yours,

JOHN C. VIVIAN.

DENVER, COLO., *February 12, 1946.*

Representative W. S. HILL,
Washington, D.C.:

The following telegram has been sent to Frank W. Cortright, executive vice president, National Association of Home Builders:

"Quickest answer to housing shortage is completion of those now under construction. In Denver there are over 1,600 homes by actual survey which were started in good faith prior to January 15, which cannot now be completed under existing regulations. One thousand of these homes range in price from $5,000 to $10,000; 400 are rental units and balance in excess of $10,000. Application for CC rating has been denied on theory that they are eligible for HH rating. However, because these houses started when no restrictions on materials, price ceiling granted by FHA is too low to warrant completion according to plans and specifications; consequently application for HH rating cannot be made. One thousand of these homes can be completed within 30 days if materials are available, and balance 60 and 90 days. This condition exists all over the country and your office should exert every effort to have promulgated necessary regulations to see to completion of existing construction. It is also asinine to divert materials to prefabricated and temporary construction when those materials can produce permanent housing at approximately same cost and within same period of time. If this is deliberate attempt on part of Government to prevent private industry from doing its job so that finger can be put on it for failure to excuse public housers for taking over construction industry, matter should be given greater publicity than is now being given by you or any local association."

Your assistance is respectfully requested in obtaining necessary regulations to make possible completion of homes mentioned. We believe this is vital to the building industry and also will solve housing shortage in this area.

STANLEY C. BRANDENBURG,
Executive Vice President, Denver Association of Home Builders.

Our Military Power Not Disintegrating

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann from the Boston Daily Globe of February 21, 1946:

OUR MILITARY POWER NOT DISINTEGRATING

(By Walter Lippmann)

By using sensational words inaccurately and much too cheaply we are misinforming the rest of the world, and indeed ourselves as well, about the power and influence of the United States in the postwar period. We are telling everyone that the rapid demobilization of our forces is the disintegration of our military power. Now, there is no doubt that the demobilization is rapid, even hasty, and that the efficiency and the discipline of our overseas forces has declined seriously. But to jump to the conclusion that this means the disintegration of American military power is to misunderstand the real nature of American military power.

The error is in supposing that the measure of our power is our ability and our willingness to maintain in time of peace the extraordinary civilian armies which were raised, trained, and equipped for Eisenhower and MacArthur to command. These armies have been the visible sign both in Europe and in Asia of American power in the world. These armies are being demobilized. What remains of them is not now, in discipline and morale, impressive. But it is a mistake to suppose that anyone can measure American power in the future, or even in the present, by the condition of these remnants of the wartime Army. For he is overlooking the basic fact that American power is peculiarly and specially amphibious.

We are an island—a continental island to be sure, but still an island—and we have developed and perfected a kind of military power which is unique. It is a combination of sea, air, and ground forces which can operate at great distances, across the oceans. No one can afford to forget the existence of this extraordinary instrument, or to leave it out of account in calculating the balance of forces anywhere. For there is no other military instrument which has a comparable range and reach, none so flexible, so mobile, so quickly concentrated, or so capable of exerting irresistible force at the point of impact. It would be absurd for anyone to imagine that with this instrument in our hands we cannot speak with equal diplomatic authority in any of the congested regions of Europe, Asia, and Africa.

Yet in Europe, and also here, it is for the moment the fashion to leave it out of account. The Europeans have never really seen the fundamental military power of the United States. The bulk of it was in the Pacific, largely invisible to the masses of the people and not really appreciated by European statesmen and generals who were preoccupied with the terrible struggle for massive land armies. The landings in north Africa, Sicily, Italy, and France, though impressive, did not really disclose the true nature of our amphibious power. For once ashore, the struggle on land obscured the underlying fact, which in the long run has the greatest significance, that here was a military instrument which could cross an ocean and put great forces ashore at the points it selected.

Our own people, including many of our military leaders and our diplomats, do not appreciate at its true value the peculiar instrument of amphibious power. Our Navy has been particularly interested in the Pacific Ocean, as enemy of the Japanese Navy and as friendly rival of the British Navy. Our Army has measured itself by the German Army, until 1942 regarded by professional soldiers as incomparably the best army in the world. Now, there is a disposition to count the number of divisions in the Red Army.

As a result, we are just beginning to understand, we have hardly begun to realize, the uses and significance of our own military instrument, that it is a new instrument and in scale and power and its uses unlike any other force in the world.

It would be advisable, I think, to correct these misunderstandings abroad and at home. It would be a good thing, it seems to me, if the new American Navy went for a cruise in European waters, and paid visits to our allies. The Europeans have seen the American Army going home—not always a pretty sight—and they must have the impression that with these homesick and somewhat demoralized GI's there is departing from the European scene the power of the United States They ought to be given a chance to see the Navy which was in the Pacific—the battleships, the carriers, and something of the great sea trains, which enable the American Navy to take its own bases with it.

It is only fair to them to show them this force, lest they forget its existence and come to think that GI's counting their points are the measure of our interest, our influence, and our power. It would help to correct any misunderstandings and miscalculations, into which land-minded diplomats so easily fall, during the critical negotiations about Germany, the Mediterranean, and the Middle East.

It would also be good for the Navy to see at first hand parts of this world in which this country is bound to be interested, and not to get into a rut and think that there is only one ocean, the Pacific.

The Navy knows all about the islands of the Pacific. It would benefit by an educational cruise not only to the British Isles, Norway, and Denmark, but to Gibraltar, Casablanca, and Dakar, to Marseilles, Toulon, and Bizerte, to Malta, Trieste, Salonika, and the Dodecanese, to Tripoli, Alexandria, Haifa, Beirut, and Suez, and to the Persian Gulf. These places are quite as interesting as Okinawa and Saipan, and it would be to the advantage of all, and would promote good negotiations, if our Navy saw these places, and if the people in these places saw our Navy.

It would not hurt UNO a bit if this were done. In fact it might help it a lot if everyone in the world including ourselves, were shown that, despite the demobilization, we were very much interested in Europe, and how, in the long view, we are able to manifest our interest.

The Patman Housing Bill

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. FORAND. Mr. Speaker, the Pawtucket Real Estate Exchange has studied the Patman bill, and so that their views may be known to the entire membership of the House, I enclose them herewith as part of my remarks:

PROVIDENCE R. I., *February 25, 1946*

Hon. AIME J. FORAND,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: The full membership of the Pawtucket Real Estate Exchange urge you to vote to have the Patman bill and its amendments sent back to the Banking and Currency Committee for further hearing, and if this cannot be done we strongly urge you to vote against the Patman amendments. These amendments would intensify the housing shortage by destroying the incentive to build. Would create a situation such as prevailed during prohibition. Ceiling prices on existing dwellings are not enforceable. Would produce chaos in the already critical housing shortage. Survey recently completed by members of the Pawtucket Real Estate Exchange shows that, because of material and labor costs, a $6,000 ceiling, at least in this area is impossible for construction of one-family dwellings. Contractors agree that such a ceiling under present conditions would completely stop the much needed housing for veterans' program. Thus we are correct, assuming this to be true, in saying that the housing shortage would be intensified. We feel strongly that because this program has never had a public hearing: The pertinent facts that would bear heavily on the necessity for such an amendment have not been brought to life. It has been railroaded onto the floor of the House in a way seldom seen in Washington. Industry and private citizens have never had a chance to testify on it or to submit facts about the effects it will have. They should have that chance. It can truthfully be said that real estate and the construction industry are the foundation upon which rests our American way of life. It is, therefore, too serious a problem to have radical changes made in this basic industry without complete and thorough public hearings. It must be remembered that this is one bill that reaches into every American home. We, therefore, strongly urge that you as our representative in Congress vote against the Patman amendments or do everything possible to secure a full public hearing on this very serious matter.

PAWTUCKET REAL ESTATE EXCHANGE,
PETER J. PIMENTEL, *President,*
GEORGE LAPP, *Secretary.*

Relief for the Philippine Islands

EXTENSION OF REMARKS
OF
HON. C. JASPER BELL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. BELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor of February 23, 1946:

MCNUTT PREDICTS QUICK ACTION ON BILLS FOR AID TO PHILIPPINES

(By Selden Menefee)

WASHINGTON, February 23.—The log jam holding up long-overdue legislation for the relief and reconstruction of the Philippine Islands has been broken, United States High Commissioner to the Philippines Paul V. McNutt said today.

He confidently predicted the quick passage of both the Bell bill to provide free trade with the Philippines for 8 years following independence and graduated tariff increases for 20 years thereafter, and the Tydings bill to spend $450,000,000 on public works and compensation for the victims of war damage.

Referring to the Bell bill, Mr. McNutt said:

"The House Ways and Means Committee, with complete and generous disregard for petty commercial interests which might benefit from the continued prostration of the Philippine economy, has now approved a bill providing for 28 years of preferential trade relations between the Philippine Commonwealth and the United States after independence is achieved next July.

"This action, which I am sure presages speedy approval by the Congress, is a gesture to the heroic people of the Philippines, and it will not be lost on our wards and allies."

Mr. McNutt said that the Tydings bill was equally essential. In providing funds to enable reconstruction to get under way it is complementary to, and in no sense a substitute for, the Bell bill. The Senate has passed the Tydings bill, and it is now in the House Insular Affairs Committee, of which Representative BELL is chairman. Now that the Bell bill has been reported out, quick action is expected on the Tydings bill.

Proponents of the legislation have been amazed at the lack of opposition from beet-sugar and other interests which in the past have worked to sever all ties with the Philippines, in order to eliminate tariff-free competition. The only real opposition came from within the Government itself—from a clique within the State Department and the Tariff Commission which is more interested in protecting Cuba's preferential sugar tariff than in promoting Philippine recovery. But that opposition has now been defeated

Even with this legislation, it will be at least 3 years before Philippine industries can even begin to export, and a decade before they can be restored to prewar levels. The Japanese utterly wrecked the sugar industry. They tried to substitute cotton for sugar without success. But now instead of exporting a million tons of sugar a year to the United States, as they did before the war, the Philippines must actually import sugar.

Neither American nor Filipino authorities want to restore a sugar-based economy, which Mr. McNutt says is inconsistent with a broad economic democracy. Both parties want much greater diversification than before the war. But according to Lt. Comdr. Julius Edelstein, adviser to Mr. McNutt, a substantial part of the sugar industry—the most efficient part—can be expected to thrive on exports to the United States west coast and to far eastern countries, to the extent of about 60,000 tons a year.

The Tydings bill will pay for less than half of the war damage in the island; total damages are estimated at more than $1,000,000,000.

PROBLEM OF JAP CURRENCY

A major economic issue of recent date has been the question of payments made in Mickey Mouse money—Japanese occupation pesos—during the invasion. Real estate was purchased, sometimes at gun point, and businesses changed hands by payments in this Japanese fiat money.

High Commissioner McNutt, in accordance with a directive from President Truman, recommended to the Commonwealth Government a plan of evaluation for payments and deposits made in the Japanese money, according to a formula worked out by a commission named by President Osmeña.

OPPOSITE BILL PASSED

A special session of the legislature was called to consider the McNutt plan. But while the High Commissioner was in Tokyo last December, the legislature, many of whose members had engaged in transactions in Japanese money, threw out the plan and passed a substitute bill drawn up by the opposition leader, Senate President Manuel Roxas. This would have validated most of the payments made in Mickey Mouse money at its full face value.

President Osmeña signed the Roxas bill. But under the Tydings McDuffie Independence Act, all legislation affecting Philippine currency must be approved by the President of the United States before it can become law. President Truman, on Mr. McNutt's recommendation, vetoed the bill. But it is still an issue in the islands.

POLITICAL CONFUSION

This incident symbolizes the confused political situation as the April 23 election approaches. President Osmeña and Manuel Roxas are the presidential candidates. The race has split wide open not only the Nacionalista Party of the late President Quezon, but also two smaller political groups, the Popular Front and the Democratic Alliance.

Informed Washington sources say that the issue is not a clear-cut one—Mr. Osmeña and the Democrats versus Mr. Roxas and the collaborationists—as some reports have indicated. While it is true that most of the collaborationists support Mr. Roxas, there are a considerable number of politically potent collaborators in the Osmeña camp as well. Mr. Roxas himself was cleared by Gen. Douglas MacArthur of collaborationist charges. Neither President Osmeña nor any of his chief spokesmen have echoed the charges made in the American press that Mr. Roxas is a collaborator.

President Osmeña has the support of most liberals, about half of the guerrilla leaders, and Communists. But he also is privately supported by the wealthy pro-Franco Andres Soriano, who is supplying funds and personnel for the Osmeña campaign. And Mr. Osmeña's party officially offered the vice presidential nomination to Quinin Paredes, who held a cabinet post under puppet President José Laurel and is still under indictment as a collaborator. Fortunately for President Osmeña's reputation, Mr. Paredes turned it down.

Two top collaborationists, Laurel and Jorge Vargas, his Ambassador to Tokyo, are being held for military trial in Tokyo. Others are being tried in Filipino people's courts. Only a handful have been convicted so far.

Most responsible Filipino and American authorities favor going through with the plan for complete independence next July. But they agreed that without the close cooperation of the United States during the next few crucial years, independence will have little meaning for the average Filipino.

Mr. McNutt put it this way in a recent speech:

"The fact of independence on July 4 does not minimize our responsibility. It increases it * * * (we must) recognize the imperative necessity of building here an economic system to keep step with political democracy."

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Newark (N. J.) Star-Ledger:

WASTE OF FEDERAL TIME

We find it difficult to understand the logic of fomenting national debate on a controversial issue such as the St. Lawrence seaway at a time when finding homes for war veterans, increasing production, defeating inflation, and balancing the Budget are crying for concentrated study.

The St. Lawrence project would provide a seaway between the Middle West and the Gulf of St. Lawrence. It would cost an estimated half billion dollars and would take years to complete.

Its proponents argue that it would open great new vistas for the Middle West through cheap transportation. Its opponents call it an outlandish squandering of public funds that, instead of helping anyone, would do irreparable damage to established east coast ports including New York and Newark.

There should be no reason for arguing the merits of such a plan now. It is not the time to debate spending a half billion dollars when Federal finances tremble under the impact of postwar demands. There is no need now for the thousands of jobs this project would provide. Under the rule of first things first, debate on the St. Lawrence seaway could easily be deferred 2 or 3 years until more important problems are settled.

The Credit to Britain and World Trade

EXTENSION OF REMARKS
OF
HON. GEORGE E. OUTLAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 21, 1946

Mr. OUTLAND. Mr. Speaker, under permission to extend my remarks, I would like to include the inspiring address by Under Secretary of State Dean Acheson on the subject of the loan to Great Britain.

After some of the statements and misstatements that have been made about this loan, I believe that Dean Acheson's remarks will come as a most welcome relief:

It is discouraging to some that our problems did not end with the end of the war. Our people strained themselves to the breaking point to win the war, they devoted themselves untiringly to the difficulties which arose and they solved them, and now they would like to enjoy the peace. But, of course, we have always known that keeping the world peaceful was difficult too. That also requires our patience and our best efforts.

Surely there is no problem which affects us more intimately than a prosperous world and a prosperous United States. It is about that question that I would like to speak to you tonight.

From late summer until last winter representatives of the American and British Governments worked together to arrive at a solution of the financial and trade problems which both of us face. When the discussions were completed we had reached agreement as to the means we would employ to secure the chance of a prosperous world.

Those means cover a broad range. They include the settlement of the lend-lease and reciprocal aid account between the two countries, an agreement on the proposals for an international trade organization and the granting of a credit to Britain.

I should like to tell you why I think it makes sense for us to extend a credit to the British, and, second, I should like to tell you why I think the terms of that credit are in our own interest.

A little less than a year ago we presented to the Congress the Bretton Woods agreements for an International Monetary Fund and an International Bank for Reconstruction and Development. We presented those agreements against the background of what we believed were going to be the postwar economic conditions of the world. We stressed to the Congress that when the period of war was over and the period of lend-lease was over, we would abruptly face the problem of supplying the needed imports which foreign countries must have to live. We explained that these countries would find it very difficult to get dollars because they would have few goods to sell and that, without the Bretton Woods institutions, we would run into a whole series of restrictions over world trade, a series of restrictions which would be designed for the purpose of helping each country force its products on the rest of the world so that it might earn enough money to buy abroad the barest minimum of goods it required for its people.

We said that these efforts could only lead to a system of closed blocs; each country would want to fence off for itself a market where it could sell its goods. In fact, it would have to make such an attempt because only by doing so could it earn enough money to purchase from other parts of the world what it needed to live upon. The Congress believed what we said. It believed that that would be the central economic problem of the postwar world, and it passed the Bretton Woods Agreements Act.

The better part of a year has gone by. Everything that was then presented to the Congress has proved to be far too true. I don't think it unfair to say that in that period of time the whole condition of the world has deteriorated far more than we could have thought. It seems to me that it has passed the point of being critical. It has reached a point where only the most timely and vigorous action on our part can prevent a further decay into the conditions of economic anarchy.

Why has that happened? It has happened partly because events have moved far faster than we have been able to provide measures to deal with them, partly because the military occupation has come sooner and lasted longer in some areas than we thought it would, and partly because conditions in the world are generally worse than we thought they would be. It has happened for a hundred other reasons.

Why have I discussed this situation? What is its relevancy to Bretton Woods and the credit to Britain?

Let us think for a moment about the position of the United Kingdom in relation to world trade, world production, world exchange of goods, and world commerce. Let us think of the position of the United Kingdom, not merely because of the tremendous importance of what it buys and sells but also because of the tremendous importance of its currency which together with the dollar, provided the trading mechanism for one-half of the total prewar world trade.

Britain and the United States provide the currency which, after this war and the elimination of Germany and Japan from prominence in international commerce, will be the currency with which two-thirds or three-quarters of the trade of the world is conducted.

Let us look a little more closely at the position of England. Before the war, one-fifth of the entire trade of the world moved in and out of the ports of Great Britain.

That little island was like a lung. It was the breathing in and out, the drawing in of imports and the sending out of exports, which was one of the great activating forces of world trade. Great Britain and the British Empire, the United States, and Canada between them conducted one-half of all that trade. British trade, Canadian trade, American trade, affected every single corner of the earth, affected France and all of Europe, affected Indonesia, China, Japan. Every part of the world was activated by British and American trade.

Now, what is the position of Great Britain today? During the war many things happened to that island. One of the things was that through force of necessity, through the virility of its own administration and its own character, that island converted almost its entire economy to the production of war commodities. It is easy to say that the British had to do that because they were in the middle of the fight and they could not have survived without doing so. But many other people were in the middle of the fight and did not survive because they did not do so. The British took no half measures. They never spared themselves. All of their industries were transformed into the production of war goods; their manhood was scattered over the seven seas and all the continents in the armed services; old men, women, and children were brought into

the factories. Life throughout Britain was completely disrupted to produce materials for the war and to carry on the war. I am not saying this because this loan is a reward for virtue; I am saying it to indicate the condition of that island at the end of the war. British exports were down to 30 percent of what they had been before the war. But that is still only part of the picture.

Another thing which had happened to Great Britain was that, although the United States had provided about $25,000,000,000 of aid through lend-lease, the British had provided us with five billion of reverse lend-lease aid and they had to conduct the war from the Straits of Gibraltar to India and Burma through the use of the British pound sterling. At the end of this year the British will have accumulated $14,000,000,000 in sterling debts to other countries. I don't mention that merely because it is a tough thing for Britain to accumulate debt; we have accumulated debt ourselves. We borrowed billions from our own people. But the important fact about the British is that they accumulated debt to other people. What does that mean in terms of world trade?

It means first, that for decades and decades the British will have to export goods for which they get no pay. Those goods will have to be exported to pay off the sterling debt. That is inevitable. That must happen. That is the burden the war brought upon Britain. It is our hope and the hope of the British that some of their creditors will agree to scale down a part of that debt as part of their war contribution. But there will certainly remain a very substantial amount which Britain will have to work off through exports. And that means that, unless drastic steps are taken to secure an interchangeability of currency, the British must work for their individual creditors, and their individual creditors, if they are to realize upon their debt, must accept British goods and services only. That problem, if not dealt with in some way, would bring about a channeling of economic activity which could only result in the division of the world into closed economic blocs.

I hope it is clear what I mean. In order to buy meat during the war, the British bought it from Argentina. That is where they had to buy it, because that was the only place they could get it. The way they paid for the meat was to say to the Argentine, "We will give you sterling credits in London. You can draw on a bank in London for sterling and that is good wherever and whenever you can use sterling." This transaction, which was repeated again and again in various parts of the world, was one of the most extraordinary financing jobs of the war. People went on taking sterling credits in London because they had faith in the integrity of the British character and the British Government. They could not use this British money for the time being. There was little they could buy with it. They could not exchange it for dollars, francs, or rubles. All they had was the faith that some day they would be able to buy something with it.

If you look at nothing more than the claims on future British goods which arise from Britain's sterling indebtedness to other countries, you can see that for generations people in India who have sterling credits, people in Egypt who have the same thing, and people in near eastern countries and South America would have to look only to Britain for goods and services to extinguish that debt unless the pound sterling can be made exchangeable for the currencies of other countries. That is the situation Britain faces at the end of the war.

What does it mean in terms of world trade? It means that all of the disasters which I began by talking about are more accentuated than they otherwise would be. As the situation stands today, it means that, if Greece wants to deal with Great Britain, it can only deal in terms of sterling. If Great Britain buys something from Greece, all Greece gets is a claim on future British production. It means that Italy, which is in a desperate situation, if it deals with Great Britain, gets only a claim on some possible future production. They get no money they can spend in New York or Paris or Rio; they get merely a claim against future British exports.

That is the situation which confronted the British and American negotiators when they came to discuss a credit to Britain. The agreement which they reached was not couched in terms of the United States simply lending some money to the British.

We had a chance—one last, clear chance—to restore world trade, to put it on a basis which would permit someone who sold goods to England to get some money which he could then take and use in Brazil or the United States or France. We could then again have a condition of multilateral trade, in which every sale gave you a chance to buy in any market you wanted to in the world, a situation which would increase production everywhere because everybody would have a chance to compete freely in every market.

Or we had a chance of taking a narrow viewpoint. We could have said, "Well, we have done enough for the British. We sent them $25,000,000,000 worth of lend-lease during the war. We did all that and now we have our own problems." The result of that attitude would have been that the British would have been forced to adopt the only alternative open to them—a desperate one which offered no real hope to them or anyone else. It was the alternative of trying to pull the Empire closer and closer together, of saying, "We will make a contract to sell to Australia and they will buy from England. Or Australia will sell to South Africa and buy from England." Deals within the Empire: That was the alternative.

It was an alternative which would mean a lowered standard of living throughout the world; it would mean lowered markets for the United States. For the prosperity of this country can no more continue in the face of a descending and impoverished world than it could continue in the period of the thirties.

Those were the alternatives and, faced with that situation, some of the criticisms which I hear seem to me to be uninformed and almost frivolous.

Fortunately those who were charged with the responsibility of negotiating with the British recognized the alternatives which faced us. They said, "It is perfectly clear that over the next period of 3 to 6 years the British will have a deficit in their balance of payments."

Now, what is meant by the phrase "balance of payments"? It means that with all the savings that the British have in terms of the currencies of other countries, with all the currencies of other countries they receive from the goods they can sell abroad, they will still not have enough money to buy the essential goods which they have to import into their island. The British have to import goods in order to live. They must import wheat, they must import cotton, they must import the fundamental elements of food and clothing, but they have to do more than that. They have to import machinery and the means of making machinery to convert the factories which have been making Spitfires and bombs and artillery and tanks into factories which make goods both for domestic and for foreign consumption. They have to do even more than that. They have to import the raw materials which those factories will use in order to make the goods which they can then sell abroad, and from which they can earn money in the form of foreign currencies. In other words, a deficit in their balance of payments means that the British bank account, the bank account in which they have the currencies of other countries, won't balance. They will have to draw more checks on that bank account than they have deposits.

It is to nobody's interest that the British be forced into the situation which I spoke about a moment ago. It is to nobody's interest that they cease to buy abroad because they lack the necessary dollars or francs or guilders. Nobody makes any money when a customer is unable to buy. If that customer is worthy of credit it is to everybody's interest that he be carried over the period of his embarrassment. Therefore, our negotiators said, "What sum of money is necessary to carry the British deficit in their balance of payments over this period? Of course, the British expect to maintain an austere standard of living; they must cut down on many things their people would like; for a while their standard of living may have to be even lower than it was during the war; but they must still be able to exist; they must still have hope; they must still go forward. Now, what is the amount of money that will be required?" That was the question we had to answer. After many calculations, and taking into account loans yet in the offing from Canada and other countries to whom Britain might look for credits, it was determined that $3,750,000,000 would be the sum which, added to these other credits, would carry the British over the next few years, and that amount was agreed upon.

I said that I wished to discuss two questions tonight. The first was whether it was in our interest to extend a credit to Britain, and I have tried to explain what will happen to us and to the whole future of world trade if we do not extend the credit. The second question related to the terms of the agreement which was reached with the British, and I would like to tell you why I think the provisions which have been agreed upon are fair terms and why they will greatly benefit us.

First let me summarize briefly the repayment provisions of the agreement. The British may draw upon the credit of $3,750,000,000 until the end of 1951, and interest payments do not begin until that time. On December 31, 1951, the first payment of interest and a part of the principal becomes due and such payments continue for 50 years until the entire sum of the principal of the loan plus the interest has been repaid. If in any year the British foreign earnings from exports and other transactions fall below a fixed standard, the British may apply for a waiver of the interest. In applying for a waiver they must agree that they will secure a waiver of interest payments on their debts to other countries, and the International Monetary Fund created by the Bretton Woods Agreements must certify that the British foreign earnings are, over an average period of 5 years, below the standard set by the agreement. If these conditions are met the interest is waived; it is not suspended for payment later, but waived completely.

We do not wish to get into a position such as the one which existed with respect to World War I debts. In the 1920's the British paid us over $2,000,000,000 against the debt they had incurred, and, when the depression came and they did not have earnings sufficient to meet their obligations in full, there was no mechanism by which the debt burden could be adjusted to conform to the stubborn facts of the international situation. Default followed, and the problems that it brought have plagued us ever since.

But quite apart from the repayment of the credit with interest, the British have agreed to do a number of other things which are essential to the prosperity of the United States and to the kind of international trade which we as a Nation seek.

When our negotiators sat down with the British they said, "We are willing to extend you a credit. But you must agree to a number of other things, so that we may hasten the time when trade can be conducted more

freely without the hampering restrictions which, even under the Bretton Woods Agreements, you are entitled to impose for a period of 5 years." After a good many discussions the British obligated themselves to do the following things:

First, they agreed that immediately after the credit becomes available any American doing business with the United Kingdom, any American with investments there on which he receives dividends, any American movie company which has payments due on its films, any American who is involved in a current transaction with the United Kingdom, is entitled to receive dollars. He will not have to take blocked sterling which he cannot use or which he can only use for certain things; he will receive dollars which he can use freely in any way he chooses.

Second, the British agreed that at the end of 1 year within the sterling area—the area in which British currency is the medium for doing foreign business and which includes the British Empire, except Canada and Newfoundland, plus several other countries—anybody carrying on current day-to-day business transactions and receiving pounds sterling can walk into a bank and exchange pounds for any currency he wants. This is a tremendous step forward.

Third. The British went on to agree that at the end of 1 year they would not only make pounds convertible into other currencies within the sterling area, but every place else in the world as well. This means that if a Frenchman sells goods to a British merchant and receives pounds, he can walk into a British bank and exchange his pounds for dollars or any other currency In this way the pound and the dollar can operate as the great mediums of foreign business, free of the controls and limitations which during the war prevented those who sold in British markets from using the proceeds to buy from us or elsewhere in the world.

But the British went still further. They agreed, fourth, that from the effective date of the agreement they would impose no import restrictions which would discriminate against the United States. Of course the British, who will be short of foreign exchange for some time, cannot permit their people to spend dollars and other foreign currencies for luxuries when their needs are so great for essentials such as food and raw materials and machinery. But the British do agree that any restrictions they impose upon imports will be nondiscriminatory and that every country, including the United States, will have a free opportunity of trying to supply whatever the British are willing to purchase abroad. That is all we want. We are confident that American businessmen who are permitted to compete freely for trade will prosper and thrive.

The British did not even stop there. They agreed to a fifth thing of great importance. We took up with them the question of their sterling indebtedness which amounts to some $14,000,000,000. This indebtedness to parts of the empire and other sterling-area countries is a very serious problem. It is a tremendous debt which has many trade results that I have already mentioned.

The arrangement we worked out was along these lines. The British agreed that, with respect to a substantial part of the indebtedness, they would negotiate with their creditors to get it written off the books as a contribution to the war. Much of the sterling debt had been incurred in the sterling area for the purchase of war supplies and for services directly related to the war. The countries which extended this credit should consider a large part of it as their contribution to victory. The British agreed that, with respect to an even larger part of this sterling indebtedness, they would seek to convert it into a long-term debt which could be repaid over many years in annual installments, and they agreed that any payments which they made on this part of the debt could be used by their creditors anywhere in the world. The balance of the sterling indebtedness the British agreed to pay off immediately, and they agreed that the sterling which they pay immediately can be exchanged by their creditors into dollars or any other currencies and used wherever their creditors wish to use it. They did, of course, also agree that they would not use the dollars we are lending them to pay any of these debts.

Those are the obligations which the British have undertaken in the financial agreement with us. They are very large undertakings indeed. Surely no one can say that we are simply lending the British money without getting anything in return.

But we did not stop there. We also secured the agreement of the British to support the trade proposals which were published by this Government last fall. These proposals were put forward with a view toward freeing world trade of discriminatory and hampering restrictions of all kinds. The proposals relate to such matters as the reduction of imperial preferences comparable to the reductions in our tariff, the lifting of quantitative quotas and embargoes of a discriminatory nature, the limiting of subsidies on exports to exceptional and well-defined cases, the elimination of restrictions on the commerce of the world by cartels and combines through international action, the handling of the difficult special problems of surplus commodities, the creation of an international trade organization under the Economic and Social Council of the United Nations, and the efforts to provide full and regular employment in each country by domestic action which will avoid harmful effects on the employment situation in neighboring countries.

Without the credit which we have agreed to extend to the British, it would be wholly impossible for them to undertake the commitments included in the financial agreement and quite beyond their capacities in the next few years to support our proposals for securing a multilateral trading system in which the businessmen of the United States can freely compete for the markets of the world.

And yet even this was not all that was agreed upon in our negotiations with the British. We had also to think of the lend-lease and reciprocal-aid accounts and of the United States surplus property in the United Kingdom. This was a problem which might easily have been bungled and which might have hung on to strain and endanger and complicate our relations for decades.

During the course of the war we had sent to the British on lend-lease about $25,000,000,000 worth of goods. These goods ranged from tanks and planes and shells to food and blankets and medical supplies. But the greater part of the total had been either blown up or used up in our common effort against the enemy. At the end of the war there still remained a sizable amount of goods. Some of these were of a military nature, some civilian. There was also a very sizable amount of surplus property in the United Kingdom, much of which had little value. The British might have said to us, "We wish now to return you everything that is left and you make take it away with you," but if they had done that, we would have been faced with the absurd situation of packing up all of these supplies and paying enormous amounts in freight and service charges to bring them home. It would have been absurd for another reason, since the British had a use for many of the goods which were there. And, of course, we had large quantities of supplies which we had received from the British on reverse lend-lease. These supplies were in the hands of our armed forces all over the world.

What we did was to look at all that remained in their hands and in ours and agree with the British upon a value for all of it. When the accounts were balanced, it was found that the British owed us $650,000,000 and the British agreed to pay us that amount. This will be paid on the same terms as those provided in the financial agreement in 50 annual installments. The entire slate has now been wiped clean. What we received for those goods which were destroyed or consumed is the effort which our ally was able to put forth in winning the war and that is enough. We have made a fair settlement for what was left, and that should be very heartening to the American people, who always wished that lend-lease should be a great war mechanism and that it should be promptly and fairly settled at the war's end.

I think you will agree that we found solutions to a very considerable number of difficult problems. What we attempted to do in the negotiations with the British was to reach a settlement of all of the outstanding financial and commercial problems which confronted us. We thought it was appropriate that we secure a settlement of all of these problems in connection with the granting of a large credit to the United Kingdom. We did not think it was appropriate to try to use the lever of the credit to practice dollar diplomacy in fields quite unrelated to financial and commercial questions. Questions of territorial sovereignty and other political matters are not subject to solution by such methods.

What we have done is to arrive at an understanding with a nation, whose position in world commerce is unique, to move forward toward the removal of controls and restrictions which hamper and reduce international trade so that both of us and other nations may prosper in an expanding world economy.

Child-Care Centers

EXTENSION OF REMARKS

OF

HON. CHARLES R. SAVAGE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. SAVAGE. Mr. Speaker, there are still a great many women working who are wives of servicemen, and some who have lost their husbands, and therefore it is vitally important to them that the child-care centers be continued.

In view of this fact, I insert this timely editorial from the Washington Evening Star, of February 8, 1946, in the RECORD:

CHILD-CARE CENTERS

On the basis of information supplied to the Board of Eduction and District building officials by social workers who have studied the situation, the scheduled closing of Washington's emergency child-care centers on February 28 would work real hardship on many families. Among those who would be seriously affected are the wives and children of scores of servicemen still overseas, as well as many widows whose ability to make a living for their families depends on their finding means of caring for their children during working hours. This being the case, the Board of Education has been persuaded to discuss with the District Commissioners the possibility of obtaining a deficiency appropriation of $50,000 with which to carry on the work of the centers for the remainder of the fiscal year.

There is considerable merit to the contention that these centers should remain available to worthy families during the period of postwar economic readjustment through which they are passing. A careful screening of applicants will be necessary as the tapering-off process incident to the return

of more normal domestic conditions is effected.

Incidentally, there is a movement in some circles to seek continuance of the centers on a more or less permanent basis. The Council of Social Agencie is conducting a survey which should throw light on the advisability of continuing the centers beyond the emergency period. Whether such a long-view program should be subsidized with Federal funds or supported by community contributions is a matter for future determination. The immediate problem is to find ways and means of continuing the program during the present emergency. And it is an emergency relief measure that the Commissioners would be justified in requesting from Congress the deficiency appropriation sought by the Board of Education.

In Memoriam

EXTENSION OF REMARKS

OF

HON. FRANK A. BARRETT

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. BARRETT of Wyoming. Mr. Speaker, today we celebrated the one hundredth anniversary of the birthday of that great American, William Frederick Cody, popularly known as Buffalo Bill. In his day he was the idol of every American, particularly the children.

Buffalo Bill was a man of great vision, and in the early days, before the Federal Government enacted its irrigation law, he promoted an irrigation project near his home town, Cody, Wyo.

At the time of Custer's last stand Buffalo Bill, as one of the chief scouts, fought the Cheyennes in the battle of War Bonnet Creek, on July 17, 1876, near my home town. In this battle Buffalo Bill, winning in hand-to-hand fighting with the celebrated Indian Chief, Yellow Hand, recorded the first revenge for Custer's death.

The following tribute, in the souvenir edition of the Cody Enterprise, February 20, 1946, expresses the high esteem in which this great frontiersman is held by every citizen:

IN MEMORIAM

Col. William Frederick Cody—"Buffalo Bill" in the hearts of every citizen of this and other countries—is gone, but his deeds, words and many accomplishments will never die. During the month of February the world salutes the memory of three great Americans. Washington, the founder of our Nation; Lincoln, the savior of our Nation; and Cody, the great frontiersman.

The blood of a hardy race of pioneers flowed in the veins of Bill Cody. The instincts of the empire builder were his. His heart was as tender as his spirit was brave, and though respected, honored and admired by the greatest of the earth, his real friends—those who loved him best because they knew him best—were his old friends and comrades in and about his home town of Cody, Wyo.

Perhaps there is no person so universally known as Colonel Cody. The idol of all the children, his Wild West Show brought to the world the personification of the romantic dreams of thousands of ordinary people for life that was adventurous and free. He was a great showman, and this quality more than anything else enabled him to place the great future of Wyoming and other Western States before the public.

As a man he bowed to none. With his tall, handsome, athletic frame, and gracious ways he won the hearts of kings as well as common men. Ever alert to his destiny in the West, he spurned an easy life among the world's great, and always returned to his last and greatest love, his home on the frontier in Cody.

Buffalo Bill the individual represents an era in American history that in itself was unique—an era of conquest typified by him who was no conqueror. He played a major part in the greatest period of transition the world has ever witnessed. His roles were numerous, but always important and colorful—scout, Indian fighter, Pony Express rider, buffalo hunter, trail blazer, empire builder, and master showman. His career was one of deeds and accomplishments, the stuff of which nations are built to withstand the blasts of time.

On February 26, Cody, Wyo., the town that was his home, pays tribute to its greatest benefactor, the man who looked beyond the rocks and sagebrush and saw a thriving metropolis rich in minerals, oil, fertile irrigation lands, and freemen.

Cody is no longer the frontier of an advancing civilization, but in the hearts of those who are privileged to dwell in the chosen homesite of William Frederick Cody, the spirit of the frontier will always prevail. In deepest humility we pay everlasting tribute to the memory of our greatest benefactor, Buffalo Bill Cody.

Thinking It Over

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the February 23 issue of the Fair Play of Ste. Genevieve, Mo.:

THINKING IT OVER

Republicans are gleefully whooping up the Truman-Ickes-Pauley quarrel the past week, pointing to it as an outright indication of dissension within the Democratic ranks. The truth of the matter really is somewhat different in our estimation.

Ickes in the true sense was never a party man. His only hold on the Democratic Party was that he was a member of the Democratic Cabinet during President Roosevelt's tenure in office. He was an avowed believer in the Rooseveltian policies and various social reforms, many of which he authored himself with the President's approval. But there the line was drawn. When President Roosevelt died, Ickes died with him—politically. His crack-brained schemes to revolutionize everybody and anything may not have been looked upon with favor by the practical Truman. So—Harold Ickes, like an outraged prima donna, sought to embarrass the President by calling a Presidential appointee a crook.

It has not been so long ago when the Republican press was condemning Ickes for everything under the sun. Now overnight they point to him as the soul of honesty, integrity, and loyalty.

If the Republicans think that about Harold they can have him in their party. But if they think for a minute that his rampage will break up the Democratic Party, brother, they're just whistling in the dark.

Money Facts and Fallacies

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. WHITE. Mr. Speaker, one of the most important functions of governments everywhere is to provide their people with a stable monetary system.

It now appears from the business and financial conditions prevailing throughout the world that the governments of the past, with their money systems as imperfect as they were, have done better in meeting this responsibility than the several governments—including our own—are doing at the present time with their several so-called managed currency systems.

There is submitted for the information and consideration of my colleagues a letter on the money subject and my answer thereto:

SPOKANE, WASH., *January 31, 1946.*

Mr. CHAS. E. POND,
Peyton Building, Spokane, Wash.

DEAR SIR:

1. A short time ago I wrote asking why the difference in the price of gold in various parts of the world in terms of United States dollars. You never replied but you sent me various articles which I have appreciated, especially the remarks by Hon. COMPTON I. WHITE. In it are some things I understand and some I do not. All remarks following that are in quotation marks are from Hon. C. I. WHITE's article.

2. A miner brings metal to the mint, "it would be minted into coin and handed back to him to do with as he pleased"; "the miner could spend it or keep it as he pleased"; "the collection of interest was not inherent with the creation and circulation of gold and silver money." All of that is plain, simple and understandable.

3. But if the miner wished he could loan it to someone with or without interest. He could have loaned it to Uncle Sam, taking in return a bond that paid interest. The interest had nothing to do with the creation or circulation of the money. The interest was a price paid for the use of the money by a party not owning the money. From the beginning of our Government down to the present Victory loan our Government has borrowed money by issuing interest-bearing bonds. I see nothing wrong in it.

4. The National Bank Act permitted legal tender money to be issued up to 90 percent of the value of the bonds deposited as security. Those bonds did not become the property of the Treasurer. They continued to pay interest to the owner because the Government was still using the money those bonds were originally issued for. The United States guaranteed that legal tender bank note because it had $100 for each $90 note issued. I cannot see anything wrong with that.

5. The miner takes the metal to the mint and receives (1) gold coin, (2) silver coin in return. Often he traded the gold coin for a piece of paper called (3) gold certificate. Usually he traded the silver coin for a piece of paper called (4) silver certificate, because the silver coins were too bulky and heavy to handle. The banker took the United States bonds to the Treasurer and deposited them for a piece of paper called (5) national bank note. All the above five kinds of money were legal. The owner, that is the banker or the miner, could spend, keep or loan as he elects.

6. What I do not understand is: How are the American people burdened with any interest in the creation or circulation of any of that money. Interest does not start until the owner loans his money to a second person and the latter person is willing to pay for that use of that money.

7. The amount of bank-note money issued was not controlled by the banks but by the amount of the bonds the United States sold, which in turn was controlled by the confidence someone had in investing in those bonds. The bank, after securing the bonds, could then control the amount of notes it wished to issue against those bonds. The bonds yielded interest but not the bank notes, that is until they were loaned out at interest as a gold coin or gold certificate or silver coin or silver certificate was loaned out.

8. Anyone can figure that a dollar compounded at 6 percent interest from 1879 until 1945 will be $46.79, if they have the time and the patience. It was nice of Mr. Woodlief Thomas, of the Federal Reserve System, to have done the work but it also added prestige to a weak argument. Why take 3 percent or 6 percent? Why compound annually? During that period banks loaned money as low as 2 percent and as high as 10 percent; took out interest in advance so that they got slightly more than the mentioned rate; loaned it for 30, 60, or 90 days, usually 90 days, so maybe interest should have been compounded quarterly or every 60 days. But on the other hand the banks had to keep 15 to 25 percent reserve, seldom had all their money loaned out, had certain expenses and losses inherent to running a loan business. So you see all this talk of interest means nothing. Just a smoke screen to cover the real issue.

9. "Money of ultimate redemption." What does that mean? Ultimately we redeem a gold or silver coin with what?

10. "Money of unchangeable value." What does that mean? That 1 ounce of gold will at all times buy a certain fixed quantity of wheat or coal or silver? Even in our bimetallic days an ounce of gold bought from 15 to 16.002 ounces of silver.

11. "Bimetallism worked from 1792 until 1873—81 years." Did it? The 1792 ratio was 15 to 1, which was very close to the world market. But the world market changed and by 1795 to 1833 that market changed and the average ratio was 15.6 to 1. That meant that gold was undervalued in the United States and silver was overvalued. You could change 15 ounces of silver for 1 ounce of gold at the United States mint and trade that ounce of gold for 15.6 ounces of silver, making 4 percent on the transaction. And the turnover was fast. The "inexorable force of Gresham's law" was working. Result, we got the silver and gold went to the world markets. And we had to do something about it.

12. So—in 1834 and 1837—the ratio was changed to 16 to 1. United States overvalued gold and undervalued silver. "The inexorable force of Gresham's law" reversed the process. An ounce of gold exchanged for 16 ounces of silver at the United States mint, but you took only 15.33 ounces of silver (in 1853) to the world markets and got 1 ounce of gold for it, making 4.3 percent on the transaction. Result, United States got the gold, silver almost vanished from the United States. Even small coins were melted down and sent abroad.

13. The scarcity of small change was so serious that the public protested, private coins were issued as a convenience, silver dollars were cut into quarters and eighths to be used as small change, bank notes were issued in fractional parts of a dollar and in odd amounts such as $1.25, $1.50, and $1.75, dollar bank notes were torn into halves and quarters to be used as small change.

14. Silver was not demonetized in the United States at this time. England in 1816 (not Germany in 1870) demonetized her silver coins by reducing their silver content and making them fiduciary money. Similar measures had been discussed in the United States. About the middle of the century a beginning was made by coining a 3-cent piece of reduced silver value and limiting its legal tender value to 30 cents. Then Congress reduced the silver value of small coins 7.6 percent less than the dollar so the small coins would not be melted down and exported. The coinage and use of silver dollars was almost negligible. The Government minted $1, $2.50, and $3 gold pieces for the convenience of the public. But Congressman WHITE says, "Silver was pouring into the mints to be coined as money."

15. Then came the Civil War. Specie payments were suspended, greenbacks were issued, and lack of confidence among people caused hoarding. Hoarding of what? Gold or silver or greenbacks? I presume the metal coins, which showed that Gresham's law was working.

16. During the greenback period, when practically no silver dollars were in circulation or had been in circulation for many years and the people were not familiar with the silver dollar, Congress revised our coinage laws in line with those of the rest of the world. Congress discontinued the silver dollar, which put us on the monometallic gold standard. That was in 1873 and caused no particular comment by the silver advocates, by the people, or by Congress. As in 1834, when the gold dollar was reduced from 24.75 grains to 23.22 grains, there was no particular comment about this debasing of the money because there was so little gold in circulation that it affected practically no one.

17. The United States remained on the gold standard until recent times when we suspended specie payments. The country is on a managed-currency basis but we do not like to admit it. The gold and silver in the Government vaults has no connection with the dollar. (See Chairman Eccles, of the Federal Reserve, in his report to the House Banking and Currency Committee.)

18. If you refer to page 7 of Congressman WHITE's article, he talks about population and commerce increasing 3 percent. It is rather vague because his arithmetic is faulty. One percent of a fraction of a quantity plus 2 percent of the balance of the quantity can never equal 3 percent of the quantity.

19. Now this profit in seigniorage we hear so much about: On page 3 reference is made to United States Treasury Bulletin showing 45 percent seigniorage which is a tremendous profit to the Federal Treasury. But on page 8 he again refers to United States Treasury Bulletin of July 1945, which shows a loss of $459,000,000 for a period from sometime in 1944 to May 1, 1945. That calls for some explanation.

20. The concluding paragraph in Congressman WHITE's remarks refers to the various prices of gold in United States dollars in different parts of the world. That brings us back to the original letter I wrote you and I am still wondering why Gresham's law does not correct this.

Again thanking you for the information you have sent me at various times, I remain,

Yours respectfully,

R. A. CROWLEY.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON COINAGE,
WEIGHTS, AND MEASURES,
Washington, D. C., February 23, 1946.

Mr. R. A. CROWLEY,
Spokane, Wash.

DEAR MR. CROWLEY: It is interesting to learn from your letter of January 31, addressed to my good friend, Mr. Charles Pond, of Spokane, in which you raise certain questions concerning statements made in my extension of remarks in the CONGRESSIONAL RECORD entitled "The Trouble With Silver," that you are interested in and are studying the money question. It would be better for our country if more of our thoughtful citizens would become conversant with the problems of money, and would direct their efforts to giving this country a sound, workable, adequate money system which would provide the cash necessary to finance the business of our country.

For the sake of convenience in answering the inquiries made in your letter, I have inserted numbers to the consecutive paragraphs.

Now to explain my position and present you with the facts.

The answer to your first question, as to the cause of the varying prices of gold in the several countries, is that these fluctuations result from the forces of economic law; i. e., supply and demand. Since the value of the currency (money) of the several countries is geared under their managed currency system to their national credit and detached from the value of gold and silver, it is natural that as the value of the national credit of any nation rises or falls in international trade, the purchasing power of that country's money in terms of gold or silver fluctuates so the price of gold is higher or lower in terms of this credit money. As an example take France: At the start of the depression back in 1929 when most nations were still on the gold standard the French people were eagerly paying $25 for United States $20 gold pieces. We (the Congress) subsequently legalized by statute what the law of supply and demand had already done; i. e., increased the value of gold from $20.67 an ounce to $35 an ounce.

The statements made in paragraphs 2 and 3 of your letter are correct. The Government, as far as obtaining and disbursing money is concerned, has always treated itself as an independent corporation and procured its income by taxation, the proceeds from which it spent in paying the Government's commitments and running expenses. Like any other corporation, in times of emergency, when its income did not meet its expenses, it proceeded to make up the difference by borrowing money from its citizens or in the market by issuing and selling bonds—a form of promissory note—and, as you say, there was nothing "wrong about that."

Now as to the plan authorized by law for the creation of money under the provisions of the National Bank Act discussed in paragraph 4, a scheme by which the national banks collected double interest on money lent to the Government in the first place, while collecting interest on the same credit by lending it (credit) to its customers in the form of national bank notes to which you say, "I cannot see anything wrong about that." I am unable to agree with you. If there is any interest to be paid for the use of Government credit, it should go to the Government and not to the banks. Besides, this scheme gives the banks power to retire money from circulation by refusing to renew loans or make new loans—in most cases, as we have learned by experience, when cash is needed the most.

The statements made in paragraph 5 are absolutely correct. The issuance of gold or silver certificates with the equivalent of this money metal on deposit in the Government vaults available for redemption on demand made the best paper money in the world, money that was convenient to transport and handle; the kind of money that saved the money users the necessity of paying interest to the banks in order to have this kind of money issued and remain in circulation and also prevented loss of the Nation's money metal by abrasion or misplaced coin.

The answer to the uncertainty expressed in the sixth paragraph is simple. If you have gold or silver coin or gold or silver certificates, otherwise money, which someone wants to borrow at interest, certainly you have every right to collect your interest as long as they want to keep the money. But, that proposition is quite different from the operation of a money system whereby the only source of money creation and supply is given to the

banks operating under a plan whereby the money of the country is supplied to borrowers who must exchange interest-bearing notes to secure the issue of new money or the reissue of old money that has been returned to the banks in payment of previous loans—or maybe get money issued by procuring a loan of mixed new national bank notes and old national bank notes, but in any event all of it paying interest to the issuing bank until this loaned money or its equivalent in some kind of money is brought back to the bank with interest added and the note taken up.

In fact, in the operation of the present money-creating scheme both the note and the money are retired until the next borrower comes along and takes this money out and puts it in circulation again by giving the bank a new interest-bearing note. Thus we find that under our existing Federal Reserve banking system there is a never-ending yield of interest to the bank.

In this connection it is interesting to note that the average money user doesn't realize that he is paying interest on the money in circulation, especially if he has a comfortable bank account and is accumulating, instead of losing, money. But he is paying his share of the interest indirectly even though his earnings or his share of money is only in his possession for a few minutes or days, a brief period on which the current rate of interest is infinitesimal. Ordinarily the interest on the money he handles over the week end or after the monthly pay day is so small it means practically nothing to him, but he pays his share of the interest just the same in the added price to the things he gets from the butcher, the baker, the merchant, the theater owner, or whomever he patronizes. The people who have borrowed money in the conduct of their business must add the interest they pay to the price of the things they sell. To illustrate the magnitude of this charge for the use of the money in circulation, compute the interest on the $25,633,379,605 in Federal Reserve notes and $502,261,413 in Federal Reserve bank notes as shown on the December circulation statement of the United States Treasury and prorate the amount of that figure among the people of this country.

Contrary to the statement in paragraph 7, the amount of bank-note money issued is controlled by the volume of applications for bank loans based on the value of the security offered and the willingness of the banks to make loans: no willingness, no loans—no loans, no money—no money, falling prices—falling prices, little value to the security offered—little value to the security offered, impossible to make sound loans—so the Nation's financial pump has lost its prime and thereby the more liberal banks were powerless to supply the money flow to finance business—then depression, and you and your old man lost your financial shirt—pardon the digression.

Now, explaining the equation and the deduction you make in paragraph 8, if you want to make your calculation conform to the practice of the banks using the Federal Reserve System as applied to business notes classified as eligible paper, we find there is a maximum limitation of 90 days on the maturity date on this class of loan so the interest on the money of the realm, i. e., Federal Reserve notes, comes in every 90 days or sooner, owing to the period of maturity of the eligible note pledged as security for the issuance of this kind of money.

The statement as to idle bank reserves and bank losses is beside the point. The indisputable fact is that the banks collect interest on all money in circulation with the exception of gold and silver coin and gold and silver certificates and, as you know, existing law has retired all gold coin and all gold certificates and operates to keep both these kinds of money out of circulation. The only interest-free money now in circulation is silver coin and silver certificates and when the banks come into possession of this kind of money, as they do all the time, and lend it out again they receive and are entitled to their interest just as you and I are entitled to interest on any loan that we make.

I think you and everyone else will agree with me that the banks of this country perform a most useful and indispensable service in dealing in money and dispensing credit, but when it comes to creating money and collecting interest on the use of the Government's credit with the power to contract or expand the money volume and the flow of credit then the banks have taken to themselves a concession to which they have no right and exercise power that is dangerous to national welfare as experience has repeatedly taught us.

Now as to the smoke screen you see mentioned in paragraph 8, let's brush this screen aside so we can really see the accumulation of interest the banks are taking on the interest-bearing obligation that is supporting the $26,500,000,000 of Federal Reserve notes and Federal Reserve bank notes in circulation calculated, say, at 3 percent annually.

Now when you and I were little kids and went to school the teacher said the way to find 1 percent of any given number was to write down the principal and then point off two places, that is, the last two numbers. Well, here we have $26,500,000,000. Now let's point off two places by marking off the two last ciphers and we find that 1 percent is $265,000,000 and we know that nobody can borrow money from a bank at 1 percent, for as I remember during most of my young life we had to work like everything to pay 10 percent on a farm mortgage and at that quarterly, and later the banks began to lend money at 8 percent. After the Federal land bank came along they made loans as low as 6 percent. That's what most of us have to pay now and we know that Government bonds, until lately, were paying 4 percent. Now the Government is paying you and me, if we wait long enough to get our money, 2½ percent.

There is no point in this discussion in bringing up the amount of interest that the people of this country are paying on the $262,000,000,000 national debt. Well, as 1 percent interest on the Federal Reserve notes in circulation brings us out at $265,000,000 and the banks probably receive an average of 3 percent interest on their loans, so 3 percent on the amount of bank money now in circulation is $7,950,000 a year income to the banks for the use of their kind of money.

Now, as I see it, this smoke screen thing has been draped over this interest-gathering mechanism of the banks and their interest income procured by using Uncle Sam's credit long enough, so you see that all this talk of interest means something, and now I would like to ask, as you see it, what is the real issue? With this smoke screen blown away, the people of this country should be able to see more clearly the real cause and objective of this long-sustained campaign to discredit the use of silver money.

Paragraph 9 evidently calls for a simple answer to a simple question, an answer which until recently was found on the face of every Government bond and most mortgages until the Gold Reserve Act of 1934 was passed, a covenant which clearly stated the obligation was redeemable in gold. At first for a long period after the Civil War Government bonds were redeemable in coin; later the law was changed to make them redeemable in gold. Not in wheat or iron, or labor, or bank credit, or the paper token of another debt, but gold, the money of ultimate redemption. Possibly you have noted that in all the years of this country's existence people did not redeem gold and silver coin with anything. They obtained gold and silver coin in exchange for many things—the products of labor or labor itself.

To define money of unchanging value, the subject of your query in paragraph 10, a better definition would be money of stable value, the kind of money the governments of the world have been seeking to create since civilization began, a quality of money the world needs now as never before.

Consider the French franc coming down to us from the dawn of medieval history. The monetary unit of a great nation, each franc is composed of 100 centimes or five sous, which had stable purchasing power all down through the centuries with a value of 20 cents in United States money. The franc has fallen since a managed currency system was adopted by France until today the value of the franc is 119 francs to one United States dollar, with the purchasing power of about five-sixths of a United States penny.

In considering the financial distress of the French people, one is prompted to ask if this could possibly have happened if francs were minted of silver.

The Italian money unit, the lira, formerly worth 20 cents in our money, is now worth 225 to the United States dollar. It is difficult to imagine how Italian pennies can be used in trade and from what material they could be minted.

The monetary unit in a stable monetary system should remain unchangeable in value as measured by the average commodity price level. Money, in a sound workable adequate money system, should measure values just as the thermometer measures the temperature. The value of the dollar, as nearly as possible, should be as fixed as the zero mark on the thermometer used in measuring the degrees of cold and heat.

The value of all other commodities are subject to fluctuations, influenced by conditions affecting production and the law of supply and demand. But money, the medium of exchange required in redeeming promissory notes and other deferred obligations, must be stable in value to protect the integrity of contracts.

The answer to the contention made in paragraph 11 as to the proven practicability of bimetallism is best answered by a statement made on the floor of the Senate by Senator F. M. Cockrell when he said:

"Here is international bimetallism established by France, Italy, Belgium, Switzerland, and Greece. France alone had maintained bimetallism ever since October 1785. In March 1865, she had called the attention of our Government to it, and Mr. Lincoln (President Lincoln) had appointed Mr. N. M. Beckwith commissioner general. On January 4, 1867, Mr. Berthemy, envoy of France to the United States, submitted to Secretary Seward a copy of the monetary convention of December 23, 1865, and invited the United States to become a party to it.

"That is the only time the United States was ever offered an opportunity to become a member of an international bimetallic union. Here was a bimetallic system upon a ratio of 15½ to 1 maintained by France since October 30, 1785, and all we had to do was simply to subscribe to it. There was no international complication connected with it; nothing to do but simply subscribe to it and agree that we would coin certain coins. In order to come to that, we only had to strike out about 12½ grains of our standard silver dollar, reduce it to 400 grains, and thus bring it down to the ratio of 15½ to 1. Here was the standard perfected, tested for nearly a hundred years."

In reaching our conclusions concerning the influence responsible for the flow of money, evidently you mistake the disparity in the values of the money metals gold and silver in this country and in Europe for "the inexorable forces of Gresham's law." The movement of money metal referred to was occasioned by the difference in monetary ratios of gold and silver, minted by our Govments and the governments of Europe, particularly France, which steadily maintained

a ratio of 15½ to 1 while our Government at first established a ratio of 15 to 1 and then, instead of standardizing the ratio of gold and silver in our money with that of France and other European countries, the United States Government by the acts of 1834 and 1837 adopted the ratio of 16 to 1, thereby undervaluing silver in our money which naturally went to the European mints at the standard value then prevailing in France and other countries at a profit to the exporters in this country.

Later, when the opponents of international bimetallism were successful in preventing this country from standardizing our currency with nations comprising the Latin union and joining an international convention to extend international bimetallism to this country, the profits being made by the silver exporters were used as one of the excuses for demonetizing silver in this country in 1873.

It is interesting to note that the "inexorable forces of Gresham's law" is failing to operate at the present time to drive superior quality Federal Reserve note currency out of circulation by the use of inferior quality silver certificate currency, or vice versa.

In discussing the acute shortage of subsidiary coin mentioned in paragraph 13 with silver undervalued here at a time when the mints of the European nations were accepting silver on a 15½-to-1 ratio, naturally silver flowed to Europe, leaving this country short of subsidiary coins.

As stated in paragraph 14, England did adopt the gold standard after the Napoleonic wars in 1816, with distressing effect on the English people for a long time. It was after the Germans defeated France in 1870 and exacted as a down payment on the war indemnity all the gold in France when the French people patriotically brought their gold to the French Treasury and exchanged it for French bonds, which gold the Germans loaded up on their gun caissons and hauled back to Berlin.

It was after this that the German and English bankers found themselves in possession of 90 percent of the world's gold with France still heavily indebted to Germany for the balance of the war indemnity payable in gold. Germany was quick to take further advantage of France by closing the German mints to silver and dumping the silver on France. This forced France to close her mints to silver, soon to be followed (1873) by the demonetization of silver in this country.

Again, in paragraph 15, you apparently confuse the influence of Gresham's law with the effect of war conditions. It may be explained that due to the uncertainties as to the outcome of the Civil War or which side would be victorious, naturally there was hoarding and metallic money disappeared from circulation. To meet this emergency, President Lincoln resorted to the expedient of drawing on the public credit by issuing non-interest-bearing Treasury notes engraved and printed with green ink, commonly called greenbacks, the total amount of which never exceeded a half million dollars, from which it appears that the Government of that day was more considerate of our people and posterity than the Government is now, because greenbacks were issued interest free.

Paragraph 16 understates the case. Paper national-bank notes were invented and the National Bank Act was passed in 1863 in an emergency during the Civil War. This plan gave the banks the concession to create and issue money that was backed by the credit of the United States Government—a money-creating plan by which the banks collect two interest yields on the circulation of their kind of money, that is, 4 percent on the Government bonds which the banks placed on deposit in the Treasury and the current commercial rate of interest on the money equivalent to the deposited bonds which the banks issued into circulation in making bank loans. Much of this money in that day was loaned at 10 percent.

It is interesting to note that at the time the banks were getting the circulation of their interest-yielding national bank note money under way the opening of western mines was pouring silver into the mints to be coined into money, which for the most part flowed into circulation without being loaned at interest.

In this situation it was the most natural thing in the world for the financiers on both sides of the ocean to set plans in motion to cut off the competition of silver money with their profitable (interest yielding) monetary concession and to keep it shut off.

In making the statement contained in paragraph 17, it is to be regretted that apparently you have overlooked the real effect of the legislation that revalued gold and abandoned the gold standard. Operating under the provisions of this law, the banks have as effectually secured the demonetization of gold in this country as they have silver, accomplished by removing gold and gold certificates from circulation, thereby removing the competition of gold with their interest-yielding Federal Reserve note currency.

Chairman Eccles may be able to fool you and himself as to the importance of gold for security in connection with his managed currency system but it appears from the present market quotations on the price of gold throughout the world, he is not fooling the rest of the people. As to the rate of growth of population of commerce referred to in paragraph 18, it is to be regretted that you are in disagreement with the majority of economists.

In discussing a subject as important as the profits the Government has made on silver purchases under the provisions of silver legislation since 1934, it might be well to call your attention to the fact that the daily financial statements of the Treasury and the table of the monthly Treasury Bulletin are available for the asking. It is to be regretted that evidently you fail to understand the facts concerning seigniorage (profit) reported by the Treasury on its silver purchase operations. An attempt will be made to set you aright by giving you the facts on seigniorage from reports contained in the last monthly Treasury Bulletin, that of January 1946. On page 82 of this report appears a table with the columns containing the separate categories of silver seigniorage totals.

The first column in this table shows the seigniorage on subsidiary coins (dimes, quarters, and half dollars) since January 1934 which amount to $424,300,000. The second item is the total seigniorage on silver revalued since January 1934, which amounts to $917,400,000. The total of the last column is the potential seigniorage on the idle silver bullion carried at cost in the general fund which, if this silver were coined and used as money, would amount to $377,600,000. Taken all together, the silver seigniorage as reported by the United States Treasury since the Silver Purchase Act was passed in 1934 is $1,719,300,000, a tidy sum for the Government to make on a minor Treasury money transaction. If there is any doubt in your mind as to what the word seigniorage means, it is suggested that the exact meaning of the word seigniorage can be found in any dictionary.

It is difficult to understand the motive of anyone with any patriotism who would misrepresent facts concerning silver and the profits that the Treasury has made on its silver transactions under provisions of existing law.

As to the effect of Gresham's law, the subject of the twentieth and the last paragraph of your letter, it appears that the final result of the sustained effort of the banks and the United States Treasury to circumvent the forces of economic law by the operation of a managed currency system in this country must finally end like all attempts to evade natural law when the inexorable rules of economic law will overtake and overturn man's puny effort in due time as it did in recent depression years and naturally will do again.

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

National Forests: Thin Purses' Paradise

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1946

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Richard L. Neuberger from the Sunday Oregonian of February 17, 1946:

NATIONAL FORESTS: THIN PURSES' PARADISE

(By Richard L. Neuberger)

More than four decades ago an American President with bright teeth, shiny glasses and a love of the outdoors set aside millions of forest acres as a trust to be held for future generations. Thus were the national forests established, nearly all of them in the States of the far West.

"To these solitudes of forest and mountains," said the twenty-sixth President of the United States, "families of limited means will be able to come to find inspiration and health. They will be the vacation land of the average citizen."

Theodore Roosevelt's vision is going to be realized this year in greater proportions and magnitude than even that robust adventurer dreamed.

The United States Forest Service expects approximately 5,000,000 people to visit the national forests of Oregon and Washington during 1946. It will be the record forest vacation season of all time, predicts Frank B. Folsom, of Portland, assistant regional forester in charge of recreation.

GAS BUGGIES CAN AGAIN TAKE TO STEEP ROADS

In 1941, the last peacetime year, the national forests of the Pacific Northwest were used by 2,248,685 citizens. All current travel prophecies expect that figure to be doubled this year. Inquiries from every section of the North American Continent have been received by regional headquarters of the Forest Service, in Portland, as well as by the national offices in Washington, D. C.

Lyle F. Watts, Chief Forester of the United States, says that his organization anticipates a record rush of tourists to the national forests in 1946. "It will be a busy season for recreation," says the Chief Forester, who not so long ago was a resident of Portland himself.

While the war lasted, forest vacations were held to a minimum. Gasoline rationing kept cars off the steep roads leading to these upland fastnesses. Lack of tire replacements confined the relatively few automobiles that were running to pavement; no motorist wanted to risk his precious rubber on wilderness roads. Picnic grounds were overgrown by underbrush and young trees; shelter cabins and fireplaces tumbled into various stages of decay.

Today, motorists once more can give the command, "Fill 'er up!" Tires have been removed from rationing lists. Dealers even are accepting orders for 1946 cars. New camping equipment is available. Shot and shell can be purchased for rifles. Millions of

Americans are looking once more toward the forests and mountains.

FORESTS OFFER BEST GAME HUNTING, FISHING

These vacation aspirations place a special burden and responsibility on the Pacific Northwest. Twenty-three percent of the entire State of Oregon, for example, is within the boundaries of national forests. The State has a total area of 61,188,480 acres; the national forests in this State contain 14,425,571 acres. Of Washington's 42,775,040-total acreage, 8,413,387 are in national forests.

National forests include some of the region's most conspicuous beauty—Mount Hood, Mount Jefferson, the Three Sisters, the Wallowa Range, Mount Baker, Snoqualmie Pass, Lake Chelan, Mount Adams, Mount St. Helens, the Olympic Seacoast, the Rogue River, the 6,100-foot chasm of Hell's Canyon on the Snake. The best hunting and fishing in the Northwest can be found in the national forests; a substantial proportion of the region's big game feeds within forest boundary lines.

MOUNT HOOD LEADS IN VISITORS

Frank Folsom and his assistant, Kenneth Wolfe, expect visitors to trek to the various national forests during 1946 in about the same ratio that they did in the peacetime years just before the Japanese attacked Pearl Harbor. There are 21 national forests in the Northwest—8 in Washington and 13 in Oregon, with a portion of two of Oregon's forests, the Rogue River and the Siskiyou, extending gently into northern California.

This is how the 21 forests of the region were used by American travelers and tourists in 1941:

State of Oregon:	
Deschutes	89,530
Fremont	24,955
Malheur	32,635
Mount Hood	636,446
Ochoco	12,515
Rogue River	56,590
Siskiyou	63,100
Siuslaw	82,585
Umatilla	52,100
Umpqua	84,585
Wallowa	31,328
Whitman	25,539
Willamette	134,263
Total	1,326,171
State of Washington:	
Chelan	20,185
Columbia	145,432
Colville	26,700
Mount Baker	133,757
Olympic	35,720
Snoqualmie	397,500
Umatilla	7,890
Wenatchee	155,330
Total	922,514

Both Folsom and Wolfe, the Forest Service officials in charge of recreation, believe that Mount Hood will continue to lead the region's national forests in the number of visitors. They cite several reasons. One is Mount Hood's premier position as a winter sports center. Another is its proximity to the Portland metropolitan area. Few other national forests are as close to a large city as Mount Hood is to Portland.

The Snoqualmie and Mount Baker National Forests stretch to within a comparatively short distance of Seattle, but the Puget Sound region has more competing attractions than the Portland area. Snoqualmie is also famous for winter activities, although both it and the Mount Hood forest feature summer recreation as well. The Milwaukee Railroad has helped build up the Snoqualmie attendance by running ski trains to the edge of the forest. Some of the most diversified recreation in America takes place within the borders of national forests. White-capped streams, snapping at canyon walls, invite rod and reel. The hunter can track nearly every kind of grazing animal. Lakes of cobalt blue and emerald green are ideal for swimming. Thousands of trails offer hiking and walking. Lofty glacial summits challenge the experienced climber. Pack trips offer other possibilities.

The atmosphere, too, is diversified. The Mount Hood National Forest, within sight of Portland's busy streets, is ribbed with several paved highways. Contrasting surroundings feature the Eagle Cap wilderness area in the Wallowa National Forest, a region with no roads, no cabins, and only a few narrow game trails. In wilderness areas, no motorized transportation can be used—no cars, no motorboats, no Cub airplanes. Foot, horseback, and canoe are the sole means of getting about the most primitive parts of the forests of the Northwest.

To assist in the enjoyment of the region's forests, these are the improvements constructed thus far in the woodlands controlled by the Forest Service in Oregon and Washington:

Camp grounds	569
Picnic areas	26
Camp grounds and picnic areas	344
Swimming areas	17
Winter sports areas	54
Organization camps owned by Forest Service	19
Organization camps owned by various organizations	51
Hotels owned by Forest Service	4
Privately owned hotels	45
Privately owned cabins and summer homes	1,664

Of the four hotels owned by the Forest Service, three are located in the Mount Hood National Forest—Timberline Lodge, Cloud Cap Inn, and Multnomah Falls Lodge. The other is Heather Inn on the steep slopes of the Mount Baker Forest in the State of Washington.

RECREATION WILL AGAIN STAY IN TOP POSITION

Throughout the war, recreational needs came second to the imperative job of defeating the enemy. The Forest Service concentrated on lumber production, development of essential minerals, and the protection of the forests against fire. Other duties were postponed. In a recent report to Horace J. (Hoss) Andrews, regional forester, Frank Folsom pointed out, "None of the camp grounds has been adequately maintained during the war. Tables, benches, bridges, swings and other equipment are rotting and falling apart, even when built of heavy logs. Camp stoves are in such bad shape we believe 75 percent of them should be replaced."

Folsom said that this condition prevailed in the face of "a year likely to be as full a one as we have ever had. The whole existing system of public camps and picnic grounds is in need of extensive repair, but, in addition, a number of new areas should be planned immediately and construction started as soon as possible. These are the areas which have been opened up by mineral, timber, or other access roads. Having become suddenly accessible, they will be used for recreation. Provision should be so made."

What are the outstanding forests of the Northwest from the standpoint of recreational possibilities?

In Oregon, Kenneth Wolfe nominates the Mount Hood, Willamette, Deschutes, and Rogue River. For the State of Washington he picks the Columbia, Snoqualmie, and Wenatchee. These all have diversified activities, ranging from placid automobile rides to dangerous alpine ascents. Frank Folsom, the Northwest director of recreation for the Forest Service, once was supervisor of the Wenatchee Forest. He points out that many of the forests in the region feature both "east side and west side recreation."

This is an important combination. The west slope of the Cascades has heavy rain and snowfall. Forests are clogged with underbrush and ferns. Green is the dominant color. Columbian blacktails comprise the deer population. The east side of the mountains is out of the rain belt, for the high summits knock the moisture from the clouds as they are blown in from the Pacific. The forests of the east side are like parks. The ponderosa pines stand up like Greek columns. Sagebrush and bunch grass hem in the forests. Mule deer predominate in the animal population.

PERSONAGES EXPRESS PREFERENCE IN VACATION AREAS

Such forests as the Willamette, Columbia, and Snoqualmie combine both east side and west side scenery. They extend all the way across the Cascade Range. This adds to their recreational attractiveness. Yet many famous visitors to the Northwest swear by particular forests. Justice William O. Douglas says his favorite is the Wallowa, with its immense canyon and rugged lakes basin. A fellow named Harry Truman wants to visit the Mount Baker and the North Cascades wilderness area. Gen. George C. Marshall favors the fishing in the Umpqua. Zane Grey always promoted the Rogue River. James Oliver Curwood once trekked through the Columbia and pronounced it superb.

National interest in the forests of the Pacific Northwest is at its greatest pitch today. Arden X. Pangborn chairman of Gov. Earl Snell's tourist development program, says that thousands of people in every State want to visit the vast wilderness reaches of this region. Gov. Monrad C. Wallgren, of Washington, expects the national forests of his State to be used by twice as many people in 1946 as ever before. He says that President Truman has made him a definite promise to come "and possibly visit Alaska, too."

Even youngsters show this interest. Jack Horton, assistant regional forester, recently received a letter from Bill Skyzypek. "I'm very interested in the forest rangers," wrote Bill, "and plan to be one when old enough. I don't know but could you send me a forest-ranger badge? My gang don't think I mean that when I'm old enough I will be a ranger. If it is impossible to send me a badge could you please send me a button from a ranger's uniform?"

"That kid is on the spot with his gang," said Horton, and so in due time a button from one of Horton's old ranger uniforms will reach Bill Skyzpek, at 1424 East Falls Street, in Niagara Falls, N. Y.

Ever since Teddy Roosevelt's administration, the national forests have been the poor man's vacation land. They also have been the place where civilized people can commune with the primeval, where a last vestige of the original American wilderness remains. A policy aimed at continuing this status will govern the forest of the Pacific Northwest during the 1946 vacation season.

APPEAL MADE TO PEOPLE OF LOW INCOMES

"Particular attention will be given," says a directive from headquarters of the Forest Service, "to facilities for the use of the majority of American citizens, who can enjoy forest recreation only if its cost is small. This means emphasis on camping and picnicking facilities and on organization camps owned by the Government and made available either to individuals or organizations whose members are in low-income groups."

For many years the Salvation Army has maintained a camp system for underprivileged children at Lake o' the Woods, in the Rogue River National Forest. The camp, owned by the Forest Service, is taken over for a period by the Salvation Army. Similar groups use national forest facilities in many sections of the Northwest. No charge is made for the use of Forest Service campground equipment, such as stoves. Entrance to the forests themselves is without toll. All

emphasis is on catering to the citizen with the thin wallet.

In addition the Forest Service seeks to preserve as much as possible of the original fastnesses which Lewis and Clark saw. "The Forest Service will install or permit the installation of facilities only to the extent required to serve public needs," orders Chief Forester Watts. "It will keep to a minimum the introduction of artificial developments in the forest environment."

In the record tourist year now about to begin, Frank Folsom and his associates seek such an objective in the national forests of Oregon and Washington—vacations for men and women of average income in the grandest setting of all, the original setting with which God Almighty endowed the American wilderness.

Attack on Soap Monopoly

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD. I include the following correspondence:

FEBRUARY 26, 1946.

Hon. TOM C. CLARK,
Attorney General of the United States,
Washington, D. C.

DEAR MR. CLARK: Enclosed please find a copy of a letter I sent some time ago to the Secretary of Agriculture, the Honorable Clinton P. Anderson, concerning the very deleterious situation which has developed in the manufacture of soap in this country.

I also draw your attention to Public Law 458, Seventy-eighth Congress, chapter 480, 2d session, setting up the Office of War Mobilization and Reconversion. I specifically draw your attention to section 205 which states, "The Attorney General is directed to make surveys for the purpose of determining any factors which may tend to eliminate competition, create or strengthen monopolies, injure small business, or otherwise promote undue concentration of economic power in the course of war mobilization and during the period of transition from war to peace and thereafter."

The quota that has been established by the War Food Administration strengthens the monopoly on soap manufacturing now held by the so-called big three, Colgate-Palmolive-Peet, Lever Brothers, and Procter & Gamble. These three outfits manufacture about eighty-five percent of all the soap produced in this country.

The quota set up by the War Food Administration has the result never intended by Congress when it passed Public Law 458.

I call upon you to make this survey.

I herewith enclose a second letter which I have sent today to the Secretary of Agriculture, offering an alternate plan to the present system of quota.

Very truly yours,

EMANUEL CELLER.

DECEMBER 5, 1945.

Hon. CLINTON P. ANDERSON,
Secretary of Agriculture,
Washington, D. C.

DEAR CLINTON: Since I saw you the other day with Mr. Kamen, of the Kamen Soap Products Co., on the subject of quotas for inedible fats, oils, and grease, facts, in addition to those disclosed to you, have been brought to my attention.

The fat and grease renderers are bitterly complaining that as a result of the quota they are compelled to channelize the bulk of their product to the so-called big three—Lever Brothers, Colgate-Palmolive-Peet, Procter & Gamble—and other large organizations. They are unable to choose their customers. They must sell to those who are favored with large quotas.

They are cowed and coerced by these big three, even to the extent of compelling them to sell below ceiling price. These fat and grease renderers are afraid to come forward with complaints, either to you or the Department of Justice. The minute they raise their voices in protest, they are met with all manner and kind of irritations set up by the big three.

I know of one case, specifically, but the grease renderer will not allow me to use his name because of his fears. He offered several cars of grease to one of the big three, who insisted upon a deep cut in the price. The fat renderer refused to accept the price cut and then tried to sell elsewhere but was balked in his attempts inasmuch as the smaller operators had such short quotas they could not accept his offer. He continued to seek purchasers but finally was compelled to sell his product to one of the big three at reduced price. This is the type of squeeze that the big three are indulging in all over the country.

Frankly, I am reminded of an old saying, "The more you poke an old pile the more it stinks." The more I hear about this situation, the worse it grows.

May I urge upon you a reexamination of the facts concerning these quotas? May I be permitted to suggest that a public hearing be held, at which time all sides might be heard? Otherwise, I am convinced that these big soap manufacturers will so fasten their hold upon the soap industry as to drive most of the smaller manufacturers out of business.

Remember, also, that we are now in a critical period—reconversion. The smaller entity needs all the aid and assistance that Government can extend to it. Instead of being given this support, he is being hurt by such governmental decrees.

Sincerely yours,

EMANUEL CELLER.

FEBRUARY 26, 1946.

Hon. CLINTON P. ANDERSON,
Secretary of Agriculture,
Washington, D. C.

MY DEAR MR. SECRETARY: I am sure you will forgive my importuning you again concerning WFO-42b, the War Food Administration order which establishes quotas on raw materials used for soap making.

Ordinarily, the establishment of quotas is eminently fair and proper, but in the case of soap making, quotas freeze a status quo and freeze the monopoly enjoyed by the three main soap manufacturers, Lever Brothers, Colgate-Palmolive-Peet, and Procter & Gamble. These big three make 85 percent of all American soap.

Assuredly, it was never the intent of Congress in passing the War Powers Act to give any authority to any governmental entity to give aid and comfort to a monopoly through orders establishing quotas. In fact, the War Powers Act expressly provides that no governmental agency shall issue decrees or orders that cause continued violation of the antitrust laws. WFO-42b does just that. It encourages and approves the soap monopoly by the so-called big three, to the detriment of the small manufacturer.

Apparently, you have not been impressed with this argument.

I herewith present another suggestion to you as a way out of this difficulty. In order that the small soap makers have a chance to remain in business, why not provide for a maximum blanket allowance of fats and oils which shall be quota exempt. In other words, quotas would not start until this blanket allowance is consumed. This blanket allowance could be determined by the War Food Administration and equitably arranged so that the smaller manufacturers could remain in business. This general blanket allowance would greatly reduce the available supply of raw materials before the quota would obtain. Such a plan would help the little fellow and to that extent create a more equitable distribution. Of course the big three would not like it.

Such an arrangement would greatly reduce the quota pie. That is the way it should be. Each manufacturer would then get a smaller piece of the quota pie, but he will, in the first instance, have been helped a good deal out of the ex-quota. The little fellow would then get a chance for his white alley.

Sincerely yours,

EMANUEL CELLER.

White Elephants Versus Work Horses

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 26, 1946
